VOLUME 25]

JANUARY, 1925

[NUMBER 1

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

THIS issue of the LABOUR GAZETTE contains the regular monthly articles on the industrial and labour situation in Canada during the past month, including reviews of the movement of prices and cost of living, industrial disputes and conciliation proceedings, recent industrial agreements, fair wage contracts, etc.; also the usual notes on industrial training and apprenticeship, labour union activities, recent legal decisions and industrial safety and health. There is also a report on employment conditions in Canada during the year 1924. Two supplements dealing respectively with "Wages and Hours of Labour in Canada, 1920-1924," and "Prices in Canada and other Countries in 1924," are also included with this issue.

Monthly Summary

Reports from the Employment Service of Canada indicated a continued contraction in the volume of business during November, the situation at the beginning of December being less favourable than during the same period in 1923. At the beginning of December the percentage of unemployment among members of trade unions was 9.7, as compared with 6.8 per cent at the beginning of November and with 6.2 per cent at the beginning of December, 1923. Reports from 5,880 employers of labour also indicated a continued contraction in employment on December 1, when they were employing 749,841 persons, as compared with 762,848 on November 1.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.58 at the beginning of December as compared with \$10.46 for November; \$10.73 for December, 1923; \$10.39 for December, 1922; \$11 for December, 1921; \$14.84 for December, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for December, 1918; and \$7.96 for December, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1913 as 100, advanced to 160.9 for December as compared with 157.7 for November; 153.5 for December, 1923; 153.1 for December, 1922; 150.6 for Decem-

ber, 1921; 217.2 for December, 1920; 256.7 for May, 1920 (the peak); and 223.4 for December, 1919.

The time loss caused by industrial disputes in December was less than in the previous month or December, 1923. No disputes were carried over from November, but two new disputes arose during the month, one of these terminating before its close. The two disputes referred to affected 95 employees, and resulted in a loss in working time of 1,845 days. Corresponding figures for the previous month were as follows: 2 disputes, 313 employees and 4,808 working days; and for December, 1923, 13 disputes, 2,446 employees, and 28,693 working days.

Industrial Disputes Investigation Act, 1907

During December the Department received a report from the Board of Conciliation established in connection with a dispute between the Roberval-Saguenay Railway Company and certain of its employees, members of the National Catholic Syndicate of the employees of the Company. In the case of the dispute between the Canadian Pacific Railway Company and certain of the employees on its western lines, following the receipt of the report of the Board which was given in the November issue of this GAZETTE, a conference was arranged between representatives of the parties concerned, and a settlement was reached by direct negotiations.

Combines Investigation Act, 1923

An application having been received for an investigation under the Combines Investigation Act, 1923, from six persons complaining of a combine in connection with the distribution of the New Brunswick potato crop, the Minister of Labour has instructed the Registrar to carry out an investigation. Mr. Peter J. Hughes, K.C., of Fredericton, N.B., has been instructed by the Department of Justice to conduct the investigation before the Registrar.

Legislative programme in Quebec

The second session of the Sixteenth Legislature of the Province of Quebec opened on January 7. The Lieutenant Governor, the Honourable Narcisse Pérodeau, in his Speech from the Throne, stated that four important commissions had practically completed the tasks entrusted to them, namely, the commissions respectively for the revision of the Provincial statutes, for the consideration of the Workmen's Compensation Act, for the revision of the salaries and classification of the civil service, and for the examination of the school conditions on the Island of Montreal. Reports from all these commissions are to be submitted during the session. The Legislature will also be asked "to make an appropriation for the education, in the elementary schools, of the children of workmen who are left without means by the death of their fathers whilst engaged at their work."

The progress of the inquiry into workmen's compensation has been noted in previous issues of this GAZETTE. The commissioners, whose chairman is the Honourable Justice Ernest Roy, held their final meeting early in January. No official statement was made as to the recommendations that would be made. According to statements in the press, however, the commissioners will not recommend the creation of a Board as a substitute for civil court procedure in compensation cases; but, it is further reported, that they are in favour of modifying the existing provision which exempts from the benefits of the act workers who are earning more than \$1,500 in a year, and of extending to working men the right to add cost of medical fees to the amount claimed as compensation for injuries.

The Judicial Committee of the Privy Council

The Judicial Committee of the Privy Council of the United Kingdom, whose decision in reference to the validity of the Lord's Day Act of Manitoba is quoted elsewhere in this issue, is the Supreme Court of Appeal from the courts of the British Dominions beyond the seas. It consists of all Privy Counsellors who have held certain high judicial offices in the United Kingdom or certain of the Dominions, but in practice the appeals are invariably heard by members who have been selected with reference to particular cases. Professor H. C. Gutteridge, of London, England, in an article in the August issue of the *International Labour Review*, published by the International Office at Geneva, points out that this tribunal has no jurisdiction in matters with which the industrial law of Eng-

land is concerned, and its decisions are not binding on the English judges. At the same time it cannot be ignored by them, because the industrial legislation of the Imperial Parliament has been adopted to a considerable extent by the legislatures of the Dominions, and the interpretation of this legislation by the Judicial Committee is treated with very great respect, and has very nearly the same authority as if it had emanated from the judges of the English courts.

For the United Kingdom itself, the highest and final court of appeal is the House of Lords, presided over by the Lord Chancellor, who is both head of the Judiciary and Minister of Justice. Appeals are heard by a quorum of three at least of the following high judicial officers of the Crown: (1) The Lord Chancellor; (2) six Lords of Appeal in Ordinary, who are professional lawyers on whom life peerages have been conferred for the purpose of enabling them to sit in the House of Lords; and (3) Peers who have held certain high judicial posts. In theory any peer other than those mentioned is entitled to take part in the hearing of appeals, but an understanding exists that appeals are left in the hands of those peers by whom the quorum must be constituted. Of this Court of Appeal Professor Gutteridge says:—

This tribunal possesses a deservedly high reputation for learning and impartiality. It may not be out of place to state that the view is widely held that the House of Lords has given evidence of a breadth of view in dealing with industrial questions which has not always characterized the decision of the Courts of inferior degree; that this Court, though essentially aristocratic in theory, is in practice truly democratic; and has won the respect and confidence of the English public to a greater extent than almost any other court.

Reissue of Alberta minimum wage orders

The recent decision of the Supreme Court of Alberta, declaring invalid all orders of the Provincial Minimum Wage Board affecting wages, was noted in the last issue of the LABOUR GAZETTE. The invalidity of these orders was due to the fact that the wording of the orders did not conform strictly with the requirements of the Act in regard to orders issued by the Board, inasmuch as they omitted to enumerate the municipalities to which they were to apply. Since the judgment was given the orders have been re-written so as to specify the municipalities affected, namely, Edmonton, Calgary, Lethbridge, Medicine Hat, Red Deer, Wetaskiwin, Blairmore, Camrose, Cardston, Coleman, Drumheller and Redcliff. With this change the orders again became effective on January 1, and the act is thus once more in operation. As a result of

the recent action in court, during which criticisms were made of the construction of the Act, it is stated that the act is being redrafted and that legislation will be introduced at the coming session of the Legislature to correct the alleged irregularities of the present act.

British Columbia
eight hour day
law in effect

The British Columbia Hours of Work Act, 1923, became effective on January 1. The exemptions allowed by the Board of Adjustment, in accordance with the provisions of the Act, are given elsewhere in the present issue. The provincial Minister of Labour, The Honourable A. M. Manson, speaking in the Legislature during its recent session, stated that he did not intend to have the law so "riddled with exemptions" that it would become ineffective. He indicated that the scope of the law would be extended year by year until the 8-hour day became an integral part of the industrial life of the Province. The Minister further stated that it might be advisable later on to replace the present Board of Adjustment by a departmental board, after the present commissioners should have given full effect to the law. A suggestion that the Workmen's Compensation Board should administer the act is to be considered among other suggestions. Some account of the survey of the Province carried out by the Board of Adjustment was given in the last issue of the LABOUR GAZETTE.

William Green
new president of
A. F. of L.

William Green, secretary and treasurer of the United Mine Workers of America, was elected on December 19 president of the American Federation of Labour in succession to the late Samuel Gompers. According to the constitution of the Union the Executive Council, in the event of the death of a president, has power to appoint a successor to hold office until the date of the next convention. The new president shortly after his election intimated that he would follow the general lines of policy laid down by Mr. Gompers. He said:—

In co-operation with my colleagues on the executive council of the American Federation of Labour and the chosen officers of all affiliated organizations we will carry forward the work of organization and education among the workers of our land. Our devotion to America and the American institutions must never be successfully challenged. Our demands upon society for higher standards of life, better wages and humane conditions of employment must ever be based upon our inalienable right to the enjoyment of life, liberty and the pursuit of

happiness. Our problems must be met and solved upon the best of American fair play and in accordance with American traditions and ideals.

Mr. Green was secretary-treasurer of the United Mine Workers from 1913 until he became president of the A. F. of L. In 1900, when 30 years of age, he became president of sub-district No. 6 of the Ohio Mine Workers, and in 1906 was elected president of the State organization. In 1910 he became a State senator and served two terms until 1913 when his connection with the American Federation began. Following his election as President Mr. Green resigned his office in the United Mine Workers.

Alberta
railwaymen's
compensation
for accidents

A delegation representing the running trades in the seven railway brotherhoods in Alberta presented to the Provincial Government, on December 17 proposed amendments to the Workmen's Compensation Act which would provide slight increases in the existing rates of compensation for injuries. The trades represented included the firemen, enginemen, maintenance men, telegraphers, trainmen, steam shovel and dredgemen and conductors. The ministers who received the delegation promised that the railway men's proposals would be considered by the cabinet, although it had not been intended to introduce any new compensation measures during the coming session.

It may be noted that two acts in regard to Workmen's Compensation are on the Statute book of Alberta. The first of these is the "Workmen's Compensation Act, 1908" (Revised Statutes of 1922, chapter 176), its full title being "an act with respect to compensation to workmen for injuries suffered in the course of their employment." This act establishes the liability of employers to their workmen for injuries, the scale and conditions of compensation being set forth in an appended schedule. Compensation under the act of 1908 is recovered by means of court proceedings. The second act is the "Workmen's Compensation Act (Accident Fund)," of 1918 (Revised Statutes of Alberta, 1922, chapter 177), which establishes a common fund formed from assessments levied on employers of labour, and administered by a Board, as in the five other Provinces having "state" systems of compensation. The running trades of the railways are expressly exempted from the provisions of the act of 1918, and the compensation of this class is therefore governed by the act of 1908. The delegation made it clear to the Government that they desired to remain under the earlier act.

Manitoba Safety League reorganized

The Provincial League was organized in Manitoba in June, 1920 (LABOUR GAZETTE, July 1, 1920, page 747). Mainly through the efforts of Mr. E. McGrath, then secretary of the Bureau of Labour, appropriations were secured from the Provincial Government for the purpose of furthering the work of accident prevention. But public interest in the movement subsequently declined, and the branch remained dormant until last October, when prominent provincial and municipal official representatives of employers and labour organizations, and of the principal industries, met together in Winnipeg on the suggestion of the Canadian organization, Premier Bracken acting as chairman. At that meeting a representative committee was appointed to reorganize the Manitoba Safety League, composed of the following members: Chas. F. Roland, Employers Association of Manitoba; Major D. M. Duncan, Superintendent School Board; H. B. Lyall, Canadian Manufacturers Association; A. C. Emmett, Manitoba Motor League; E. McGrath, Manitoba Bureau of Labour; Walter Owens, Trades and Labour Council; Mayor S. J. Farmer; W. H. Darra-cott, Winnipeg Electric Railway; Alderman T. Boyd, Civic Public Safety Committee. Since October the committee has held a number of meetings and the Provincial League is now active, with Mr. Charles F. Roland, as acting secretary, and with its head office at 506 Electric Railway Chambers, Winnipeg.

The Dominion Government made a grant last year of \$25,000, to further the work of the Canadian National Safety League. In addition to the Ontario Safety League, which is the oldest branch, there are now provincial leagues in Quebec, the Maritime Provinces and Manitoba.

Compensation administration in Manitoba

The Union of Manitoba Municipalities, acting on a recommendation from the city of Brandon, presented to the provincial cabinet in December a request for the enactment of legislation that would make Brandon a distinct unit in the administration of workmen's compensation. The present act recognizes seven classes of industry within the province, this division being for the purpose of assessment in order to create and maintain the Accident Fund under the Act for the payment of compensation and other outlays. The city of Winnipeg now forms one of these classes,

The Manitoba Safety League has lately been reorganized, and is again an active member of Canadian National Safety League.

the remaining municipalities of the province being grouped together into another class. The other classes are as follows: The Canadian Pacific Railway; the Grand Trunk Pacific Railway; the Canadian National Railways; The Crown in the right of the Province; and lastly all the industries that are set out in Schedule I of the Act, covering practically the entire industrial field.

Employment of children in theatres

The Director of Child Welfare, a new official appointed in Manitoba under the Child Welfare Act of 1922, has served notices to all theatres and other places of public entertainment throughout the Province, calling the attention of the proprietors to the fact that the Act forbids the public appearance of children under 10 years of age as performers. The Child Welfare Act became law in 1922, and came into effect on September 1, 1924, by proclamation. The sections of the act relating to the employment of children in places of public amusement are as follows:—

163. Any person who:

(d) subject to the provision of section 164 hereof, causes any child under the age of sixteen years to be at any time in any circus or other place of public amusement to which the public are admitted by payment, for the purpose of singing, playing or performing for profit, or offering anything for sale

shall be guilty of an offence against this Act, and on conviction thereof shall incur a penalty not exceeding two hundred dollars, and in default of payment of the penalty, or in addition thereto, shall be liable to imprisonment for a term not exceeding six months.

164. In the case of any entertainment or series of entertainments to take place in premises used for public entertainments or in any circus or other place of public amusement, where it is shown that proper provision has been made to secure the health and kind treatment of a child proposed to be employed thereat, the director may grant a license for such time and during such hours of the day, and subject to such supervision, restrictions and conditions as he may think fit, for any child over ten years of age to be employed of whose fitness to take part in such entertainment or series of entertainments without injury he is satisfied, and such license may at any time be varied, added to or revoked by him, and the cost of investigation and all other expenses involved in the granting of such license shall be paid by the person or persons making application therefor.

Travelling libraries in Saskatchewan

The growth throughout Canada of community libraries, particularly for the use of rural committees, was noted in the issue of the LABOUR GAZETTE for September, 1924, in connection with the various existing provisions in the direction of the "utilization of workers' spare time." Some further information on the growth of the movement in Saskatchewan was given at the recent meet-

ing of the Provincial Legislature. The number of travelling libraries in the Province is now 990, with about 50,000 books in circulation. At a conservative estimate these books were read during the past year by half a million persons. In the last two years 275 new libraries were started, and 148 new districts have applied for libraries in the last four months. Many of the libraries are sent to outposts of the Province, there being at least 75 north and west of Battleford, 12 north of Prince Albert, and 25 east and north-east of Prince Albert. The northeastern part of the Province is well served as far north as Ravine Bank, and as far east as Prairie River, the south being also well served, particularly in the districts furthest from the railroads. Applications from outlying districts, it is stated, are given first consideration. Books that are slightly worn are mended and sent out again, and those that are badly worn are taken out of circulation and repaired. Since January 1, 1924, 13,000 books have been thoroughly repaired, at an average cost of six cents per book. The old books that are beyond repair are disposed of in various ways. At least once, and usually twice a year, large boxes of old books are shipped to the goals at Prince Albert and Regina, and the Home at Wolseley. They are also sent out in bundles to isolated districts where it is impossible to send libraries. Last winter nearly one hundred districts were supplied in this way.

Second fatality caused by "bump" at Springhill mine

A second fatality occurred in the coal mines at Springhill, Nova Scotia, about a week after the fatal accident mentioned in a note in the last issue of the LABOUR GAZETTE. Both these sad accidents were caused by "bumps" in the mine, the first bump occurring on the east side and the second on the west. A report made by Mr. George S. Rice, Chief Inspector of Mines of the United States Bureau of Mines, on the bumps in the Nova Scotia mines, has now been issued, and a summary of the conclusions reached by the investigator will be given in the next issue of the LABOUR GAZETTE. As noted in a previous issue, Mr. Rice examined the Springhill mine at the request of the Provincial Government. The *Canadian Mining Journal*, commenting on these fatalities, says:—

Had not the Mines Department and the Company tried every available means and sought the advice of the best mining experts on the American continent, they might have been open to censure for not seeking information that might have been of value in solving this most difficult problem. But having done all possible, there is nothing left, but to proceed

along new lines and apply other methods of mining. This may take time; indeed it is usually a slow process to open up large sections of a coal mine on any system. There is in this case no other recourse. To work longwall in a nine-foot seam may be difficult, but it is feasible. There will be no large district of coal standing on pillars—nothing but a solid face ahead and waste workings behind where the roof may fall in and relieve the great pressure which is now causing the much dreaded bumps.

Ten years of Ontario compensation act

The first ten years of operation of the Workmen's Compensation Act of Ontario was completed on December 31. During this ten-year period 442,002 accidents to workmen were reported to the Board and of these 3,983 were fatal. In the ten years \$45,937,221.06 was awarded in compensation to injured workmen and their widows and children and in providing medical attention, hospital and skilled nursing services and artificial limbs and appliances. This means that roughly speaking the average accident reported to the Workmen's Compensation Board has cost over \$100. In 1924 there was a decrease in the number of accidents from 1923. In 1924 there were 58,675 accidents, of which 402 were fatal, as compared with 61,109 of which 379 were fatal in 1923. The total benefits awarded during 1924 were \$6,122,809.26 or about \$50,000 less than awarded during 1923.

Commenting on the ten years' record, Mr. R. B. Morley, general manager of Industrial Accident Prevention Associations says:—

"Industry in Ontario may feel that this toll of accidents is a heavy one and yet, on the other hand, an enormous amount of good has resulted from the passing of the Compensation Act over ten years ago. The great advantages of the present system as compared with the old law are the speedy disposition of claims, the immense saving of expense to all parties concerned, the great widening of the workers protection and the immunity of the employer from individual liability. Although the Ontario Act is now the most liberal in the world, especially in cases of severe accidents, the rates of assessment paid by employers are very much less than under other systems in adjoining States."

Relation of the Amsterdam and third internationals

The proposal emanating from the Third International (Moscow) for closer co-operation between that organization and labour organizations in other countries, with a view to the attainment of labour solidarity throughout the world, has been noted in previous issues of this GAZETTE (September 1924, page 737). A proposal in this direction was

addressed to the Trades and Labour Congress of Canada at its last convention, but was rejected by the Congress (October, page 854). The International Federation of Trade Unions, with which British and Canadian labour organizations are affiliated, declined through its Amsterdam Bureau to negotiate with the Red International on the ground that in its constitution there was an explicit avowal of the aim of destroying the Amsterdam Federation, which was described as the ally of the bourgeoisie and capitalism. Communications took place later between Amsterdam and the officials of the All-Russian Council, but no progress was made owing to the steady refusal of the Moscow officials to entertain the stipulation of Amsterdam that a condition of unity should be acceptance of the Amsterdam constitution. At the conference of the International Federation at Vienna last June the Amsterdam Bureau proposed that negotiations should cease altogether. This was opposed by Mr. Fred Bramley, for the British delegation, on the ground that it was necessary to do everything possible to re-establish relations, and that there was hope that the Russian unions might become more disposed to accept the Amsterdam point of view. The outcome was a decision arrived at by compromise—the British proposal having first been criticized by the French, German, and Belgian delegates. It was, in effect, that consultations should be continued with the Russian Council, in so far as was consistent with the dignity of the Federation, and that any question of unity must be settled on the basis of acceptance of the Amsterdam constitution.

The British Trade Union Congress at Hull, last June, after listening to an address by Mr. Tomsy (who will be remembered as having signed a communication to the Canadian Congress) tacitly agreed to a suggestion by Mr. Purcell, its chairman, that the General Council should be empowered, through the Amsterdam body, to try to bring together the various dissident trade union bodies—this term covering broadly the Russian unions, the Communist sections which had split from the French movement, and others.

At a subsequent meeting of the Bureau of the Amsterdam body the Vienna standpoint seems to have been maintained, and it was decided to request Moscow to furnish a clear statement of their aims before agreeing to call a conference. In their replies the Moscow trade union officials reiterated their proposal that any conference should not be restricted by preliminary conditions, and their definition of "united front" aims was crystallized

in a phrase, "class war to the knife" against capitalism.

This was the position when Mr. Purcell and his colleagues of the British delegation went to Russia, their object being to further reconciliation and to secure the affiliation of the Russian trade union movement to the International Federation. One concrete result, the report which is not disputed, is that the delegation has entered into a provisional arrangement with the All-Russian Trade Unions Council for the formation of an Anglo-Russian joint committee to promote unity. A special Council meeting of the International Federation is to be held at Amsterdam on February 5 to consider the latest Russian "class war" reply. Mr. Purcell and Mr. Fred Bramley will be there as representatives of the British movement, and they will present the considered view of the General Council.

Sick benefits for hourly employees

Privileges that are designed to improve the status of employees working by the hour are provided by the Brooklyn Edison Company, these employees being included in the general scheme for sick benefits provided by the Company for all its employees. Employees when sick are carried on the payroll at full rate of pay for 25 per cent of the time they have been with the company, and after the lapse of this period recommendation may be made by Department Heads for carrying them at half pay for indefinite periods. It is necessary for weekly employees to be in the service of the company for one month, and for hourly employees to serve one year before being entitled to these benefits. The maximum period at full pay for any employee is 26 weeks. As stated, all employees are subject to these benefits. If a labourer were sick for 26 weeks, he would be carried on the sick payroll at full rate of pay for this period in just the same manner as a clerical worker. No contribution is made by employees towards these benefits; the expenses are shouldered entirely by the company.

Unemployment insurance in Queensland

The first annual report on the operation of the Queensland Unemployment Insurance Act of 1922, which came into force in March 1923, has been issued covering a period of sixteen months to June 30, 1924. From March 1, to June 30, 1923, contributions from employers and workers, levied in the form of stamps, amounted to £42,000, which, with the state contribution, constituted a total of about £57,000. From July 1, 1923 to June 30, 1924,

employers and workers paid into the insurance fund £156,000, and the state whose contribution is equal to half that of employers and workers, paid about £71,000, thus making a total of about £227,000, or, adding receipts for the first four months, nearly £282,000.

During the whole of this, 16 months period, expenditure in unemployment allowances amounted to £149,000 and administrative expenses to about £9,500. There remained, therefore, at the end of the first year of operation, an excess of revenue over expenditure amounting to about £124,000. Mr. Forgan Smith, minister of public works in the Queensland Government stated that this very favourable situation allowed of the possibility of allowances being increased, but that the utmost care must be taken to avoid a surprise being sprung by a sudden unemployment crisis.

The Parliament of Canada has been summoned to meet on Thursday, February 5.

The third session of the seventeenth Legislature of Manitoba opened on January 15.

The Revised Statutes of British Columbia, 1924, was issued at the close of the year, in three volumes.

The Hamilton branch of the United Women's Federation of Ontario at a meeting in December resolved to ask the Ontario Government to promote legislation that would extend to boys the provisions of the minimum wage act.

The Standing Committee on agriculture, in a report to the Legislature of British Columbia during the late session, reported that the Provincial Women's Institutes had accomplished a large amount of very valuable executive work during the year, particularly along the lines of home economics, public health, child welfare, community betterment, education, and school environment.

At the municipal elections held at Edmonton, Alberta, in December, the proposal that the city should adopt the Provincial Act providing "One Day Off in Seven" for firemen, was carried, the vote being 6,700 for, and 2,610 against.

Since April 1, 1924, the Province of British Columbia expended the sum of \$17,000 for immigration purposes, the main item of expenditure being \$12,500 for 500,000 illustrated booklets distributed at the British Empire Exhibition at Wembley. The settlers brought into the Province between April 1 and September 30 by the agency of the Salvation Army numbered 149, including 44 youths for farm help, and 105 young women for domestic service.

The Children's Bureau of the United States Department of Labour specifies January 24, 25 and 26 as the period within which the National Child Labour Day is to be observed throughout the United States. Three dates are given in order to give an opportunity for the observance of the day by the various interested organizations.

New regulations have been issued by the Minister of Mines of Great Britain to govern the use of electricity in coal mines. Electricity may not be used without a permit. When current exceeding 650 volts is transmitted it must be "stepped down" below that voltage.

A recent investigation by the United States Public Health Service into sickness among 21,000 automobile workers showed that except for lead poisoning the sickness rates do not indicate the existence of serious industrial diseases. However, the high frequency in some plants of certain diseases, such as stomach and nerve troubles, suggest the desirability of investigation.

"The Uniform Life Insurance Laws of the Provinces of Canada" is the title of a new book by Mr. R. Leighton Foster, Superintendent of Insurance for Ontario. Seven of the nine Provinces of Canada, namely:—Ontario, British Columbia, Alberta, Saskatchewan, Manitoba, New Brunswick and Prince Edward Island, have now enacted the uniform act recommended by the Commissioners on Uniformity of Legislation. British Columbia was the first province to adopt the Act, it having come into force there on September 2, 1924, and for this reason Mr. Foster has used the British Columbia text as the basis for the uniform act in his book, and as an appendix gives the variations in text which appear in the acts of the other provinces. Copies of the book can be obtained at ten cents each from the Department of Insurance, Parliament Buildings, Toronto.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

The Labour Situation

EMPLOYMENT at the beginning of December showed a further and larger decline, chiefly seasonal in character. Conditions were not as favourable as on December 1, 1923.

During November, 1924, the offices of the Employment Service of Canada showed a further decline in the transactions, as compared with the preceding month while employment generally was on a lower level than during November, 1923.

The following is a summary of the employment situation at the end of December, 1924, as reported by the superintendents of the Service in the various provinces.

In the Maritime Provinces there was a sharp decline in the construction group with very few positions offering. A number of the cities were continuing street repairs, sewer and watermain construction to employ some of those thrown out of work by the suspension of outdoor building operations. Some inside work, finishing, painting and decorating, was under way in schools and public buildings, and at Halifax, Chatham and Moncton a number of these workers were placed. There was an exodus of men from the lumbering camps for the holiday season, causing the closing of the camps temporarily. A further demand in this group is anticipated for early in January. There was an increase in orders received and applications registered in the Women's Section.

In Quebec the demand in the construction group was for inside workers only with the exception of a slight amount of public work undertaken in the cities of Montreal, Hull and Quebec. The greatest activity had been shown in the logging industry, teamsters and camp workers being required from Quebec, Hull and Montreal. Manufacturing industries showed inactivity with the exception of the iron and steel and textile industries, a few factory workers being required in these trades at Montreal. At the latter office there was a brisk demand for women workers, but a decline was recorded at the other offices of the province.

In Ontario the curtailment in building activities and manufacturing industries has resulted in increased unemployment. Apart from sewer and watermain construction and work at the stone quarries, few vacancies were available to meet the increased number of men out of work in the larger centres. The cold and snowy weather has had a tendency

to increase the staffs in the various departments of the railways, former employees being recalled to service, and a number of casual workers employed. An increase in business, due to the holiday, gave much temporary and casual work to men in the cities as snow shovellers, unloaders, and extra mail deliverers and sorters. The few orders recorded in the Western Peninsula for men for winter work on farms were easily satisfied. A brisk demand for general bushmen and camp workers was shown, but owing to the breakup of the camps, due to the holiday, employers were uncertain as to the requirements for the new year. The demand in retail trade was quieter this year than a year ago, although many extra workers were employed for the holiday trade. Experienced household workers were required in increasing numbers with few applicants registered.

The calls for farm help for winter work in Manitoba had declined, due to the extreme cold. Logging activities were quiet, very few men desiring employment during the holiday season. Construction work had declined considerably, but in several districts ice cutting had started and a number of teamsters and cutters were placed.

In Saskatchewan there had been a decrease in the demand for help in the farming districts with few applicants registered for these jobs. Construction activities had slackened greatly, the offers being for inside workers only. A few loaders and casual labourers were required for the railways and a fair demand for loggers was reported.

A small though nominal seasonal demand for farm workers was met satisfactorily from the offices in the larger centres of Alberta. After the severe weather of the early part of the month, work was again resumed on sewers and watermains to give temporary relief to the unemployment situation. Few positions were available, however, in the building group. A gain was shown in the employment of men on railway lines or temporary gangs for snow clearing. A slight improvement was recorded in mining, while the logging group continued to absorb many workers.

Construction work in British Columbia declined considerably and the outlook for employment in this group for this winter was very poor. Most outdoor work has been suspended, due to the cold weather, and the few vacancies available were rapidly filled. Tiemakers and experienced bushmen were required, but later the response was uncertain,

due to the holiday season. Increased activities are anticipated, however, for early in January. A slight activity was shown in the mining group, while placement of workers on farms was of a nominal nature only.

EMPLOYERS' REPORTS

Further reductions in employment were reported by employers of labour at the beginning of December, but these declines were a good deal smaller than those recorded on the same date of 1923. The index number then, however, was above its present level. Employment declined in all industries except logging, mining and retail trade, in which there were considerable seasonal gains. The construction and manufacturing industries reported the most extensive shrinkage.

Firms in all provinces recorded reduced activity. In the Maritime Provinces, there were pronounced reductions in employment in sawmills and highway construction; fish canning, iron and steel were also slacker. On the other hand, logging, coal mining and retail trade reported substantial improvement. In Quebec, there was a general slowing up of activity in manufacturing. Sawmills, pulp and paper, textiles, iron and steel recorded the heaviest losses, while electrical appliance works showed the only large increases in the group. Logging, trade and transportation also afforded greatly increased employment. In Ontario, marked improvement in logging, trade, rubber and electrical apparatus factories was offset by contractions in sawmills, textiles, transportation and construction. In the Prairie Provinces, manufacturing afforded more employment, chiefly in abattoirs and iron and steel works. Logging, mining and trade also showed expansion, but there were declines on a larger scale in construction. In British Columbia, there was further seasonal shrinkage in lumber mills and fish canneries; employment in construction, mining and transportation also decreased. On the other hand, logging and retail trade were much more active.

Employment in all of the seven cities for which separate tabulations are made, except Toronto, declined. In Montreal, there were large gains in transportation, preceding the close of navigation, and small increases in retail trade and electrical apparatus works. On the other hand, manufacturing as a whole, construction and services afforded less employment. In Quebec City, the largest decreases were reported in construction. In Toronto, seasonal expansion in retail stores accounted for the increase; manufacturing, construction and transportation, however, afforded less em-

ployment. In Ottawa, construction reported the largest losses. In Hamilton, contractions in textiles and construction accounted for most of the decline. In Winnipeg, there were large decreases in construction, and smaller losses in manufacturing, while trade showed improvement. In Vancouver, additions to staffs in retail stores were offset by contractions in iron and steel and construction.

Manufacturing afforded considerably less employment than at the beginning of November; the lumber, pulp and paper, textile and iron and steel divisions reported the most pronounced declines. Logging and coal mining employed larger working forces, while there were small declines in communication and large reductions in transportation and construction. Trade registered the marked improvement usual at the time of year.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of December, 1924.

TRADE UNION REPORTS

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month, with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Considerable unemployment was reported at the end of November by the 1,501 trade unions, from which reports were tabulated; these unions had a combined membership of 154,375 persons, 9.7 per cent of the members being out of work, as compared with percentages of 6.8 in October and 6.2 at the end of November 1923. Manitoba and Alberta were the only provinces to show improvement over October and of the decreases, that of nearly 8 per cent in Quebec was the most pronounced, due, to a great extent, to seasonal depression in the garment trades. Noteworthy reductions were also reported in Nova Scotia owing to slackness in the coal mines and in British Columbia where less employment was afforded in the lumbering industry. The decline in Ontario was slight and of a rather general nature. In no province was the situation more favourable than at the close of November of last year. Reports were tabulated from 421 unions in the manufacturing industries with 45,400 members, 17.5

per cent of whom were out of work. In the garment trades employment was on a much lower level than in October, and decreases of lesser degree were reported by papermakers, glass, jewelry and leather workers and unclassified labourers. Textile and iron and steel workers, tailors and printing tradesmen, however, registered slight improvement. In practically all groups of the manufacturing industries more idleness was reported than at the end of November, 1923. Nova Scotia coal miners were slacker than in October but in Alberta more work was afforded and in British Columbia there was very little change in the situation. Asbestos miners in Quebec reported no idle members. Workers in the building trades were a little slacker than in the preceding month and also in November of last year, 14.2 per cent of the members being idle at the end of November as compared with percentages of 13.1 on October 31, and with 13.0 at the close of November, 1923. Carpenters and joiners, electrical workers, granite and stonecutters, painters, decorators and paperhangers, plumbers and steamfitters, and tile layers, lathers and roofers reported more unemployment than in October; steam shovel and dredgemen and bridge and structural iron workers reported no idleness and bricklayers, masons and plasterers and hod carriers were more fully engaged. In comparison with November of last year all tradesmen with the exception of carpenters and joiners, electrical workers, granite and stonecutters and painters, decorators and paperhangers recorded improvement. A slightly less favourable situation than in October was reported in the transportation industries all groups sharing in the decline. More unemployment was reported than in November of last year. Retail clerks were not so fully engaged as in October though the change was very slight. Hotel and restaurant employees, theatre and stage employees, barbers and stationary engineers and firemen were not so active. Lumber workers and loggers registered considerable unemployment. Fishermen reported no unemployment.

EMPLOYMENT OFFICE REPORTS

During the month of November 1924 the offices of the Employment Service of Canada made 23,578 references to positions and effected a total of 22,004 placements, this in contrast with 30,309 placements during November 1923. The placements in regular employment during the month numbered 12,556 of men and 2,831 of women—a total of 15,387—as against 23,652 during the same period of last year. The placements in casual

work in November numbered 6,617. The offices of the Employment Service received notification of 23,438 vacancies during November, of which 16,755 were for men and 6,683 for women, as compared with 38,876 vacancies offered during the same month of 1923. Applications for employment were registered from 30,366 men and 9,712 women, a total of 40,078, while during the same period in the preceding year registrations totalled 44,359. A marked decline is recorded in the transactions in November in contrast with the same month of 1923, especially in the opportunities available and placements effected. Registrations for work remained at approximately the same level as during the preceding month, the decline noted being very slight.

PRODUCTION REPORTS

The Dominion Bureau of Statistics reports that the production of pig-iron during November showed a decline of 20 per cent from the October output of 28,626 tons, the figure being 22,994 gross tons. No basic pig-iron was made in October, but the November returns showed 3,594 tons, 63 per cent of which was for the further use of the reporting firms. Foundry iron dropped 15 per cent to 19,400 tons as compared with 22,909 tons in October. No malleable iron was made in November. The cumulative production of pig-iron for the eleven months ending November was 570,480 tons comprising 341,674 tons basic, 180,379 tons foundry, and 48,427 tons of malleable iron. The average monthly output was 52,000 tons as against 75,000 tons per month in 1923, 32,000 tons in 1922 and an average of 50,000 tons in 1921. The output of 1,373 tons of ferro-alloys produced in November showed little change from the 1,350 tons produced in October. During the month one furnace at Sydney, Nova Scotia, was banked leaving two in blast on November 30, namely, one at Sault Ste. Marie, Ontario, and one at Hamilton, Ontario.

During November the output of steel ingots and castings advanced to 22,744 tons, or 14 per cent over the 19,996 tons of October. While the production of 697 tons direct steel castings marked a decline from the 935 tons in October, this was more than offset by the increase in the quantity of steel ingots produced. Steel ingots rose 16 per cent to 22,047 tons including 20,510 tons basic open hearth and 1,537 tons alloy steel ingots. The output of ingots in October was 18,572 tons basic open hearth and 489 tons alloy steel ingots. The cumulative output of steel ingots and castings for the eleven months ending November was 624,451 tons comprising 599,591 tons steel ingots and 24,860 tons steel cast-

ings. The average monthly production to date this year was 57,000 tons as compared with 77,000 tons per month for the corresponding period last year; 40,000 tons in 1922, and 57,000 tons in 1921.

A report from the Department's correspondent at Cobalt shows that seven cars containing approximately 505,620 pounds of silver ore were shipped from the Cobalt Camp during the month of December; as compared with 14 cars of silver ore containing 1,100,025 pounds in the previous month. The Nipissing mines shipped 347 bars containing 399,749.45 ounces of silver, and The Mining Corporation of Canada shipped 116 bars containing 117,017.53 ounces of silver, making a total of 463 bars containing 516,766.98 ounces of silver shipped during December as compared with 213 bars containing 226,914.90 ounces shipped in the previous month.

A report from the Department's correspondent at New Glasgow, Nova Scotia, gives the following figures showing the production of coal in Pictou County, Nova Scotia, for the month of October, 1924: at the Intercolonial Coal Mining Company, Limited, 13,622 tons; and at the Greenwood Coal Company, Limited, 3,373 tons. Figures showing the output from the Acadia Coal Company, Limited, were not given. As complete figures for the coal production in Canada are not available for the month of October, the statistics for the previous month are given at the end of this section. A preliminary report on mineral production is summarized elsewhere in this issue.

A report from the British Columbia Forestry Branch shows that 191,471,496 feet of timber, board measure, was scaled in the province during November, 1924. The total includes Douglas fir, 81,892,596 feet; red cedar, 50,661,132 feet; spruce, 15,577,535 feet; hemlock, 23,885,477 feet; balsam, 2,685,148 feet; yellow pine, 2,893,136 feet; white pine, 3,358,391 feet; jack pine, 1,125,399 feet; larch, 3,395,026 feet; cotton wood, 246,831 feet, and species not specified, 5,750,825 feet.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, according to a preliminary statement, amounted to \$20,946,123 during the month of November, as compared with \$22,840,698 in October, and \$24,087,039 in the corresponding period of last year. The gross earnings from January 1, 1924, to November 30, 1924, were \$216,271,446 as compared with \$230,482,380 in the corresponding period of 1923.

The gross earnings of the Canadian Pacific Railway Company for November, 1924, were given in a preliminary statement as \$18,100,945

in comparison with \$19,352,341 in the previous month and \$22,244,319 in November, 1923. The gross earnings for the eleven months of 1924 were \$166,811,985, as compared with \$176,700,415 for the same period in 1923.

Coal Statistics for October.—During October the output of coal from Canadian mines, according to estimates from the Dominion Bureau of Statistics, amounted to 1,296,856 short tons, an increase of 44 per cent over the tonnage for the previous month. The tonnage for October, however, was 18 per cent below the average for the month for the past five years, indicating that the coal industry during the period was considerable below normal in activity and general prosperity. A notable feature during October and one that indicated a greater output of coal in the immediate future was the settlement of the strike in District 18, which had been one of the principal causes of the heavy losses in production from British Columbia and Alberta during the summer months. The record of output by provinces for both September and October, respectively, was as follows: Nova Scotia, 471,000 and 609,000 tons; New Brunswick, 18,000 and 13,000 tons; Saskatchewan, 17,000 and 35,000 tons; Alberta, 265,000 and 474,000 tons, and British Columbia, 132,000 and 166,000 tons.

The number of men employed in the coal mines of Canada during October was 27,843, of whom 21,418 worked underground and 6,425 on surface, as compared with a total of 21,639 in September, of whom 16,492 worked underground and 5,147 on surface. The monthly production per man was 46.5 tons for October, as against 41.7 tons per man for September. During October the production per man-day was 2.5 tons, as compared with 2.3 tons in September. The tonnage lost was largely due to lack of orders and other causes in October.

BUILDING PERMITS AND CONTRACTS AWARDED

According to the Dominion Bureau of Statistics the value of the building permits issued in 56 cities during November while indicating a seasonal decline as compared with October, showed an increase over November, 1923. The total for November, 1924, stood at \$9,555,472 which was 17.1 per cent lower than the total of \$11,533,111 for October, 1924, but 18.9 per cent higher than the November, 1923, aggregate of \$8,035,466.

According to the *MacLean Building Review*, issued by MacLean Building Reports, Limited, the value of the contracts awarded in Canada during December amounted to \$28,868,000 as compared with \$24,614,000 in November, and with \$21,507,000 in December, 1923. The re-

turns for the year 1924 show construction undertaken to a value of \$276,261,100 compared with \$314,254,300 in 1923. Among the provinces Ontario's total was \$136,041,400, the aggregate for the rest of the Dominion being \$140,219,700. The year 1924 like 1923 saw reductions in almost every class of construction, although it continued on a high level in Ontario and Quebec as compared with 1920 and 1921. Spring and summer were quiet with a distinct revival noticeable in the late autumn. The figures for 1924 as given for the various classes of building are: residential \$91,224,800; business, \$73,666,700; industrial, \$21,765,000; and engineering, \$89,604,600.

The summary of Canadian FOREIGN TRADE prepared by the Department of Customs and Excise shows that in November, 1924, the merchandise entered for consumption amounted to \$66,250,498 as against \$72,084,304 in November, 1923. The domestic merchandise exported amounted to \$118,964,536 in November, 1924, as compared with \$103,292,462 in the previous month, and \$138,087,873 in the corresponding month of 1923. Foreign merchandise exported amounted to \$911,653 in November, 1924, and \$917,250 in November, 1923.

The chief imports in November, 1924, were: fibres, textiles and textile products, \$13,598,632; non-metallic minerals and products, \$11,408,117; agricultural and vegetable products, mainly foods, \$10,714,973; and iron and its products, \$9,320,739.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, \$58,543,785; wood, wood products and paper, \$21,026,566; and animals and animal products, \$17,166,068. During the eight months of the fiscal year ended November, 1924, exports of agricultural and vegetable products, mainly foods, were valued at \$274,182,134; wood, wood products and paper, \$167,782,145; and animals and animal products at \$108,440,239.

Strikes and Lockouts

The time loss due to industrial disputes was less in December than in either November, 1924, or December, 1923. There were in existence during the month two disputes, both of which began during December, none being carried over from November. These involved 95 employees and resulted in a time loss of 1,845 working days. In December, 1923, there were recorded 13 disputes, involving 2,446 employees and a time loss of 28,693 working days. One of the disputes commencing during December terminated during the month. At the end of the month, therefore, there was

one strike on record, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

Retail food prices continued upward, the slight advance being due mostly to higher prices for eggs. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was \$10.58 at the beginning of December as compared with \$10.46 for November; \$10.73 for December, 1923, \$10.39 for December, 1922; \$11 for December, 1921; \$14.84 for December, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for December, 1918; and \$7.96 for December, 1914. Eggs showed a substantial seasonal advance while there were less important advances in bread, flour, milk, coffee and potatoes. Meats, butter, rice and sugar declined slightly. Including the cost of fuel and rent with that of foods the total budget averaged \$20.90 for December as compared with \$20.81 for November; \$21.21 for December, 1923; \$20.97 for December, 1922; \$21.49 for December, 1921; \$25.67 for December, 1920; \$26.92 for July, 1920 (the peak); \$21.64 for December, 1918; and \$14.26 for December, 1914. Rent was lower in some localities.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics advanced substantially to 160.9 for December as compared with 157.7 for November; 153.5 for December, 1923; 153.1 for December, 1922; 150.6 for December, 1921; 217.2 for December, 1920; 256.7 for May, 1920 (the peak); and 223.4 for December, 1919. In the grouping according to chief component material five of the main groups advanced, one declined, and two were practically unchanged. The vegetables and their products group and the animals and their products group both advanced substantially, the former because of higher prices for grains, flour, shorts, bread, tea, coffee and rubber and the latter because of higher prices for cattle, sheep, meats, eggs, hides, leather and fur. The fibres and textiles group was higher because of advances in the prices of wool and binder twine which more than offset the declines in cotton, jute and silk. Higher prices for pig iron, steel billets and steel sheets caused an advance in the iron and its products group. Non-ferrous metals advanced because of increases in the prices of copper, lead, tin, zinc, and antimony. The chemicals group declined slightly while the wood and wood products group, and the non-metallic minerals group were practically unchanged.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF DECEMBER

DURING the month of December the Department received a report from the Board of Conciliation and Investigation established in connection with the dispute between the Roberval-Saguenay Railway Company, and its station agents, telegraphers, conductors, locomotive firemen, and others of its employees being members of the National Catholic Syndicate of the Company's employees. The Board was composed as follows: Mr. Louis G. Demers, K.C., of Quebec, chairman; Mr. F. X. Gosselin, Chicoutimi, representing the employer, and Mr. Arthur Frenette, of Chicoutimi, representing the employees. The report of the Board was unanimous.

Other Proceedings under the Act

In the case of the dispute between the Canadian Pacific Railway Company (western lines), and certain of its employees, being clerks, freight-handlers, baggagemen, storemen, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, following the report of the Board of Conciliation and Investigation (LABOUR GAZETTE, November, 1924, page 922), a conference was arranged between representatives of the parties concerned, and an amicable settlement was reached by direct negotiations.

Report of Board in Dispute between the Roberval-Saguenay Railway Company and certain of its Employees

QUEBEC, December 17, 1924.

To the Hon. JAMES MURDOCK,
Minister of Labour,
Ottawa.

IN THE MATTER of the Industrial Disputes Investigation Act, 1907, and a dispute between the Roberval-Saguenay Railway Company and certain of its employees, being Station Agents, Telegraphers, Train Conductors, Engineers, Locomotive Firemen, etc., members of the National Catholic Syndicate of the Employees of the Roberval-Saguenay Railway Company.

SIR,—The Board of Conciliation and Investigation appointed by you in the above matter under the Industrial Disputes Investigation Act, has the honour to report as follows:—

The petitioners, numbering eighty, are the employees of the Roberval-Saguenay Railway and belong to various classes of employment.

The company has been operating for about ten years a line thirty-seven miles in length in the County of Chicoutimi.

In their petition the employees asked for a schedule granting a reduction of working hours, an increase in wages and the adoption by the company of rules improving working conditions.

The company, in answer, produced among other documents a schedule marked "Exhibit G" and which, in its opinion, should govern its relations with its employees as regards wages as well as working conditions.

As the point in question was a first schedule which the employees wanted recognized, the

investigation was necessarily a long one. The Board sat during seven days in all, at three different periods, besides three sittings held, in the absence of the president, by the two members from Chicoutimi.

The number of employees is not large, but we had to consider the case of all classes of employees on a railway: station masters, assistants, telegraphers, foremen and maintenance-of-way men, trainmen of all classes, train despatchers, etc., as regards wages as well as working conditions.

We have at the very beginning directed our efforts towards conciliation and we are glad to recognize that if the discussion was at times sharp, it was often made amicably and never with any animosity. We feel we ought to thank the parties as well as their counsel, Messrs. Elzéar Lévesque, C. R., and A. B. Routhier, for the loyal efforts they have made throughout the investigation to help us come to a solution.

The increase in wages asked for by the employees was equal to 30 per cent (Exhibit E) and the company wanted to maintain the present wages; it agreed, however, to a number of rules concerning working conditions.

On August 20, 1924, after two days' sittings, it was decided, by mutual consent, to adjourn to a later date, that a new petition or schedule would be produced within a few days and that the company would make answer to such petition or schedule.

The new schedule, which was submitted on September 1, modified the employees' first petition, especially as far as wages are concerned; it still indicated, however, an average

increase of more than 20 per cent for trainmen as compared with the present wages and a smaller increase for the other employees.

After hearing the parties through their authorized representatives and their counsel and after earnest consideration, we have come to the conclusion that the schedule annexed to the present report should govern the relations between the company and its employees.

Said schedule is divided into five sections, to wit:—1. The general rules concerning the employees; 2. those applying to telegraphers; 3. those concerning trainmen; 4. those concerning maintenance-of-way men; and section 5 recommends that said schedule be effective on January 1, 1924, and that no amendment may be submitted without a 60 days' notice.

The schedule speaks for itself, but we believe it is advisable to give the following explanations:—

1. *About the Rules.* Up to the present, no written agreement has been made between the parties, but several of these rules are put into practice.

2. *Telegraphers or Station Agents and Assistants* are sometimes on hand during 14 hours and more per day; this is due principally to the fact that the passenger train goes one way early in the morning and returns in the evening. These employees receive for all their work the monthly wage mentioned in the schedule annexed to this report.

We are of opinion that the present wage is sufficient; we believe, however, that work of more than 10 hours in 12 consecutive hours should be paid for (besides the monthly wage) at an hourly rate at the *pro rata* of the monthly wage; an exception, however, is made for *Agent de Latérière*, as his monthly wage is increased in lieu of night overtime.

As there is an assistant in almost every station, the company will be able to have the service performed with little overtime wages by employing the agent early in the morning and by having the assistant start in later, or *vice versa*.

3. *Trainmen* at present receive the wages mentioned in the annexed schedule. They are paid by the hour and at present receive three hours' pay for less than three hours' work; for more than three hours' work, they are paid for five; for more than five hours, they are paid for seven; for more than seven, they are paid for ten.

We suggest that the employees should be paid at the rate of four hours and a half for $4\frac{1}{2}$ hours of work or less or for each call, and at the rate of nine hours for nine hours or less, overtime to be paid at the usual rate mentioned in the schedule.

By doing so, computing the employees' time would be simplified and an employee would not be called to duty unless he was paid at the minimum rate of $4\frac{1}{2}$ hours of work, and, if working more than $4\frac{1}{2}$ hours, he would be paid at the minimum rate of 9 hours.

According to a statement signed by Mr. Vallerand, the company's superintendent, and produced as "Exhibit H," if that way of computing and paying for trainmen's time had been followed during the whole year 1923, they would have received \$1,606.12 more, which means that each of these employees would have received about \$100 more.

The Roberval-Saguenay Railway Company was established specially to transport the pulp manufactured by the Chicoutimi Pulp Company. The latter company is at present in liquidation since February, 1924, and its mills have worked but little since it has been put in liquidation; the Royal Trust Co. is the assignee.

We must say, however, that, in spite of the putting in liquidation of this pulp company, the Roberval-Saguenay Railway continued to transport the company's products, as there was a large quantity that had accumulated, but this liquidation is likely to affect its general passenger and freight traffic.

We are not ignorant of the fact that railway trainmen employed on important lines generally receive comparatively high wages, but in the present case we have to deal with a small railway whose resources are exhausted and whose financial years are marked with large annual deficits.

We do not forget, either, that unemployment exists in the region served by the railway.

How could we, under such circumstances, recommend or even suggest an increase in wages?

Would an increase in wages be even legitimate, would it be timely to recommend it knowing about the financial position of this railway and under a precarious condition of the industries upon which it is depending for its subsistence?

We do not think so. This question, however, could be reconsidered at a later date.

4. *Maintenance-of-Way Men.*—Their foremen work 10 hours per day. They now receive the wages mentioned in the annexed schedule. We do not think there is any reason to recommend an increase in wages.

We are of the opinion, however, that nine hours should constitute a day's work.

We do not recommend any increase in wages for the day's work, but as these men agree to do in 9 hours as much work as they are now

doing in 10 hours, and as we have cause to believe they are in a position to hold to their agreement, we are willing to recommend the payment of 9 hours' work at the present rate of 10 hours.

We also come to that conclusion because their present wages are low and that during four months in the year it is impossible to work 10 hours, the days being too short.

In conclusion, our recommendations are based on the employees' necessities and the requirement of the company's treasury.

All of which is respectfully submitted,

(Signed) LOUIS G. DEMERS,
Chairman.

(Signed) F. X. GOSSELIN.

Annex to the Report

SECTION I

General Rules

Art. I. (a) A complete list of all the employees according to their seniority rank shall be kept and posted in the office of the chief train despatcher, and a copy thereof shall be sent and kept in each station, for the information of those concerned.

(b) Said list shall be subject to correction upon request and a copy corrected to date shall be transmitted to the President of the Syndicate at the beginning of each year. Said list with all corrections and modifications shall be certified by the Superintendent.

Art. II. (a) Any entry on an employee's record shall be first made known to him.

(b) Upon request, employees shall receive an abstract from their discipline record.

(c) Employees cannot be suspended or dismissed from the service except for serious reasons. They may, however, be retired from the service pending the results of an investigation and a decision shall be given within ten days after such investigation; the accused man may attend such investigation or be represented at the same by a member of the Syndicate.

(d) If he is found not guilty, he shall be paid for all time lost.

(e) Investigations shall be held and decisions rendered with as little delay as possible. Appeals shall be made in writing to the Superintendent within ten days after notice of discipline.

Art. III. Employees called upon to appear in Court or for any other occupation for the Company, other than those mentioned in the present annex and which are assigned to them by an authorized person, and if called upon to go away from home, shall be paid their necessary expenses. Fees of all kinds shall return to the Company.

Art. IV. The Company shall provide each of its employees with a copy of the present rules in the form of a booklet.

SECTION II

Rules Concerning Telegraphers, etc.

Art. I. Any authorized employees, assigned to any telegraph or telephone service of the Railway of any kind or duration, such as train despatcher, relief agent and assistant agent, station agent, incorporated in the following wage scale, shall be recognized as telegraphers.

Art. II. Promotions shall be considered according to merit and ability, and, such being equal, the oldest telegrapher in the service shall have preference.

Art. III. Seniority right can only be exercised in case of a vacant position or a reduction in the number of telegraphers. In such case, the oldest employee in the service shall have preference.

Art. IV. (a) Ten hours within twelve consecutive hours shall constitute a day's work, the choice of hours belonging to the Company.

(b) Overtime shall be paid at *pro rata*.

(c) All work done on Sundays or the following holidays, to wit: New Year's Day and Christmas, shall be paid two hours for each call to duty or a full day for three calls or more within the twelve consecutive hours, the whole at *pro rata* of the work of the employee concerned.

(d) Whenever an employee is called to duty outside of his regular working hours, he shall be paid a minimum of one hour for each call.

(e) In order to get the *pro rata* rate for the payment of telegraphers' overtime, the monthly wage shall be divided by 280.

Art. V. A telegrapher assigned to any service other than his regular position for one week or more, shall receive the wages of the position to which he is temporarily assigned, but such wage shall not be less than the one he was receiving before. If a duty is assigned to him outside of his home terminus, his reasonable expenses shall be paid upon presentation of vouchers.

Art. VI. (a) Any vacant position shall be advertised within ten days through a message, Form 23, or through a circular letter addressed to all telegraphers.

(b) At the expiration of ten additional days, the appointment and assignation shall be made according to the terms of the present section, and the same shall be notified to all the candidates.

(c) All temporary positions for a period of more than thirty days shall be announced and filled as above provided.

Art. VII. Operators may on request obtain leave for 90 days or more provided the Company is in a position to let them off; a further extension of 90 days may be made following a first period of 90 days if the conditions in the service allow it.

Any operator failing to report following expiry of holiday shall be considered as having left the service of the Company.

Notice of his return shall be given either by mail, telephone, telegraph or personally by the operator to the office of the Superintendent at least five days previous to the expiry of period of holiday. This procedure will give necessary time for preparation of required documents and allow the auditor to be ready to make the transfer if said notice is not given as provided, all delay occurring in preparation of documents required by the auditor shall be at operator's expenses.

Art. VIII. Operators shall not be required to shovel snow off the platforms, saw or pile wood, load or unload wood or coal, clean flues, clean or disinfect cattle box-cars or stalls, fill or look after lamps (semaphore) or switches. However, operators are required to see that platforms are kept clean and that semaphore and switch lamps are clean and lighted.

In case of urgency, when employees in charge are absent, operators shall see that lamps are clean, lighted and properly placed. A \$2 allowance shall be made twice a month to agents to cover expenses attached to the cleaning of stations and waiting-rooms.

Art. IX. Operators having to change location are entitled to free transportation on the Roberval-Saguenay lines for themselves, family, dependents,

furnishings, etc. All arrangement to be made must be submitted to and approved by the Superintendent.

Art. X. Operators having been in the service of the Company for three consecutive years or more shall be entitled to two calendar weeks holiday with pay.

Art. XI. The rent rate for houses furnished by the Company to agents shall not be above that now in force, namely, \$5 a month.

Art. XII. Scale of wages for ten hours for twelve consecutive hours per day:—

	Per month	Per hour
Train dispatcher	\$135.00	.52
Train dispatcher (substitute)..	125.00	.48

Station	Position	Per month	Per hour
Ha Ha Bay Jct.	Operator	\$160.00	.61½
Ha Ha Bay Jct.	1st Assistant..	120.00	.46
Ha Ha Bay Jct.	2nd Assistant .	65.00	.25
Port Alfred.. . . .	Operator	160.00	.61½
Port Alfred	1st Assistant..	90.00	.35
Port Alfred.. . . .	2nd Assistant .	65.00	.25
Bagotville.. . . .	Operator	125.00	.48
Bagotville	Assistant	65.00	.25
Chicoutimi	Operator	160.00	.61½
Chicoutimi	Assistant	65.00	.25
Laterrière.. . . .	Operator	125.00	

No additional pay given to operator at Laterrière for supplementary work caused by the night train, as his salary has now been increased to \$125 a month.

SECTION III

Rules Concerning Trainmen

Art. I. The term "Trainmen" applies to conductors, brakemen, engineers, firemen, motormen and trolley-men.

Art. II. Scale of wages per hour:—

	cts.
Conductors.. . . .	45
Brakemen.. . . .	37
Engineers.. . . .	50
Firemen.. . . .	40
Motormen.. . . .	45
Trolley-men.. . . .	25

Art. III. A day's work shall consist of nine hours. Overtime shall be paid at *pro rata*.

Any trainman called on duty then sent back following cancellation of train or who works less than 4½ hours shall be paid for 4½ hours; any such employee working more than 4½ hours but less than nine shall be paid for nine (9) hours.

Art. IV. Conductors and engineers shall report the time of their brakemen and firemen with their own; if there are any mistakes in the time-sheets, these shall be returned to be corrected. The overtime shall be calculated and paid according to *pro rata*.

Art. V. Employees are entitled to thirty minutes for meals, at the ordinary hours for meals, and this time shall be paid for as regular working time.

Art. VI. Employees on duty for 14 hours shall be entitled, on notice being given to dispatcher's office, to an eight-hour rest at the terminals at Laterrière, Bagotville or Ha Ha Bay Junction.

Art. VII. The resting places at the terminal at Laterrière shall be comfortable, well heated and provided with beds and bedding, and free to employees.

Art. VIII. If a locomotive breaks down and must be taken to the shops for repairs, the engineer shall be entitled to claim his seniority rights after twelve hours of idleness. This also applies to the fireman.

Art. IX. Employees attached to mail and express services shall receive an additional amount of \$10 per month for this kind of work; they will be held responsible for this work.

Art. X. All train employees (trainmen) shall be entitled to a travelling permit on the lines of the

Roberval-Saguenay as long as they remain in active service.

Art. XI. The locomotive shall be provided with weatherproof cabins with separate box flags and fuses. These cabins shall be provided with the necessary side curtains running from top of cabin to tank.

The grease-cups shall be filled and the head-lights cleaned by the shop staff.

The tool-boxes shall be installed and taken off by the engineer, and repairs made shall be duly reported in report book for repairs. Brakes and wedges shall be adjusted by the shop staff.

The tender of every locomotive used to push a snowplough shall be covered with tarpaulins.

Art. XII. Employees shall not be required to clean lamps on cars at the Bagotville terminal, but, however, they shall take away from cars all refuse, etc., at any other place or during trip. Engineers shall not be required to fill sand-boxes at shed in which shop staff is working.

Art. XIII. A brakeman shall be competent and have six months experience in his work before another brakeman can be placed on the same train to learn the work. If the conductor finds that the new employee is incompetent, he shall notify by writing the proper authority.

Art. XIV. If an employee is suspended, his suspension shall date from the day he is put out of the Company's service.

Art. XV. If he desires so, the employee will be given a letter stating the reason of his discharge.

Art. XVI. Employees shall appear on the promotion list according to their seniority in service; any employee not promoted at his turn shall be notified of the fact by the Superintendent and reasons given for such procedure.

Art. XVII. The order of promotion for steam and electric railway trainmen shall be as follows: from cleaner to fireman; from fireman to engineer, and from brakeman to conductor. On electric trains—from trolleyman to brakeman; from brakeman to conductor, and from conductor to motorman.

Art. XVIII. Employees refusing promotion or neglecting to qualify for such shall have no right to displace employees accepting position; they shall however retain their seniority rights.

Art. XIX. Employees laid off following reduction of staff will on request obtain a letter indicating period of service and reason for discharge.

Art. XX. If after the 15th of November of every year an employee is without work for a period of fifteen days or more, this employee shall then be entitled to ask for a holiday, the length of which shall be determined by the Superintendent, but in no case shall this holiday period cover more than six months, except, however, if there is a reduction in traffic. If employee does not report on expiry of his holiday period, he shall then lose his seniority rights.

Art. XXI. Enginemen shall be entitled to thirty minutes to prepare locomotives, and motormen 15 minutes to prepare motor before hour of starting. However, in the case of regular steam trains, enginemen shall be on duty one hour before starting time.

Art. XXII. Crews to be on duty for an *extra* between 11.30 p.m. and 6 a.m. shall be called about one hour before starting time.

Art. XXIII. Every steam or electric train shall have a crew of three men exclusive of employees looking after steam or electric locomotives, as the case may be.

Art. XXIV. The Company shall pay half the cost of the summer uniform, as well as half the cost of the winter uniform and the caps, to every trainman in the service for at least five years.

Art. XXV. The crews of the Chicoutimi-West siding shall not have seniority right over the main

line crews, and the crews of the main line shall not either have seniority right over the Chicoutimi-West siding.

SECTION IV

Rules Concerning Maintenance-of-Way Men

Art. I. (a) Nine consecutive hours shall constitute a working day, the dinner hour at noon excluded.

(b) Overtime shall be calculated *pro rata*.

Art. II. Snowplough workers shall be entitled to eight hours rest, if they wish so, after working 16 hours without stop, provided request for such resting period be made at the Bagotville or Chicoutimi terminals; exception to this paragraph will be taken if the main line is blocked and there is no one to do the work.

Art. III. Any foreman of a regular crew temporarily placed with an extra gang putting in ties, laying rails, repairing bridges, etc., shall be entitled to an extra pay of five cents per hour.

Art. IV. If an employee is called on duty after his regular working hours, he shall be entitled to a minimum of three hours work at the regular rate, and a minimum of two hours work may be required.

Art. V. The Company, however, cannot compel employees to interrupt work during the regular working hours in order to make up for overtime work previously done by any employee.

In case of urgency, employees shall not be compelled to work more than 24 hours without stopping if they are not given a rest period of eight hours.

Art. VI. The scale of wages for the various classes of employees in the maintenance-of-way service is as follows:—

Occupation	Locality	Per day of 9 hours	Per hour
Foreman	Section Port Alfred		
	Yard.. . . .	\$4.25	.47
Foreman	Section Chicoutimi-		
	West Yard.. . . .	4.25	.47
Foreman	Other sections .. .	3.75	.42
Maintenance-of-way men	All lines	\$3.00	.33
Conductor or man in charge of snow-plough		4.25	.47
Flanger man		3.00	.33

SECTION V

Art. I. The rates of the above scale shall take effect the first day of January, 1925.

No change to the scale or schedule shall be made without the approval of the Superintendent of the Company and the general committee of the Syndicate, and in the case of any change desired a notice, in writing, 60 days previous to the first day of April 1925 or to the first day of April of any year shall be given by the party desiring change.

CO-OPERATION IN SASKATCHEWAN AND BRITISH COLUMBIA

THE *International Co-operative Bulletin* in a review of the progress of co-operation in Canada, states that the movement has made most progress in Saskatchewan, where it is chiefly in connection with agriculture. The Provincial Minister of Agriculture has, for the past ten years, had a Co-operation and Markets Branch, which recently secured the services of Mr. George Keen, general secretary of the Canadian Co-operative Union, to visit societies and give advice to local societies as to administration, book-keeping, etc. Mr. Keen emphasized the need for securing the co-operation of women in making co-operation a success, and advocated the forming of Women's Co-operative Guilds by the societies.

At the end of 1923 the co-operative societies in that province had a membership of 16,082, and a paid-up capital of \$438,057. During 1923, 47 co-operative associations marketing live stock shipped 744 cars, the receipts amounting to \$657,480; in addition, the farm produce marketed represented a sum of \$49,667. A distributive business of \$2,936,353 had also been done. The aggregate turnover, marketing and distributive, totalled \$3,643,501, while net profits amounted to \$96,110. The grants paid by the Provincial Government under the provision of the Agricultural Socie-

ties Act in the fiscal year 1923-24, was \$104,853, in 1922-23, \$114,866; and in 1921-2, \$111,825.

Co-operation amongst farmers and fruit growers has made considerable advance in British Columbia. Seventy per cent of the present associations date from 1913. At the close of 1923, there were 59 societies of fruit growers, shippers, etc., handling horticultural products; 84 distributive stores and farmers' supply organizations in rural communities; 30 associations for the improvement of live stock, cow testing, etc., and 12 creameries. Included also as co-operative societies were 148 farmers' institutes and 111 institutes. Exclusive of these institutes the number of co-operative associations was 185.

Of the fruit-growers' societies, no less than 20 were incorporated in 1923; the majority of the new societies are in membership with the Associated Growers of British Columbia at Vernon. In the small fruit districts 75 per cent, and in the tree fruit districts about 85 per cent of the fruit is marketed co-operatively.

Prior to 1913 there were periods of enthusiasm for co-operation, especially in the nineties, when a number of societies were formed. The only one of these still in existence is the Vancouver Island Flockmasters' Association.

ARBITRATION OF DISPUTES IN DISTRICT 18, UNITED MINE WORKERS OF AMERICA

Reports of arbitrator in disputes between (a) the Great West Coal Company and its employees, and (b) the Canmore Coal Company Limited and its employees

Disputes in Star Mine

A DISPUTE arose between the Great West Coal Company operating the Star Coal Mine, Alberta, and certain employees of the Company, members of the United Mine Workers of Alberta, District 18, on the rates of pay for certain classes of work. The joint committee representing the Western Canada Coal Operators Association and the United Mine Workers of America, District 18, having failed to agree on the questions at issue, they decided to refer these questions to an independent chairman and accordingly sent a joint request to the Minister of Labour, as provided by the agreement, to appoint a chairman. The Minister appointed Mr. R. F. McWilliams, K.C., of Winnipeg, who delivered his finding at the close of December, 1924.

The matters in dispute related, first to the machine runners' contract rate. It was contended on behalf of the Union that the rate payable to machine-runners on contract work should be \$4.20 per place instead of \$4 as now paid. This claim was based on the fact that in this mine the work is carried on a lower seam and that the work is more difficult in a lower seam than in an upper seam, and that also in the Rosedale mine in the same locality the \$4.20 rate is paid for work in the lower seam. On behalf of the Company it was contended that there was no material difference in the difficulty of the work in the lower seam as compared with the upper, both being subject to variations which are averaged in the rate fixed, also that the Rosedale Mine made a separate agreement with its employees and was not a party to the agreement under which the Star Mine is operated. As to the nature of the work in the lower seam, it appeared that the men had recently in certain places been working in harder material, but it was clearly shown that this was a factor that was frequently varying and in some parts of the mine was getting easier. On the whole it seemed clear to the arbitrator that the machine runners were able to make at the present contract rate an amount substantially above the usual earnings for such work and that they had not shown any sufficient ground for an increased rate on the lower seam.

The other matter related to the price paid for crosscuts. The present contract provides

a rate of \$1.17 for entries and 92 cents for rooms. No specific mention is made of crosscuts. The Company contended that crosscuts are work of the same character as either entries or rooms. If narrow (less than eight feet) they should be paid for at the entry rate; if wide at the room rate, the reason for the difference in rate being exactly the same. The Union contended that there being no rate fixed in the agreement for such work, reference must be had in accordance with the provisions of the agreement relating to new work to "existing prices in the same mine or in other mines in the neighbourhood," and that in that part of the agreement relating to the Alberta Block Coal Company and nine other Companies the point at issue was expressly dealt with and provision made that if crosscuts are "driven at room width and track is laid as in rooms, then, room rates plus one-half of the differential between rooms and entries shall be paid." The Union therefore asked for a rate of \$1.04½ on this rock. The Chairman found that the Company had a strong case on its merits, and that the Union representatives had not shown any substantial reasons why crosscuts of room-width should be paid for at a higher rate than rooms. On the other hand, he found that the men were entitled to call for the carrying out of the terms of the agreement, and the application of the principle of higher pay for narrow work. He concluded as follows:—

I therefore conclude that the principle of the rates paid in the locality should be applied in this case and that crosscuts should be paid for the Star Mine in accordance with the provisions of the last paragraph of the Alberta Block Coal Company's agreement. As the men might have raised this question at any time and did not, they are not entitled to have the increase made retroactive. I fix January 1 next as the date when this decision will take effect.

The representatives of the miners and of the operators having agreed among themselves that clauses 2 to 14 of the Machine Runners' Contract in the Drumheller Valley shall apply also to the Star Mine, my ruling also covers their incorporation in the General Machine Runners' Contract of the Star Mine.

The Chairman further pointed out that friction had arisen in both these cases because of the varying rates paid in the district for apparently similar work. Such variations, he said, were bound to lead to frequent disputes, and an effort should be made to revise all the agreements and establish a more uniform basis.

Dispute in Canmore Mines

In this case application to the Minister for the appointment of an independent chairman was made by the Joint Committee representing the Western Canada Coal Operators Association and the United Mine Workers of America, District No. 18, who failed to reach an agreement. The Minister accordingly appointed the same independent chairman as in the preceding case, his finding being delivered at the close of December.

The first matter in dispute was the price on the Morris seam of the Company's mine. Work on this seam had reached a point when it was possible to make permanent arrangements. Conditions had been such that it was necessary to deal with the seam on the basis of "new work". The difference arose principally from the fact that instead of there being a solid block of coal between two bodies of rock, with only a small amount of rock coming into the coal, the vein in the Morris seam has several layers of alternating coal and rock. This makes necessary so much removal of rock by the miner that it was agreed that an allowance should be made to him for the removal of rock in addition to the rate paid for coal. The provisions of the agreement with respect to the Stewart seam were accepted except as to the additional allowance for removal of rock in crosscuts and pillars and in gangways. The Company was prepared to allow a rate of four-tenths of a cent per inch by one foot by three feet. The men claimed an allowance of one and one-quarter cents, basing their claim on the rate paid in the Brazeau Mine.

The chairman found that the exceptional rate paid in the Brazeau Mine was due to unusual conditions and should also be eliminated from comparison. There remained three standards in support of all of which there appeared to be sound evidence, and he stated that he had considerable difficulty in understanding how there could be so great a discrepancy in the rates paid for the same work. In support of its offer the Company produced a record of the earnings of the men in this seam during part of November last when working on day rate, which showed that after allowing for payment for coal, timber, powder, etc., and reckoning quantity of rock at the average percentage compared to the coal the men had earned \$7.44 per day. It was contended that with the increased production resulting from contract work the miners would at these rates make considerably more than usual wages. There was evidence that on contract work the men make from 20 per cent to 35 per cent more than on day work. The Union representatives disputed the figures only in reference to the

allowance for timber, but claimed that the method of computation by allowing a differential for contract work was not fair. In a number of other mines the rate paid is equivalent to a nine-tenths cent rate and in several others to a six-tenth cent rate. In explanation of so great a discrepancy it was stated that the nine-tenth cent rate was paid only in lignite mines and the six-tenth cent rate in bituminous mines to which latter class the Canmore Mine belongs. Also in some of the mines no allowance is made unless the rock exceeds four inches.

The Chairman's ruling on this point was as follows: "The great discrepancies in the rates paid make a decision on a fair rate very difficult but after the best consideration I can give I have come to the conclusion that a six-tenths cent rate would be fair to all parties and I rule accordingly.

Another point at issue was the price for handling rock in gangways. It was agreed that a substantially higher rate must be allowed owing to the necessity of keeping the gangways constantly cleared. The Company suggested a 60 per cent increase, and as the Union representatives made no other proposal the Chairman fixed the rate at one cent.

A claim by the men for a higher rate for shovelling coal than was paid in the Stewart seam was rejected by the Chairman as the conditions in these two seams were similar. The Union further claimed an allowance in the event of the seam going below normal thickness. The Company claimed that such a provision applied only in lignite mines but was unheard of in bituminous mines. The Chairman found that no reason had been shown for such an unusual provision, intended to cover a contingency which had not yet arisen.

The second group of questions at issue was in connection with payment for cap rock in the Stewart seam. It appeared that there had recently been found in this seam a layer of rock above the coal, but below the body rock which must either be taken down or be shored up. This layer varies from three to eighteen inches in depth and its fall depends on the strength of the arch. The men asked for a rate of one and one-quarter cent as allowed in the Brazeau mine, which also is the usual rate for brushing (including gobbing). The Company contended that the work in the Brazeau Mine was much heavier as the seam there was from 12 to 18 feet in thickness and that much of it required double handling, while in the Canmore mine the seam was about eight feet. The Chairman found that the miners had given sufficient evidence to warrant an allowance for the removal of this rock on the basis of cap rock, but that the conditions did not warrant as high a rate as

in the Brazeau Mine. He thought a rate of one cent would be fair. If it proved excessive the Company could protect itself by methods of shoring. The rate will not however be retroactive.

At the conclusion of the discussion on the foregoing points the Chairman was asked to deal with the following questions:—

(1) *The Union's claim for the definite fixing of a contract price for slopes.*—The Chairman's statement follows:—

It appears that the Company has run a number of crosscuts at a considerable slope, all but the last of these having been paid for at a uniform contract rate. The seventh slope was paid for on day rates. The miners ask for payment for the work done in this seventh slope on the same contract rate as the previous slopes and the fixing of this rate as a permanent rate for such work. The Company contends that the contract rate paid in these six slopes was a matter of independent agreement in each case and that no general agreement was ever made or any general rate established. The Union representative understood that a general agreement had been made but they had not the evidence available at the hearing to establish this claim. I ruled that the onus was on the union to establish the fact of a general agreement having been made if the Company disputed it. If such an agreement were proven to have been made it would apply to the work done on the seventh slope. As to the fixing of a general contract rate on all future slopes nothing can be done as neither party was at the time ready with the evidence necessary.

(2) *Change in Pitches.*—The men claimed that the pitch in the pillars in the Stewart seam had so decreased as to create a new condition and to call for the fixing of a new rate. The Chairman's ruling was as follows:—

The difficulty in determining whether a new condition has arisen from the fact that the change is one of degree rather than one of kind, and that the variations in this mine have been irregular. No application for a special allowance was made by the miners when the pitch went down to about twenty degrees, and the Company contends that as between a twenty degree pitch and a nine degree pitch there is no material difference in the nature of the work. After considerable discussion I ruled that there was sufficient evidence of a new condition to warrant the claim being gone into.

The men contended that a similar change had been made in the Hillcrest Mine in 1920 but it appeared that this mine was not one of those in the Operators' Association.

On further inquiry it appeared that the question of the proper difference in rate in pillars with a high pitch and flat pillars had been gone into in an arbitration presided over by Mr. James Smith in September, 1923, in regard to the Luscar Collieries. After taking considerable evidence Mr. Smith had fixed the rate in pitch pillars at seventy cents per long ton and in flat pillars at eighty cents per long ton after taking into account certain compensatory advantages in the flat pillars. It did not appear from his finding that there was any question of degree in that case it being assumed that all pillars were either pitch or flat and no angle being given to draw a line between them. While I am not bound to follow this finding it ought to be given every consideration and followed so far as circumstances are the same unless there is clear evidence to the contrary.

After going into this matter at length I came to the conclusion that it was impossible to give a satisfactory decision without having before me the evidence of earnings which have heretofore been made by the men in the different parts of this mine and the evidence of what could be earned in the present low pitches. I therefore proposed that the matter should be stood over for three months until the necessary evidence can be procured. At the same time I suggested that the parties might agree on a rate which I suggested as the best conclusion I could come to from incomplete evidence. After consideration both parties agreed that it would be better for me to give a definite decision on such evidence as was now available rather than leave the matter in a state of uncertainty for the next three months with the consequent liability to friction. I accordingly agreed to reconsider the suggestion and make a finding.

The evidence appears to show that there is less difference between the pitches in this mine than those in the Luscar mines but that there is sufficient difference from the pitch existing in this mine when the present rates were fixed to warrant some allowance for the increased handling of the coal required where there is little pitch. Mr. Smith allowed an increase of 10 cents or one-seventh or fourteen per cent in the flat pillars. I think an increase of 10 per cent would be fair when applied to the conditions in this mine wherever the pitch is less than 15 degrees. I am confirmed in this view by a comparison of the rates paid in the Canmore Mine and those allowed in the Luscar mine. The rate paid at Canmore is equal to 66 cents per long ton and with an increase of 10 per cent will be about 72½ cents. I therefore find that the miners are entitled to an increase of 10 per cent in the present rate for the work of removing pillars where the pitch is less than fifteen degrees.

All the above findings which involve any change from the existing practice were to become effective on January 1, unless otherwise agreed between the parties.

Apprenticeship in Building Trade

The seventh annual convention of the Association of Canadian Building and Construction Industries will be held at Montreal from the 28th to the 29th of the present month, as was noted in the last issue of the LABOUR GAZETTE. One of the principal questions to be discussed will be that of apprenticeship, particularly in the bricklaying trade. It is stated that the Association will probably ask the Provincial Government to establish schools, or conduct technical courses at Montreal, Quebec, Sherbrooke, Three Rivers and other industrial centres. The aim is to have boys apprenticed for three years, spending seven months each year at work and five months in school. Many contractors are in favour of paying the boys while they are in school in order that suitable boys may offer themselves for apprenticeship and training.

A feature of the convention will be a seven-hour contest by apprentices in bricklaying and carpentry. Contractors attending the convention have been invited to bring their apprentices to compete for prizes.

PROCEEDINGS OF THE CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

THREE new decisions of the Canadian Railway Board of Adjustment No. 1 have been received by the Department. This Board was established under an Order in Council dated July 11, 1918, the war still being in progress, its purpose being to secure uninterrupted service on the railways. The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the railway brotherhoods. A summary of the recent decisions of the Board is given in the following paragraphs. Summaries of earlier decisions appeared in the issue for November, 1924, and in previous issues.

Case No. 220—The Canadian National Railways (Atlantic Region) and the Brotherhood of Railroad Trainmen.

A train on mixed service was held up by snow on the return journey of its run and the crew was obliged to return to the distant terminal from which it was ordered for plough service on two trips, not returning to the home terminal for seven days from the time of leaving. The crew put in for continuous time for the seven day period. The railways had paid them continuous time for each trip.

The Board denied the employees' claim on the ground that the crew was paid considerably more money than it would have received if covering its regular assignment, and because the members of the crew resided at the distant terminal where they were laid up, and had therefore enjoyed the comforts of home, avoiding extra expense that would otherwise have been incurred.

Cases Nos. 221 and 222—These cases were outlined in the November issue of the *Labour Gazette* (pages 927 and 928).

Case No. 223—The Canadian National Railways (Atlantic Region) and the Brotherhood of Railroad Trainmen.

Rule 34 A of the Trainmen's schedule provides that unassigned crews will run "first in first out" of terminals on their respective subdivisions. A conductor in unassigned service was detained at the distant terminal, another conductor on turn-around service, who arrived later, leaving $6\frac{1}{2}$ hours sooner on the return trip. The Railways contended that as the latter was on continuous duty, he could run ahead of a conductor on "straight away" service.

The Board sustained the employees' claim for the enforcement of the Rule 34A, holding that local arrangements as to the different ways of paying crews should not interfere with its application.

Case No. 224—The Canadian National Railways (Atlantic Region) and the Brotherhood of Railroad Trainmen.

An agreement was entered into in 1914 between the general manager of the Canadian Government Railways and representatives of the conductors and trainmen to the effect that the crews manning certain four trains could be pooled, and would be reduced in number from six to five. In applying this agreement it was found that this reduction created a grievance for a number of old employees manning these trains, and further application of the agreement was subsequently postponed until such time as the old employees referred to should have retired or left the service. All these retirements had taken place by September, 1924, and in that month therefore the Railways put into effect the original agreement of 1914, providing that the four trains should be handled by five crews. The employees contended that about three years ago when the Railways pooled certain trains, causing a reduction of one crew, they had proposed to amend their agreement by conceding to the Railways the right to rearrange pool runs and assignments in order to reduce as far as possible the payment of premiums to conductors and trainmen, the understanding being that crews would not be reduced in number or home terminals changed. This offer was declined, they stated, and the Railways had continued to pool crews, causing a reduction in the number of crews, and in some cases changing the established home terminal. The employees claimed that the question was covered by Article D section (b) of their agreement, which read:—

(b) Reduction in crews or increases in mileage, in passenger train service from assignments in effect January 1, 1919, shall not be made for the purpose of offsetting the above increases in wages, this, however, is not to be understood as preventing readjustment of runs in short turn-around, branch or suburban service that are paid under the minimum rates for the purpose of avoiding the payment of excess mileage or overtime that would accrue under these rules, without reducing the number of crews.

The Board denied the employees' claim in so far as affected the particular assignments referred to in the claim.

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1924

THE number of strikes and lockouts in Canada in existence at some time or other during the month of December was two, the same number as in November. The time loss for the month was less than in December, 1923, being 1,845 working days, as compared with 28,693 working days in December, 1923.

Date	Number of disputes	Number of employees involved	Time loss in working days
December, 1924.....	2	95	1,845
November, 1924.....	2	313	4,808
December, 1923.....	13	2,446	28,693

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees, and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

Two disputes, involving 95 workpeople, commenced during December, and one remained unsettled at the end of the month. The record does not include minor disputes as described in the previous paragraph, nor does it include any dispute after information has been received indicating that employment conditions are no longer affected, but which the union or organization concerned has not yet called off. Information is available as to three such disputes, namely,

moulders at Galt, commencing August 2, 1922; moulders at Guelph, June 2, 1924, and street railway employees at St. John, N.B., June 29, 1921.

The figures printed are inclusive of all strikes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received till some time after its commencement.

CLOTHING WORKERS, MONTREAL, QUE.—On December 2, 70 clothing workers went on strike because the company violated the agreement with the union by discharging several of its employees and then refused to appear before a Board of Arbitration provided for in the agreement. The employer closed down part of the operations in the factory affected by the strike and opened a factory in another locality. At the end of the month this strike remained unterninated.

HOTEL EMPLOYEES, TORONTO, ONT.—Twenty-five chambermaids employed in a hotel went on strike December 3, in protest against longer hours, without payment for overtime, alleged to be in violation of the Minimum Wage Act of Ontario. A committee of the District Trades and Labour Council negotiated with the employer to have the girls reinstated but were informed that the girls had been given an opportunity to return and had been replaced by other workers. The Council then placed the case before the Minimum Wage Board of Ontario, with claims for extra pay for overtime worked in the past.

STRIKES AND LOCKOUTS DURING DECEMBER, 1924

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
Strikes and lockouts commencing during December, 1924.			
MANUFACTURING—			
<i>Clothing:</i> Clothing workers, Montreal, Que.	70	1,820	Commenced December 2, against discharge of employees. Unterminated.
SERVICE—			
<i>Domestic:</i> Hotel employees, Toronto, Ont.	25	25	Commenced December 4, against longer hours without payment for overtime. Strikers' places filled.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING NOVEMBER

THE British *Ministry of Labour Gazette* for December contains the following table which analyses the disputes in progress in November, 1924, in Great Britain and Northern Ireland by groups of industries, and indicates the number of workpeople involved in the establishments concerned, and the approximate time lost during the month in all disputes in progress. (Disputes involving less than 10 workpeople, and those lasting less than one day, are not reckoned).

Of the 40 disputes beginning in November, 9, directly involving 600 workpeople, arose out of demands for advances in wages; 15 directly involving 2,600 workpeople, on other wages questions; 7 directly involving 300 workpeople, on questions respecting the employment of particular classes or persons; and 9, directly involving 1,000 workpeople, on other questions. The total number of workpeople involved in these disputes (including those thrown out of work at the establishments where the disputes occurred, though not themselves parties to the disputes) was approximately 5,000. In addition about 10,000 workpeople were involved, either directly or indirectly, in 32 disputes which began before November, and were still in progress at the beginning of that month. The number of new and old disputes was thus 72, involving about 15,000 workpeople, and resulting in a loss during November of about 134,000 working days.

Settlements were effected in the case of 28 new disputes, directly involving 3,000 workpeople, and 15 old disputes, directly involving 3,000 workpeople. Of these new and old disputes, 10, directly involving 1,000 workpeople, were settled in favour of the workpeople; 14, directly involving 2,000 workpeople, in favour of the employers; and 19, directly involving 3,000 workpeople, were compromised. In the case of 3 disputes, directly involving 1,000 workpeople, work was resumed pending negotiations:—

Groups of industries	Number of disputes in progress in November			Number of workpeople involved in all disputes in progress in Nov.	Aggregate duration in working days of all disputes in progress in Nov.
	Started before 1st Nov.	Started in Nov.	Total		
Mining and quarrying.....	7	4	11	6,000	47,000
Metal, engineering and shipbuilding.....	5	8	13	1,000	11,000
Textile.....	3	6	9	3,000	26,000
Transport.....	2	8	10	2,000	7,000
Other.....	15	14	29	3,000	43,000
Total, Nov., 1924..	32	40	72	15,000	134,000
Total, Oct., 1924...	37	37	74	36,000	377,000
Total, Nov., 1923..	15	38	53	54,000*	1,016,000*

*A dispute involving about 40,000 boilermakers, etc., in Federated shipyards accounted for most of the loss of time in November, 1923.

LABOUR LEGISLATION IN BRITISH COLUMBIA IN 1924

THE Sixteenth Legislative Assembly of British Columbia opened on November 3 and continued until December 19, 1924. A summary of the principal measures directly affecting labour is given in the following paragraphs:—

Licensing of Barbers.—An act to incorporate the barbers of the province was the subject of considerable discussion in the Legislature. The Barbers Act as finally passed, applies to persons operating barber shops in the strict sense, and excludes "beauty parlour or hair-dressing shops patronized by women and children only." It provides for the registration of The Barbers' Association of British Columbia, all recognized barbers being required to become members. A board of examiners in barbering is created, composed of

three persons, one a master barber, and two others who are journeymen barbers; these persons to be elected by ballot, and to hold office for three years. Neither the Association nor the Board has power to regulate or interfere with the prices charged to the public. Applicants for registration as barbers must submit health certificates, and evidence of skill in the trade, and certificates are to be kept posted in the shops. Certificates may be revoked by this Board, after due notice to the persons concerned, on account of misconduct, disease, lack of skill, etc., but persons who are dissatisfied with any action of the Board may appeal against any of their decisions to the courts. The Board will hold public examinations at least four times in each year, the scope of the examinations and

methods of procedure being fixed by them. Certificates are to be renewed each year on payment of a renewal fee of \$2. The rule as to apprentices is as follows: apprentices must serve under a licensed barber and be registered as apprentices, the registration fee being \$2. The apprentice's premit card must be kept posted up in the shop where he works. An apprentice who has so worked for one year becomes eligible for membership in the Association. Barbers practising without a certificate being liable to a fine up to \$15 or 14 days' imprisonment for the first offence, and up to \$50 or 30 days for subsequent offences. The Barbers Act does not apply in unorganized territory, or in municipalities where the population is less than 750 persons, or incorporated villages.

Inspection of Industrial Plants.—Certain administrative changes were made to reduce existing overlapping in the work of inspecting industrial plants in the province. The Workmen's Compensation Board, in addition to its other duties is to have charge of the administration of the Electrical Energy Inspection Act, formerly under the supervision of the Minister of Public Works of the province. All the inspectors, clerks and other employees engaged in the administration of the Act are to be civil servants within the meaning of the Civil Service Act. To the Workmen's Compensation Board was similarly assigned the duty of administering the Boiler Inspection Act. A new section was added to the Act forbidding the painting or operation of any steam engine or fly wheel which has been subjected to or damaged by fire, unless it has been first inspected and approved by an inspector, the penalty for the infraction of this provision being up to \$500.

Fortnightly Pay.—The Semi-Monthly Payment of Wages Act (a measure enacted in 1917 to provide for such periodical payments in connection with work in mines, foundries and machine shops, lumbering, shipbuilding, pulp and paper mills and fishing) was amended by the raising of the penalty for infractions of the act from between \$25 and \$100, to between \$100 and \$500.

Mothers' Pensions.—Important amendments were made in the Mothers' Pensions Act of 1920. Provision was made for the creation of a Mothers' Pension Board to administer the act, which has hitherto been in charge of the Workmen's Compensation Board. The new Board, however, is to consist of the members of the Workmen's Compensation Board, with the addition of one other member, who must be a woman, and who may be appointed either by an order in council, or by

the existing Board. The chairman of the Compensation Board is to be chairman of the Mothers' Pension Board, and may be paid out of the fund provided for the administration of the Act, such additional salary, up to \$1,000, as may be determined by the Lieutenant Governor in Council. The definition of "mother" under the act was amended by a new subsection which entitles to a pension a widow whose husband was domiciled in the province "at the time of the appearance of the disability which caused his death," instead of "at the time of his death," as in the original act. Similarly, the provision of a pension for a woman whose husband is unable to support the family by reason of total disability, was limited by the addition of a proviso that such total disability must have resulted from sickness or accident "at a time when he was domiciled in the province, and which disability may reasonably be expected to continue for at least one year." The desertion allowance was also further restricted by the addition of the condition that, to have a pension, a wife must have been "deserted for at least two years by a husband domiciled in the province at the time of the desertion, but who does not reside or own property therein at the date of her application for an allowance." A new subsection is added to the effect that a woman is not to be debarred from receiving an allowance by the fact of having, in addition to the necessary household and personal possessions, personal property up to \$500, or real property assessed at \$1,500 above encumbrances thereon. By another amendment the pension may be discontinued if the mother ceases to be a fit or proper person to have custody of her children. On the other hand provision is made in cases where a mother dies leaving a child or children under 16 years of age, for the continuance of her pension to the relatives who assume care of these children, subject to the Board's recommendation.

Women's Institutes.—Provision for Women's District Institutes was made by an amendment to the Agricultural Act, the women's institutes within a district being authorized to organize a Women's District Institute to co-ordinate the work of the local institutes. Besides these district institutes there will be a Provincial Women's Institute, all members of local institutes being members also of the provincial institute. The provincial organization will have a Board of five directors, whose expenses in organization work may be defrayed out of money voted by the Legislature.

Licensing of Workmen.—Provision was made by an amendment to the Creameries and

Dairy Regulation Act for the licensing of cream graders, the existing act providing only for the licensing of persons operating creameries and dairies, and of milk testers. The Motor Vehicle Act was amended so as to require all drivers of motor cars to take out licenses. Formerly only persons employed to drive for wages were required to carry licenses. The definition of "professional engineer" as given in the Engineering Act, was amended by including among the duties already outlined that of reporting on, designing or directing the construction of any works which call for such experience and technical knowledge as are required by the Act for the admission by examination to membership in the Association of Professional Engineers of the Province of British Columbia. The working of the subsection as to the licensing of non-resident engineers was changed to permit the recognition, under certain conditions, of the qualifications of engineers who have been trained outside Canada. The "Act relating to trade and other Licenses without the Boundaries of Municipalities" was amended by the reduction from \$25 to \$12.50, payable every six months, of the licensing fee to be paid by conveyancers, real estate and land agents having an office or place of business outside the limits of a municipality.

Co-operation.—The Co-operative Association Act was amended by the insertion of stricter provisions in regard to the enforcement of co-operative marketing contracts between an Association and its members.

An amendment to the Railway Act which is of interest from the standpoint of public safety enables the Minister of Railways to require the removal of any obstructions to the view of railway crossings, such as trees, buildings, earth, etc., so as to diminish the danger at any highway crossing.

Old age Pensions.—The following resolution was carried by the Legislature unanimously:—

Whereas it is the announced policy of the Federal Liberal Party in Canada that an "adequate system of insurance against dependence in old age should be provided in so far as is practical and having regard for Canada's financial position";

And whereas it is accepted as between the Dominion Government and the Provincial Governments that the Dominion has jurisdiction in respect of questions having to do with health insurance, unemployment, and old-age pensions, and the Provinces in respect of such other social legislation as may be in the public interest;

And whereas the Government of the Province of British Columbia passed the "Mothers' Pensions Act" in the year 1920, and has since been administering it at a cost of approximately \$500,000 per annum;

And whereas State responsibility in the matter of the proper maintenance of aged citizens has been recognized by Great Britain, Australia, New Zealand, and a number of the nations of the Continent of Europe;

Therefore be it resolved, That this House puts itself on record as approving the principle of old-age pensions and as being favourable to the enactment of legislation by the Dominion Government bringing the same into effect in Canada at an early date.

And be it further resolved, That an humble Address be presented to His Honour the Lieutenant-Governor, praying that he will cause to be conveyed to the Secretary of State for Canada the foregoing Preamble and Resolution.

Unemployment and Oriental Labour.—The following resolution was adopted:—

"Whereas this Province has an unemployment problem; and whereas it is desirable that our employers of labour should do their utmost to give employment to men and women of the white race;

"Therefore be it resolved, That this House record its opinion that all employers of labour within this Province should employ members of the white race exclusively."

Another resolution bearing on the oriental immigration question was passed as follows:—

Whereas there were in British Columbia, according to the last Dominion census, 23,532 Chinese and 15,006 Japanese;

And whereas statistics show that there is a very large natural increase of Orientals in British Columbia, multiplying each succeeding year to an alarming extent;

And whereas the standard of living of the average Oriental is far below that of the white man, thus enabling him to live comfortably on a much lower wage than our white men;

And whereas the Orientals have invaded many fields of industrial and commercial activities to the serious detriment of our white citizens;

And whereas considerable unemployment always exists in British Columbia, partly due to the fact that large numbers of Orientals are filling situations in our industrial and commercial life which could be filled by our white citizens;

And whereas the Orientals are fast invading the commercial areas of many municipalities and districts of British Columbia, carrying on commercial and industrial pursuits;

And whereas many of our white merchants are being forced out of business by such commercial and industrial invasion;

Therefore be it resolved, That this House go on record as being utterly opposed to the further influx of Orientals into this Province; and, further, that this House places itself on record as being in favour of the enactment of such amendment to the "Immigration Act of Canada," as is necessary to completely prohibit Asiatic immigration into Canada;

Be it further resolved, That this House is also of the opinion that the field of industrial and commercial activities of all Orientals now in Canada, and particularly British Columbia, should be restricted by legislation.

And be it further resolved, That an humble Address be presented to His Honour the Lieutenant-Governor, praying that he cause a copy of this Resolution to be transmitted to the Hon. the Secretary of State or other proper official at Ottawa, for presentation to His Excellency the Governor General in Council.

Be it further resolved, That the Government of the Dominion of Canada be respectfully requested to grant adherence on the part of Canada to no treaty or binding international obligation in any form whatsoever having the effect of limiting the authority or power of Provincial Legislatures in respect of the regulation of social and industrial activities within the Provinces;

and, further, that the Government of the Dominion of Canada be respectfully requested to forthwith take the action necessary to bring about the denunciation of any and all treaties in so far as the terms and provisions of the same have the effect of depriving the Dominion of Canada of the power of regulation, control, and prohibition of Asiatic immigration.

Acts not Passed.—Among the acts introduced during the session, but not passed, were the following: "Act to amend the Women's

and Girls' Protection Act" (i.e. by prohibiting the employment of white girls and orientals in the same dwelling); an "Act to amend the Fire Departments Hours of Labour Act Amendment Act" and an "Act to amend the Fire Departments 2-Platoon Act Amendment Act"; an Act to amend the Master and Servant Act (regarding the workmen's choice of a medical attendant).

BRITISH COLUMBIA HOURS OF WORK ACT, 1923

Exemptions allowed by Board of Adjustment from 8-hour day provision

THE Board of Adjustment under the Hours of Work Act of British Columbia, 1923, has issued the following regulations, which have been approved by the Lieutenant-Governor in Council, and published in the British Columbia Gazette:—

1. Under section 10 of the Act:—

Section 9. (2) Under the provisions of section 10 of the "Hours of Work Act, 1923," and for the purpose of carrying into effect the provisions of the said Act according to their true intent, the Board of Adjustment, subject to the approval of the Lieutenant-Governor in Council, after inquiry made pursuant to the said Act, hereby makes the following regulations:—

All workers employed in the ship-building and metal trades industries shall be permitted to work fifteen hours per man per month over and above the limitations of hours contained in section 3 of the said Act, in order to execute work necessary to keep other industries in operation.

A record of such overtime must be reported monthly to the office of the Board of Adjustment, Parliament Buildings, Victoria, B.C., in a form prescribed by the Board for such purpose. A copy of said form is hereto attached. [Form omitted.]

In all industries which use steam as a motive power and which operate on a one-shift basis, the engineer and fireman in charge of such plants shall be allowed to work overtime to the extent of one hour and a half per day to cover preparatory or complementary work.

2. Under section 9 of the Act:—

Section 10. (1) Having regard to the nature and conditions of the industrial undertakings hereinafter mentioned, the condition of employment, and welfare of employees, the Board of Adjustment, after inquiry held pursuant to section 8 of the "Hours of Work Act, 1923," and subject to the approval of the Lieutenant-Governor in Council, hereby exempts from the operation of the said Act, to the extent hereinafter stated, the industrial undertakings and workers engaged therein hereinafter mentioned, namely:—

All workers employed in the logging industry as operators of launches; all persons engaged in booming operations; all workers in the said industry engaged as operators of transportation systems, such as railway crews, workers engaged in handling logs by trucks or horses, and engineers employed in the operation and upkeep of donkey-engines.

Section 10. (2) The fishing industry and all its attendant branches, such as the canning or otherwise preserving of fish and all by-products of fish.

Section 10. (3) All workers in cook and bunk houses shall be exempt from the provisions of the said Act.

Trial by Jury in Cases of Alleged Contempt of Court

Labour leaders in the United States have expressed the opinion that alleged abuses in the use of injunctions issued by Federal courts in labour disputes will be diminished in consequence of the recent judgment by the Supreme Court of the United States granting the right of trial by jury in cases of contempt of court in connection with alleged violations of such injunctions. The circumstances in this case were as follows:—

In 1922, Federal District Judge Luse, sitting in Superior, Wisconsin, enjoined striking shopmen on the Chicago, St. Paul, Minneapolis and Omaha railroad from having more than one picket "at each point of ingress or egress" of the railroad shops. The railroad management claimed that shopmen at Hud-

son, Wisconsin, were violating the court order and ten of the strikers were cited for contempt. They were brought to Superior and demanded a jury trial, as provided in the Clayton law. Judge Luse refused the request on the ground that the Clayton law did not apply in this case, and the shopmen were given various sentences, ranging from 15 days in jail to fines of \$100. Appeal was made to the federal circuit court at Chicago, but Judge Luse's decision was sustained. The case was then carried to the United States Supreme Court which reversed the decision of the lower court, and found that the provision of the Clayton Act in reference to the right of trial by jury was applicable to the case.

RATES OF ASSESSMENT FOR WORKMEN'S COMPENSATION IN NEW BRUNSWICK FOR 1924

IN accordance with the provisions of the Workmen's Compensation Act of New Brunswick, the Board has given notice to the employers in the various classes of industry in the Province of the rates of assessment to be charged against them in 1925 for the purposes of workmen's compensation, these rates being based upon estimates of the amounts required to provide funds in each of the classes sufficient to meet all claims for compensation payable during the coming year. The rates that were charged against the principal classes of industry last were given in the LABOUR GAZETTE for January, 1924, (page 29).

The industries in which the rates of assessment have been changed for 1925 are shown in the following table. These changes are of interest as indicating to some extent the character of the accident record of the various classes of industry concerned.

Class I. (Mining, quarrying, etc.).—	1925	1924
Quarrying, etc..	\$3 50	\$3 00
Mining coal.. . . .	4 00	3 50
Mining coal (stripping operation).. . . .	3 00	2 75
Manufacture of brick, tile, etc..	2 50	2 00
Manufacture of cement, etc..	2 25	2 00
Stone dressing or cutting, etc..	50	70
Plaster mills.. . . .	70	1 00
Class II. (Lumbering, saw-mills, etc.).—		
Saw-mills, etc..	4 50	4 00
Planing & moulding mills, etc..	2 25	2 00
Logging, cutting timber, etc..	4 25	4 00
Pulp mills, etc..	1 70	2 00

Class III. (Manufacturing steel, etc.).—		
Manufacture of saws, skates, stoves, tools, etc..	1 50	1 25
Car building; engines, iron and steel foundries, etc..	1 50	1 25
Garages, etc..	1 10	1 00

Class IV. (Manufacturing-miscellaneous).—		
Manufacture of boots & shoes, leather goods, etc..	75	50
Bakeries, including delivery.. . . .	64	60
Cutting & storing of natural ice, handling, etc..	2 00	1 70
Canning fruit, vegetables, fish, etc..	1 75	1 50
Manufacture of beverages, etc..	1 50	1 00
Manufacture of fertilizers, etc..	2 00	1 50
Manufacture of dairy products.. . . .	1 25	70
Manufacture of biscuits, etc..	70	60
Sugar refineries.. . . .	1 75	1 50
Manufacture of boxes, cardboard & paper.. . . .	40	50

Class V. (Building construction).—		
Shipbuilding (wood).. . . .	2 00	2 50

Class VI. (Construction of bridges, electric railways, etc.).—		
Bridge construction (wood).. . . .	4 25	4 00
Construction electric power lines, etc.. . . .	1 00	1 20
Roads and streets.. . . .	2 00	1 80
Water works maintenance.. . . .	80	1 00
Sewers and water works.. . . .	1 75	2 00
Trenching for pipes.. . . .	1 75	1 50
Telegraph and telephone operation, extension, etc..	3 00	2 00

Class VII. (Storage, dredging, etc.).—		
Express companies.. . . .	80	1 00
Stevedoring Bay of Fundy.. . . .	4 50	3 50

PENSIONS FOR RAILWAY EMPLOYEES IN CANADA

SOME account was given in the LABOUR GAZETTE for January, 1924, of the pension scheme on the Grand Trunk Railway system, the benefits of which had then recently been extended to employees on the western lines of the Canadian National, who had not formerly been included under any pension scheme. When that action was taken it was intimated that it was only a temporary expedient, and that a more general scheme would be evolved that would include the existing Grand Trunk, Intercolonial and any other pension systems that have been in effect in any part of the present Canadian National Railways. Action has since been taken in this direction, and certain proposals considered by the employees in some districts, of which further mention will be made in a future issue. The following pages give an outline of the superannuation system that has been in effect on the Inter-

colonial Railway since 1904. Some information is also given on the similar provision that is made by the Canadian Pacific Railway Company for their employees on reaching the age of retirement.

Superannuation on the Intercolonial Railway

The following information is taken from the constitution of the Intercolonial Railway Employees' Relief and Insurance Association:—

All permanent male employees of the Intercolonial Railway are regular members of the Association during their employment provided their ages do not exceed 50 years at the time they enter the permanent service of the Railway, and provided also that their admission to regular membership is recommended by the Executive Committee of the district in which they are employed, and is subsequently approved by the General Executive Committee.

All permanent male employees under 50 years of age are required to fill in a form specifying that the employee is in perfect health, that he has never been afflicted with any sickness, or physical or mental defect, which would tend to shorten his life or incapacitate him from the performance of his duty as an employee of the Intercolonial Railway, etc., etc.

It is optional with permanent female employees, whether they enter any feature of the Association or not. They are allowed to become members of the Sick and Accident feature on the same terms and conditions as male employees under 18 years of age.

When a member ceases to be employed in the railway service, his membership terminates from that date, unless he has within 20 days thereafter, advised the general secretary in writing that he wishes to continue in the insurance fund. A member not employed in the railway service is not eligible to enter a higher class than that in which he was at the time of leaving the Intercolonial Railway service.

All male members over 18 years of age are required to contribute 40 cents per month, except conductors, train baggagemen, brakemen, engine drivers and firemen, yard-masters, shunters and switchmen, who pay 50 cents.

Male employees under 18 years of age contribute to the sick fund at half rates, and are entitled to half the benefits. Upon attaining the age of 18, they contribute full rates and are entitled to full benefits.

Female employees who become members of the sick and accident feature, contribute to the sick fund at half rates, and are entitled to half the benefits.

All fees and assessments are deducted from the pay of employees on the pay rolls, and the paymaster pays the money as he may be directed by the general executive committee.

The sick allowance is at the rate of \$3 per week of 6 working days, for 26 weeks. In no case must payment of sick indemnity exceed 26 weeks in any one year, such year to commence on July 1 and end on June 30 in each year.

A member after receiving sick benefits for 26 weeks, is not again entitled to go on the funds until he has returned to his work, and has been employed in the performance of his duty for at least 464 hours. In computing this time in the case of trainmen and engine-men, ten hours are allowed for each day when actually at work, and ten hours for each day when not actually at work, if subject to call. No sick allowance is given for less than one

week. No member is entitled to sick allowance unless notice of his illness be given to the proper official without delay.

Medical attendance and medicine is furnished members when they are disabled and unable to work. In case of prolonged sickness, where the constant attendance of a physician is not required, the member must, if able, visit the physician's office at least once a week to receive his certificate. A member who suffers no loss of pay owing to his ailment, is not entitled to special or hospital treatment at the expense of the Association.

The insurance fund is divided into three classes, designated A, B and C. Every male employee must join one class, with the option to those under 50 years of age to join, either of the three classes. Those over 50 and under 60 are limited to classes B and C, and those over 60 to class C. All permanent male employees of the Intercolonial Railway are admitted to class C without medical examination. All applicants for membership in classes A and B must pass a medical examination at the hands of a medical officer of the Association. The following sums are required to be paid to persons totally disabled, or to the heirs or assigns of deceased members:—For class A, \$1,000; for class B, \$500; for class C, \$250.

Upon the death or total disability of a member in the insurance section, every surviving member is required to pay an assessment proportionate to the amount of his insurance, made up on the following basis: one member of class A is counted as equal to four of class C; and one member of class B as equal to two of class C. The total of these added to the total of class C, is divided into the amount to be raised, and the product will represent in cents, the amount to be paid by each member of class C. Members of class B pay twice the amount, and members of class A four times the amount, paid by members of class C. Should the assessments produce more than the above sums, the surplus is applied toward the payment of death or total disability claims.

The insurance money which may be collected from death or total disability levies, is paid to the totally disabled person, or to the person or persons named by the deceased member. Failing such person or persons in the latter case, it is paid to the member's widow, failing his widow, to the executors or administrators of deceased member. Any regular member of the Association may make claim for total disability allowance.

Work in 1923.—The statement of receipts and expenditures in connection with the Provident Fund, for the calendar year 1923 shows

that contributions made by employees during the year, being one and one-half per cent of their monthly salary and wages, were \$282,290.62. The contributions by the railways during the same period totalled \$100,000, this being the maximum amount they may, under the Provident Fund Act, contribute in any one year. The further amounts of \$47,387 was provided to increase the retiring allowance of all retired employees receiving less than \$30 per month, in order that the minimum allowance now paid under the act, namely \$20, might be increased to \$30 in accordance with a vote in the estimates whereby an amount was placed in the estimates to supplement retiring allowances payable under the provisions of the Intercolonial and P.E.I. Railway Employees' Provident Fund. During 1923 the sum of \$478,893 was paid out of the Fund for retiring allowances.

Superannuation on the Canadian Pacific Railway

The Canadian Pacific Railway Company, in 1902, established a superannuation system for officers and permanent employees, who have reached an age when they are unequal to the further performance of their duties. The system calls for no contribution from the employees themselves. In a statement prefacing the rules and regulations of the Pension Department the President of the Company said: "The Company hopes, by thus voluntarily establishing a system under which a continued income will be assured to those who after years of continuous service are by age or infirmity no longer fitted to perform their duties, and without which they might be left entirely without means of support, to build up amongst them a feeling of permanency in their employment, an enlarged interest in the Company's welfare, and a desire to remain in and to devote their best efforts and attention to the Company's service."

The following information is taken from the Rules and Regulations of the Company's pension department, as revised to February 6, 1922:—

The administration of the Pension Department under the direction of a Committee composed of the president, the vice-presidents and the chief solicitor of the Company. The president is *ex officio* Chairman of the Committee, which has power to make rules and regulations for the efficient operation of the Pension Department; to determine the eligibility of employees to receive pension allowances; to fix the amount of such allowances; and to prescribe the conditions under which such allowances may inure. The proceedings

of the Committee are subject to the approval of the Board.

The benefits of the Pension System apply only to those persons who have been required to give their entire time to the Company, or to the Company and some other Company or Companies jointly. In cases of joint employment, and when the whole salary is not paid by the Canadian Pacific Railway Company, the pension to be paid by the Company is estimated upon the proportion of salary or wages received from the Company.

All officers and employees who have attained the age of sixty-five years are retired, and officers and employees who have been ten years or longer in the Company's service are pensioned. The Committee, however, has power to vary the foregoing rule and retain in the service any employee who has reached the age of sixty-five years if in their opinion it is in the interest of the Company to do so; provided, however, that no employee who has reached the age of sixty-five years without having served ten years continuously in the Company's service, and who is retained in the service after he attains the age of sixty-five years, is eligible for pension allowance. No employee, however, notwithstanding anything in the above rule, who has entered the service of the Company after attaining the age of forty years is eligible for pension, except under special circumstances to be approved by the Pension Committee. This rule does not apply to employees who entered the service on or before the 4th day of July, 1904.

Officers and employees between the ages of sixty and sixty-five may, at the discretion of the Committee, be retired with a pension either upon the application of such employee or upon the recommendation of the Head of the Department. The Committee has power, subject to the approval of the Board of Directors, to retire with a pension, in special circumstances, employees who have not reached the age of sixty years, and to add additional years to the actual term of service when there is sufficient cause for doing so. Physical examination is made of employees recommended for retirement who are under sixty-five years of age, and a report with the recommendation of the Company's Surgeon is transmitted to the Committee for consideration in dealing with such cases. Six months' previous notice is given to employees who are to be compulsorily retired.

Retirements are made effective from the first days of January or July in each year.

The terms "service" or "in the service" refer to employment upon, or in connection with, any other railway, express company, or

steamship line operated or controlled by the Company, and the service of any employee is considered as continuous from the date since which he has been continuously employed whether prior or subsequent to their control or acquisition by the Canadian Pacific Railway Company; provided, however, that in no case is such service counted for any period prior to the incorporation of the Canadian Pacific Railway Company. Service is reckoned from the day since which the person has been in the service to the date when retired. Leave of absence, suspension, dismissal followed by reinstatement within one year, or a temporary lay-off on account of reduction of forces, is not necessarily treated by the Committee as constituting a breach in the continuity of the service, and the time when so laid off or absent, unless the employee has during such absence entered other employment, may be allowed by the Committee to count as part of service. Persons voluntarily leaving the employment of the Company when their services are required thereby become ineligible for pension allowance.

The pension allowance is granted upon the following basis:—

For each year of service an allowance of one per cent of the average monthly pay received for the ten years preceding retirement, or preceding the date upon which the employee attained the age of sixty-five years, should he be retained in the service after such date; for example an employee has been in the service for forty years and received on an average for the last ten years sixty dollars per month, the pension allowance would be forty per cent of sixty dollars, or twenty-four dollars per month. No pension allowance authorized, however, is less than twenty dollars per month.

In calculating the period of service upon which the pension allowance is based, the broken period following the completion of a year, when it is less than six months, is not counted; when it exceeds six months, it counts as an additional year.

When pension allowances are paid monthly during the life of the beneficiary; provided, that the Company may cancel any pension whenever it is established in the opinion of the Pension Committee that the pensioner displays a decided lack of appreciation of the Company's liberality in granting the pension, or is guilty of other serious misconduct.

The Regulations point out that "the establishment and continuance of this system of pensions is entirely a voluntary act on the part of the Company, and as the employees do not in any way contribute towards it, neither the action of the Board of Directors in establishing such a system, nor any other action now or hereafter taken by them or by the Committee in the inauguration or operation of the Pension Department, shall be construed as giving to any officer or employee of the Company a legal right to be retained in its service, or any legal right or claim to pension allowance. While it is the policy of the Company to encourage its employees to remain with it and by faithful service to earn a pension, the Company expressly reserves its right and privilege to discharge at any time any officer, agent, or employee when the interests of the Company, in its judgment, may so require, without liability for any claim for pension or other allowance than the salary or wages due and unpaid."

LEGAL STATUS OF WOMEN IN CANADA

ON the presentation of a request by the National Council of Women, which links together a very large number of women's organizations in the cities and towns of Canada, the Dominion Government recently agreed to publish a pamphlet designed to give briefly the main sections of the federal and provincial statutes which deal with the relations of women in the family, in industry, in the municipality and in the state. As the legislation involved is of a social character and various phases of it have been the subject of discussion and resolutions by labour organizations, it was decided that publication

should be made under the authority of the Minister of Labour.

The Department of Labour has, therefore, issued a pamphlet containing extracts from the Dominion and provincial laws relating to naturalization, franchise, eligibility of women for municipal, provincial or federal election and for service as magistrates or jurors, marriage, divorce, sexual offences, married women's earnings and property, dower, devolution of estates, insurance, mothers' pensions, maternity benefits, deserted wives and children, legitimation of children born out of wedlock, support of children of unmarried

parents, adoption of children, hours of labour and minimum wages for employed women, workmen's compensation and other minor subjects.

Though differing in many particulars, the provincial laws have shown an increasing tendency to uniformity in recent years and the last decade has been remarkable for the social legislation enacted. The extension of the franchise to women has been to some extent at least responsible for the attention given to this class of legislation in recent years.

Ontario and all the provinces west of it have passed laws providing mothers' allowances in case of the death or incapacity of the husband. In all the provinces but Nova Scotia, provision has been made for the legitimation of children born out of wedlock by the subsequent intermarriage of the parents. Acts compelling support of dependent parents by their children are now in force in Ontario, Saskatchewan and British Columbia. Statutes regulating the adoption

of children have been enacted in all the provinces but New Brunswick and Quebec. With the exception of Prince Edward Island and Quebec, all the provinces have provided for monetary assistance by the father of an illegitimate child in the expenses of the birth and the support of the child for a certain period.

Laws enabling the establishment of minimum rates of wages for the employment of women have been passed in all the provinces but New Brunswick and Prince Edward Island. The Quebec statute, however, is not in force and no regulations have been issued in Nova Scotia. Compensation to the dependents of a man or woman injured in the course of employment is payable in all the provinces but Prince Edward Island.

No attempt has been made to give an exhaustive statement of the law on any points, the purpose of the publication being merely to give a general idea of the law on these subjects and to facilitate comparison as between the different provinces. *

WORKING WOMEN AND CHILDREN IN PENNSYLVANIA

ACCORDING to a study made by the Consumers' League of Eastern Pennsylvania, the number of female workers in Pennsylvania 10 years of age and over increased by 80,796 from 1910 to 1920, but the increase was not uniform throughout all the industries. Decreases in the proportion of women to men employed were shown in the fur-felt hat industry, confectionery and ice cream, and printing and publishing of newspapers and periodicals. Agriculture and domestic and personal service showed a marked decrease in the number of women employed. One-third of all women workers were employed in manufacturing and mechanical industries. The number of women engaged in clerical occupations, however, doubled during the period the chief increase being among women clerks not in stores. Women bookkeepers, cashiers, and accountants grew from 17,344 in 1910 to 29,229 in 1920 while the number of men employed in these occupations increased from 26,157 to 27,288. In 1920, 74,390 women in professional service of one kind or another constituted an increase of 19,235 since 1910, while 75,881 men in professional service grew to 90,716 men. Among the unusual occupations in which a few women were employed were the following: 1 woman brick and stone mason; 1 woman dyer; 5 charcoal and coke works workers; 6

glassblowers; 1 loom fixer; 7 marble and stone-yard workers; 3 oilers of machinery; 3 building painters; 3 pattern makers; 2 plasterers; and 9 cobblers and shoemakers. "The most marked characteristic of distribution of the wage earners in a 20-year period" says the report "is the decrease in the number of children under 16 years of age employed in manufacture." The decline in the extent of child labour has been accompanied by an increase in the employment of women; the deduction is made that girls 16 and over take the jobs formerly held by children under 16.

Mr. Ben. W. Hooper, chairman of the United States Railroad Labour Board, in a recent address at Chicago, pointed out that the people of the United States, in the last two and a half years, have enjoyed virtually complete freedom from railroad strikes. "This condition," he said, "is without parallel in the history of our country." Mr. Hooper criticized the "Howard-Barckley bill" as based on the assumption that the public had no concern in railroad strikes, and announced that, instead of this bill, a measure was in process of incubation that would provide "elaborate facilities for mediation and conciliation."

MINERAL PRODUCTION AND EMPLOYMENT IN CANADA IN 1924

ACCORDING to a preliminary report by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics, the total estimated value of the mineral production of Canada during 1924 was \$203,194,000. This total has only been exceeded in three years; in 1923, when the output was worth \$214,079,331; in 1920, when it was valued at \$227,859,665; and in 1918, when it was valued at \$211,301,897.

Metal mining in Canada during 1924 showed an output not previously equalled in times of peace. In the three war years, 1916 to 1918, the metallic mineral production in Canada was valued in excess of one hundred million dollars, but during the years before and since, the highest metallic output recorded was \$77,939,630 in 1920.

The following table shows the mineral production of Canada by classes since 1910:—

Year	Metallic	Fuels and other non-metallics	Structural materials and clay products	Total
	\$	\$	\$	\$
1910.....	49,438,873	37,757,158	19,627,592	106,823,623
1911.....	48,105,423	34,405,960	22,709,611	105,220,994
1912.....	61,172,753	45,080,674	28,794,869	135,048,296
1913.....	66,361,351	48,463,709	30,809,752	145,634,812
1914.....	59,386,619	43,467,229	26,009,227	128,863,075
1915.....	75,814,841	43,373,571	17,920,759	137,109,171
1916.....	106,319,365	53,414,983	17,467,186	177,201,534
1917.....	106,455,147	63,354,363	19,837,311	189,646,821
1918.....	114,549,152	77,621,946	19,130,799	211,301,897
1919.....	73,262,793	76,002,087	27,421,510	176,686,390
1920.....	77,939,630	103,027,947	41,892,088	227,859,665
1921.....	49,343,232	87,842,682	34,737,428	171,923,342
1922.....	61,785,707	82,976,794	39,534,741	184,297,242
1923.....	84,391,218	91,936,732	37,751,381	214,079,331
1924.....	96,034,000	73,830,000	33,330,000	203,194,000

Coal.—Coal, which is the most important item of the non-metallic field, showed a drop in 1924 of approximately four million tons and \$18,000,000 from the quantity and value of the output in the preceding year, the total production amounting to 13.1 million tons, valued at \$54,280,000. Nova Scotia mines showed a loss of more than 700,000 tons from the total for 1923; in New Brunswick the output was less by 71,000 tons; in Saskatchewan the loss was 31,000 tons; the greatest reduction was sustained in Alberta, the output of 4,525,000 tons being 2.3 million tons less

than the total for 1923; the output from British Columbia coal mines showed a decline similar to that in Nova Scotia. The output of coal by classes included 9,512,000 tons of bituminous coal, 559,000 tons of sub-bituminous coal, and 3,032,000 tons of lignite. Labour troubles in District 18, in which some of the principal coal mines of Alberta and British Columbia are located, were the chief cause of the lessened output. The following table shows the estimated output of coal from Canadian mines by provinces and by grades in 1924, with comparative data for 1923:—

	1923		1924	
	Net tons	Selling value	Net tons	Selling value
		\$		\$
Nova Scotia.....	6,597,838	28,170,458	5,855,000	25,044,000
New Brunswick.....	276,617	1,196,772	205,000	871,000
Saskatchewan.....	438,100	853,448	407,000	745,000
Alberta.....	6,854,397	28,018,303	4,525,000	17,458,000
British Columbia.....	2,823,306	13,813,526	2,111,000	10,167,000
Yukon.....	313	1,455		
CANADA				
Anthracite.....	107	322	Nil	Nil
Bituminous.....	12,941,877	58,478,670	9,512,000	42,413,000
Sub-bituminous.....	466,492	1,399,424	559,000	1,676,000
Lignite.....	3,582,095	12,180,570	3,032,000	10,196,000
Total.....	16,990,571	72,058,986	13,103,000	54,285,000

Other Non-Metallics.—In the asbestos industry shipments were somewhat less than in 1923, their value being estimated at \$7,200,000.

The production of natural gas showed a slight gain both in quantity and value, sales reaching a total of \$5,950,000. Progress in the

gypsum industry, noted in 1923, continued throughout 1924, and sales increased to a total value of \$2,450,000. The general industrial depression of the year was reflected in a lowered output of cement, lime, brick, stone, sand and gravel. Cement sales dropped 1.6 million dollars in value to \$13,400,000; lime sales were half-a-million dollars lower at \$2,780,000; brick, tile, stone, sand and gravel sales were valued at \$17,150,000 as compared with \$19,420,112 in 1923.

Employment.—Returns on employment statistics based on data compiled from monthly reports supplied by approximately 200 mining companies employing about 48,000 hands showed a decline of about one per cent in the average number employed throughout the year, as against an advance of 6 per cent in 1923 over the totals for 1922. But in spite of the fact that the general employment situation in the mining industry showed such a slight variation in 1924 as compared with 1923, there were wide fluctuations within the

several component groups. Employment in the metal mining industries increased gradually during August; during the remaining months of the year the number employed was somewhat below the totals for the earlier months. The average for the year, however, showed a very considerable improvement over the figures for 1923. With employment in January, 1920, as a base of 100, the index for the metal mining industry in Canada was 148.8 in 1923 as against 123.5 in the preceding year. The non-metal mines showed a better trend in that the employment toward the close of the year was maintained close to the peak established during the summer months. On the same basis as noted above, the index for employment in the non-metal mining group was 93.4 in 1924 as compared with 98.2 in 1923, a loss of about 5 per cent. The clay, glass and stone group of industries showed a distinct upward trend for the summer months; the average index of employment for the year was 86.6 a drop of two points from the average for 1923.

EMPLOYMENT AND WAGES IN VARIOUS INDUSTRIES IN CANADA

Reports of Dominion Bureau of Statistics on (a) slaughtering and meat-packing and allied industries, (b) harness and saddlery and miscellaneous leather goods.

THE Dominion Bureau of Statistics has recently issued reports on the slaughtering and meat packing and allied industries, and on the harness and saddlery and miscellaneous leather goods industries for 1923. Previous reports in this series relating to other industries were outlined in the *LABOUR GAZETTE* for November and in previous issues.

Slaughtering Meat-Packing and Allied Industries

In 1923 there were 76 slaughtering and meat-packing plants in operation in Canada. Of these 26 were in Ontario, 19 in Quebec, 7 in New Brunswick and 7 in Manitoba, 5 in Alberta and 5 in British Columbia, 3 in Prince Edward Island, and 2 each in Nova Scotia and Saskatchewan. The capital investment of the industry in 1923 represented a total value of \$53,052,776 as compared with \$56,710,481 in 1922.

The total value of production was \$138,218,909, a decrease from the preceding year of \$5,195,784, this being attributed chiefly to lower average selling prices of products. Increases in quantity of production are shown for most of the principal items, including beef and pork, sold fresh; beef, salted or cured; pork, salted; hams; shoulders; bacon and

sides; sausage; cooked meats of all kinds; and lard. Decreases are shown for mutton and veal, sold fresh, for canned meats and for lard compound and other shortening. The cured meats and other manufactured products constitute the larger part of the value of output, these products representing 61 per cent of the total value shown for 1923 and 62 per cent of the value for 1922. The cost value of the animals slaughtered during 1923 was \$82,010,741 and the cost of the dressed meat purchased \$10,710,005. The number of beeves slaughtered in 1923 was 564,541 and the number of hogs slaughtered was 2,472,740.

The industry gave employment in 1923 to 9,914 persons, comprising 2,662 (2,275 male and 387 female) employees on salaries, and an average for the year of 7,252 (6,765 male and 487 female) wage-earners. The total amount paid in salaries and wages was \$12,708,253, of which \$4,713,265 was for salaries and \$7,994,988 was for wages. Employment was lowest during the month of March, when 6,852 wage-earners were employed. A steady increase was shown during the following months, the maximum for the year being reached in December, with 8,057 wage-earners employed.

Harness, Saddlery and Miscellaneous Leather Goods

The report on the harness, saddlery and miscellaneous leather goods industry is divided in four sections, namely, (a) harness and saddlery (b) the leather belting industry (c) the trunk and valise industry, and (d) leather goods, n.e.s.

Harness and Saddlery.—The number of establishments engaged in the manufacture of harness and saddlery in 1923 was 312, of which 148 were in Ontario, 117 in Nova Scotia, 46 in Quebec, 37 in Saskatchewan, 28 in Manitoba, 16 in Alberta, 12 in New Brunswick, 5 in British Columbia and 3 in Prince Edward Island. The total value of production during the year was \$4,823,635. Compared with the preceding year a decrease of 21 is shown in the number of establishments, and a decrease of \$4,855 in the value of production. The total capital invested in 1923 was valued at \$6,643,211 as compared with \$6,160,062 in 1922. The industry in 1923 gave employment to 1,295 persons, compared with 1,390 in 1922 and 1,262 in 1921. Among the salaried employees there were 212 males and 50 females, while among the wage earners the male employees totalled 955 and the females 78. April was the month of highest employment, with 1,081 persons employed and August the month of least employment with 1,002. The average number of days in operation during the year was 298.5, the average hours worked per day was 8.7 and the average hours worked per week, 49.7.

The Trunk and Valise Industry.—There were 15 establishments in operation in 1923 whose chief products were trunks, valises, suitcases and bags. The distribution of establishments by provinces was as follows: Ontario, 6; Manitoba, 4; Quebec, 3; British Columbia and Nova Scotia each 1. The value of the capital investment was \$2,189,579 compared with \$1,958,458 in 1922 and

\$2,104,832 in 1921. The total value of production in 1923 was \$2,465,751, compared with \$2,008,103 in 1922 and \$2,226,474 in 1921. The average number of wage-earners employed during 1923 was 630 and the number of salaried employees, 92, a total of 722, of whom 118 were females. There were 66 male and 26 female salaried employees whose salaries totalled \$185,489, and 538 male and 92 female wage-earners who received in wages \$550,999.

The Leather Belting Industry.—In 1923 there were seven establishments making leather belting, five or which were in Quebec and two in Ontario. The total value of the products of the industry was \$1,685,572. The capital invested in the industry amounted to \$1,625,094. There were 52 salaried employees, of whom 40 were male and 12 were female, and 129 wage-earners. The amount paid in salaries totalled \$110,995 and for wages, \$135,075.

Leather Goods, n.e.s.—In 1923 there were 46 establishments engaged in the manufacture of leather goods which do not come under any one of the specially classified leather industrial groups, the principal items of manufacture being club bags, hand bags and satchels, purses, pocketbooks and folders, body belts, straps, sporting goods and fancy articles of leather. The total value of these products in 1923 was \$1,594,863, compared with \$1,361,136 in 1922 and \$1,270,594 in 1921. The value of the capital investment of the establishments in 1923 was \$1,326,101, compared with \$1,185,219 in 1922 and \$932,986 in 1921. The number of persons employed during 1923 was 617, comprising 110 salaried employees and 507 wage-earners. The total amount paid in salaries was \$177,104 and in wages, \$393,555. The average days these establishments were in operation during the year was 292.2, the average hours worked per day were 8.6 and the average hours worked per week 46.2.

British Columbia Superintendent of Neglected Children

The Reverend Thomas Menzies, who represented the constituency of Comox in the Legislature of British Columbia from 1920 to 1924, has been appointed Superintendent of Neglected Children for the Province. This appointment is made under the Infants Act of the Province (Revised Statutes of British Columbia, 1924, chapter 112). The duties of the Superintendent are to administer the sections of the act relating to the protection of children, exercising the powers conferred by the Act upon Children's Aid Societies; to en-

courage and assist in the establishment of such societies, and to advise them in the performance of their duties; to see that they keep a record of all committals and of all children placed in foster homes; to direct and supervise the visiting of children so placed, and to prepare annual reports to the Minister in charge of the general administration of the act.

Mr. Menzies has been connected with public work on behalf of children as well as with Red Cross work and other social activities.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the **LABOUR GAZETTE** relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act. Other activities are also noted which have a direct bearing on the training of apprentices and industrial workers. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

Vocational Guidance Movement at Montreal

The following article appeared in the *Montreal Gazette* on November 7, 1924:—

The "find yourself" campaign recently inaugurated in Montreal, as a preliminary to establishing a vocational guidance bureau in connection with the Young Men's Christian Association, is an undertaking worthy of all commendation, promising as it does to aid in the solution of the crucial problem of selecting a life-career with which numberless growing youths and their parents are confronted. Any means which tend to substitute trained guidance and helpful suggestion, based on adult experience and scientific data, for a haphazard choice of occupation should be welcomed and supported. The lengthy, arduous and expensive courses of education and stiff examinations necessary to qualify for the learned professions or scientific pursuits operate to eliminate the unfit and deter all but the most determined and naturally gifted aspirants, but in the case of those occupations which demand only a primary or secondary school education as a basis of beginning, boys are too apt to drift into the first opening which presents itself, regardless of the prospects for advancement or their aptitude for the work. As a result, many find themselves in blind alley jobs, which, if taken, at all, should only be used temporarily while preparing for something better, while others, even though securing positions which provide a competence, find themselves assigned for life to work in which they can take only a perfunctory interest, and thus fail to reach the full measure of usefulness which would be theirs had they but discovered the niche for which they were suited by nature and abilities. It is to assist in the selection of a true vocation—literally, that to which one is "called"—that a group of earnest and practical men, with a genuine interest in the youths of to-day, who will be doing the world's work to-morrow, have taken up the project of a Vocational Guidance Bureau for Montreal. There is no intention arbitrarily to direct any young man to a specified occupation or method of livelihood, or to interfere with a formed ambition or the wishes of a boy's natural guardians. Rather is it the purpose of the promoters of the movement to present to the youth or young man the general principles connected with the choice of a life-work, to enable him by a process of self-analysis to discover in what direction his preference and his capabilities point, and to bring him into touch with men, already established and successful in the indicated line of work, who will enlighten him as to its advantages and its difficulties and advise him generally as to his course of action. Such an institution, in the hands of men, who

have undertaken its foundation, cannot fail to be productive of far-reaching benefit to the coming men of Montreal, and if given adequate support should be the means of aiding many a lad to take his rightful place in life.

Social Workers' Courses at McGill University

Lectures opened in November at the School for Social Workers, McGill University, Montreal. The school, which is the only university school of its kind in Canada, is now entering upon its seventh year and is under the direction of Dr. C. A. Dawson, assistant professor of social science at McGill. A large number of new courses are included in the program for the 1924-25 session. One of the new courses on legal problems deals with the practical administration of the law in difficult cases of desertion, workers' compensation, and other questions which the social worker has to confront. There is also a course on immigration, which takes up political, economical and social phases of the immigration problem and the "Canadianization" of the immigrant. Other features of the program are courses of lectures on social case work, principles of mental and physical health, industrial history, a course in Child Welfare by Dr. W. Gettys, newly appointed assistant professor of social science, a course on organization and administration of social agencies, public hygiene, hospital social service, psychology, including the psychology of play, playground supervision and equipment.

Courses are provided also for partial students who are unable to attend for the fulltime diploma course. The school provides training for social workers who intend to take up social work as a vocation, and also for the girl and woman of leisure. To all it aims to give the scientific point of view in social work.

Registration last year at the School for Social Workers at McGill reached a record figure, and it is expected that registration this year will be equally satisfactory. A series of special lectures open to the public will be given again.

Apprenticeship in the Building Trades

"How can the spirit of craftsmanship be revived in the building industry?" was the question E. J. Mehren, Vice-President of the McGraw-Hill Company, tried to answer for the employers in the New York Building Congress at a recent luncheon in the Hotel Biltmore. The speaker declared the spirit of craftsmanship had departed, and that public estimation of completed work had been lowered. There was no single cause and no single

remedy, and the revival of the guild spirit would be a long and difficult task. An educational programme should be started, he said; workmen should be encouraged to do their best, and employers should come into personal contact with their men. He further suggested that the existing custom of posting the names of bank tellers, soda clerks and Fifth Avenue bus drivers in the public sight be carried into the building trades, and that completed buildings should bear tablets giving the craftsmen's names.

"We seek the development of more mechanics well trained. But our efforts cannot stop there. We must have foremen who are craftsmen of outstanding rank. We must have superintendents, sub-contractors and general contractors who demand good work, who take pride in what they are doing, who look on each building not as another structure to be thrown together and to be forgotten but as part of their own business monument. We must have more architects who will battle with owners for workmanlike construction and refuse to prostitute their high calling by aiding and abetting slipshod work. The revival of craftsmanship involves, finally, the education of owners to the higher economic value of good work, so that they may gladly invest 15 or 20 per cent more in their building operations, confident that over the long life of the structure the additional expenditure will prove a profitable investment because of lower maintenance cost and slower depreciation. There is a large shortage of skilled mechanics in every branch of the building industry. Poor workmanship is common and there is much spoilage of the work of others through carelessness and lack of skill. Accompanying these faults of workmanship is a rather common indifference to the interests of contractors and owners, a feeling that the worker owes them no responsibility in return for the wage he is drawing. In thus citing the shortcomings of the worker, it is not with any desire of 'picking' on him. Craftsmanship, however, is the object of our inquiry.

"The parties responsible are those of the public who demand cheap building, regardless of quality. Among these the outstanding offender is the speculative builder, the person, be he capitalist or constructor, who builds not for the purpose of owning and operating a structure, but for selling it at a profit just as quickly as possible. These people—the bargain-counter public and the speculative builder—have no interest in good construction. They do not expect to hold the bag when rapid depreciation and high maintenance costs come along. By that time they expect to have their profit or to be otherwise finished with the structure. Their demand upon architects, contractors, general contractors, superintendents and foremen is for speed and cheapness. Under these conditions, not merely the worker but those who supervise his activities abandon all idea of craftsmanlike performance and acquire the habit of getting by with the delivery of as little value as possible. From top to bottom the incentive for good workmanship is destroyed.

"There is much food for thought in the plan now being used by the Building Congress of Portland, Ore., through its 'Guild of Building Handicrafts.' This guild selects workmen of outstanding competence, true craftsmen, and, after examination of their work by a jury of five, awards to them, if the jury reports reports favourably, the title of Guildman."

Apprenticeship System of the Canadian National Railways

The system of training apprentices on the Canadian National Railways was described

by Mr. A. H. Williams, western supervisor of apprenticeship, at a recent teachers' convention in Saskatoon. Approximately 300 boys are now serving a five year apprenticeship on the western lines of the Canadian National, and there is a long waiting list at every large training centre.

Mr. Williams emphasized the need of providing a thorough system of training including physical, moral and intellectual development as well as vocational training and stated that his experience has shown that with such a system no difficulty was encountered in securing the right type of boys.

A complete description of the Canadian National Railways' apprenticeship system appeared in the LABOUR GAZETTE for December, 1922.

Apprenticeship of the Canadian Pacific Railway Company

In the Angus shops of the Canadian Pacific Railway at Montreal, 430 apprentices are being trained in various mechanical occupations. The courses last five years and provide thorough training which enables boys to advance to the highest positions in the company.

Evidence of the interest taken in the training of young workers by the company officials was displayed at a recent dinner given to one hundred boys in the Montreal Windsor Street station. These boys are employed in the company offices and have enrolled in evening courses conducted by the Y.M.C.A. in type-writing, shorthand, business correspondence, etc. Classes meet twice each week and last for eight months. A small fee is charged but part of this is refunded by the company to boys who make satisfactory progress. Several prominent officials addressed the boys and expressed the hope that they would become the future executives of the company.

Apprenticeship for Printers in Small Centres

According to an announcement made at headquarters of the International Typographical Union, efforts will be made through union locals to carry educational advantages to apprentice printers in all small towns of the United States and Canada.

Apprentice committees of the local organizations will be asked to make a survey of conditions in small towns contiguous to their jurisdictions for the purpose of extending to young men in the printing trade opportunity to take the International Union's course in printing. The purpose, according to officials of the union, is to maintain a high standard of educational qualifications in the trade and to prevent growth of specialization with consequent deterioration of the printing art. The

plan was adopted on recommendation of the standing committee on apprentices and supplemental education at the Typographical Union convention in Toronto last August. Local committees are also being urged to aid in promotion of printing instruction in vocational departments of the public schools. In addition to the correspondence course, the Typographical Union is maintaining schools of printing in a number of large cities.

Training in the Bell Telephone Company

The Bell Telephone Company has always adopted the policy of recruiting the supervisory officials from the rank and file of the staff. Considerable attention has been given to the training of telephone workers, both male and female, and this educational work has progressed to the stage when regular training staffs have been established in several of the departments. The employees on these training staffs devote their whole time to the instruction of the junior employees.

In the traffic department, whose task it is actually to provide the service, regular schools have been established in the larger centres to train the operators in the proper method of completing telephone calls. These schools are divided into two main branches—those teaching the method of operation on local calls, and those teaching the various operations in connection with long distance. Operators are required to spend from two to four weeks in the school, while male employees of the traffic department must also spend part of their training period in the school.

The plant departments also have regular schools where instruction is provided for the men engaged in the installation and maintenance of telephone equipment. These schools teach the proper method of installing telephones in subscribers' premises, the construction of telephone lines and the maintenance of the switchboards. Cable splicing, line construction, telephone circuits, repair and maintenance of apparatus are among the subjects taught. In addition, correspondence courses are carried on in these schools. These correspondence courses are free to all employees and teach the theory of electricity, mathematics, etc. Hundreds of employees each year are engaged on these courses in their spare time, and the result in the quickened interest and increased efficiency of the men has been marked. Men completing these courses are building on a sound foundation for advancement of the organization.

The traffic plant and correspondence courses cover most branches of telephone work, including the manual and the automatic methods of operating. They do not, however,

cover all the requirements of this large corporation. A certain number of men are required each year with special training. Such positions as power engineer, transmission expert, accountant, legal counsel, etc., are filled from those having adequate preliminary education and experience. A majority of such men are drafted from colleges and universities, and are given special facilities for learning how to apply their knowledge to the telephone business. The number of such men engaged is, of course, a small percentage of the total employed each year by this company, but is steadily increasing, as the problem of giving satisfactory service especially in the larger centres, becomes more complex. Last year, about fifty technical men were absorbed, while this year the number will be somewhat higher.

In addition to the regular facilities provided for training the employees, it is considered to be the duty of every supervisory official to teach and train his own immediate staff in the work of his department. It is recognized that only by constant training in this way can satisfactory officials be developed to carry on the work of the company and ensure a high standard in this vital service to the community.

Forestry and Paper Schools in Quebec

It is expected that orders-in-council will be passed shortly by the Government of the Province of Quebec to provide for the extension of the work of the new Forest Rangers School at Berthierville and the Papermaking School at Three Rivers. There is now an enrolment of 30 pupils in the former school and 21 in the latter. At present these two schools are providing the pupils with theoretical and practical courses, but it is intended to further extend the advantages by placing at the disposal of pupils some of the forestry reserves where in addition to the two groups above mentioned, pupils of the Forestry School will also be given the opportunity of going through all the operations connected with the exploitation of the forest resources.

Chatham Vocational School

The new Chatham vocational school was formally opened by the Hon. James Murdock, Minister of Labour, on December nineteenth. The Minister complimented the people of Chatham on their keen interest in vocational education and paid a tribute to the School Board whose energy and faithful service have made the school possible. Faced with the difficult task of providing suitable accommodation for vocational work in Chatham without incurring the heavy expenditures neces-

sary for a new building, the Board purchased an hotel building which is centrally located and which, with minor alterations, has made a very complete and convenient vocational school. The building cost the city approximately \$50,000, including alterations, and it is estimated that similar accommodation in a new building would have cost at least \$200,000. Mr. H. Collins, formerly in charge of manual training work in Chatham, has been appointed principal of the new school.

The Owen Sound Collegiate-Vocational Institute

The following article by Mr. Elmslie, Principal of the Owen Sound Collegiate-Vocational Institute, appeared in the *Owen Sound Daily Sun-Times*, of December 3, on the occasion of the opening of the new school:—

The Owen Sound Collegiate-Vocational Institute is one of a score of a new type of secondary school that has been developed during the past five years. It is a composite school, and offers all the advantages of an approved Collegiate Institute with its various departments, mathematics, science, English, and history, classics, moderns, art, physical training, and in addition to these an industrial, a commercial, and a home-making course. The last three courses were added in response to an insistent popular demand that secondary schools be made of more direct practical value.

It would have been an intolerable burden upon the public to establish technical schools in smaller centres, but it was a reasonable thing to add technical departments to the Collegiates already functioning. Ministers of Education, under successive administrations, that differed radically in policy on other public matters, agreed that the more bookish studies of the Collegiate were not functioning towards, but rather away from, fitness for jobs boys and girls were actually entering. In so far as the Collegiate studies were enabling a boy or girl to be a better citizen, more intelligent, more loyal, more contented with his job and his leisure-time occupation, they were doing all any school could be expected to do, but many students were escaping from school before they had a chance to reap the greatest benefits from these studies; many were growing up with the regret in their hearts that they had stopped too soon; many were going out into commerce and industry without any other motive than blind necessity, so a system of so-called vocational education was adopted. Industry and commerce were both calling for greater efficiency, and the nation, as always, but more especially during the war, was alive to the need of better manhood and womanhood, and was determined to act in every way that might help to satisfy that need.

The vocational branch is founded upon the theory that boys can be made more efficient in skill of hand and brain by giving them training in practical work half a day, and training in class-room work the other half. When they are through school they will have less breadth of intellectual thought maybe, less science and language than the graduate of the Collegiate, but more technical skill and more readily applied knowledge. The cultural side of education is not neglected. A boy is not doomed to be a wage slave. He is not to be hemmed in and handicapped by any stunting process from being the man he would like to be. English, history, science, mathematics and the option of a foreign language are extended to him by teachers of qualifications just as high as those of Collegiate Institute

teachers. Likewise, a girl is extended the opportunity of entering a homemaking course in which, instead of being immersed in books all day she will be permitted to think and work upon the actual problems of the home whether they be problems of cooking, sewing, shopping, nursing, setting table, decorating, or any of the score of things involved in adding comfort, health and security as well as interest and inspiration in the home, all under supervision of expert artists. Likewise, also, the commercial course holds definitely before it a career in business. The old commercial course was too stereotyped; its graduates were supposed to become bookkeepers or stenographers. Business efficiency is the new ideal and some of the most skilled teachers in the province are engaged in working out a curriculum and text books that will be approximate to this ideal. They study office methods, consult employees, confer with successful employers, all with a view to carrying to the class-room the real spirit of business and create there an atmosphere likely to stimulate effort in a wide field. Students in this department carry along with these practical commercial subjects cultural studies. They may not have the same chance of penetrating deep into the heart of problems of mathematics, science or language, but they go as far as is necessary to show them the way further if they care to follow it at their leisure. In the case of all the vocational departments students are well equipped with skill and knowledge that will immediately purchase them positions in the business or industrial world. The Collegiate graduate too often feels his training has not been practical enough.

But enough of contrasts—the prime factor is that the new composite school functions as an educational institution, not as a certificate factory nor as a trade school. There is no such emphasis on certificate getting and job getting on the part of students that the real purpose of education is sometimes lost sight of. Anxiety of students to prove their worth at examinations, over anxiety of parents to prove their children's claim to something above mediocrity too frequently are emotions that fill the heart to the exclusion of the less noisy emotions of love of education for its own sake, love of truth regardless of the commercial value, truth that lifts men's eyes from sordid materialism to the finer lights that shine only when he is at his best. The school has been generously endowed with space, light, comfort, fine finishings, appliances of the most approved style. Would that it might be endowed with those things that are most vital, the vision to see, the power to grasp the prize all education aspires to, the prize of a useful life.

Technical Courses at Saskatoon

Five winter short courses are being put on this year at the College of Agriculture, at Saskatoon, under the direction of the Department of Agricultural Extension, on gas and steam engineering, on threshing machine operation and on poultry.

In gas engineering there will be two courses, one commencing on January 6th and lasting to January 30th, and the other commencing on February 10th and lasting to March 6th. The courses will consist of lectures each afternoon and the mornings will be devoted to practical work, graded so that the student will be brought on step by step, in the Engineering Building, which is fully equipped with varieties of engines, testing equipment, sections and models.

The steam engineering course began on December 1st, lasting to December 20th, and the course was framed so as to increase the knowledge of steam engine operation among operators, and is designed particularly for those now holding operators' certificates, who wish to improve their training and standing.

The course in the operation, adjustment and care of threshing machines lasts from February 2nd to February 7th, and is designed to give training in the general operation, care and repair of the threshing machine.

The course in poultry husbandry is divided into three periods of one week each, divided as follows: First week, the selection and culling of flocks on a basis of egg production, considerations of rationing for egg production; second week, the reproduction of the flock; third week, problems of management and marketing.

Technical Education in South Africa

At the seventh annual convention of the South African Federated Chamber of Indus-

tries held in Johannesburg in July last the following resolution was passed:—

The attention of the Government is drawn respectfully to the following points: (1) This Convention is of the opinion that the present arrangements for industrial training in the various Provinces lack proper organization, and that a national policy is essential. It recommends the Government to secure the co-ordination of the various systems of industrial training at present in operation, by the establishment of a national board, upon which the Government, industry, commerce and education, shall be represented; and that this board shall be responsible for framing the conditions under which grants for technical education shall be made. It also urges that all schemes of industrial training shall be closely related to actual workshop conditions, and that, having regard to the varying industrial conditions in different centres of the Union, industrial training can be advanced most effectively by the establishment of local Technical Education Boards working directly under the Central Board, and receiving grants under the Higher Education Act of 1923; (2) This Convention desires to urge the desirability of the Government making provision to extend the system of granting industrial scholarships; (3) Attention is called, respectfully, to the disabilities of Port Elizabeth in regard to facilities for technical education, the lack of which compels ambitious boys to be sent to Cape Town, Johannesburg or overseas for training.

INDUSTRIAL CENSUS OF SOUTH AFRICA

THE eighth industrial census of the Union of South Africa, taken in respect of the period 1922-23, shows that the gross value of output was £74,486,000, as compared with £79,446,000 in 1921-22, a decrease of 6 per cent, and the value of materials £37,140,000, as compared with £42,823,000, a decrease of 13 per cent. The corresponding proportionate decreases recorded in 1921-22 were 19 and 26 per cent respectively.

Other statistics shown by the census are as follows:—

—	1922-23	1921-22	1915-16
No. of establishments	7,039	7,055	3,998
No. of employees.....	172,047	170,951	101,178
Europeans	61,296	59,995	39,524
Fixed capital.....	£50,261,000	£47,869,000	£27,552,000
Salaries and wages—			
All races.....	£19,186,000	£20,130,000	£ 8,913,000
Salaries and wages—			
European	£13,904,000	£14,777,000	£ 6,740,000

Hart, Schaffner and Marx Prize Essay Competition

The committee to whom was assigned the decision upon the merits of the essays presented in the contest of 1924 for the prizes offered by Messrs. Hart, Schaffner & Marx, has agreed upon the following awards:—

Class A.—1. The first prize of one thousand dollars to George Ward Stocking, assistant professor of economics, Dartmouth College, 1924, for a study entitled "The Oil Industry and the Competitive System."

2. The second prize of five hundred dollars to C. B. Kuhlmann, professor of economics, Hamline University 1922, for a study entitled "The Development of the Flour Milling Industry" in the United States with Special Reference to the Industry in Minneapolis."

3. Honourable mention to Mildred Hartsough, instructor in economic history, University of Minnesota, 1924, for a study entitled "Development of the Twin Cities, Minneapolis and St. Paul, as a Metropolitan Center."

4. Honourable mention to Gladys Louise Palmer, professor of economics and sociology, Hollins College, 1924, for a study entitled "A Study on Labour Relations in the Lace and Lace Curtain Industries of the United States."

Class B.—1. First prize of three hundred dollars to George Inch Emery, Harvard College, for a study entitled "The Seasonal Movement of the New York Discount Rate, 1831-1914."

NOTES ON LABOUR UNION ACTIVITIES

District 26, United Mine Workers

THE United Mine Workers of America, District 26, at their recent convention at Sydney, Nova Scotia, passed a resolution favouring an amendment to the Workmen's Compensation Act of the province whereby an appeal to a higher court could be made from a decision by the Board. As the Act now stands the Board's decision is final. The convention also expressed a wish to have a representative elected by the miners or mine workers on the Board. (Under the Nova Scotia Act the three Board members are appointed by the Governor in Council).

The convention endorsed the "one hundred per cent strike" as the most effective method of the workers in a dispute with the operators, but decided that the matter of calling a strike in the district should be left entirely in the hands of the executive board. The president promised, however, that a strike would not be called by the executive without first consulting the rank and file of the miners.

A resolution asking that officers who had been deposed in July, 1923, should receive legitimate remuneration was adopted, on the understanding that their claims be presented and approved by the convention. Considerable time was given by the convention to settling the policy of the district in the coming wage negotiations, and a number of resolutions were adopted on this subject. Among these it was decided that all future wage contracts should be negotiated in Nova Scotia, that the new contract should expire on April 1, 1927, and that there should be an increase of 25 per cent for all datal workers and of 10 per cent for all contract miners; also a ten per cent increase for all men working double shifts and 15 per cent for men working three shifts in a place. It was also decided that the officers of the district should not sign any wage contract until it has been approved of by the men by a referendum vote. (The new wage agreement when adopted will be printed in the LABOUR GAZETTE).

The names of the new officers of the district were given in the last issue of the LABOUR GAZETTE on page 1061.

United Textile Workers of America

Mrs. Sara A. Conboy, secretary-treasurer of the United Textile Workers of America, in her report to the convention of that organization held in New York City in September last, referred to the depression which had existed in the industry during 1923 and 1924.

She stated that the industry employs a greater number of persons than any other industry in the United States, there being an average of 1,611,000 men, women and children weaving, dyeing and finishing cotton goods, woollen, silk, hosiery, laces, carpets, knit goods and kindred products. "It is more important" she said, "than even the steel and iron industry, which employs on an average of 1,586,000 workers." Child labour and the impoverishment of the toilers were mentioned by Mrs. Conboy as the two great evils of the industry. In some regions, she said, particularly the backward South, entire families must go to the mills in order to get enough earnings to eke out a precarious existence. The average wage paid to textile workers was stated to be \$18 a week.

The convention endorsed the work of the Brookwood Labour College and it was decided to instruct the General Executive Board to give consideration to the establishment of one or more scholarships for members of the United Textile Workers at Brookwood, and to render other support as the conditions of the organization may warrant.

It was also decided that a request for a National Life Insurance Company controlled by the American Federation of Labour be submitted to the convention of that organization to be held at El Paso, Texas. The action taken by the American Federation of Labour in regard to insurance was noted in the LABOUR GAZETTE for December, 1924, page 1054. The Federation decided that there should be a voluntary conference of all national and international officers within the coming year for such action as shall appeal to the best judgment of those attending and as may be within their power to do.

The president Thomas F. McMahon and the secretary-treasurer Mrs. Sara A. Conboy were re-elected to office.

Printing Commission for New York Publishing Industry

Under an agreement entered into in July last between the Publishers' Association of New York City and the International Printing Pressmen's and Assistants' Union of North America, a printing commission was established to settle disputes between the pressmen and the publishers, in the event of inability of the joint conference committee to arrive at a decision within one week as required by the Pressmen's agreement. (The agreement allows of a longer interval in the case of differences over a contract respecting the scale of wages,

which may be considered for thirty days after the evidence has been submitted). All disputes must, however, be first referred in written form to the joint conference committee which is composed of one representative appointed from the New York local union, one representative from the International Printing Pressmen and Assistants' Union of North America, and two representatives appointed by the employer.

The commission is composed of the four members of the joint conference committee and three impartial disinterested persons chosen by lot by the joint conference committee, or, in the event of their failure to act, by the mayor or acting mayor of New York City, from a panel of twelve men who have practical experience in settling disputes. They must be broad-minded men of judicial or business or professional experience, none of whom have any interest in or personal or business relations with any newspaper, publisher or union. Should the joint conference committee be unable to agree upon these twelve persons the Governor of the state of New York is to be requested to make the appointments. The remaining nine of the twelve men on the panel will be held in reserve in case substitutes are required, as after three months any of the three men chosen may be removed upon request of either party. A president and secretary of the commission are to be chosen from the three impartial members. These three members are to receive an honorarium of \$25 each for each session they are required to hear evidence and arguments, and the commission is required to hold sessions during the first and third weeks of every calendar month whenever there are cases to be heard and determined. One week's advance notice in writing is to be given by the secretary of the commission to each member thereof when cases are noticed for trial, either by the union or the employer, the question at issue in each case being briefly stated in such written notice. The decisions of this printing commission will be binding upon both parties.

In all cases where appeal is made to the joint conference committee or the printing commission, pending the hearing and determination of such issue, any order given by the responsible foreman is to prevail and be complied with, and all work is to continue without interruption or curtailment such as strikes, lockouts, vacations, absenteeism, etc., which might interfere with the regular publication of the newspapers. To deter both the union and the employer from referring to the printing commission trivial complaints or presenting grievances without just cause, the commission may, in its discretion assess the cost

of any session against the party presenting such case or cases for trial; otherwise the cost of the commission's sessions are to be divided equally between the two parties and to be paid monthly. In any case appealed to the commission from an order given by any foreman, the commission is first to ascertain if such order was complied with (even under protest) when given, and if it was shown that it was not properly executed when given, the commission is to dismiss the appeal without further hearing, and the discipline enforced by the foreman is to stand without further question. The foreman is to give no order to do work not pertaining to the pressmen's craft, as generally practiced, or in conflict with the terms of the contract. The printing commission is to be the final judge as to whether an order given is in conflict with the contract, and the order must be complied with when given. In the event that an unjust, unreasonable or illegal order is given by any foreman and complied with, the joint conference committee or printing commission (unless the office satisfactorily adjusts the difference) is to restore any pay lost during the consequent unemployment and may, in addition, impose a penalty upon the office by awarding one week's extra pay to the wronged union member. On the other hand, any union member found guilty by either the committee or the commission, after a hearing or through default, of disobeying any just, reasonable or legal order of the foreman, may, in addition to the discipline previously enforced by the foreman, be disciplined by the commission by a penalty to be imposed upon the union of one week's pay of the employee, which shall go to any charity designated by the commission.

Industrial Workers of the World

A convention of the Industrial Workers of the World was held at Chicago, Illinois, from October 13 to November 10. This convention was called in order to endeavour to heal a breach between the former executive officers. The outcome of the meeting was that the constitution of the organization was re-drafted, all the former officers were removed from office, and a temporary executive was set up to administer affairs until permanent officers have been elected by referendum. Mr. P. J. Welinder was elected temporary general secretary-treasurer. The dispute was taken to the courts, where numerous postponements occurred and up to the present time no decision has been rendered. As a result of the controversy a dual Industrial Workers of the World was set up but as to the following it has secured no definite information has been received.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Anthrax Poisoning

✓ THE *Nation's Health* for December, 1924, contains an article "Anthrax As An Industrial Hazard" in which Mr. Henry Field Smyth, chairman of the industrial hygiene section of the American Public Health Association, is claimed to have stated that the general incidence of the disease is low, but that an extremely high incidence is recorded among those who are exposed to it. For instance, about two per cent of all Pennsylvania tanners contract anthrax every year. The whole situation it is stated, indicates that our present disinfection methods are inadequate. There is an average mortality in each state of 24 per cent, and the range in mortality from 12 per cent in Pennsylvania to 81 per cent in Ohio, shows plainly that education is needed both in diagnosis and treatment methods. On the subject of disinfection methods, Dr. Smyth declared that the accepted measure of consular certificates on the purity of imported raw materials is open to too many pitfalls for safety, and that exposure of such materials to from 165 degrees to 200 degrees Fahr. (dry heat) or soaking in alkaline solutions is not effective. The procedure prescribed in Pennsylvania and New York kill the anthrax bacillus, but this process gives a "permanent wave" to hair products which is objectionable to the trade. England immerses hides in hot alkaline solutions, followed by formaldehyde treatment, the accuracy of the process being assured by requiring disinfection at government stations at small expense to the importer.

Human Anthrax in New York

✓ Dr. William Jacobson, industrial medical inspector of the New York City Department of Health, has made a clinical and epidemiological study of 61 cases of human anthrax occurring in New York City during the five years 1919-1923. He found that about one-third of the cases of anthrax occurred among brush makers, warehousemen, truckmen and longshoremen. Forty-two persons were infected by animal hair or articles made from animal hair, and sixteen by animal hides, skins or articles made therefrom. In the treatment of the disease the administration of antianthrax serum gave, in the greatest number of cases, the best results. The mortality rate in sixty-one cases was 31 per cent. Fatal cases usually terminated before the ninth day after onset.

As a result of the increase in the number of cases of anthrax in New York City in 1920 (from 14 cases in 1919 to 24 in 1920), the

authorities of the department of health were stimulated to adopt more stringent measures for suppression and control of the disease. These measures consisted in:—

(1) The enactment of regulations regarding sterilization of all animal hair to be used in brushes or hair cloth, and requiring manufactured hair products to be identified by trade marks or manufacturer's name.

(2) Tracing the source of infection and seizing and destroying or disinfecting infected material; and

(3) Public health education, by which means the worker, the employer and the public generally were informed concerning anthrax.

Following the adoption of these measures, the number of cases of anthrax declined. In 1921 only 9 cases were reported; in 1922, 8 cases; in 1923, 6 cases; and only one case was reported for the first six months of 1924.

Accidents in Meat Packing

✓ "Accident frequency in meat packing plants represents the principal and largest factor in economic loss in the entire industry," according to an article appearing in the December issue of *National Safety News* (Chicago). The article proceeds:—

The first illustration is that of a plant having approximately 14,000 employees. Of this number 6,500 employees experienced wounds in one year that necessitated lost time. Of the 6,500 lost time accidents, 660 were caused by knife tools in the hands of workmen. These figures do not include wounds of greater or less severity that did not result in lost time. No accurate data were attempted to record the facts of the non-loss time wounds. The reason given was that the number of such cases was too great.

The second illustration is that of a report of a plant having 2,000 employees covering a period of one year and confined exclusively to knife wound accidents that caused lost time. The wounds are reported under the one classification, "cuts."

We find of 2,000 employees engaged, 510 (25.5 per cent) employees lost time from knife wounds, 506 knife wounds were self-inflicted, four knife wounds were inflicted by fellow-workers, and 743 days of lost time resulted.

Coal Mine Safety Conferences in United States

The mine safety movement noted in recent issues of this GAZETTE as in progress in the United States during 1924 will culminate in a national conference that is to be called by President Coolidge early this year. Steps have already been taken by the Department of Interior and its Bureau of Mines to arrange a programme for the conference, and invitations will be sent out soon after Governors-elect in the coal States have taken office. All States in which coal is mined will be asked to send representatives, including Pennsylvania, West Virginia, Virginia, Ohio, Indiana, Illinois,

Kentucky, Tennessee, Alabama, Utah, South Dakota and Wyoming. The frequency of coal mine explosions have brought officials to the conclusion that the Federal Government might properly seek the co-operation of the States in procuring greater safety to coal mine workers.

Mine inspectors and representatives of the coal companies and mine workers of the anthracite field meet in Wilkes-Barre, Pa., on February 24, 1925, for the purpose of discussing various methods of preventing and reducing fatalities and accidents in hard coal mines. Officials of districts 1, 7 and 9 of the United Mine Workers will be invited to attend. Among the papers to be read are "Falls of Roof," "Accidents from Mine Cars," "Premature Blasts," "Exploding Gas," and "Mine Fires."

Mine and Quarry Accidents

Reports received by the United States Bureau of Mines for the first eight months of 1924 indicate that 1,628 men were killed in mine accidents, as compared with 1,793 during the same period last year. The 8-months fatality rate for 1924, namely, 4.58 per million tons, as compared with 4.12 in 1923, was entirely in the bituminous industry and was attributable to explosions of gas and coal dust. The bituminous rate for the first eight months of this year was 4.40 per million tons. In 1923 the rate was 3.83. The anthracite rate for the same period in 1924 was 5.48; last year it was 5.63.

Statistics compiled by the United States Bureau of Mines show that the operation of the stone quarries throughout that country required the services of 92,455 men in 1923, a larger number than had been employed in this industry since 1915. A total of 25,545,859 shifts were worked, constituting an average of 276 work days per man. Accidents during the year caused the death of 143 men and injured 14,990, showing a fatality rate of 1.68 and an injury rate of 176 per thousand full-time, 300-day workers. The corresponding rates for 1922 were 1.92 killed and 172 injured; for the five-year period (1916-1920), similar rates were 2.10 killed and 160 injured.

Causes of Lost Time Accidents

Mr. W. W. Adams, statistician of the Bureau of Mines, United States, Department of the Interior, presented to the 13th annual meeting of the National Safety Council, at Louisville, Kentucky, the following information with respect to the causes of lost-time accidents to underground workers:—

Of all causes of lost time from accidents underground falls of rock or face result in the greatest aggregate loss, both at coal mines and metal mines. This cause of accidents, while proportionately more important as regards fatalities than nonfatal injuries,

nevertheless was responsible for 33 per cent of the lost time at coal mines and 26 per cent at metal mines. In coal mines most of the falls occurred while the men were loading coal on the cars or while engaged in cutting or barring down the coal; in metal mines the largest number occurred when the men were drilling although quite a number occurred when the men were loading ore or engaged in taking down loose rock or preparing to set props. Haulage accidents which rank next to falls as a cause of fatalities also rank second as a cause from nonfatal injuries. About 18 per cent of the deaths in the coal mines are due to haulage accidents, but 30 per cent of the lost time at coal mines and 16 per cent at metal mines were due to accidents in this group. Being struck or run over by the cars formed the largest single class of haulage accidents, and of these the largest number occurred while coupling cars. Next in point of lost time were injuries resulting from the men getting squeezed between the car and side. Handling materials, including the loading of coal or ore, caused the third largest loss of time at both coal and metal mines. Not many fatalities are included in this group but 11 per cent of the lost time at coal mines and 16 per cent at metal mines resulted in handling materials, principally coal or ore, although quite a large time-loss resulted from injuries while handling props. At this point the parallel of the causes of lost time at coal and metal mines ceases, and the various classes of accidents assume different degrees of importance in the two branches of the mining industry. Hand tools ranked fourth as a cause of lost-time accidents at coal mines and were responsible for 9 per cent of the aggregate loss of time, while at metal mines they ranked fifth and caused nearly 9 per cent of the loss. Picks were, of course, the principal tools involved in this class of accidents at coal mines. The sixth most numerous class of accidents at both coal and metal mines was falls of persons, to which was attributed over 3 per cent of the lost time at coal mines and more than 8 per cent at metal mines. This class of accidents is also an important one because of the number of persons killed by falling, although it is not a major cause of fatalities. Machinery ranked fifth among the causes of accidents at coal mines and seventh at metal mines; in each case about 6 per cent of the time lost was included in this group. Undercutting machines at coal mines and drills at metal mines are the principal types of machinery referred to. Accidents connected with shafts or cages caused a little over two per cent of the time-loss at metal mines and about one-half per cent at coal mines. Lost time from falling objects amounted to nearly 11 per cent of the aggregate loss of time at metal mines but only 1.2 per cent at coal mines, the difference being due mainly to injuries from objects falling down chutes, winzes and raises in metal mines and the non-existence of this type of hazard in most coal mines due to level coal-beds. Explosives are the direct cause of relatively few accidents either in coal mines or metal mines. Indirectly they may be charged with some of the accidents usually attributed to falls of roof, but to what extent they are thus chargeable is not known. . . . Electricity is likewise the cause of relatively few deaths—about 4 per cent is the usual proportion—and a still smaller percentage of non-fatal injuries.

"Taking a Chance" in Coal Mines

The Safety Service Director of the United States Bureau of Mines, writing in the *Journal of Personal Research*, calls attention to certain conditions of employment in coal mines that tend to danger. Among these conditions he mentions the common practice

in connection with payment for the time spent by the miners in timbering. Nearly half the deaths in coal mines are caused by falls of coal or rock. To prevent falls of material the miner must set up timber and remove loose fragments. The miner is paid on the basis of the number of tons of coal he gets out, and it is only when an excessive length of time is required that any allowance is made for setting timber. The usual arrangement is that the company allows the miner all the timber he needs, while the miner sets it up in his own time. When doubt exists as to the necessity for timbering, the miner is left the option of setting timber and taking down loose material in his own time, or of taking a chance of being safe without taking these precautions. The Director remarks that "discouraging such chance-taking is a very real personnel problem for which as yet no satisfactory solution has been found, although many have been proposed. Five times as many deaths result from this cause as from explosions, and there does not seem to be any preventive measure that does not involve working through the individual miner".

Causes of "Textile" Accidents

Mr. Glenn W. Cook, supervising inspector, The Travellers Insurance Company, Springfield, Massachusetts, in an address before the 13th Annual Safety Congress, Louisville, Kentucky, classifies accidents in the textile industry under three headings (1) accidents common to all industry, such as falls, hand tools, bumps, strains, hernias, etc., (2) accidents which occur in that part of the plant which is not strictly textile, such as machine shop, carpenter shop, power plant, or in the parts of the plant which are essential to the industry, but also found in many other industries, and (3) accidents which occur on textile machines and in the process of converting a fiber into a woven fabric. He claims that the engineering side of safety in the textile mill, that is: the construction, installation, and maintenance of mechanical safeguards, if properly carried out, would mean the permanent elimination of nearly 50 per cent of the textile mill accidents. An analysis of accident causes based on the experience of some 350,000 plants showed that 44 per cent of the cost of accidents in the cotton industry is due to mechanical causes; 54 per cent in the woolen industry, and 26 per cent in the silk industry. They are divided as follows:—

	Cotton	Woolen	Silk
Elevators.....	2.5	2.5	4.5
Power transmission.....	1.5	1.5	1.5
Machine drives.....	2.0	2.0	2.0
Moving parts on machines.....	8.0	8.0	8.0
Point of operation.....	30.0	40.0	10.0
Total.....	44.0	54.0	26.0

The machines found to have caused the greatest number of accidents were: revolving flat type cards, carpet trimmers, roller type body ironers, band knives, moire machine rolls, pickers, calender type ribbon finishers, rope stranding machines, shearers, carpet frayers, centrifugal dryers or extractors, flat work ironers, circular knives, openers, pile cutters, dyeing, printing and finishing rolls, sewing machines, sliver and ribbon lap machines, dry tumblers, willowers, washers. Of these the most hazardous are carpet frayer, opener, picker and willower. Belts, gears and other machine parts cause 11½ per cent of the accidents in this industry. The practice of washing the floors while the mill is in operation causes many slips and falls, as does also a soapy condition of floors around wool washers, and wet floors in dye houses. Many workers are injured while picking waste from machines, or while repairing or adjusting machines. Many are caught in looms, mules, cards, willowers, etc., when other employees start the machines. The locking of machines under adjustment and repair would eliminate most of these accidents. Weavers are subject to the greatest variety of accidents. They are frequently struck by flying shuttles, or caught between the lay and the beam, or by the picker stick, and weights sometimes fall on their feet. They receive infection from broken heddle wires, fall over beam shafts, and slip on spools scattered on the floor. The practice of slashing beams causes bad cuts in the legs. In the dye house, men are scalded by hot water, particularly by tubs boiling over, and some men are subject to poisoning from dyes. Steam vapour in the dye house is responsible for many trucking and other types of accident. Exposed steam pipes cause many burns, and dye house employees fall into the old-fashioned tubs. Bale hooks and carelessness in cutting bale bands, the installation of mules without proper clearance between the walls and the columns, slivers in the feet of mule operators, slivers from bobbins, the falling of spools from spinning and the twisting of frames are also common causes of textile mill accidents.

A report has been received from the Secretary of State for the Colonies on the recent visit of the British Overseas Settlement Delegation to Canada in 1924 for the study of the existing system of child migration and settlement. As already noted in the LABOUR GAZETTE the delegation was composed of Miss Margaret Bondfield, Mrs. F. N. Harrison Bell, Mr. G. F. Plant and Mr. W. Garnett. An outline of the findings and recommendations of the delegation will be given in the next issue.

ADVANTAGES OF ROCK DUSTING IN COAL MINES

THE United States Bureau of Mines has published a study of stone or rock dusting to prevent coal dust explosions, as practised in Great Britain and France. The report is written by Mr. George S. Rice, whose services in connection with the mining industry of Nova Scotia have been noted in previous issues of this GAZETTE. At present stone dusting is practically universal in British collieries, although the efficiency with which the method is applied admittedly varies in different districts and different mines.

The Mines Department of France has approved shale dusting as a preventive of coal dust explosions, and this method is extensively applied in the mines of the Pas-de-Calais and Nord Departments. The French officials are urging a wider use of rock dusting in the more dangerous mines. The admirable precautions that the French authorities have always taken as to ventilation and preventing accumulations of fire damp and the ignition of gas and coal dust have minimized the danger from coal dust. In fact, there is no other country, unless it be Belgium, which is as careful in preventing explosions as is France, and there have been only a few disasters of this type since that at Courrières in 1906, proportionately less than in any other country except Belgium. However, under the natural conditions generally found in France and in Belgium, there is much less explosive road dust than in coal mines of most other countries. Furthermore, the mining methods in those two countries are conducive to much less danger from coal dust than is found elsewhere. The beds are so folded and faulted that the main roads are tunneled through the rock or shale of the coal measures, and only the secondary working levels and inclines are in coal. The shales of the coal measures are generally so friable that particles of roof and floor mix in and dilute the coal dust.

Discussing the application of rock dusting in the mines of the continent, Mr. Rice points out that American mines have heretofore relied on watering and the prevention of ignition to avoid coal dust explosions. Although it is agreed that watering is successful if done with absolute thoroughness, engineers of the Bureau of Mines have rarely, if ever, found watering so perfectly done that if a source of ignition was present in imperfectly watered parts of the mine a coal dust explosion would not follow. This remark, of course, does not apply to Pennsylvania anthracite mines, the dust of which has not been found to be explosive, but does apply to all bituminous, semibituminous and subbituminous coal

mines. The report states that recent explosions in the United States have practically demonstrated the failure of the watering system as ordinarily practised. Some of the advantages of the rock dusting are stated as follows:—

The effect of rock dusting is not so ephemeral. Many roadways do not have to be redusted for a week or two. Other parts of the mine may not need redusting for months. A light-coloured dust is visible and has the advantage of greatly increasing the illuminating effect of a miner's lamp instead of decreasing it by making the walls black, as watering does; the increased illumination prevents many smaller accidents along the passageways. If properly applied, the stone dust fills the cavities and crevices and lies on the ledges ready to be dislodged by a concussion and to extinguish an explosion—an effect directly opposite to that of coal dust lying in such cavities, on ledges, and on timbers. If there is an explosion of gas where rock dusting is used the air waves carry the incombustible dust along with the coal dust inevitably present, and the rock-dust particles extinguish the flame by absorbing heat and by coming between particles of coal dust.

One of the greatest advantages of rock dusting is that failure or delay to apply the dust for a day or a few days is not so vital as the omission of watering. The condition of the roadways can be largely determined by inspection and checked positively by the gathering of samples. This applies not only to inspection from day to day by the management, but also to the more occasional State inspection. For example, a State inspector may find the condition of a watered mine admirable as far as coal dust is concerned on the day of inspection, but he cannot tell whether the mine will be safe the next day. Usually a month or more will elapse before he makes another inspection of that particular mine. Meantime the effectiveness of the watering cannot be positively checked in the same way that samples of dust gathered and tested by the management can be if made a matter of daily record.

Canada and Child Labour

President William Green, of the American Federation of Labour, in the course of a statement of labour policy on New Year's day, referred as follows to the position of Canada in regard to the proposed child labour amendment to the constitution of the United States:—

"Although that portion of our movement which is in Canada is not directly concerned in this effort for the child labour amendment yet they are directly affected by whatever standards we may secure. Is not the time opportune for the workers in Canada to weld another link in the bond uniting our economic movement by making the conservation of child life the paramount issue for the coming year?"

A summary of the laws of the provinces of Canada regulating the employment of children in various occupations was given in the issue of the LABOUR GAZETTE for December, 1923.

A STUDY OF EMPLOYMENT OFFICE SYSTEMS

"PUBLIC Employment Offices—their Purpose, Structure and Methods," recently published by the Russell Sage Foundation, New York, is a volume of nearly 700 pages. It embodies the results of research work and study into the subject indicated by the title, covering a period of five years. Years before the Great War broke out, the evils associated with private, fee-charging, commercial, employment agencies and the inadequate service inevitably associated with such agencies, had begun to impress themselves upon the public mind. More or less feeble efforts had been made on the North American continent by several provincial, state or municipal governments to create some form of free public employment service.

Every competent authority, including several government commissions, that had investigated the subject of employment office methods, had roundly condemned the general practices and inefficiency of private commercial agencies and had recommended the establishment of free public employment offices. Notable among these in Canada were the Royal Commissions appointed by the governments of British Columbia and Ontario in the years 1912 and 1914 respectively. Both these commissions sensed the need for a co-ordinated, national system of employment offices to supersede the ineffective and often mercenarily disposed fee-charging agencies who frequently not only robbed and deceived the worker who used them as the means of obtaining information concerning opportunities for employment, but also caused unnecessarily large and expensive turnovers in the staffs of employers.

The labour conditions created by, and immediately post-dating, the war so vividly exposed the economic wastefulness incident to the private agency system, that the Federal Governments of Canada and the United States enacted legislation providing for the establishment of a nationally co-ordinated system of free public offices in the respective countries. The first International Labour Conference (League of Nations), held in Washington in 1919, urged upon all the component powers the need for the adoption of similar policies and further recommended that, as quickly as possible, private fee-charging agencies should be outlawed. President Wilson's Industrial Conference of 1920 and President Harding's Conference on Unemployment held the following year were both unanimously in favour of an adequate system of public employment offices.

The publication of the Russell Sage Foundation contains the record and findings of a remarkably exhaustive survey of the subject, particularly as it effects the United States, although a considerable degree of attention has been paid to Canada. And while it is not, and it must be confessed cannot, be claimed that the Employment Service of Canada realizes the ultimate ideal of service conceived by the investigators, complimentary references are quite generously made to Canada in connection with the work accomplished in this field.

Fluctuations of Employment

It has for many years been obvious to students of social and economic conditions that unemployment is not a problem limited to periods of trade depression. Full time employment for all who must be constantly engaged in gainful occupations in order that the prime necessities of life may be obtained, and the wolf of poverty kept on the outside of the home, is no longer available. This stern and challenging fact is clearly revealed in the report. "Unemployment is at present a constant phenomenon and therefore a continuing problem. . . large enough to cause serious loss, waste, and suffering, and to compel attention." The machinery, that has been set up for the purpose of collecting and tabulating statistical data relating to unemployment on the North American continent, is incapable of providing the accurate and complete information concerning the number of workers who are unemployed. Nevertheless, "there is plenty of evidence that the amount has reached great proportions at certain periods, various estimates for the years of depression since 1900 ranging from 1,000,000 to over 6,000,000 people idle for weeks and sometimes for months at a time." Interesting diagrams are contained in the report, which afford a comparison between unemployment among trade unions in Canada from January 1916 to June 1923; in the State of New York for the period January 1904 to June 1915, and the State of Massachusetts January 1908 to June 1923. The peak of unemployment in Canada during the period plotted in the diagram was reached in March, 1921, when the unions reported 16.48 per cent of their members out of work. This mark was exceeded by the returns made to the New York Department of Labour, as shown in the diagram, during each year of the period covered with the exception of 1906, while during the years 1908, 1914, and 1915 the peaks soared above the 35 per cent

point. Contemporary comparison is afforded in the diagrams depicting the trade union returns in Canada and Massachusetts, and it is interesting to note that, with the exception of the first half of 1916, a greater degree of unemployment is indicated in Massachusetts throughout the whole period than in Canada. For more than a year and a half the peak of unemployment among trade unions in Massachusetts exceeded the high peak of March, 1921, in Canada, which, to repeat, was 16.48, while the greatest degree of unemployment among the unions in Massachusetts was at the beginning of 1920, when it reached the mark of 28 per cent.

Functions of Employment Offices

Although most exaggerated claims have sometimes been made regarding the practical effect of a free, co-ordinated, nation-wide public employment service, these claims sometimes running to the absurd lengths of asserting that such service was a panacea for the ills of unemployment, the Russell Sage Foundation investigators have steered clear of such extravagance. Public bureaus are only one plank in the platform. Properly planned and operated they can, and do, reduce labour reserves by the matching of jobs and workers seeking jobs to a degree which the private agencies are incapable of reaching. They are capable of still further assisting in this direction by influencing the flow of immigration in accordance with the requirements of industry. They may be of service to the governing and administrative bodies in determining when public works should be carried on or when such work should be postponed. They can be made the medium for the collection of all statistical data concerning labour, and their reports should furnish the most reliable information respecting general conditions of employment. They can also be made a useful guide to young persons in the selection of vocations by affording information regarding the trends of trade and new lines of development in industry, and they are indispensably necessary as an auxiliary agency to government unemployment insurance schemes. These are some of the positive contributions which public employment bureaus, properly organized, can make to the solution of the problem which challenges the statesmen, the captains of industry and finance, and all who have the welfare of society at heart, namely, that of the constant and, in ever recurring cycles, serious and widespread unemployment.

Non-Partizan Administration

The voluminous and exhaustive character of the report of the study undertaken by the

Russell Sage Foundation investigators precludes the possibility in this notice of more than fragmentary reference. As a guide and inspiration to those whom it was planned to assist, namely, "those who, both inside and outside the service, are already seeking to lift it to an increasingly higher plane of accomplishment," it is invaluable. It will well repay the public employment service worker and student for all the time devoted to reading it. It is a wealthy mine of detailed information regarding the nature of the work, its organization and administration. Some surprise will be occasioned to Canadian readers who are familiar with the record of the Employment Service of Canada to learn that United States employers have strongly opposed the United States Employment Service, mainly on the ground that it was partial to the interests of the workers and prejudiced against those of the employers. Evidently, the investigators regard this antipathy as ineradicable and fatal so long as the United States Employment Service is administered by the Federal Department of Labour. "In view of the procedure and practice in England and Canada, the presumption would seem to be in favour of placing the federal responsibility for the Employment Service in the United States Department of Labour; and it is there that it seems most logical, in conformity with approved modern tendencies in governmental administrative organization, to place it. Extended consideration of the question, however, leads to the conclusion that whatever the strict logic of the case, and whatever form it may ultimately take, the practical situation makes it undesirable at the present time for the United States Employment Service to be made a part of the Department of Labour." This conclusion is somewhat startling in view of the fact that the Federal part of the United States Employment Service is administered by the Department of Labour. No exception, however, can be taken to the finding of the report that "impartiality is the only principle upon which the government can conduct a service of this kind." Stress is also laid upon the menace to the highest interest of a Federal-State service owing to appointments that are made by political patronage, and the turnover of staffs under the operation of the spoils system, when changes in government take place. Since the inception of the Employment Service of Canada, there have been changes in Government, both Federal and Provincial, but there is no instance known to the writer where a member of any staff in the Employment Service of Canada has been removed for political reasons. As recommended in the

publication, appointments to the Federal and Provincial staffs are made in accordance with Civil Service Commission regulations, and the period of service depends upon the satisfactory performance of the duties appertaining to it.

Unemployment a Local Problem

It is the view of those who conducted the inquiry that as between the Federal-Provincial system of the Employment Service of Canada and a federal-provincial-local scheme of support and administration, the balance of favour belongs to the latter. In their opinion the problem of unemployment is, and should remain, primarily local. Canadian readers will recognize in this statement an echo of the policy of the Federal Government regarding responsibility for unemployment relief. In support of this contention the report claims that local participation insures greater flexibility in the methods of administration adopted to correct the varied conditions prevailing locally; stimulates the interest and co-operation of the community; promotes efficiency and economy; and satisfies "that primary impulse for responsibility and self-expression which is a part of community life."

Advisory Councils

Emphasis is laid upon the value of local and national advisory councils. These are regarded as being much more useful and necessary than provincial or state councils. The experience of Canada in this particular is interesting. If a census of opinion on the subject of provincial or local advisory councils were taken among the provincial authorities in Canada, a large body of such opinion would probably be widely at variance with that of the investigators. It is claimed that under normal conditions the interest of the members wanes, largely because they recognize that, apart from the assistance they may render during such periods as those of establishing

the system, when the country is at war, or when unemployment is rampant, the officials of the Service know more about the matters referred to the advisers for their advice than do the latter themselves. Unemployment insurance, as in Great Britain, particularly when coupled with widespread and long continued periods of unemployment, provides ample work to hold the interest of advisers. British local councils, or committees as they are called, have been consulted on a variety of problems arising out of unemployment, other than that of the operation of the Employment Exchanges.

Concerning such activities and certain other recommendations contained in the report, it should be borne in mind that the undertaking of them is contingent upon the willingness of governments to accept responsibilities and provide the necessary finances. Immediately following the Armistice the peoples, including the governments, of Canada and the United States were largely under the spell of emotionalism produced by the war and the victory of the Allies. Menacing problems called for solution and governments were disposed to provide liberally for agencies then considered to be imperative. The usefulness of a public employment service was readily recognized and a disposition exhibited to provide somewhat generously for its establishment and operation. These conditions have changed. In Canada, at least, enormous disabilities were inherited through participation in the war and full recovery has not yet been achieved. Under such circumstances economies have had to be effected and forward movements halted for the time being.

The Russell Sage Foundation has rendered a conspicuous service in undertaking this investigation and releasing its report for the benefit of all who are interested in promoting the greatest measure of success in public employment service work.

United States Trade Commission on Co-operation

In the summer of 1923, the Chairman of the United States Federal Trade Commission, Mr. Huston Thompson, and Dr. William Notz, Chief of the Export Trade Division, studied co-operation in fifteen European countries. The Commission has now made a voluminous report to Congress dealing with certain specific phases of the subject. Insurance and housing are omitted.

The Commission recommends development of co-operation in the following directions:—

1. Farmers' co-operative societies.
2. Rural credit societies of the Raiffeisen deposit and loan type, adapted to local conditions and needs, managed by the farmers

themselves, with a centralized auditing system and central banks for diverting funds from one section to another as needed.

3. The distribution of electric power in rural communities through farmers' co-operative societies.

4. Retail consumers' co-operative societies.

5. Co-operative distribution of household coal.

6. The distribution of milk by consumers' co-operative societies.

7. Co-operative export associations.

8. Decentralization of power and administration in co-operative organizations.

ANNUAL REPORT OF THE UNITED STATES DEPARTMENT OF LABOUR

THE twelfth annual report of the Secretary of Labour of the United States covers the work of the Department during the fiscal year ended June 30, 1924. The Department of Labour consists of the office of the Secretary, which comprises the Division of Conciliation, the United States Employment Service and the Bureau of Industrial Housing and Transportation; the other Departmental bureaus being the Bureau of Labour Statistics, the Bureau of Immigration, the Children's Bureau, the Bureau of Naturalization and the Women's Bureau. The Department employed during the year a staff numbering 3,457, of whom 2,837 were employed outside the District of Columbia.

Conciliation Service

Commissioners of conciliation were assigned during the fiscal year 1924 to 544 trade disputes—strikes, threatened strikes, and lockouts. Of the 544 cases in which the representatives of the conciliation service of the Department of Labour exercised their good offices, 415 disputes were settled, 346 through the individual efforts of the commissioners, and 69 cases were adjusted in co-operation with State or local agencies, or with committees of citizens or State and municipal officials. The number of workers directly and indirectly involved in the controversies handled through this service aggregated 497,469, this estimate being extremely conservative. The report states that "it is the earnest desire of the Secretary of Labour to continue developing the conciliation service so that it will ultimately become a more important factor in the prevention of strikes and lockouts through the adjustment of differences arising between the interested parties while production continues and the wages and returns to the management are uninterrupted. Gratifying progress is being made along this line of endeavour."

U. S. Employment Service

This service placed in employment 1,806,990 men and women during the fiscal year, the several States co-operating in the work of the Federal office. The Service comprises a Farm Labour Division, handling the problem of harvesting; a Junior Division, acting in co-operation with the State services, public school systems and other local agencies; and an Industrial Employment Information Division. The latter Division formerly published a monthly bulletin of statistical information,

but this work is now done by the Bureau of Labour Statistics. Valuable information is thus compiled, and distributed throughout the country for the purpose of supplying the demand of the labour market.

Immigration

The number of aliens admitted and charged to the quota during the fiscal year ended June 30, 1924, was 357,642, as compared with 243,953 and 335,480 in the fiscal years 1922 and 1923, respectively. During the year just ended the quotas of all countries, with the exception of Estonia, Fiume, and Iceland, were completely exhausted. Attention is called, however, to statistics of immigration from Canada, Mexico, South and Central Americas, etc., which under the law were exempt from quota limitation.

The immigration act of 1924, approved May 26, 1924, changes the basis for computing the quotas in two particulars; the per centum limit act of 1921 took as a basis the foreign-born persons in the United States as shown by the census of 1910, while the new law takes as a basis the number shown by the census of 1890; further, the old law applied 3 per cent to the census enumeration of 1910, whereas the new law applies 2 per cent to the census enumeration of 1890. Beginning July 1, 1927, however, the numerical limitation will be based on the number which bears the same ratio to 150,000 as the number of inhabitants in continental United States in 1920 having that national origin bears to the number of inhabitants in continental United States in 1920, but the minimum quota of any nationality shall be 100.

Numerous complaints were received from representatives of labour organizations against the unlawful entry of deserting alien seamen, on the ground that their presence in the United States afforded opportunities to the large industries to employ them at a low rate of wages, to the detriment of unemployed union labour. Recently an investigation conducted in the anthracite coal region in Pennsylvania disclosed that one of the large companies had in its employ approximately 200 alien seamen who had entered the United States contrary to the provisions of the immigration laws, and it is likely that as a result of that investigation several hundred aliens who thus entered illegally will be deported. The Immigration Bureau succeeded in deporting under warrant proceedings, during the fiscal year ended June 30, 1924, 6,400

undesirable aliens, the largest number for any one year, during its history.

The report contains full information on the subject of the recent developments of the immigration policy of the United States. The Department undertook special investigations into the conditions in various foreign countries and found evidence of a policy in certain countries of "dumping" their undesirable citizens in the United States. "By analysis," the report states, "it must be evident that there is much that is undesirable in immigrant prospects, especially if all limitations were to be removed. Perhaps the actual numbers of desirable labour admitted would be greater by a letting down of the bars, but the influx of unassimilable and undesirable aliens would be more than proportionately increased. The quota law, however, has increased 'bootlegging' of aliens across our borders, and this practice has been a prolific source of dangerous types."

Bureau of Labour Statistics

The functions of this Bureau are purely educational, rather than administrative, and have remained unchanged since its organization in 1885. The act creating the bureau provides that it "acquire and diffuse among the people of the United States useful information on subjects connected with labour in the most general and comprehensive sense of that word and especially upon its relation to capital, to hours of labour, to earnings of labouring men and women, and the means of promoting their material, social, intellectual, and moral prosperity." Under the act organizing the Department of Labour the bureau is to "collect, collate, and report at least once each year, or oftener if necessary, full and complete statistics of the conditions of labour and the products and distribution of the products of the same." The main publication of the Bureau is the *Monthly Labour Review*, containing invaluable periodical information on labour and economic conditions in the United States, with special articles on current topics. The Bureau also acts as an agent for unifying State Statistics. For example: co-operative arrangements have been entered into with the several State compensation commissions to compile uniform statistics of industrial accidents so that the Bureau will be able to collect and publish annually for the United States the number of industrial accidents and the accident rates.

The Department has continued to co-operate with the International Association of Industrial Accident Boards and Commissions, the Association of Government Labour Officials,

and the State labour bureaus, to the end that State Labour legislation and administration may be harmonized and labour statistics made more comparable. State bureaus are kept informed of the current activities of the other bureaus by means of the *Monthly Labour Review*. Co-operation has also been maintained with the American Engineering Standards Committee in the development of industrial safety codes. A representative of the Department is now aiding in the formulation of the following safety codes: Rubber machinery, electrical safety code; sanitation; machine tools; electrical power control; and walkways; he is also a member of the safety code correlating committee.

Children's Bureau

This Bureau deals with the subjects of maternal and infant mortality, and administers the maternity and infancy act, which has now been accepted by the forty states in the Union, but perhaps its most important work, as regards labour, is in connection with the employment of children, on various phases of which valuable studies were made during the year.

Bureau of Naturalization

The fiscal year 1924 showed the highest peak attained in the number of naturalizations in any year since 1906 when the Naturalization Act took effect, 601,657 papers being filed. This work is allied to that of citizen training. During the past year the names and addresses of 371,860 candidates for citizenship were supplied to public-school authorities in 699 cities and towns, or 82,127 more than during the preceding year. During 1924, 2,500 industrial concerns were assisted in various ways in furthering the training for citizenship of their foreign-born employees. To date this brings the total number of employers of foreign-born labour who have sought the Bureau's aid to over 22,000.

Women's Bureau

The duties of this Bureau are classified as follows:—Investigations of conditions of employment of women in industry in the several States, special studies of problems particularly related to wage-earning women, co-operation with State and Federal officials on such matters, conferences for the exchange of ideas about women workers, and research and educational work. In view of the more than eight and one-half million women employed in gainful occupations, the task has proved to be beyond the present resources of the Bureau.

Summary of Recommendations

The report concludes with a number of recommendations intended to enable the Department of Labour to increase its usefulness:

The broadening of the field of the Bureau of Labour Statistics and the establishing of a Division of Labour Safety in the bureau which would co-ordinate the work for industrial safety now being done in the various States.

A gradual increase in appropriations to enable the Conciliation Service to develop and expand its functions; and specially trained commissioners should be appointed to handle controversies arising out of the basic industries.

The Employment Service should be made a statutory Bureau of the Department of Labour.

The Children's Bureau should be extended, and its reports distributed to the public.

The Women's Bureau should be provided with adequate means for carrying on its work.

The immigration law should require that all applicants for admission are qualified before they leave their homes, and the quota rule should be made applicable to Canada, Mexico and Central and South America, and the activity of the surreptitious entrant and

the smuggler of aliens be thus prevented; that provision should be made for the admission, regardless of quota limitations, of farmers and skilled labourers needed in the United States, when such labour is fully employed in this country, and when no strike or lockout exists or impends in the industry which needs such labour. To compensate for this the President of the United States should be authorized to prohibit all, or further limit, immigration whenever the Secretary of Labour and the Secretary of Commerce shall find that unemployment in the country makes such a suspension desirable; that immigration laws should, wherever possible, be humanized and should not operate to keep members of the same family apart; that while the 1924 act makes such provision for wife and unmarried children under 18 years, it should further include the dependent father and mother of such a citizen; further, that within the quota preference should be given (1) for admission to the families of aliens who have declared their intention to become citizens; (2) to immigrants who served in the military forces of the United States during the World War; (3) skilled labourers; (4) all other labourers, including domestic servants.

Finally, a complete revision and codification of United States naturalization laws.

CANADA AND THE EIGHT HOUR DAY

Eight Hour Day Convention of International Labour Conference referred to Supreme Court of Canada

IN pursuance of a resolution which was adopted by the House of Commons at its last session a reference has been made by the Dominion Government to the Supreme Court of Canada to secure a judicial determination of the question whether the Draft Convention of the International Labour Conference (League of Nations) "Limiting the Hours of Work in Industrial Undertakings to Eight in the Day and Forty-Eight in the Week" is within Federal or Provincial legislative jurisdiction.

The Draft Convention in question was adopted at the first session of the International Labour Conference in 1919. Its object is to secure the adoption of a maximum working day of eight hours and week of forty-eight hours for persons employed in public or private undertakings. Certain exceptions to this proposed rule are noted in the text of the Convention.

The Order in Council providing for the above-mentioned reference was approved by His Excellency the Governor General on January 12, and is as follows:—

Text of Order in Council

The Committee of the Privy Council have had before them a report, dated 23rd December, 1924, from the Minister of Justice, stating that he has under consideration, upon reference from the Honourable the Minister of Labour, the report of the Select Standing Committee on Industrial and International Relations, which was adopted by resolution passed by the House of Commons of Canada on the 18th July, 1924, and is in the terms following:—

A resolution was adopted by the House of Commons on May 23, declaring it expedient that a certain Draft Convention which was adopted at the 1st Session of the International Labour Conference of the League of Nations in 1919, limiting the Hours

of Work in Industrial Undertakings to Eight in the day and forty-eight in the week should be referred to the Select Standing Committee on Industrial and International Relations for examination and report, having regard to the Labour Provisions of the Treaties of Peace and to the Order in Council of November 6, 1920, dealing with the jurisdiction of the Dominion Parliament and the Provincial Legislatures.

Your Committee has held several sittings and made a careful examination of the Draft Convention, the Labour Part of the Treaties of Peace and the Order in Council of November 6, 1920, dealing with the jurisdiction of the Dominion Parliament and of the provincial legislatures. Evidence was taken with respect to the present position of the eight-hour day in industrial employment in Canada and other countries. Information was presented to your Committee with reference to a Conference which was held in Ottawa in September last between representatives of the Dominion and Provincial Governments which indicated that notwithstanding the view expressed in the Order in Council of November 6, 1920, doubt existed in certain quarters as to the jurisdiction of the federal and provincial authorities, respectively.

It is accordingly recommended that measures be taken to refer the "Draft Convention Limiting the Hours of Work in Industrial Undertakings to eight in the day and forty-eight in the week" to the Supreme Court of Canada for hearing and consideration under Section 60 of the Supreme Court Act together with such questions as will serve to secure an advisory judgment from the Court on the jurisdiction of the Dominion Parliament and of the provincial legislatures, respectively.

The Order in Council of November 6, 1920 (P.C. 2722), referred to in the foregoing report, was passed on the report of the then Minister of Justice (the Rt. Hon. C. J. Doherty) and deals, in part, with the nature of the obligation of the Dominion of Canada as a member of the International Labour Conference, constituted under the Labour Part (Part XIII) of the Treaty of Versailles and the corresponding provisions of the other treaties of peace with relation to the draft conventions or recommendations which may from time to time be adopted by the International Labour Conference and in order to appropriate legislative or other action being taken to give effect to them, and the opinion expressed by the Minister upon this point was set forth in the following paragraph of the said Order in Council:—

The Minister further states that he is of opinion that the provisions of the Labour Part of the Treaty of Versailles do not impose any obligation on the Dominion of Canada to enact into law the different draft conventions or recommendations which may from time to time be adopted by the Conference. The obligation as set forth is simply in the nature of an undertaking on the part of each member within the period of one year at most from the closing of the session of the Conference, or if it is impossible owing to exceptional circumstances to do so within a period of one year, then at the earliest practicable moment, and in any case not later than eighteen months from the closing of the Conference "to bring the recommendations or draft conventions before the authority or authorities within whose competence the matter lies for the enactment of legislation or other action." The treaty engage-

ment being of this character, it is not such as to justify legislation on the part of Parliament under the authority of Section 132 of the British North America Act, 1867, to give effect to any of the proposals of the said draft conventions and recommendations, which must be held, as between the Dominion and the provinces, to be within the legislative competence of the latter. The Government's obligation will, in the opinion of the Minister, be fully carried out if the different conventions and recommendations are brought before the competent authority, Dominion or Provincial, accordingly as it may appear, having regard to the scope and objects, the true nature and character of the legislation required to give effect to the proposals of the conventions and recommendations respectively, that they fall within the legislative competence of the one or the other.

The said Order in Council of the 6th November, 1920, also embodied the Minister's opinion upon the question whether the provisions of the "Draft Convention Limiting the Hours of Work in Industrial Undertakings to Eight in the Day and Forty-Eight in the Week," adopted at the first session of the International Labour Conference at its first annual meeting 29th October—29th November, 1919, came within the legislative competence of the Parliament of Canada or of the provincial legislatures. The Minister reported that the proposals of this Convention "involve legislation which is competent to Parliament in so far as Dominion works and undertakings are effected, but which the provincial legislatures have otherwise the power to enact and apply generally and comprehensively."

The Minister observes, however, that the Select Standing Committee on Industrial and International Relations of the House of Commons received information which indicated "that, notwithstanding the view expressed in the Order in Council of November 6, 1920, doubt existed in certain quarters as to the jurisdiction of the federal and provincial authorities, respectively."

The Minister considers it expedient, in view of the said report of the Committee on Industrial and International Relations and of the importance of the subject-matter involved, that the question which has arisen as to the respective legislative powers of the Parliament of Canada and the provincial legislatures in relation to the enactment of the legislation required to give effect to the provisions of the said draft convention should be judicially determined, and he, accordingly, recommends that the following questions, together with copies of the Treaty of Peace with Germany and the "Draft Convention Limiting the Hours of Work in Industrial Undertakings to Eight in the Day and Forty-Eight in the Week," be referred by Your Excellency in Council to the Supreme Court

of Canada, for hearing and consideration, pursuant to the authority of Section 60 of the Supreme Court Act,—

(1) What is the nature of the obligation of the Dominion of Canada as a member of the International Labour Conference, under the provisions of the Labour Part (Part XIII) of the Treaty of Versailles and of the corresponding provisions of the other Treaties of Peace, with relation to such draft conventions and recommendations as may be from time to time adopted by the said Conference under the authority of and pursuant to the aforesaid provisions?

(2) Are the legislatures of the provinces the authorities within whose competence the subject-matter of the said draft convention (copy of which is herewith submitted) in whole or in part lies and before whom such draft convention should be brought, under the provisions of Article 405 of the Treaty of

Peace with Germany, for the enactment of legislation or other action?

(3) If the subject-matter of the said draft convention be, in part only, within the competence of the legislatures of the provinces, then in what particular or particulars, or to what extent, is the subject-matter of the draft convention within the competence of the legislatures?

(4) If the subject-matter of the said draft convention be, in part only, within the competence of the legislatures of the provinces, then in what particular or particulars, or to what extent, is the subject-matter of the draft convention within the competence of the Parliament of Canada?

The Committee submit the same for approval.

(Sgd.) E. J. LEMAIRE,

Clerk of the Privy Council.

The Doctor and the Psychologist in Industry

THE subject of "The Doctor and the Psychologist in Industry" was discussed at the annual conference of the Institute of Industrial Welfare of Great Britain held at Swanwick from 26-29 September, 1924.

Dr. C. S. Myers, Director of the Institute of Industrial Psychology, dealt with the part which psychology can play in industry. Dealing first with "work-curves", he discussed the various factors by which they were influenced. He showed how "rest-pauses" gave rise to increased output, and how "ease" of movement and "rhythm" tended to reduce fatigue, and as a result to improve the quality of work performed and reduce spoilt work and accidents. Finally, he laid stress on the importance of psychology in vocational guidance.

Dr. W. F. Dearden examined the question of what medical science can do for industry. He recalled the basic principles laid down more than 200 years ago by Ramazzini, of Padua—the primary necessity for the study of the human machine, and the capital importance of cleanliness and ventilation. It had taken two centuries for industrial hygiene to become a properly defined branch of medical science. In the present state of trade, the medical profession had a very definite function, and could do its share towards putting industry on its feet. In the United States special courses of training existed for this branch of medical science. Co-operation was necessary between the physiologist and the pathologist; the former to discover how bodily powers reacted to occupational conditions and by suitable adjustment of those conditions to get a maximum output without waste of energy; the latter to study the morbid effects, local and general, brought about

by fatigue. The health of the workers must be studied in the workplaces themselves. In this connection, he referred to the value of the work of the certifying surgeons in Great Britain, and also to the importance of the work of the medical inspectors of factories. He pleaded for a development of medical inspection in industry and for the periodical medical examination of young persons.

ACCIDENT PREVENTION

Dr. H. M. Vernon, member of the Industrial Fatigue Research Board, dealt with the physiological aspect of accident prevention, and Dr. Millais Culpin with its psychological aspect. Dr. Culpin called attention to the importance of the personal factor in the occurrence of accidents, and to the need for investigation into that factor in order to discover in each case what particular characteristic was associated with the special susceptibility to accidents to be found in certain people, a susceptibility often attributable to functional or organic troubles.

Dr. Vernon contended that accidents could be largely prevented by maintaining the workers in the best of health and under the best factory conditions, and training inexperienced workers on "fool-proof" machines. Lack of experience was a potent cause of accidents; speeding-up of production, temperature, and humidity were other factors to be considered, having regard to their physiological effects on the workers.

Mr. F. N. Epworth, speaking from the employers's point of view, welcomed the advent of the psychologist in industry. He strongly urged that medical men should get to know thoroughly the actual conditions of factory work.

PRACTICE IN VARIOUS COUNTRIES REGARDING "HOLIDAYS WITH PAY"

THE subject of the provision of holidays with pay for workmen forms the third item on the agenda of the 8th International Labour Conference to be held at Geneva in 1926. A note in the October issue of the *LABOUR GAZETTE* outlined the existing practice in Canada in this respect. No legal provision is made by any province of Canada for annual vacations with pay for industrial employees. Moreover, the Trades and Labour Congress of Canada, at its last annual convention rejected a proposed resolution favouring legislation that would compel all employers of more than ten workmen of over ten months standing, to allow them annual vacations with pay. On the other hand, industrial agreements often contain clauses requiring this concession to be made to the employees affected thereby, particularly where employment is steady and regular.

Some account may now be given of conditions in other countries in the matter of vacations, whether provided by legislation or by collective agreement:—

Provision by Collective Agreement

Great Britain.—The British *Ministry of Labour Gazette* published articles in August 1920 and December 1922 on the question of holidays with pay. The first article states that "apart from the general increases in rates of wages and reductions in weekly working hours, perhaps the most noteworthy feature of the improvement in the conditions of employment of workpeople in the United Kingdom which has taken place since the conclusion of the Armistice has been the widespread extension of the principle of payment of wages for holidays." "It is estimated that about two million workpeople are now covered by collective agreements between employers and workpeople, or by less formal arrangements, providing that certain holidays with pay shall be granted annually." The second article states that since August 1920 there had been a considerable extension of the principle of holidays with pay and that the Ministry of Labour then knew of over 100 cases of collective agreements or less formal arrangements providing that certain holidays with pay should be granted annually. In most of the formal agreements it was laid down that wages would be paid for legal public holidays and in addition for holidays of a certain length, generally ranging from 3

to 12 days per year. Generally, however, holidays with pay were only allowed to workers with 6 or 12 months' service, and in some cases the number of days' holiday with pay varied according to length of service.

France.—In almost all cases employees in commercial undertakings and non-manual workers in industrial undertakings have in practice from a week to a fortnight's holiday in the year. It is, however, extremely rare for manual workers to have annual holidays. Only 4 out of 144 collective agreements included in the statistics published in the *Bulletin du Ministère du Travail* for 1923 have clauses dealing with holidays.

Germany.—According to the publication of the Ministry of Labour entitled "Collective Agreements in Germany at the end of 1922", of the 10,768 collective agreements which applied to 890,237 undertakings, employing 14,260,000 wage-earners, 80.1 per cent instituted annual holidays for 92.7 per cent of the workers. The minimum holiday allowed was 3 working days or less in 54.5 per cent of the agreements, covering 54.3 per cent of the undertakings, and applying to 53.8 per cent of the workers. It was from 3 to 6 working days in 38 per cent of the agreements, covering 37.7 per cent of the undertakings and 38.6 per cent of the workers. It exceeded 6 working days in 7.5 per cent of the agreements, covering 8 per cent of the undertakings and 7.6 per cent of the workers. The maximum holiday fixed by the agreements was 6 working days or less in 31.9 per cent of the agreements, covering 41.3 per cent of the undertakings and 29.1 per cent of the workers. It was from 6 to 12 working days in 42 per cent of the agreements, covering 31.1 per cent of the undertakings, and 44.2 per cent of the wage-earners. It was from 12 to 18 working days in 20.1 per cent of the agreements, covering 20.9 per cent of the undertakings and 13.3 per cent of the workers. It was more than 18 working days in 6 per cent of the agreements, covering 6.7 per cent of the undertakings and 13.4 per cent of the wage-earners.

It should be noted that the above figures apply to all wage-earners, both manual and non-manual. The corresponding figures for non-manual workers alone are much more favourable.

Sweden.—According to the statistics of labour disputes and collective agreements in 1923, published by the Government, there are clauses concerning holidays with pay in 671 out of 899 collective agreements. These agreements apply to 77 per cent of the total number of workers whose conditions of work are regulated by collective agreement. Most of the agreements which do not lay down holidays with pay apply to seasonal industries. For most of the workers the holiday allowed is less than one week. In the most important industries it is, as a general rule, 4 working days.

Czechoslovakia.—Annual holidays are instituted by law for commercial workers and miners. They are, also, laid down by collective agreements in nearly all industries. Most of the collective agreements summarized in the recent publication of the International Labour Office: "Hours of Work in Industry in Czechoslovakia" contain clauses relating to holidays. The holiday is rarely less than three days. It generally increases with length of service to a maximum of 7 to 14 days in the chemical industries, breweries, distilleries and spirit refineries, the paper industry and the match industry. It ranges between a minimum of 4 to 8 days and a maximum of 12 to 14 days in the metal industries, the textile industry, furniture manufacture, boot and shoe making, tanneries, the milling industry and the sugar refining industry.

Provision by Legislation

Legislation on workers' holidays may be divided into two groups: (1) Legislation making it compulsory to grant holidays either to all wage-earners or to large departments of national economic life such as industry or industry and commerce. (2) Legislation making it compulsory to grant holidays to wage-earners belonging to certain industries and occupations.

The first group includes the following measures: in

Austria, the Act of July 30, 1919, concerning workers' holidays, which applies to all undertakings coming under the Industrial Code, and to certain other industries such as mines, railways and state undertakings; in *Finland*, the Act of June 1, 1922, concerning labour contracts, which applies to all wage-earners except those employed on work carried out by order of the public authorities; in *Latvia*, the Act of March 24, 1922, concerning hours of work; in *Poland*, the Act of May 16, 1922, concerning holidays for workers employed in industry, mines and commerce, with the exception of persons employed in seasonal industries and in artisans' undertakings employing not more than four workers; in *Soviet Russia*, the Labour Code of November 9, 1922, which applies to all wage-earners.

Eleven states, including three Swiss cantons, have legislation belonging to the second group. *Austria* has a series of laws making it compulsory to grant holidays to private employees of all kinds, employees in agricultural and forestry undertakings, actors, domestic servants, and door-keepers, as well as for agricultural workers in Upper Austria, Lower Austria and Carinthia. *Denmark* has made the granting of holidays compulsory for domestic servants, *Spain* for seamen, *Finland* for commercial employees, *Iceland* for commercial apprentices, and *Italy* and *Luxemburg* for private employees. In *Switzerland*, the canton of Berne has instituted holidays for women workers, the canton of Ticino for non-manual workers employed in industrial and commercial undertakings, and for workers in bakeries and confectioners' establishments, and the canton of Zurich for women domestic servants. *Czechoslovakia* has maintained the Austrian Act of January 16, 1910, which makes it compulsory to grant holidays to commercial employees, and has passed an Act dated July 14, 1921, making holidays compulsory for miners.

MINIMUM WAGE LEGISLATION IN VARIOUS COUNTRIES

Methods of fixing and enforcing rates

AN account of existing minimum wage legislation in the Provinces of Canada was given in the LABOUR GAZETTE for May, 1923, and the orders of the several Boards have been noted as they were issued. A general outline of the practice in various countries in regard to the legal fixing of minimum wage scales is given in the following paragraphs.

Legislation in Various Countries

Minimum wage legislation is a comparatively recent development. The first minimum wage law was the New Zealand Industrial Conciliation and Arbitration Act of 1894, but subsequently the system has extended with considerable rapidity in the English-speaking countries—Australia, New Zealand, Great Britain, the United States of America and Canada. In certain other countries also the minimum wage principle has been applied to some extent, for example in France, Germany, Austria, Czecho-Slovakia, Norway, the Argentine Republic, Hungary and Uruguay.

In Australia and New Zealand the principle is widely applied either by means of wage boards or by arbitration courts. The wage board system has been adopted in Victoria and Tasmania. Arbitration courts have been set up for the Commonwealth of Australia and in Western Australia, while in New South Wales, South Australia, Queensland and New Zealand a combination of the industrial arbitration court system and the wage board system has developed.

In Great Britain the minimum wage principle is applied by the Trade Boards Acts of 1909 and 1918, and about three million workers are covered by the Trade Boards set up under these Acts. The Agricultural Wages Act 1924 and the Coal Mines (Minimum Wage) Act 1912 also apply the principle.

In the United States of America the first State to adopt the minimum wage principle was Massachusetts, legislation giving effect to it being passed in 1912. This example was followed in 1913 by eight States, and in 1923 by the State of South Dakota. In these States the laws apply to female workers, and generally to male juvenile workers.

In Canada minimum wage legislation similar to that in the United States, except that male juvenile workers are not covered, has been adopted in seven Provinces and is

in actual operation in five of the Provinces.* The legislation in Canada is of comparatively recent date, the first law being that incorporated in the Factories Act of Alberta in 1917. During the three following years the principle was applied in all provinces with the exception of Prince Edward Island and New Brunswick.

In a number of countries of Continental Europe the principle has been applied particularly in the case of out- or home-workers.

In France an Act of July 1915 provided for the setting up of Wage Committees for determining the wage rates of female home-workers in the clothing industry. The real purpose of the committees is to secure to home-workers the payment of wages at rates equal to those of similar groups of factory workers.

In Norway an Act was passed in February, 1918 providing for the fixing of the minimum wages primarily of home-workers, regardless of sex, in industries engaged in the manufacture of clothing and articles of needlework generally. The Act was passed for a period of five years only, but was extended for a further period of five years by an Act of July, 1923.

In Germany a Law providing for the protection of home-workers was passed in 1911, but the only power of the Boards set up under the Act as regards wages was that of encouraging the conclusion of collective agreements. In 1923, however, the Act was amended, the Boards being empowered under certain conditions to fix wage rates for home-workers.

In Austria in December, 1918, and in Czecho-Slovakia in December, 1919, Acts were passed providing for the regulation of conditions of work and wages of home-workers.

In Hungary the minimum wage principle was applied in the case of agricultural workers by an Act passed by the National Assembly in 1923.

In the Argentine Republic a Minimum Wage Law applying to home-workers was passed in 1918, while in Uruguay an Agricultural Minimum Wage Act was approved by the Senate and the Chamber of Deputies early in 1924.

An examination of the legislation mentioned above indicates that minimum wage laws may

* No minimum wage board has yet been appointed in Nova Scotia, though the Minimum Wage Act is in effect.

be divided into two groups—those which cover certain specified groups of workers only, and those which are of general application.

In the first group the limitation may be considerable as is the case where laws apply only to workers in a given industry, for example agriculture, or to home-workers. On the other hand they may have a much wider application as in the case of the British Trade Boards Acts, and may cover all workers without distinction of sex in industries in which wages are unduly low, or in which the workers are badly organized.

In the second of the above-mentioned groups may be placed the minimum wage laws of Australia and New Zealand which generally apply to all workers without distinction of industry or sex. Their scope is wider and extends beyond the limits of sweated trades.

Object of Minimum Wage Laws

The chief object of most minimum wage laws appears to be the improvement of the wages of the workers in trades in which wages are unduly low. In addition to the advantage conferred upon the workers the view is held that as a consequence of such legislation an increase in the efficiency of the workers may result.

As the payment of unduly low wages often occurs where there is a lack of organization, in certain countries minimum wage legislation has been applied to trades where the workers are badly organized. An indirect object of certain minimum wage laws would therefore appear to be that of stimulating the development of organization among the workers. In the British Trade Boards Act of 1909 attention was directed merely to trades in which wages were unduly low, while by the Trade Boards Act of 1918 the Minister of Labour was authorized to establish Trade Boards empowered to fix minimum rates of wages in trades in which "no adequate machinery exists for the effective regulation of wages."

In the United States and in Canada in a number of States or Provinces minimum wage laws have been generally adopted in the case of female workers only, it being considered that owing to lack of organization they are less able than men to secure adequate wages by agreement. In Germany, Austria and in Czecho-Slovakia a study of the minimum wage laws appears to show that collective bargaining is regarded in these countries as the most satisfactory means of fixing wages, and that legislation is mainly required to

protect the workers where necessary if this means is not employed.

A third object of the fixing of minimum wage rates is the removal of the element of unfair competition which results from the policy adopted by unscrupulous employers of cutting the wage rates of their workers to a level considerably below those paid by the better employers.

Another object of minimum wage legislation which has been prominent, particularly in Australia and New Zealand, is the prevention of industrial disputes. In this case, however, the laws and the machinery set up are often less concerned with low-paid and unorganized workers than with various grades of more or less strongly organized workers.

Methods of Fixing Rates

The methods adopted for fixing minimum wages vary to a greater or less extent according to the object in view. Where the object is the prevention of disputes the Arbitration Court system is generally adopted. Under this system the rate is fixed after a case has been brought before the court and the evidence given by the employers' and the workers' representatives has been examined. The award of the court is usually binding only on the parties to the dispute brought before it, although the fact of the award has an indirect influence on the rates of wages of similar groups of workers, as the court would probably make similar awards if other cases, in which the same conditions prevailed, were brought before it.

A method of fixing minimum wages which has been introduced or proposed in a few countries is that of declaring of general application the wage rates fixed by collective agreements the parties to which represent a sufficiently large proportion of employers and workers in the industry.

The method generally adopted in the case of the lowest paid groups of workers is that of establishing Trade Boards or Minimum Wage Boards. Trade Boards generally consist of an equal number of representatives of employers and workers, together with a number of disinterested members. They are usually appointed for a given trade or industry, and charged with the function of fixing wages irrespective of any question of a dispute. Such Boards are largely independent of one another and the wages fixed for workers of similar skill in different industries may differ considerably. Such differences may be avoided or reduced by establishing some form of central control or liaison between the Boards.

Under the minimum wage laws in force in certain States in the United States, or Provinces in Canada, a Minimum Wage Board is set up consisting of three or five members only, that is, much smaller bodies than the Trade Boards described above. They determine the minimum wages for different industries, and in doing so generally either set up Trade Boards or call together conferences consisting of equal numbers of employers and workers in any industry for which the Board is considering what rate to fix. Where this course is adopted the system in practice resembles closely the Trade Boards system.

The body charged with the determination of minimum wage rates may fix the same rates throughout the area covered by it, or may fix different rates in different districts. Generally Trade Boards fix uniform rates throughout an industry, although in certain cases special district rates are fixed. In various Australian States a basic wage may be fixed as the minimum throughout the State and covering all industries. In other cases, however, local variations are made. In Norway, France and other countries local wage boards are set up to fix or recommend the minimum wages for the area they cover.

Many bodies which fix minimum wages determine the rates not only of unskilled workers in the trade or area covered but also of groups of workers who, owing to their greater degree of skill, are paid at higher rates. Where the object in fixing the wages is to secure to the workers a minimum of subsistence, evidently only the former group of workers need be taken into consideration, and the rate fixed should be a minimum time rate. Piece work rates may, however, be fixed in relation to the minimum time rate, and such rates appear particularly necessary in the case of out—or home-workers who work at irregular times. The fixing of higher rates for workers of higher grade by the same body as that which fixes the minimum rates appears desirable, although, as has been suggested in Great Britain, the case for enforcement of such rates by criminal prosecution is less strong than where the rates are fixed in order to guarantee the lowest paid groups of workers a reasonable minimum for health and efficiency.

Many bodies whose duty it is to fix minimum wage rates may make allowances in the case of "slow" workers who may be given permits to work for rates somewhat below the minima fixed for "average" workers.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Two Conferences in 1926

ACCORDING to a despatch from Geneva on January 9, the governing board of the International Labour Bureau has decided to hold two international labour conferences in 1926, one purely for maritime questions and the other dealing with general labour problems.

An American Estimate of the International Labour Organization

The International Labour Conference is the subject of an article published in the November issue of the *American Review of Reviews* by Amy Hewes, Professor of Economics and Sociology, Mount Holyoke College.

The writer begins by analysing the votes given at the first six sessions of the conference in order to remove the impression, not only among outside observers in the American labour movement and elsewhere, but also among labour delegates in the Conference itself, that labour, having only one-fourth of the voting strength, must always be outvoted by a coalition of employers' and government delegates. The records, it is pointed out,

actually show that on divided votes the government delegates have been with the workers almost twice as often as they have been with the employers.

After discussing the group system, and the new procedure adopted by the last session of the Conference, the article concludes as follows:—

No one can question that the influence of labour in the Conference is growing stronger, just as certainly as the Conference itself is each year becoming a more important body. The gravity of the questions with which it has to deal, many with far-reaching political and international consequences—as, for instance, the relation between reparations and working hours in Germany—has made necessary the appointment of able and experienced men. It is becoming the custom, more and more, to reappoint the same delegates to successive Conferences. In this way the personnel is gaining a degree of permanence which will greatly facilitate it in the building of a tradition that will one day make the Conference the effective Parliament for industrial reconstruction of which its founders dreamed.

Maternity Convention of Washington Conference

The Italian Government has definitely announced its intention of ratifying the Washington Maternity Convention adopted by the

International Labour Organization Conference in 1919. This convention prohibits the industrial employment of women for six weeks before and six weeks after child-birth, and insures free medical attendance and maintenance for mother and child during the period of absence from work. In Italy the maternity fund already provides for insured women a money grant during the weeks immediately preceding confinement. The adoption of the Washington Convention would simply entail a further development of the machinery now existing.

The Cost of Social Insurance

The *International Labour Review*, the monthly magazine published by the International Labour Office at Geneva, contained articles in its October and December issues dealing with "the financial resources of social insurance." It will be recalled that one aspect of social insurance, namely Workmen's Compensation, is to be further discussed at the Conference to be held at Geneva during 1925, with a view to the adoption of a Draft Convention on this subject. The conference will also consider the various other aspects of the subject of social insurance. The first of the articles in the *Review* discussed the advantages and disadvantages in the different branches of social insurance of the various possible financial systems (distribution of annual costs or capital values, fixed premiums, capitalization of individual accounts, etc.). In the second article the questions discussed

are the raising of the necessary funds and the division of the cost between the state, the employer, and the worker, the arguments for and against a system of uniform contributions or of scales graduated either according to actual earnings or to a system of wage classes, and methods of collecting the contributions. After examining the solutions of these problems adopted in the laws of the different countries, the author is seemingly of opinion that, in spite of apparent divergences in the systems in force, the cost of social insurance is in the last analysis borne by production, and that it must therefore be entered as an item in the costs of production.

Germany and the Eight-Hour Day

At a meeting of German industrialists and heads of various Chambers of Commerce held at Berlin in December, a resolution was unanimously adopted to reject the eight-hour compact on the ground that it brought no advantages and was destined to become a menace to German production. It was held that the German people should be permitted to determine their own working hours in order to enable the country to meet its war burdens and avoid being placed under the control of competitive States.

Opposition to the ratification by Germany of the Washington eight-hour day agreement is stated to have been based on America's failure to ratify the treaty and England's disinclination to put it into full operation.

APPOINTMENT OF CANADIAN ADVISORY OFFICER (LEAGUE OF NATIONS) AT GENEVA, SWITZERLAND

AN Order in Council was adopted on December 17 authorizing the appointment of an officer at the seat of the League of Nations in Geneva, to be known as the Dominion of Canada Advisory Officer (League of Nations). A separate Order was passed at the same time appointing Dr. W. A. Riddell, Ph.D., to this position effective from January 1, 1925, and directing that he should be duly accredited to the League of Nations.

Dr. Riddell is a graduate of the University of Toronto and is also a practical agriculturist, having farmed in Western Canada. For several years he was Deputy Minister of Labour of the Province of Ontario, and in 1919 was a member of the delegation appointed by the Government of Canada to the first meeting of the International Labour Conference which was held in Washington in the fall of that year. In the year following Dr. Riddell accepted an important appointment at

the headquarters of the International Labour Office; and removed to Geneva, where he now resides.

In the Order in Council authorizing the foregoing appointment it was stated that a report had been received from the Secretary of State for External Affairs pointing out that fulfilment of the duties devolving on the Dominion of Canada as a member of the League of Nations, under the Treaties of Peace, requires that she should be represented officially by three delegates at each annual meeting of the Assembly of the League and by two delegates at each annual or special meeting of the International Labour Conference, the headquarters and customary place of meeting of both organizations being in Geneva, Switzerland.

A seat on the Governing Body of the International Labour Office was also awarded to Canada by the Council of the League of

Nations as one of the eight states of "chief industrial importance", and the Minister of Labour has been designated as its representative at the meetings of the Governing Body which are held quarterly.

The Order in Council contains the following further observations:—

The Minister of External Affairs states that the disadvantage under which overseas members of these organizations labour in taking their part in the proceedings has been the subject of report and comment by Ministers, officials and others, who have been members of a delegation from Canada. Countries adjacent to or near the place of meeting are able without difficulty to include in the personnel of their delegations various advisers and assistants, clerical and otherwise, so far as conditions may require at a minimum of expense, and the value of the work of their delegations is increased accordingly. In several instances the disadvantage of overseas countries in these matters has led to the establishment at Geneva of a system of permanent representation by which is supplied in some measure the advisory and other assistance which cannot be supplied direct from distant countries; Japan is understood to have set an important precedent in this respect which has been followed by other non-European States. In other cases overseas members of these organizations have drawn advisory and clerical assistance for the Geneva conference from their continental embassies. Canada is of course without embassies and though it has occasionally obtained assistance from the offices of the High Commissioner for Canada in London, and from the Commissioner General in Paris, yet these offices have not the equipment which permits them to undertake such duties without considerable derangement of their work.

The Minister is therefore of opinion that the efficiency of the representation of Canada in the organization above named will be increased by the appointment of a permanent officer to be known as "Dominion of Canada Advisory Officer, League of Nations," and to be duly accredited to the League of Nations, who shall reside in Geneva and shall be supplied with necessary clerical assistance and office accommodation, and whose duty it shall be to establish and maintain as close relations as possible with the Secretariats of

the League of Nations and the International Labour Office, and who shall communicate with the Government of Canada as to all matters arising and requiring its attention, and generally shall act in all such matters in an advisory capacity to the Government of Canada and to delegates from the Government of Canada to Conferences arising out of the organizations before named, and such officer shall be a person qualified by character and training to act when and as an occasion may require and as the Government may determine in substitution for a Government delegate.

The Minister observes in regard to attendance at Sessions of the Governing Body of the International Labour Office held at intervals of approximately three months, that the Minister of Labour, though formerly designated as the representative of Canada on the Governing Body, has been unable to attend these gatherings personally on any one occasion during the last two years, and it has therefore been necessary at each meeting to designate a person to act as a substitute for the Minister.

It is considered that the appointment of a Dominion of Canada Advisory Officer, League of Nations, would ensure greater permanency and continuity of representation at the meetings of the Governing Body of the International Labour Office, and that such officer acting as a substitute for, and under the instruction of the Minister of Labour, would improve the present plan of Canada's representation, and that the expenditure on account of travel and fees of the substitutes heretofore appointed for attendance at Sessions of the Governing Body would be in a large part obviated by the appointment of a Dominion of Canada Advisory Officer.

Twelve countries have already representatives accredited to the League of Nations who live in Geneva. These countries are as follows: Albania, Austria, Brazil, Bulgaria, China, Finland, Hungary, Ireland, Japan, Poland, Sweden and Siam. Four other countries, namely: Denmark, Greece, Persia and Roumania, have representatives who are accredited to the Swiss Government as well as to the League of Nations and therefore according to Swiss law must reside or maintain an office at Berne.

Sunday Law in Minnesota

A case involving the validity of the One Day Rest in Seven law, enacted by the State of Minnesota in 1923, was decided recently by the Fourth Judicial District Court. A Minneapolis gas company was prosecuted under the act for requiring one of its employees to work seven days a week. The court held that the defendant should be acquitted on two grounds; first, that the business was one of necessity and so within the general exception of the statute, and second that the statute was so arbitrary in its classification as to be a denial of equal protection of the laws and hence unconstitutional. Commenting on this decision the *American Labour Legislation Review* says it

is a "sharp reminder that the preparation of a statute to carry into effect even so simple a policy as one day rest in seven is a task requiring some degree of care in draftsman-ship."

The Child Welfare Department of Manitoba, acting under the authority of the Child Welfare Act which became effective on September, 1924 (LABOUR GAZETTE, July, 1924, page 534) has given notice to the proprietors of theatres in the Province that the provisions of the Act restricting the employment of children in places of amusement would be strictly enforced.

ANNUAL REVIEW OF EMPLOYMENT IN CANADA, 1924

ACCORDING to returns from employers of labour tabulated by the Dominion Bureau of Statistics, the employment situation early in 1924 was more favourable than in the same months of the three preceding years, a result of the upward movement that began in 1922 and continued during the greater part of 1923. The fluctuations in the curve of employment in the chart on page 68 were very much the same as in the first few months of 1923, although the contraction at the beginning of April, 1924, partly reflecting the Easter lay-offs, was less pronounced. In succeeding months, however, the rate of seasonal increase was slower than it had been in the preceding year, and by the beginning of June, the curve had sagged below its 1923 level.

Spring and summer expansion was recorded in 1924 only from April to July, when the peak index of 95.9 was reached; in 1923 the crest of employment was at the beginning of August and the index, for the first time since 1920, was above the base level (January 1920), standing at 100.2. Contractions were indicated in 1924 on the first of August and September. There was a brief recovery in October, but the downward movement was soon resumed, and on November 1 and December 1 there were losses, largely seasonal in character. The declines on the latter date, however, were less extensive than at the same period in 1923.

The average working force of the firms reporting (between 5,500 and 6,000 in number) was 760,405, varying between 730,000 persons on January 1 and 786,000 on July 1. The expansion in construction was as usual the most pronounced; large seasonal gains were also registered in lumber mills, canneries and some other manufactures, but, on the whole, manufacturing was dull during the year. Trade, services, logging and communication reported improvement as compared with 1923, while the index numbers in construction, mining and transportation were somewhat lower during 1924.

Employment by Provinces

The most favourable situation as compared with 1923 was in Quebec and British Columbia; elsewhere employment was in smaller volume.

Maritime Provinces.—Activity was less throughout the whole of 1924 than in the preceding year, the index number averaging 86.1 as compared with 94.2 in 1923. The

peak of employment was in July, when the index was 90.6. Employment in iron and steel, particularly in rolling mills, and in textiles was generally dull; mining, transportation and construction also afforded less employment than in 1923, while logging, communication and services were rather busier. The pay rolls of the reporting employers averaged 64,324 during 1924.

Quebec.—Firms in this province recorded a more favourable situation than in any other except British Columbia; the index averaged 95.78 as compared with 95.18 in 1923. The working force of the employers whose returns were tabulated averaged 211,242. Manufacturing afforded more employment in the early part of 1924, but from June the level was lower; textiles, lumber, iron and steel, pulp and paper were not so fully employed. Logging showed improvement towards the winter, while transportation, construction, services and trade were more active on the whole.

Ontario.—Employment averaged nearly four points lower in 1924 than in 1923, according to the reporting firms, whose staffs averaged 318,460. Manufacturing generally was quiet; the iron and steel, textile, lumber and pulp and paper industries did not afford as much employment as in 1923. Construction and transportation were also slacker. Logging, mining, services and trade, on the other hand, reported a more favourable situation than in that year.

Prairie Provinces.—Activity in the Prairie Provinces was not as great as in 1923, partly owing to the smaller crop harvested in 1924. The index number, based on an average payroll of 98,741, was on the whole between two and three points lower. Long drawn out strikes in the coal fields during the summer affected employment adversely, but with their settlement, and seasonal demand for coal, some improvement was indicated towards the end of the year. Manufacturing as a whole was very slightly busier than in 1923; textiles, iron and steel recorded reduced activity, while pulp and paper and other manufactures reported a more favourable situation. Employment in logging and services was on a higher level than in the preceding year; communication, transportation, construction and trade, however, were dull.

British Columbia.—The index number of employment in British Columbia averaged 100.97 in 1924, compared with 98.49 in 1923; the index was above the base level for eight

months of the year. with the peak of 107.1 on August 1. The average payroll was 67,637. Employment in manufacturing was quieter than in 1923. Firms in the lumber, pulp and paper and textile divisions reported smaller staffs, but iron and steel and other manufactures showed gains. Logging was slightly less active, while improvement was indicated in mining, communication, transportation, construction, services and trade.

Employment by Cities

On the whole, employment in all the cities for which separate tabulations are made, except Vancouver, was lower than in 1923.

Montreal.—Textile and iron and steel works, together reporting from 25 to 30 per cent. of Montreal payrolls, were less active than in 1923, while communication, electrical apparatus plants and services recorded improvement. The reporting firms employed an average working force of 104,781. The high point in employment in 1924 was on June 1, when the index was 96.2; in 1923 it was 99.1 on November 1.

Toronto.—In the last two years the crest of employment in Toronto was on December 1, when there were large gains in retail trade and some other industries. The index number in 1923 was, however, higher than in 1924. Textiles and iron and steel were rather slack throughout 1924, foods were fairly active, while construction and transportation did not afford as much employment as in the year before. An average working force of 93,018 was recorded by the employers making returns.

Ottawa.—Employment generally was less active in 1924 than in the preceding year. Communication was busier, but manufacturing showed reductions. Statements were received from approximately 125 firms, whose working forces averaged 10,155 persons.

Hamilton.—The situation in Hamilton was not favourable during 1924; iron and steel and textile works were decidedly slack throughout the year. Electrical apparatus plants, on the other hand, registered large additions to staffs. Construction was very dull, and trade did not afford as much employment as in 1923. The payrolls reported averaged 24,858.

Winnipeg.—The highest point reached by the index number in 1924 was 86.4 on September 1; in the preceding year it was 92.6 on January 1. An average working force of 23,822 was employed by the firms making returns. Meat slaughtering and packing establishments showed moderate gains during the year and construction was fairly active. Other industries were generally dull.

Vancouver.—Trade, construction and communications reported improvement, as did also food, electric current and iron and steel plants. Lumber mills and shipping on the whole did not afford as much employment as in 1923. The reporting employers had an average payroll of 21,628 workers, and the index number in 1924 averaged 99.6 as compared with 95.3 in 1923.

Employment by Industries

MANUFACTURING.—Employment at the beginning of 1924 was on a slightly higher level than in the early part of 1923. There were steady gains from January to the first of June, but these were less extensive than during the same months of the preceding year and the index number soon fell below the 1923 position. The peak of employment was reached on June 1, when the index was 88.4. In 1923 the high point was 93.6 on July 1. Lumber, pulp and paper, textiles, iron and steel and some other manufactures employed smaller working forces, while the food, electric current, mineral product and electrical appliance divisions showed improvement. The average number of operatives employed by the reporting firms was 421,173.

Animal Products, Edible.—Fish and meat preparing and preserving plants were generally more active than in 1923. The index number at its peak of 101.3 on July 1 was over six points above the 1923 high level.

Leather and Products.—Boot, shoe and other leather using factories on the whole afforded less employment than in 1923. Quebec and Ontario shared in the depression in this industry.

Lumber Products.—The pronounced seasonal losses in lumber mills at the beginning of the year were followed by the usual expansion until midsummer, after which employment again waned with the completion of the season's cut. Neither the gains nor the succeeding contractions, however, were as extensive as in 1923; the index has consistently been on a lower level. Furniture and other wood using factories were not so fully engaged as in the preceding year.

Plant Products, Edible.—Employment in this division averaged higher than in 1923; the late season caused activity in canneries during the summer to sag slightly below the 1923 level, but speedy improvement was indicated and the index number at the peak was about three points above the high mark of the preceding year. Chocolate and confectionery factories showed the usual large gains in the autumn in preparation for the holiday

season, and sugar refineries were moderately busy, especially in the first half of the year.

Pulp and Paper.—This industry was very active in 1923, but in 1924 was somewhat less so. The gains were on a smaller scale than in the former year and were offset at frequent intervals by declines. At the peak of employment on October 1, the index was 101.1; in 1923 the high point of 105.5 was reached in August. Pulp and paper plants reported curtailment, while employment in printing establishments was generally on a slightly higher level than in the preceding year.

Rubber Products.—The fluctuations in employment in rubber works during 1924 were somewhat less marked than in 1923. The situation was not so favourable in the early part of the year, but improvement has been recorded in recent months.

Textiles.—Employment in textiles in Canada, as in the United States, was slack during 1924. Cotton, woollen, hosiery, knitting and garment factories employed smaller working forces than in 1923; the prolonged seasonal losses were more extensive than usual. During the autumn considerable recovery was indicated, but the downward movement was resumed at the beginning of December.

Tobacco, Distilled and Malt Liquors.—There was continuous improvement in these industries from May 1 to November 1, and the index number averaged slightly higher than in 1923.

Clay, Glass and Stone.—Although there was steady seasonal expansion in building material factories during the spring of 1924 employment was in less volume than in 1923, when building on the whole was more active. The curtailment of operations was fairly general in all provinces.

Electric Current.—The development of electric power continued to afford much employment. The situation in 1924 was a good deal better than in 1923, the index number averaging 125.8 as compared with 117.8 in the latter year. The gains in Ontario, Quebec and British Columbia were most extensive.

Electrical Apparatus.—A high level of employment was indicated in electrical appliance works chiefly in Quebec and Ontario. This partly reflected expansion in the production of radio equipment which is manufactured in many cases by makers of electrical devices. The index averaged 11.7, or 10.7 points higher than in 1923.

Iron and Steel.—Employment in iron and steel at the opening of 1924 was in greater volume than at the beginning of the pre-

ceding year, but this favourable position was soon lost. There were declines from May to September 1, followed by partial recovery in the next two months. The downward trend was, however, once more established on December 1, but the contractions on that date were not nearly as extensive as at the beginning of the same month in 1923. Railway car, automobile, agricultural implement, crude, rolled and forged works afforded less employment and steel shipyards were slacker; farm implements, however, showed considerable recovery on the first of December. The firms reporting had an average pay roll of 114,129 persons.

Non-ferrous Metal Products.—Some curtailment of operations as compared with the preceding year was indicated in these industries; nickel, copper, and other works were slacker during 1924. At the beginning of the year conditions were better than in 1923, but the improvement in succeeding months was not pronounced, and the trend soon became unfavourable.

Non-Metallic Mineral Products.—Petroleum refineries, gas and other plants coming under this heading were busier than in 1923. The index number in the mineral products group averaged 102.5 as compared with 98.6 in the preceding year.

Other Manufacturing Industries.—Firms in the fur, musical instrument and chemical division generally afforded less employment during 1924 than in 1923.

LOGGING.—Employment in logging followed the usual seasonal trends. The index number was slightly higher on January 1, 1924 than on the same date in 1923, and on the whole continued to be higher until the early summer. During July and August, however, it was lower, but the situation improved in September and employment was slightly above its 1923 level in the following reports.

MINING.—Employment in coal mining averaged rather lower. At the beginning of 1924 the index was 92.1 compared with 101.3 on January 1, 1923. Employment declined almost steadily until the Autumn, when marked revival was indicated. The prolonged strikes in the western coal fields affected the situation considerably during the summer. Metallic ore mines were very busy in Ontario and British Columbia, the index of employment in this division averaging 148.9 as compared with 123.5 in 1923. The peak of employment, 159.2, was on August 1; in the preceding year it was 138.5 in the early winter. The production of non-metallic

NOTE.—The number employed by the reporting firms in January 1920 is taken as 100 in every case. The "relative weight" shows the proportion of employees in the indicated district to the total number of employees reported in Canada as at December 1, 1924.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY DISTRICTS

	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia	Canada
1922						
January 1.....	78.1	74.4	78.3	82.8	79.9	77.9
February 1.....	76.8	74.6	79.5	83.0	84.3	78.9
March 1.....	80.7	80.6	81.7	84.4	85.3	81.9
April 1.....	80.6	77.5	81.1	82.1	85.9	80.6
May 1.....	83.0	81.2	82.4	85.4	91.3	83.3
June 1.....	87.4	88.1	87.8	92.8	96.6	89.2
July 1.....	92.6	88.0	89.2	99.7	99.2	91.1
August 1.....	94.0	90.3	90.8	101.5	99.8	93.1
September 1.....	90.3	91.6	91.9	101.2	102.0	93.7
October 1.....	91.8	92.0	93.6	101.9	100.1	94.6
November 1.....	91.7	92.7	94.9	105.0	100.2	95.8
December 1.....	92.1	93.9	94.4	101.5	95.6	95.1
1923						
January 1.....	90.8	83.5	85.6	90.0	88.3	86.3
February 1.....	90.4	87.7	90.0	91.6	88.4	89.5
March 1.....	90.7	87.9	90.8	88.9	92.0	89.9
April 1.....	90.5	85.5	88.4	83.5	92.8	87.6
May 1.....	90.0	90.3	91.6	90.4	97.5	91.4
June 1.....	93.9	99.1	96.8	95.5	100.4	97.3
July 1.....	101.0	100.5	97.2	101.4	103.9	99.5
August 1.....	97.8	101.9	97.1	104.3	107.2	100.2
September 1.....	101.4	100.1	98.1	101.1	106.6	100.0
October 1.....	97.0	104.0	96.0	100.7	104.2	99.5
November 1.....	95.2	103.2	96.0	99.2	102.8	98.8
December 1.....	91.2	98.5	93.4	99.3	97.8	95.7
1924						
January 1.....	86.3	90.5	86.1	94.3	90.9	88.7

minerals was on the whole smaller, although there were considerable gains for many months of the year.

COMMUNICATION.—Pronounced and consistent expansion was indicated in this division from the beginning of March until August 1; the index number averaged 109.0 as compared with 102.0 in 1923.

TRANSPORTATION.—The level of employment in this division was higher than in 1923 until June, but from then on the situation was not so favourable. This partly reflects the influence of the smaller harvest upon

transport. At the beginning of December, 1924, however, the seasonal contractions were very much less extensive than on the same date in the preceding year. Street and electric and steam railway operation reported reduced employment, while the index in shipping and stevedoring averaged nearly six points higher than in 1923.

CONSTRUCTION AND MAINTENANCE.—These industries were very active in 1923 and on the whole only slightly less so in 1924; the index number averaged 131.9 in the former as compared with 130.8 in the latter year. The

NOTE.—The number employed by the reporting firms in January, 1920, is taken as 100 in every case. The "relative weight" shows the proportion of employees in the indicated district to the total number of employees reported in Canada as at December 1, 1924.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES.

	Manu- facturing	Logging	Mining	Com- muni- cation	Trans- portation	Construc- tion and Main- tenance	Services	Trade	All Indus- tries
1921

Relative weight as at Dec. 1, 1924.....	54.0	4.5	6.1	3.0	14.7	8.0	1.8	7.9	100

peak index of employment in 1923 was 183.7 on August 1. In 1924 it was 175.8 on July 1. Employment in construction was relatively most active in the Prairie Provinces, where the index rose to 198.7 at midsummer; this was due to large seasonal expansion in highway and railway construction. The number employed by the contractors making returns varied between 47,000 on April 1 and 89,000 on July 1.

SERVICES.—Improvement over the preceding year was registered in services, mainly in hotels and restaurants and laundries. The index number averaged 112.2 as compared with 105.2 in 1923.

TRADE.—On the whole, trade was slightly more active during 1924; the usual increases in anticipation of Christmas and the holidays were larger than in preceding years, especially in Ontario. The reporting firms employed a sales force of over 59,000 persons at the

beginning of December, but employment would increase considerably during the next three weeks. The index number averaged 93.3, compared with 92.8 in 1923.

The tables on pages 64 and 65 give index numbers of employment by provinces, cities and main industrial groups for the past few years; these are based upon the number of persons employed by the reporting firms in January, 1920, as 100, while the relative weight shows the proportion of employees reported in the indicated district or industry to the total number of employees reported in Canada as at December 1, 1924. For index numbers by months in some fifty classified industries, reference should be made to the monthly articles on employment as reported to the General Statistics Branch of the Dominion Bureau of Statistics published in the LABOUR GAZETTE.

THE EMPLOYMENT SITUATION AS AT THE BEGINNING OF DECEMBER, 1924, AS REPORTED BY EMPLOYERS

CONTINUED contractions in the volume of employment was reported to the Dominion Bureau of Statistics at the beginning of December, when 18,837 persons were released from the pay-rolls of the 5,880 firms making returns; they employed 749,841 workers on December 1. The index number stood at 90.8, as compared with 93.0 at the beginning of November, and with 95.7, 95.1 and 87.2 on December 1, 1923, 1922 and 1921, respectively. On the same date of last year, some 25,000 workers were let out by the employers reporting, but, as may be seen in the accompanying chart, the level of employment then was higher.

Employment declined in all industries except logging, mining and retail trade, in which there were important seasonal gains. The most extensive shrinkage was noted in construction and manufacturing and was also largely seasonal in character.

Employment by Provinces

Firms in all provinces recorded reduced activity; Ontario and Quebec registered the largest decreases.

Maritime Provinces.—Sawmills and highway construction showed a pronounced falling off in the employment afforded, and fish canning, iron and steel were also slacker. Logging, coal mining and retail trade, however, reported substantial improvement. Statements

were received from 506 firms, employing 59,028 workers as compared with 62,454 on November 1.

Quebec.—There was a general slowing up of activity in manufactures in Quebec; sawmills, pulp and paper, textiles, iron and steel recorded the heaviest losses, while electrical appliance works showed the only large increases in the group. Logging, trade and transportation also afforded greatly increased employment, that in the last named representing a final effort to clean up around the harbours before the close of navigation. On the other hand, construction showed pronounced curtailment. The working force of the 1,288 reporting employers aggregated 210,577 or 4,178 less than in the preceding month.

Ontario.—In spite of marked improvement in logging, trade, rubber and electrical apparatus factories, there was a 2 per cent decrease in employment in Ontario. Contractions in sawmills, textiles, transportation and construction chiefly caused the reductions. A combined payroll of 314,213 persons was employed by the 2,713 firms making returns; they had 321,540 employees on November 1.

Prairie Provinces.—Manufacturing as a whole afforded more employment, chiefly in abattoirs and iron and steel works. Logging, mining and trade also showed expansion. Declines on a larger scale, however, took place

in construction. The result was a loss of 2,093 in the staffs of the 767 employers whose returns were tabulated, and who had 99,052 persons in their employ on December 1.

British Columbia.—There was further seasonal shrinkage in lumber mills and fish canneries, while employment in construction, mining and transportation also decreased. On the other hand, logging and retail trade were much more active. According to reports from 606 firms, they employed 66,971 workers, as against 68,784 in the preceding month.

The following table gives the index numbers of employment in the five areas into which the country is divided in these statistics:—

(Number employed, January, 1920=100)

District	Relative weight	Dec. 1 1924	Nov. 1 1924	Dec. 1 1923	Dec. 1 1922	Dec. 1 1921
Maritime Provinces.....	7.9	79.3	83.7	91.2	92.1	89.5
Quebec.....	28.1	95.3	97.1	98.5	93.9	83.7
Ontario.....	41.9	88.4	90.4	93.4	94.4	85.9
Prairie Provinces.....	13.2	91.8	94.1	99.3	101.5	95.6
British Columbia.....	8.9	100.0	102.1	97.8	95.6	88.9
Canada.....	100.0	90.8	93.0	95.7	95.1	87.2

Employment by Cities

Employment declined in all the cities for which separate tabulations are made, except in Toronto; the losses in Hamilton were most extensive.

Montreal.—Further reductions in employment were recorded in Montreal, 510 persons having been released from the staffs of the 690 reporting firms; they employed 103,002 workers. There were large gains in transportation preceding the close of navigation and smaller increases in retail trade and electrical apparatus works. On the other hand, manufacturing as a whole, particularly textile, iron and steel plants, and construction and services afforded less employment. Contractions on a very much larger scale were reported at the beginning of December, 1923.

Quebec.—The staffs of the 92 employers from whom statements were received declined from 8,493 on November 1 to 8,339 at the beginning of December. Construction reported the only marked decrease.

Toronto.—Repeating the trend indicated on the same date in 1923, employment in Toronto increased on December 1, mainly on account of seasonal expansion in retail stores. Improvement was also indicated in abattoirs, but textiles and some other manufactures were slacker, and construction and transportation also afforded less employment. Statements were tabulated from 785 firms,

whose working forces aggregated 94,380 persons, or 275 more than in the preceding month.

Ottawa.—Curtailed in construction caused a falling off in employment in Ottawa, where 367 persons were released by the 125 reporting employers; they had 9,692 persons on pay-roll on December 1. More extensive shrinkage had been indicated on the same time of the preceding year.

Hamilton.—The trend of employment in this city was downward on the first of December, 1924, as in 1923. The declines on the date under review occurred mainly in textiles and construction. Returns were compiled from 202 firms, employing 23,521 persons, as compared with 24,278 at the beginning of November.

Winnipeg.—Building contractors registered the most pronounced declines in Winnipeg, but there were also reductions in manufactures. Trade, on the other hand, was busier. An aggregate working force of 23,565 was indicated by the 285 reporting employers, as compared with 23,791 in the preceding month. Reductions on a slightly larger scale were indicated on December 1 of the preceding year, but the situation then was rather more favourable.

Vancouver.—Additions to staffs in retail stores were offset by contractions in iron and steel and construction. The payrolls of the 228 employers making returns stood at 22,638 at the first of December; on November 1 they totalled 22,840. Employment in Vancouver was considerably more active than on December 1, 1923, when the trend had also been retrogressive.

The following table shows the index numbers of employment in these cities:—

(Number employed in January, 1920=100)

City	Relative weight	Dec. 1 1924	Nov. 1 1924	Dec. 1 1923	Dec. 1 1922
Montreal.....	13.7	93.1	92.4	93.6	94.7
Quebec.....	1.1	100.3	100.3		
Toronto.....	12.1	87.4	87.0	90.2	92.9
Ottawa.....	1.3	92.3	94.5	94.3	98.6
Hamilton.....	3.1	77.3	79.6	88.5	88.2
Winnipeg.....	3.1	83.5	84.2	88.2	97.8
Vancouver.....	3.0	104.0	103.4	98.1	90.7

The Manufacturing Industries

The payrolls of the 3,807 manufacturers making returns declined from 416,278 persons on November 1 to 404,459 at the beginning of December. The completion of the season's cut in many lumber mills accounted for more than half of this decrease; textiles, pulp and paper, iron and steel also registered large reductions while there were declines on a some-

what smaller scale in fish, fruit and vegetable canning, chemical, clay, glass, stone, electric current, non-ferrous metal and mineral product works. On the other hand, rubber, meat packing and slaughtering, wooden vehicle, match, sugar refining, agricultural implement and electrical apparatus factories showed improvement. Although the shrinkage recorded on the same date of 1923 was somewhat more extensive, the index number then was higher than on December 1, 1924.

Animal Products—Edible.—Abattoirs and meat packing plants registered increased activity, while seasonal declines were again

from 322 manufacturers, they employed 28,248 persons or 270 less than at the beginning of November. Firms in the Maritime Provinces, Ontario and British Columbia registered the largest losses. At the beginning of December, 1923, minor reductions were indicated, but the index number was practically the same as on that date in 1924.

Pulp and Paper Products.—There were large declines in personnel in pulp and paper mills, while in other divisions coming under this heading little change was shown. Quebec and British Columbia reported the major part of the reduction. An aggregate of 50,712 persons

noted in fish canneries. Firms in the Maritime Provinces and British Columbia recorded the decreases in the latter, while the largest gains in the meat industry were in Ontario and the Prairie Provinces. Statements were received from 153 manufacturers, whose payrolls totalled 14,451 as against 14,604 in the preceding month. Employment on December 1, 1923, was in less volume than on the date under review.

Lumber and Products.—Further important reductions in personnel in lumber mills were partly offset by moderate increases in wooden vehicle, furniture and match factories. The declines were heaviest in sawmills in the Maritime Provinces and Ontario. The working force of the 703 reporting firms declined from 47,563 on November 1 to 41,027 at the beginning of December. This shrinkage did not affect as many persons as that recorded on December 1, 1923, but employment then was in rather great volume.

Plant Products—Edible.—Sugar refineries were somewhat busier, as were also flour and cereal mills. Rather small declines, however, took place in chocolate, confectionery, biscuit and canning factories. According to reports

was employed by the 461 manufacturers making returns, who had employed 51,627 workers on November 1. The situation at the beginning of December 1923 was more favourable; the declines then affected a rather smaller number of persons.

Rubber Products.—Further pronounced additions to staffs were recorded by manufacturers of rubber products at the beginning of December, when their payrolls increased to 10,416 from 9,962 in the preceding month. The gain was chiefly confined to Ontario. During the corresponding period of 1923 a somewhat larger increase was registered, but the index number then was slightly lower.

Textile Products.—Garment and personal furnishing and woollen factories were less fully employed than at the beginning of November. Statements were compiled from 538 textile manufacturers, employing 64,237 persons on December 1 as compared with 66,670 in the preceding month. The most extensive reductions were in Ontario and Quebec. At the beginning of December, 1923, much smaller contractions were indicated, and the index number was several points higher than at the present time.

Chemicals and Allied Products.—The production of chemical and pharmaceutical preparations in Quebec and Ontario afforded less employment than in the preceding month, 180 persons having been released from the staffs of the 118 manufacturers reporting. They employed 6,234 workers on December 1. Conditions on that date in 1923 were somewhat better, the reductions reported having affected a smaller number of persons.

Clay, Glass and Stone Products.—Brick, glass, cement and stone works reported curtailment of operations, which however, was less than that indicated on December 1, 1923. Firms in Quebec and the Prairie Provinces registered the largest losses. A combined working force of 8,108 was employed by the 111 firms making returns; on November 1 they employed 8,586 persons.

Electric Current.—There were moderate reductions in employment in electric current plants in every province. The result was a decline of 182 persons in the payrolls of the 85 reporting employers, whose staffs aggregated 12,265 persons on December 1. This shrinkage is less extensive than that indicated on the same date in 1923, when the index number was considerably lower.

Electrical Apparatus.—Employment in this industry in Quebec and Ontario increased substantially at the beginning of December, continuing the upward movement begun on September 1. The gain was larger than that noted on December 1, 1923, and the index number is higher. Statements were tabulated from 34 manufacturers, whose staffs were increased from 9,237 on November 1 to 9,742 at the beginning of December.

Iron and Steel Products.—Railway car shops, boiler, machinery, shipbuilding, heating appliance, structural iron and steel works afforded less employment, while agricultural implement factories, foundries and machine shops were busier. There were declines in the Maritime Provinces, Quebec and Ontario; improvement was indicated in the Prairie Province and in British Columbia there was no change. The payrolls of the 640 employers making returns aggregated 102,153, or 849 less than on November 1. Contractions affecting about five times as many workers were reported on December 1, 1923, but activity then was greater than on the date under review.

Non-Ferrous Metal Products.—Lead, tin, zinc and copper works were slacker, and there were minor declines in employment in smelters and refineries and some other divisions coming under this heading. Reports were

tabulated from 102 manufacturers employing 10,285 persons as compared with 10,654 in the preceding month. Firms in Quebec, Ontario and British Columbia shared in the decrease, which was smaller than that reported on December 1, 1923. Employment then, however, was above its present level.

Mineral Products.—A further reduction was reported in mineral product factories at the beginning of December, when 268 persons were released from the staffs of the 75 reporting employers. They had 9,617 workers in their employ. Gas and petroleum product works in Ontario and Quebec registered most of the decline. The situation was more favourable than at the same date in 1923, when a downward tendency was also noted.

Logging

Continued, pronounced improvement in all provinces was recorded in logging; 228 employers reported 33,917 workers, or 5,335 more than in the preceding month. Although this expansion is somewhat less extensive than that indicated on the same date of last year, the index number at the present time stands several points higher than on December 1, 1923.

Mining

Coal Mining.—Coal mining in Nova Scotia and Alberta was decidedly more active, while in British Columbia curtailment of operations was indicated. The result was a net increase of 1,059 in the staffs of the 92 operators making returns, who employed 27,109 workers on December 1. This gain was a good deal larger than that recorded on the same date in 1923. Employment then, however, was in much greater volume than during the month under review.

Metallic Ores.—The mining of metallic ores in Ontario and British Columbia employed a slightly smaller working force than at the beginning of November; conditions were, however, better than on December 1, 1923, although a slightly upward movement was noted then. An aggregate working force of 13,356 persons was registered by the 47 firms making returns, who had employed 13,576 in their last report.

Non-Metallic Minerals (other than Coal).—The number of persons employed in these industries declined from 6,185 on November 1 to 5,608 at the beginning of December, according to returns from 73 employers. Quebec, Ontario and the Prairie Provinces showed the largest losses. The index number on December 1, 1923, was higher than on the date under review; contractions were also reported then.

Communication

Fairly small declines were registered on telephones and telegraphs, according to returns from 165 firms employing 22,727 workers, or 225 less than in their last report. There were moderate reductions in all provinces except British Columbia. Practically no change in employment was indicated on December 1, 1923, when the index number was somewhat lower than at the present time.

Transportation

Street Railways and Cartage.—The volume of employment afforded in local transportation in Ontario showed a decrease, while elsewhere there was little change. The firms reporting, 117 in number, employed 19,865 persons or 374 less than on November 1. This contraction contrasts with an increase of about the same size registered at the beginning of December, 1923; employment then was on a considerably higher level.

Steam Railways.—There was a decided falling off in employment in steam railway operation, particularly in Quebec and Ontario. The working force of the 102 firms and divisional superintendents making returns declined from 76,524 on November 1 to 74,985 at the beginning of December. A minor increase in personnel was noted on December 1, 1923, and the index then was higher than on the date under review.

Shipping and Stevedoring.—Employment in shipping and stevedoring increased largely at the beginning of December, 1924; the gains represent a final effort to clear up around the St. Lawrence ports before the close of navigation. Statements were received from 64 employers, whose staffs aggregated 15,261 as compared with 13,395 on November 1, 1924. Marked curtailment was indicated at the first of December, 1923, when one index was much below its present level.

INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES, DEC. 1, 1924, ETC.

(January 1920 = 100)

Industry	Relative Weight	Dec. 1 1924	Nov. 1 1924	Dec. 1 1923	Dec. 1 1922	Dec. 1 1921

Construction and Maintenance

Building Construction.—Further large contractions approximating those noted on December 1, 1923, were indicated by the 297 contractors making returns. They employed 22,428 persons or 2,667 fewer than at the beginning of November. A very large share of the shrinkage took place in Ontario, but there were also heavy losses in the Prairie Provinces and British Columbia.

Highway Construction and Maintenance.—The trend of employment in this industry continued to be unfavourable, there being pronounced decreases in all provinces. Reports were received from 101 employers, whose staffs declined from 13,967 on November 1, to 8,242 at the beginning of December. This reduction is very slightly smaller than that reported on the corresponding date in 1923.

Railway Construction and Maintenance.—The seasonal losses in personnel reported on December 1, 1924, were considerably smaller than those indicated in 1923, but the index number then was higher than at the present time. The most extensive contractions occurred in Ontario and the Prairie Provinces. The working forces of the 36 firms and divisional superintendents making returns stood at 28,895 as compared with 35,719 on November 1, 1924.

Services

Hotels and restaurants were not quite as busy and laundries also afforded less employment. According to 173 firms in the service group, they employed 13,528 workers or 164 fewer than on November 1. Employment in this group was more active than on December 1, 1923, when the reductions were larger.

Trade

Further and much more pronounced seasonal gains were reported in retail trade at the beginning of December, while wholesale trade, on the whole, showed a minor decline. The additions to staffs in retail stores in Ontario were most pronounced. Statements were tabulated from 578 wholesale and retail establishments, employing 59,461 persons, as compared with 56,424 on November 1. These increases exceed those reported on December 1, 1923, when trade employed a smaller number of persons.

The accompanying table shows the index numbers of employment by industries as at the first of December and November, 1924, as compared with December 1, 1923, 1922 and 1921. The columns headed "Relative Weight" in the tables in this article show the proportion that the number of employees reported in the indicated district or industry bears to the total number of employees reported in Canada by the firms making returns on December 1, 1924.

EMPLOYMENT OFFICE REPORTS FOR NOVEMBER, 1924

A FURTHER decrease in the volume of business was reported by the offices of the Employment Service of Canada during the month of November, 1924, the decline from the preceding period being very precipitous. Compared with the corresponding period of 1923 a very marked contraction is recorded, the work available being at a minimum for this season. The accompanying chart, which presents the returns from the offices on the basis of daily averages over half month periods, shows a steady and continuous decline in the curves of vacancies and placements, the latter following the same course as the curve of opportunities, though on a slightly lower level. The spread between demand and supply is noticeably greater than at the same time in other years, as the curves of applications registered, though declining somewhat, remained in approximately the same position as at the end of October.

During the first half of November, 1924, applications for work numbered 1,721 daily, as compared with 1,794 during the same period of 1923, and showed a decline from an average of 1924 daily during the latter half of October, 1924. During the latter half of November, 1924, applications averaged 1,619 daily, while during the same period of 1923 the average was 1,618. During the month under review employers notified the Service of an average of 1,084 and 869 vacancies daily during the first and second half respectively, in contrast with 1,456 daily and 1,073 daily during the first and second half of November, 1923. During the latter half of October, 1924, vacancies averaged 1,522 daily. During the first half of November, 1924, the Service effected an average of 1,014 placements daily, of which the average in regular employment was 710 daily and 304 in casual work, as compared with an average of 1,379 during the preceding

period and with 1,286 during the corresponding period of 1923. During the latter half of the month under review placements averaged 820 daily in contrast with 1,046 during the corresponding period of 1923. During the latter half of the month the placements in regular employment averaged 572 daily and in casual work averaged 248 daily.

During the period under review (November, 1924), the offices referred 23,587 persons to employment and effected a total of 22,004 placements, of which 15,387 were in regular employment and 6,617 in work of a duration of one week or less. Of the regular placements 12,556 were of men and 2,831 of women workers. Employers registered 23,438 opportunities for work with the offices during the month, of which 16,755 were for men and 6,683 for women. The number of applications for work totalled 40,078, of which 30,366 were from men and 9,712 from women.

Placements in regular employment were distributed by provinces as follows:—Nova Scotia, 162 men, 76 women; New Brunswick, 309 men, 81 women; Quebec, 829 men, 387 women; Ontario, 4,844 men, 1,048 women; Manitoba, 2,016 men, 406 women; Saskatchewan, 1,671 men, 273 women; Alberta, 1,833 men, 360 women; British Columbia, 887 men, 200 women.

The following table gives the placements made to date by the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Total
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924 (11 months).....	234,611	110,302	344,913

MARITIME PROVINCES

There was a reported decrease in the demands for farm labour and outside construction work was nearing completion. The consequent decline in opportunities available was reflected in the increased number of applicants registered as out of work. Logging operations provided many men with work as choppers, teamsters and camp workers, and the offices anticipated an improvement in the near future.

QUEBEC

Little change was recorded industrially in the Province of Quebec. Large numbers of building tradesmen were employed and fewer opportunities for mechanics and labourers

were offered at the offices. A fair number of calls for bushmen was received at Montreal, Hull and Quebec, but the majority of camps had their complement of men until after the holiday season. Manufacturing and trade were very quiet with few calls for workers, most of these being of a temporary nature.

ONTARIO

Owing to the clear weather prevalent during the greater part of the month a considerable amount of outside work was still under way. The seasonal slackness in the building industries presented a problem of unemployment in the municipalities, which in some cases will be alleviated later by employment on storm sewers, winter drains and other temporary work. A few workers were placed in jobs as carpenters, labourers and extra gang hands for temporary and railway maintenance work at Cobalt, Timmins, Toronto and London. There was a falling off in the demand for farm labourers but the offices were able to fill most of the calls received. There were not sufficient applicants available to satisfy the improved demand for bushmen and loggers, especially in the vicinity of Cobalt, Timmins and Port Arthur. At Cobalt no difficulty was felt in supplying experienced men to meet the increased call for mine labourers. A few vacancies were offered for women workers in the textile and paper box industries at London and Toronto, but on the whole the manufacturing industries showed a considerable curtailment in demand. Extra freight handlers were required at Sarnia. Suitable women applicants for resident household positions were in great demand, and in other cases it was equally hard to find positions for the partially trained household workers.

MANITOBA

Although contraction from last month was reported in the agricultural group there were continued calls for men for fall and winter work. The supply of labour was more than adequate to meet present requirements and as little work was in view in the construction group the unemployment situation has been considerably aggravated. However, some temporary repair work was offered at Dauphin and Winnipeg and several carpenters and building labourers were well employed. The placements in the logging group occupied a large percentage of the business of the offices, a considerable number of men being sent as camp workers, bushmen and tie makers, to the camps near Port Arthur, Ont., and several were placed in the bush north of The Pas.

SASKATCHEWAN

There was a surplus of applicants registered to supply the declining demand for farm workers. However, a large number of placements were made by the offices at Estevan, Regina, Saskatoon and Moose Jaw. A minimum amount of construction work was underway and no demand for tradesmen was recorded. In some localities some road work was not yet completed and in Saskatoon, Regina and Moose Jaw, a number of carpenters and bricklayers were well employed. There were a few calls for mine labourers at Estevan, which were readily filled from the office at this point

was reported at most of the offices. In the early part of the month many calls were received for loggers, but latterly a reduced demand was recorded at Edmonton, Calgary and Lethbridge. Sufficient applicants were registered to meet the majority of calls for women domestics.

BRITISH COLUMBIA

Work continued on the erection of buildings, dams and on some road work at Cranbrook, Nanaimo, Nelson and Penticton. There was a considerable surplus of building labour available at the offices at Vancouver and Victoria, as the jobs offering were mostly casual. Em-

and from Regina. The logging industry was moderately active, several workers being sent to the camps north of Prince Albert, from Moose Jaw, Regina and Yorkton. A steady call for housekeepers and resident cooks was reported with plenty of applicants available. There was a decline in vacancies offered for casual work.

ALBERTA

Quietness characterized the agricultural group, the demand having declined to the normal number of calls for men for fall ploughing with more than sufficient applicants available. No immediate prospects were evident of improved conditions in the construction group and with the exception of casual and temporary jobs very little work was available. An increased registration of building tradesmen

employment on railway construction and maintenance had fallen off completely. There was an increase in the demand for bushmen during the early part of the month, but latterly at Kamloops, Nanaimo and Vancouver, many extra tie makers and loggers were registered. The farm group was very quiet. Calls for women workers were in much the same volume as previously reported and an increase in the casual work would be welcome.

Movement of Labour

During November, 1924, the offices of the Employment Service of Canada made 15,387 placements in regular employment, of which 9,899 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 2,348 were granted the Employ-

ment Service reduced transportation rate, 1,299 being persons going to points within the same province as the despatching office and 1,049 going to other provinces.

Quebec offices issued 188 transportation certificates, 26 of which were from Quebec City and were granted to bushmen going to camps in the northern part of the province. From

* 261 Placements effected by offices since closed.

the offices at Montreal and Hull 162 bushmen were transferred to the lumber camps at Sault Ste. Marie, North Bay, Cobalt, Timmins and Sudbury. The offices in Ontario granted the reduced transportation rate for employment at a distance to 605 workers. Of these 574 were bushmen, pulp wood cutters, tie makers and cord wood cutters, going to the camps near Sudbury, Sault Ste. Marie, North Bay, Timmins and Cobalt. From Sudbury one miner was transferred to Timmins and from North Bay six mill hands were sent to the same zone. To the Kingston office six rivetters, two hotel workers and three stone masons were transferred from Hamilton, Kitchener and Toronto. An engineer and 12 labourers travelled at the reduced rate from Port Arthur and Toronto to Timmins, Ont. The Winnipeg, Man., office despatched 753 workers at the special rate, one cement finisher going to Calgary, Alta., 17 farm hands, one cook, two bushmen and two household workers going to Moose Jaw, Regina and Saskatoon and Prince Alberta, Sask., and 583 workers, including bushmen, pulpwood and cordwood cutters, log makers and teamsters, were sent to the Port Arthur district. Of the 147 provincial transfers 124 were bushmen, 11 were farm hands, the remainder included cooks, waitresses and houseworkers. Of the 595 workers transferred from the Saskatchewan offices two farm hands and one housekeeper were sent to Winnipeg and

Brandon, Man., one cook and two farm hands to Medicine Hat and Edmonton, Alta., and 270 bushmen to Port Arthur, Ont. Provincially 276 bushmen, 22 farm hands, 9 miners, 3 housekeepers, a teacher and 8 household workers were sent at the reduced rate. Alberta offices placed 2 farm hands at Saskatoon, Sask., and 151 workers were sent to points within the province. These included 42 bushmen, 27 farm hands, 50 labourers, 22 miners, 2 engineers and 8 cooks. The number of reduced rate transportation certificates granted by British Columbia offices was 54, one of which was to a teamster going to Moose Jaw, Sask., and one to a cook and one to a farm hand destined to Edmonton, Alta. From Nelson, Prince George and Prince Rupert 22 tie makers and 7 muckers were sent to various points within these zones. One mucker was transferred from Vancouver to a mining camp within the zone, 12 carpenters and 2 farm hands were sent to Nelson and Penticton, while the remainder of the 51 provincial transfers included stenographers, waitresses, labourers and engineers.

Of the 2,348 workers, who benefited by the Employment Service reduced transportation rate 1,641 were carried by the Canadian National Railways, 699 by the Canadian Pacific Railway, one by the Pacific Great Eastern and 7 by the Temiskaming and Northern Ontario Railway.

Compensation Appeals in New York

Governor Al. E. Smith, of New York State, in his annual message to the State Legislature on January 7, after referring to the recent important amendments to the Workmen's Compensation Act of the State, called attention to the delay that results under the present system when appeals are taken by employers and insurance carriers from decisions of the referees and of the Industrial Board. "The theory of the Workmen's Compensation Law," he said, "was that claims for compensation would be disposed of expeditiously, and while the number of appeals is relatively small when compared with the large number of compensation cases disposed of every year, a serious problem is nevertheless presented."

The Governor made a series of recommendations in order to lessen the delay and hardship caused by these appeals, as follows:—

- (1) Increase in membership of the Industrial Board from three to five; (2) Separation of procedure in court from that before the Industrial Court; (3) Restoration of the office of counsel of the Labour Department, for the purpose of expediting appeals; (4) Interest should be paid on all awards from a date of 30 days after day of award; (5) The time limit for appeals should be reduced from 30 to 15 days.

The experience of New York State in the matter of appeals is of interest in Canada in view of proposals recently made in some provinces for the provision of the right to appeal against decisions of the several Boards. Workmen's representatives generally oppose such proposals on the ground that they would revive litigation proceedings that were formerly associated with compensation for industrial accidents.

BUILDING PERMITS REPORTS ISSUED DURING NOVEMBER, 1924

ACCORDING to reports tabulated by the Dominion Bureau of Statistics, there was a seasonal decline in the value of the building permits issued in 56 cities during November as compared with October, but there was an increase over November, 1923. As was pointed out in the last report, the comparison in any one month with the same month of previous years is more significant than is that between succeeding months in a country where the seasonal element is as important as in Canada. The total for November, 1924, stood at \$9,555,472; this was 17.1 p.c. lower than the total of \$11,533,111 for October, 1924, but 18.9 p.c. higher than the November, 1923, aggregate of \$8,035,466.

Reports in some detail were furnished by 46 cities which issued nearly 1,000 permits for dwellings estimated to cost approximately \$4,800,000 and about 2,000 permits for other buildings valued at over \$4,650,000.

Nova Scotia was the only province to show an increase as compared with October; the permits during November were 128 per cent higher than in the former month. The decline registered in Ontario of \$1,158,830 or 22.4 p.c. was the largest actual loss, while Manitoba, with a reduction of \$188,045 or 58.4 p.c., recorded the greatest proportional reduction.

As compared with November, 1923, Nova Scotia, Quebec, Alberta and British Columbia issued permits of a higher valuation; the remaining provinces showed declines. The most pronounced gain, of \$1,779,732 or 69.6 p.c., was in Quebec. Manitoba reported the largest decrease, of \$323,150, or 70.7 p.c.

The permits issued in Montreal, though lower in value than in October, were over twice as large as in November of last year. In Toronto there were minor gains in both comparisons, while Winnipeg registered losses. Vancouver recorded a rather greater total of building authorized than in October, 1924, but a decline as compared with November, 1923. Sydney, Owen Sound, St. Catharines, Sarnia, Woodstock, St. Boniface, Calgary, Prince Rupert and Victoria showed increases over both October, 1924, and November, 1923.

The value of the building permits issued during the first eleven months of 1924 was 7.2 p.c. lower than in 1923 and 15.8 p.c. lower than in 1922. It was, however, 4.8 p.c. higher than the January-November total for 1921. The eleven-month aggregate for 1924 is \$114,106,014, for 1923, \$122,994,546, for 1922, \$135,543,521 and for 1921, \$108,929,544.

The accompanying table shows the value of the building permits issued during November and October, 1924, and November, 1923. The 35 cities for which records are available since 1910 are marked by asterisks.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Printing and Publishing

SASKATOON, SASK.—CERTAIN LOCAL FIRMS AND THE INTERNATIONAL BROTHERHOOD OF BOOKBINDERS, LOCAL No. 85.

Agreement to be in effect from November 1, 1924, until October 31, 1925, and from year to year unless two months' notice of termination is given.

Hours per week, forty-four. Wages per week, journeymen, \$40.35. Overtime, time and one-half for first four hours; thereafter and Sundays and holidays, double time.

No girl shall be allowed on any part of journeymen's work.

Apprentice scale for men, first six months, not less than 35 per cent of journeymen's scale; second six months, not less than 40 per cent; third six months, not less than 45 per cent; fourth six months, not less than 50 per cent; sixth six months, not less than 60 per cent; seventh six months, not less than 80 per cent; eighth six months, not less than 90 per cent; thereafter scale.

One apprentice shall be allowed to every three journeymen or major fraction thereof.

No recognized apprentice who has served part of his apprenticeship in a bindery shall leave to follow the trade in another bindery without permission.

Wages per week, journey women, \$15. Apprentices, minimum wages, first six months, \$10; second six months, \$11; third six months, \$12.50; fourth six months, \$14; thereafter, \$15.

In case of a reduction of staff, last employed shall be first laid off, and reinstatement shall be in reverse order.

Disputes between the parties to the agreement shall be submitted to arbitration, one representative being

elected from each party and a third selected by them, the award being final.

Construction: Building and Structures

HAMILTON, ONTARIO.—MASTER PLUMBERS' ASSOCIATION AND UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, No. 67.

Hours per day, eight, with four on Saturdays.

Minimum wages per hour, 90 cents. Overtime, until midnight, time and one-half; from midnight until 8 a.m., and Sundays and holidays, double time. Absolutely necessary repairs or finishing up a repair job if not taking longer than one hour, may be done at regular rate.

Apprentices after having served four years at the trade and having passed the examination shall be paid 70 per cent of journeyman's wage for first year and 80 per cent for second year; and thereafter minimum rate.

An employee doing unsatisfactory work, through his own fault, shall make it right in his own time.

Provision is made for out of town work.

Only union members are to be employed, and these are to work only for established sanitary and heating engineers.

The employees agree not to make rules or regulations which will curtail output or restrictions that will interfere with directions of employers—other than those in the agreement.

One helper to each journeyman, labourers being used for unskilled portions of work if additional help is necessary.

Grievances are to be settled by a Joint Conference Board composed of three from each side, meeting when necessary. Matters not thus settled shall be referred to the General Office of the United Association, no strike or lockout taking place until matter has been investigated.

Transportation: Electric Railways

BRITISH COLUMBIA.—BRITISH COLUMBIA ELECTRIC RAILWAY, AND THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA, DIVISIONS 101, 109 AND 134.

Agreement to be in effect from September 1, 1924, until September 1, 1927, and thereafter until changed on thirty days' notice.

The agreement is the same as that in effect for the previous period, as summarized in the LABOUR GAZETTE for December, 1923, page 1425, with the following changes:—

Wages per hour—one-man car operators, Vancouver Island, 64 cents; mainland, 68 cents. Barn janitors and car cleaners, first six months, 45 cents; thereafter 51 cents. Track maintenance men, Interurban, first three months, 44 cents; thereafter, 48½ cents. City, first three months, 48½ cents, thereafter 53 cents.

FAIR WAGE CONTRACTS, DECEMBER, 1924

DURING December, the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to seven fair wage contracts, six of which were awarded by the Department of Public Works and one by the Department of Railways and Canals. All of these contracts contained the usual fair wage clause as follows:—

All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rate so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

A statement was also received as to supplies ordered by the Post Office Department, subject to the regulation for the suppression of the sweating system and the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS

Repairs to wharf, Port Simpson, British Columbia. Name of contractor, John Currie, Prince Rupert, British Columbia. Date of contract, November 27, 1924. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$2,548.40.

Wharf extension and repairs, Bella Coola, British Columbia. Name of contractor, John Currie, Prince Rupert, British Columbia. Date of contract, October 17, 1924. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$7,770.78.

Reconstruction of portion of wharf at Lotbiniere, Quebec. Name of contractors, Messrs. L. Lemieux and O. Roberge, Lauzon, Quebec. Date of contract, December 1, 1924. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$10,899.60.

Dredging outer portion of channel at Parrsboro, Nova Scotia. Name of contractors, Minas Basin Dredging Company, Limited, Amherst, Nova Scotia. Date of contract, December 10, 1924. Amount of contract, Class "B", \$1.25 per cubic yard, place measure. Approximate expenditure, \$25,000.

Works to be done in connection with the Fisheries Patrol Station at New Westminster, (Poplar Island), British Columbia. Name of contractor, Fraser River Pile Driving Company, Limited, New Westminster, British Columbia. Date of contract, November 26, 1924. Amount of contract, \$13,700.

Reconstruction of wharf at Repentigny, Quebec. Name of contractor, Hector Grenier, Repentigny, Quebec. Date of contract, November 24, 1924. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$3,655.

DEPARTMENT OF RAILWAYS AND CANALS

Construction and completion of Section No. 7 of the Welland Ship Canal. Name of contractors, Canadian Dredging Company, Limited, Midland, Ontario. Date of contract, December 30, 1924. Amount of contract, \$9,284,635.

POST OFFICE DEPARTMENT

The following is a statement of payments made in December, 1924, for supplies ordered by the Post Office Department, subject to the regulation for the suppression of the sweating system, the securing of fair wages and the performance of work under sanitary conditions:—

Nature of orders	Amount of orders
Making metal dating stamps and type, and other hand stamps and brass crown seals..	\$ 1,358 76
Making and repairing rubber stamps, daters, etc.....	119 90
Making up and supplying letter carriers' uniforms, etc.....	10,228 66
Stamping pads, ink, etc.....	298 11
Mail bag fittings.....	7,552 36
Scales repaired.....	46 50
Satchels supplied.....	1,097 96
Mail bagging.....	1,634 65

PRICES, RETAIL AND WHOLESALE, IN CANADA, DECEMBER, 1924

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices continued upward. Index numbers of wholesale prices were substantially higher while the family budget in terms of retail prices showed a slight advance.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.58 at the beginning of December as compared with \$10.46 in November; \$10.73 for December, 1923; \$10.39 for December, 1922; \$11 for December, 1921; \$14.84 for December, 1920; \$16.92 for June, 1920 (the peak); \$13.65 for December, 1918; and \$7.96 for December, 1914. Eggs showed a substantial seasonal advance while there were less important advances in bread, flour, milk, coffee and potatoes. Meats, butter, rice and sugar declined slightly. Including the cost of fuel and rent with that of foods the total budget averaged \$20.90 for December as compared with \$20.81 for November; \$21.21 for December, 1923; \$20.97 for December, 1922; \$21.49 for December, 1921; \$25.67 for December, 1920; \$26.92 for July, 1920 (the peak); \$21.64 for December, 1918; and \$14.26 for December, 1914. Rent declined slightly in some localities.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the importance of the commodities, advanced to 160.9 for December as compared with 157.7 for November; 153.5 for December, 1923; 153.1 for December, 1922; 150.6 for December, 1921; 217.2 for December, 1920; 256.7 for May, 1920 (the peak); and 223.4 for December, 1919. Sixty-two prices quotations were higher, twenty-four were lower and one hundred and fifty were unchanged.

In the grouping according to chief component material five of the main groups advanced, one declined, and two were practically unchanged. The vegetables and their products group and the animals and their products group both advanced substantially, the former because of higher prices for grains, flour, shorts, bread, tea, coffee and rubber and the latter because of higher prices for cattle, sheep, meats, eggs, hides, leather and fur. The fibres and textiles group was higher because of advances in the prices of wool and binder twine which more than offset the declines in cotton, jute and silk. Higher prices for pig iron, steel billets and steel sheets caused an advance in the iron and its products group. Non-ferrous metals advanced because of in-

creases in the prices of copper, lead, tin, zinc, and antimony. The chemicals group declined slightly while the wood and wood products group, and the non-metallic minerals group were practically unchanged.

In the grouping according to purpose both consumers' and producers' goods advanced. In the former group foods were substantially higher, the increase being due to higher prices for tea, coffee, breadstuffs, bacon and eggs, which more than offset the declines in the prices of sugar, foreign fruits, and cheese. Little change occurred in clothing and household equipment. In producers' goods, building materials showed little change while manufacturers' materials advanced substantially, materials for the textile, fur, leather, metal working, meat packing, and milling industries being higher. Materials for the chemical using industries were somewhat lower.

In the grouping according to origin articles of farm origin advanced, domestic farm products because of higher prices for grains, cattle, sheep, eggs and wool being considerably higher. Articles of marine origin and of mineral origin were slightly higher while articles of forest origin were unchanged. Both raw or partly manufactured goods and fully or chiefly manufactured goods were higher, the former because of higher prices for grains, rubber, tea, coffee, eggs, wool, furs, pig iron, steel billets and non-ferrous metals and in spite of declines in foreign fruits, raw sugar, and hogs. The latter group advanced because of increases in flour, bread, shorts, bacon, linseed oil, binder twine, steel bars, steel sheets and non-ferrous metal products.

The index number based upon prices of 271 commodities in 1890-1899 published by the Department of Labour since 1910 advanced to 228.0 for December as compared with 223.4 for November; 222.6 for December, 1923; 223.0 for December, 1922; 230.7 for December, 1921; 290.5 for December, 1920; 288.8 for December, 1918; and 137.0 for December, 1914. The advance was due mostly to higher prices for grains, bran, shorts, live stock, cheese, eggs, bread, flour, flax, linen rope, pig iron, steel billets, non-ferrous metals, birch, maple, carbolic acid, raw furs and raw rubber. The most important declines occurred in the prices of dressed veal, lemons, oranges, beans, potatoes, raw cotton, silk, jute and spruce deals. As compared with a year ago, dairy products, fruits and vegetables, iron and steel, fuel and lighting, building materials, house furnishings, drugs and chemicals were lower. All other groups were higher.

The index number published by the Department since 1910 has been reconstructed back to 1913, by the Dominion Bureau of Statistics, the new index being weighted and based upon the prices of 236 commodities in 1913.* The reconstructed index has now been carried back to 1913 by months. From June, 1923, to the present month the Department has continued to calculate and publish the old series in summary form in the LABOUR GAZETTE in order to afford comparisons with price levels back to 1913. For the detailed analysis from month to month, however, the new index number of the Bureau of Statistics has been used.

The accompanying tables give the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail. The index number of the Department of Labour is given by the principal groupings but the sub-groups in detail shown monthly since 1912 are omitted. The special index number of 50 commodities described in the following paragraph is also given for the purpose of continuing the record.

The special index number comprising fifty of the more important commodities selected from the 271 in the Departmental list including twenty foods, fifteen raw materials and fifteen manufactured goods, based upon price levels in 1913 as 100, advanced to 152.6 for December as compared with 151.5 for November; 153.7 for December, 1923; 154.2 for December, 1922; 150.1 for December, 1921; 199.9 for December, 1920; 260.5 for May, 1920 (the peak); and 204.1 for December, 1918. The advance was due mainly to higher prices for wheat, cattle, cheese, eggs, flour, pig iron, steel billets, lead, bituminous coal and rubber.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board, including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods and thirty-eight finished or consumers' goods based upon price levels in 1913 as 100, advanced to 148 for October as compared with 146 for September; 149 for August; and 147 for October, 1923. Producers' and consumers' goods declined but raw materials advanced. Domestic goods, import goods and export goods advanced.

Professor Michell's index number of forty articles with prices during 1900 to 1909 as 100 advanced to 177.2 for December as compared with 175.1 for November; 177.3 for December, 1923; 244.7 for December, 1919; and 118.6 for December, 1914. Both foodstuffs and manufacturers' goods were higher.

The Canadian Bank of Commerce index of exports rose from 151.56 in November to 155.89 in December; that for imports rose from 163.65 in November to 164.20 in December. The combined index of both exports and imports was up from 157.60 to 160.04. This is the highest level reached since the summer of 1923.

EXPLANATORY NOTE

The table of retail prices and rentals shows the prices at the beginning of December of seventy-one staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity, in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be

* LABOUR GAZETTE, June, 1923, and September, 1924.

maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current for Householders*

With rates in 1913 at 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

Retail Prices

Beef prices continued to decline. Sirloin steak averaged 26.2c. per pound in December as compared with 26.9c. in November. Lower prices occurred in most localities. Round steak showed about the same general decline as sirloin, averaging 21c. per pound in December and 21.8c. in November. Shoulder roast averaged 13.8c. per pound in December and 14.2c. in November and stewing beef 10.7c. in December and 10.9c. in November. Veal, roast, declined from an average of 17.7c. per pound to 17.2c. Prices in most provinces averaged lower. Mutton declined 1c. per pound, averaging 26.7c. Fresh pork, roast, was down from 24.6c. in November to 23.8c. in December and salt pork from 23.1c. in November to 22.9c. in December. Breakfast bacon was also slightly lower, averaging 33.1c. per pound. In fresh fish halibut was slightly higher in the average while white fish were lower. Salt herring advanced from an average of 14.1c. per pound to 14.4c. Finnan haddie averaged slightly lower. Lard was firm.

Both fresh and cooking eggs advanced substantially, the former averaging 63.8c. per

dozen as compared with 54.1c. in November and 45.7c. in October and the latter averaging 50c. per dozen in December, 45.6 in November and 39.8c. in October. Increases were reported from all localities. Increases in the price of milk were reported from St. Hyacinthe, St. John's, Thetford Mines, Port Arthur and Fort William. Dairy butter was down from an average of 39.3c. per pound in November to 39.1c. in December while creamery advanced slightly averaging 43.7c. per pound. Cheese showed little change.

Increases in the price of bread were reported from St. John, Fredericton, Thetford Mines, Ottawa, Brantford, Woodstock, Sudbury, North Bay and Regina. Flour advanced from an average of 5.1c. per pound in November to 5.2c. in December. Slight increases occurred in most localities. Rolled oats also were slightly higher, averaging 6.1c. per pound. Rice advanced from 10.5c. per pound to 10.8c. Canned tomatoes and canned peas declined slightly. Beans were unchanged in the average while onions fell from 5.1c. per pound in November to 4.8c. in December. Potatoes advanced slightly averaging \$1.33 per 90 pounds. Evaporated apples rose somewhat while prunes averaged slightly lower. Currants declined in the average from 19.8c. per pound to 19.1c. Raspberry jam and canned peaches showed little change. Corn syrup advanced slightly, averaging 49.2c. per 5 pound tin. Sugar showed a general decline, granulated averaging 9.6c. per pound as compared with 9.9c. in November and yellow averaging 9.1c. per pound in December as compared with 9.5c. in November. Coffee was higher in most localities, averaging 57.1c. per pound. Tea showed little change.

Anthracite coal declined in Winnipeg but higher prices were reported from Halifax, Sorel, Belleville and St. Thomas. Bituminous coal averaged \$10.34 per ton in December as compared with \$10.43 in November. Soft wood averaged \$9.18 per cord. A decline in rent was reported from Kitchener and Chatham.

Wholesale Prices

The following is a summary of a statement on prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices continued to advance. No. 1 Manitoba Northern wheat averaged \$1.72½ per bushel in December as compared with \$1.64 in November. The low price of the month was \$1.60 per bushel recorded about the beginning and the high of \$1.86½ toward the end. Strong British and foreign demand coupled with the influence of the Chicago wheat market were said to be the causes of the advance. Coarse grains fluctuated in sym-

* LABOUR GAZETTE, December, 1923, page 1442.
89716—64

pathy with wheat. American corn at Toronto rose from \$1.31 per bushel to \$1.40, western oats from 58½c. per bushel to 62½c., western barley from 85½c. per bushel to 88c. and flax seed from \$2.35 per bushel to \$2.49. Ontario rye rose from \$1.09½ per bushel to \$1.17½. The movement in wheat was reflected in that of flour and other milled products, flour at Toronto being \$9.50 per barrel as compared with \$9.20 in November and shorts at Toronto being \$36.75 per ton as compared with \$32.35 in November. Bread at Toronto advanced from 6c. per pound to 6½c. The market for sugar continued weak, raw sugar at Montreal declining from \$5.35 per hundred to \$4.70 and granulated from \$7.36½ per hundred to \$7.12½. Raw rubber advanced from 34½c. per pound to 37½. Coffee at Toronto was up from 32c. per pound to 33½c. and Ceylon tea from 50c. per pound to 53c. Linseed oil was up from \$1.16 per gallon to \$1.18. Prices of cattle moved to higher levels,

western at Winnipeg averaging \$4.92½ per hundred in November and \$5.32½ in December and choice steers at Toronto \$6.05 per hundred in November as compared with \$6.65 in December. Sheep rose from \$6.90 per hundred to \$7. Hogs, however, because of large supplies and weakness in overseas demand fell from \$10.86 per hundred to \$10.12. Bacon was slightly higher being 25c.-27c. per pound. Beef hides were up from 12½c. per pound to 13½c. Mink skins advanced \$3 each to \$12. Eggs showed a seasonal advance, fresh at Montreal bring 70c.-75c. per dozen as compared with 65c.-70c. in November and storage at Toronto being 44c. per dozen as compared with 42c.-43c. in November. Raw cotton at New York declined slightly from an average of 24c. per pound in November to 23½c. in December. Wool continued to advance, different grades averaging 5c. to 6c. per pound higher. Raw silk was slightly lower at \$6.10 per pound. Raw jute declined from \$11.61 per hundred to

DEPARTMENT OF LABOUR INDEX NUMBERS OF WHOLESALE PRICES BY PRINCIPAL GROUPS OF COMMODITIES FOR DECEMBER 1924, NOVEMBER 1924, DECEMBER 1923, 1922, 1921, 1920, 1919, 1918, 1917, 1916, 1915, 1914 AND 1913.

†Nine commodities off the market, fruits, vegetables, etc. One line of spelter was dropped in 1915.

\$10.90. Binder twine advanced 1c. per pound to 13½c. Pig iron advanced from \$27.70 per ton to \$30.20 and steel billets from \$34-\$48 per ton to \$39-\$48. Round and square steel bars were up from \$2.50 per hundred to \$2.60 and galvanized steel sheets from \$4.60 per hundred to \$4.75. Non-ferrous metals continued to advance, copper being up from \$15.75

per pound to \$16.30, copper sheets from 19½c. per pound to 20c., lead from \$9.10 per hundred to \$9.95, tin from 56½c. per pound to 57½c., spelter from \$8.45 per hundred to \$9.10 and antimony from 13½c. per pound to 15½c. Silver was down from 70½c. per ounce to 69½c. Lime fell \$1 per ton to \$8. Sulphuric acid was down from \$2.35 per hundred to \$2.25.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Validity of Manitoba Sunday Legislation

The appeal of the Lord's Day Alliance of Canada to the Privy Council in the matter of the legality of the running of Sunday excursion trains in Manitoba was dismissed by the judicial committee of the Privy Council on December 22. The action of the Alliance in challenging the validity of the Manitoba Act of 1923, amending the Provincial Lord's Day Act (Statutes of 1923, chapter 25) has been noted in previous issues of the *LABOUR GAZETTE* (July, 1924, page 624, October, 1924, page 816). This act permits the operation of excursion trains from Winnipeg on Sundays. The Supreme Court of Manitoba had upheld the validity of this legislation. The argument in the appeal to the Privy Council was heard last July and judgment was reserved.

The members of the Judicial Committee who were present were the Lord Chancellor, Lord Dunedin, Lord Carson, Lord Blanesburgh and Mr. Justice Duff.

The Hon. N. W. Rowell, K.C., and Mr. H. A. Bergman were counsel for the appellants; the Attorney-General of Manitoba (Mr. R. W. Craig, K.C.) and the Hon. Geoffrey Lawrence for the respondent; the Hon. E. L. Newcombe, K.C., (Deputy Minister of Justice for Canada), and Mr. Theobald Mathew for the Attorney General of Canada (intervenant).

Lord Blanesburgh, in delivering their Lordships' judgment said, that the appeal, which related to the permissibility of certain Sunday excursions within the Province of Manitoba, raised important questions on the legislative powers in relation to such matters possessed by the Parliament of Canada on the one hand and the different Provincial Legislatures on the other. Was it open to a Provincial Legislature to permit such excursions within its own province? Or was such a matter, even in that aspect of it, now parcel of the criminal law so as to be within the legislative competence of the Dominion Parliament alone? Those were the broad questions which emerged on the appeal.

They arose on a statute passed by the Legislature of Manitoba in 1923. It was intitled "an Act to amend the Lord's Day Act" of the province, being Chapter 119 of the Revised Statutes, 1913, and it provided in section 1 for the addition to that Act of a clause making it lawful—

For any person or corporation on the Lord's Day to run, conduct, or convey, by any mode of conveyance, any excursion on which passen-

gers are conveyed for hire to summer resorts, beaches, or camping grounds within the province, notwithstanding anything to the contrary in that or any other Act of the Legislature of Manitoba or in any law in force in the province over which the province has legislative authority.

Section 2 amended Clause 2 of the principal Act by adding those same excursions to the works of necessity and charity which by that clause were put outside the prohibition of the statute. The Act was not at once to be operative. It was to be brought into force only on proclamation by the Lieutenant-Governor-in-Council and before that step had been taken the following questions were, on April 19, 1923, under the authority conferred by chapter 38 of the Revised Statutes of Manitoba, referred by His Honour in Council to the Court of Appeal of the province for hearing and consideration—

1. Is it lawful in Manitoba for any person or corporation on the Lord's Day to run, conduct, or convey, by any mode of conveyance, any excursion on which passengers are conveyed for hire to summer resorts, beaches, or camping grounds within the province, assuming that "an Act to amend the Lord's Day Act" enacted at the present session of the Manitoba Legislature has been duly brought into force on proclamation by the Lieutenant-Governor-in-Council?

2. Are either or both of sections 1 and 2 of an "Act to amend the Lord's Day Act" passed at the present session of the Manitoba Legislature valid, assuming that the said Act has been duly brought into force on proclamation by the Lieutenant-Governor-in-Council?

3. Is "the Lord's Day Act" being chapter 119 of 1913 Revised Statutes of Manitoba, as amended by "an Act to amend the Lord's Day Act" passed at the present session of the Manitoba Legislature, within the legislative jurisdiction and powers of the Legislatures of Manitoba, assuming that the last-mentioned Act has been duly brought into force on proclamation by the Lieutenant-Governor-in-Council?

4. If the answer to question 3 is "No" in what particular respect has the Legislature exceeded its powers?

It would be observed that each of those questions was concerned with a state of things resulting from the new "Acts" being duly brought into force. The Lieutenant-Governor-in-Council expressed a desire to be informed as to the legality of the excursions to which

he referred only on the assumption that that Act had been made operative, and no question as to their legality apart from the Act was propounded. Their Lordships were, however, strongly urged by the appellants to deal with and dispose of the view that such excursions were lawful in Manitoba independently of the Act altogether—a view expressed by some learned judges of the Court of Appeal and foreshadowed in an earlier decision of the same court. Their Lordships would refrain from taking that course for one compelling reason. Statutes empowering the Executive Government, whether of the Dominion or a province, to obtain by direct request from the court answers to questions both of fact and law imposed a novel duty to be discharged, but not enlarged by the court.

The Court of Appeal for Manitoba answered the first question in the affirmative. To the second its effective answer was that Section 1 of the Act being valid, section 2 was inoperative and unnecessary. Following on those answers the Act was brought into force and the present appeal was instituted. It might be assumed that the Provincial Legislature in passing the Act of 1923, was purporting to exercise the power which it treated as being reserved to it by section 8 of the Dominion Statute, the Lord's Day Act, 1906. That Section was as follows:—

It shall not be lawful for any person on the Lord's Day, except as provided by any Provincial Act or law now or hereafter in force, to run, conduct, or convey, by any mode of conveyance any excursion on which passengers are conveyed for hire, and having for its principle or only object the carriage on that day of such passengers for amusement or pleasure, and passengers so conveyed shall not be deemed to be travellers within the meaning of this Act.

The real question raised on this appeal might, therefore, be thus phrased:—

"Is the Manitoba Act of 1923 now duly proclaimed 'a Provincial Act hereafter in force' within the meaning of section 8 of the Lord's Day Act, 1906?" After referring in some detail to the legislative history in Canada of the question of Sunday observance since the passing of the British North America Act, 1867, Lord Blanesburgh proceeded to say that the Dominion Act of 1906 was laying down for the whole of Canada regulations for the observance of Sunday. Some things on that day were everywhere prohibited; others were everywhere allowed. But there was an intermediate class of activities—Sunday excursions being among them—with reference to which the Act recognized that different views might prevail in the provinces, so varying were the circum-

stances, usages, and predominant religious beliefs of the people. The Act proceeded to provide accordingly, that, with reference to these matters, provincial views should, within a province, prevail. There was therefore reserved to each province power in these intermediate cases by *inter alia* a provincial act to exempt that province from the operation of the general prohibition in whole or in part. If it be asked whether or not it would have been within the competence of the Legislature of Manitoba effectively to enact their Act had there been on the subject of Sunday excursions no previous Dominion legislation at all, no other than an affirmative answer could, their Lordships thought, be given. In the result their Lordships agreed with the Court of Appeal that the first question of the Lieutenant-Governor-in-Council should be answered in the affirmative. They also expressed their agreement with the actual answer given to the second question by the Court of Appeal. In regard to the third question, their Lordships were in entire agreement with the answer of the Court of Appeal on the first part, and they had already expressed themselves in regard to the second. Their Lordships deemed it superfluous, as did the Court of Appeal, to answer the fourth question.

Agreeing in effect with all the answers of the Court of Appeal their Lordships were of opinion that the appeal from the judgment of that court should be dismissed, and they would humbly advise His Majesty accordingly. All parties should bear their own costs.

Unincorporated Trade Union (local branch) may not be sued

The two cases noted in the September issue, involving the question of the responsibility of a labour union for alleged unlawful acts of their members were carried to a further stage at a hearing by Mr. Justice Wright in Chambers on December 6. The facts of the case may be recalled, as follows:—Six moving picture projectionists, who had been employed in various picture theatres at Hamilton, Ont., became involved during July in an alleged lockout of union employees, and having lost their employment, picketed the theatres where they had been employed. The theatre proprietors applied for an injunction, and this was granted by the court, which also granted enlargement of the proceedings to include other members of the local union. The union subsequently applied in the County Court for orders setting aside the service of writs of summons in both cases and striking out the name of the union as party defendant. The lower court refused the application and the union appealed to a higher court.

Mr. Justice Wright found that the defendant society was not incorporated, and was not registered under the Trade Unions Act; that there were no trustees holding land or goods on behalf of the society, and that it did not own any lands or goods, or hold any trust fund. In these circumstances there was conclusive authority to decide in favour of the appellant. The plaintiffs had urged that as the defendant society had entered appearances in the present case, it could not later set up the objection that it would not be sued or served with a writ of summons in the ordinary way. On this point the judge found that nothing had been done by the defendant society except the entry of appearances, and according to precedents these appearances might therefore be considered as nullities as far as the defendant society was concerned. The appeal of the defendant society was therefore allowed.

(*Ontario—Potzalek versus Adams, and Robinson versus Adams*).

Engineer Not Having Proper Certificate Cannot Claim Wages

A stationary engineer holding a third-class certificate was engaged for the season of 1923 to operate a steam traction engine in connection with a threshing outfit in Alberta, at \$16 a day. He worked for 58 days, earning \$928, on account of which he was paid \$201, the balance remaining unpaid. He brought action in the Supreme Court to recover \$727 being the balance of wages alleged to be due. The defendant, the owner of the threshing outfit, pleaded that the contract could not be enforced as it was in contravention of the Boilers Act (Revised Statutes of Alberta, 1922, Chapter 191). The court found that the plaintiff had neither a certificate nor a permit authorizing him to operate a steam plant of the kind in question. Both parties knew that it was necessary for the plaintiff, before he could operate the engine, to have a special certificate or permit. The plaintiff was authorized by his certificate to operate a stationary engine and boiler, whereas in the course of his employment he operated a traction boiler and engine, thus bringing himself within the penalties provided by the Boilers Act. The court pointed out that this statute was enacted for the protection of the public both as to life and property, and for that purpose imposed on those engaged in the class of work specified therein the duty of complying with certain conditions precedent to their right to engage in such work. The contract in question was prohibited, and the plaintiff could not recover the amount claimed for wages. The defendants in this case counter-

claimed against the plaintiff for \$1,200 on account of damages to the engine and boiler caused by his lack of skill, but this counter-claim was abandoned.

(*Alberta—Milne versus Peterson*.)

Quebec Compensation Act Applies Outside Province

A logger, domiciled in the Province of Quebec, was engaged in December 1921, to work in the woods in the State of Maine. The sub-contractor and his principal, by whom the logger was engaged, were also resident in Quebec, but the agreement of employment was made in Maine. In the following March the logger was struck by a log and died later from fracture of the skull. Action was brought for compensation under the Workmen's Compensation Act of Quebec on behalf of the workman's dependent child. The claim was resisted on the ground that the agreement of employment was entered into in the United States, for the purpose of carrying on work in the United States, and that the Quebec law was not therefore applicable to the case, which should properly come under the compensation law of Maine (this law however contains a clause expressly exempting logging from its provisions). The Superior Court of the district of Beauce having found for the plaintiff, the case was appealed to the Court of King's Bench, which sustained the judgment of the lower court. The appeal court found that the parties to the agreement of employment were Canadians, residing in the same locality, that the enterprise was a Canadian enterprise, undertaken and carried out by Canadians of Quebec, and that the fact that the actual work was done in a forest of Maine, 40 miles from their place of residence, did not constitute it an American undertaking. "It must be concluded that both parties had the intention of placing reliance on the laws of our Province, in conformity with the provisions of Article 8 of the Civil Code. If then both parties desired to be governed by the laws of the Province of Quebec, why should they be exempted from the application of the Workmen's Compensation Act?" The appeal was dismissed with costs.

(*Quebec—Lecours versus Carrier*.)

Yearly Salary Does Not Involve Employment for Year

An employee in a pulp company was engaged at an annual rate of salary of \$6,300 (including expenses). The Company dismissed him after six months' service, and the employee brought action in the Superior Court for wrongful dismissal on the ground

that he had been engaged by the year, claiming the amount of his salary for the balance of the year. The Court held that the mere fact that the salary had been fixed at a yearly rate did not of itself establish that the engagement was an annual one. Unless the contrary is proved, a contract worded in such manner must be held to be indefinite as to duration, and may be terminated upon sufficient notice. If, instead of suing in damages for the cancellation of the contract the employee who complains of wrongful dismissal elects to sue for his wages under his contract of employment, he has a right of action only for the wages as they fall due, and he cannot demand to be paid in advance. The action was dismissed with costs.

(Quebec—Iverson versus Chicoutimi Pulp Company.)

Payment for Special Police Protection during Strike

During a strike of coal miners employed by Glassbrook Brothers, of Swansea, Wales, in 1921, special bodies of police were sent by the Glamorgan County Council, at the request of the colliery company, to preserve the company's property. The County Council later sought to recover £2,200 from the company, in payment for the service. The lower courts having found that the firm was liable for the amount claimed, the case was finally carried to the House of Lords. Judgment was given during December, to the effect that the company was liable to pay the amount claimed. For the appellant company Sir John Simon argued that it was the ordinary duty of the police to preserve property and maintain the peace. On behalf of the County Council it was pointed out that charges for

extra police under similar circumstances had frequently been made with the approval of the Home Secretary, and that in the present case the collieries would have been sufficiently protected by the ordinary police service. Of the five lords of appeal who heard the case three upheld the decision of the lower court, and two held the contrary view.

Wisconsin Minimum Wage Law Invalid

The United States District Court in the western district of Wisconsin has given a judgment declaring unconstitutional the State minimum wage law creating a commission to fix minimum wages for adult women. This judgment was given under the authority of the decision of the Supreme Court of the United States in the recent District of Columbia minimum wage case (*LABOUR GAZETTE*, January, 1923, page 77; May 1923, page 471).

NOTE

Industrial Disputes Investigation Act, 1907

The Judicial Committee of the Privy Council gave judgment on January 20 in the appeal of the Toronto Electric Commission on a question involving the constitutional validity of the Industrial Disputes Investigation Act, 1907. The decision of the various courts in Canada which heard this case have been given in previous issues of the *LABOUR GAZETTE* (May, 1924, pages 384-389, etc.). The Judicial Committee allowed the appeal of the Hydro-Electric Commission on the ground that the statute was not within the competence of the Dominion Parliament, under the terms of the British North America Act. The text of the decision will be given in the next issue.

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 25]

FEBRUARY, 1925

[NUMBER 2

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

THIS issue of the LABOUR GAZETTE contains annual reviews for the year 1924 of strikes and lockouts, and of building permits issued during the year; and the regular quarterly reports covering the fourth quarter of 1924 on unemployment in trade unions, fatal industrial accidents and immigration in Canada. It also contains the regular monthly articles on the industrial and labour situation during the past month, including reviews of the recent movements of prices, industrial disputes and conciliation proceedings, recent industrial agreements, etc., and the usual monthly notes on industrial training and apprenticeship, labour union activities, recent legal decisions and industrial safety and health. The text of the recent judgment by the Judicial Committee of the Privy Council in reference to the validity of the Industrial Disputes Investigation Act, and other special articles are also contained in this issue.

Monthly summary

Reports from the Employment Service of Canada indicated a low level of employment during December, 1924, a marked decline being shown as compared with the same period in 1923. At the beginning of January the percentage of unemployment among members of trade unions was 11.6 as compared with 9.7 per cent at the beginning of December and with 7.2 per cent at the beginning of January 1924. Reports from 5,813 employers showed the pronounced curtailment which is always evident at the beginning of a new year, the number of workers employed by them being 690,538, a decline of 57,227 from the number employed in the previous month. The employment index number on January 1, 1925, stood 83.9, compared with 90.8 on December 1, 1924, and with 88.7 on January 1, 1924.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.77 for January as compared with \$10.58 for December, 1924; \$10.78 for January, 1924; \$10.52 for January, 1923; \$11.03 for January, 1922; \$14.48 for January, 1921; \$15.30 for January, 1920; \$16.92 for June, 1920 (the peak); \$12.42 for January, 1918; and \$7.73 for January, 1914. In

wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1913 as 100 advanced to 165.2 for January as compared with 160.9 for December, 1924; 156.7 for January, 1924; 151.4 for January, 1923; 151.7 for January, 1922; 200.6 for January, 1921; 233.4 for January, 1920; 256.7 for May, 1920 (the peak); and 206.1 for January, 1919.

The time loss caused by industrial disputes was greater in January than in the previous month, but was less than in January, 1924, when a strike of coal miners was in progress in Nova Scotia. Ten disputes were in existence at some time during January, 1925, affecting 694 employees, and resulting in a loss in working time of 4,882 days. Seven of these disputes terminated during the month, leaving three disputes on record as the month closed. In December 1924 there were three disputes, affecting 125 employees and involving a time-loss of 1,865 days. Corresponding figures for January, 1924, were 13 disputes, 14,294 employees, and 209,834 working days.

Industrial Disputes Investigation Act, 1907

During January the Department received reports from three Boards of Conciliation and Investigation established under the Industrial Disputes Investigation Act.

Three new applications for Boards were received by the department during the month.

Minimum wages for women in Quebec.

As is stated elsewhere in this issue, the Women's Minimum Wage Act of the Province of Quebec (Statutes of 1919, chapter 11) is to become operative without further delay, by the appointment of a Minimum Wage Commission in accordance with its provisions. The Commission will be appointed by the Lieutenant Governor in Council, under direction of the Minister of Public Works and Labour, and will consist of three members, including the Deputy Minister of Labour or a substitute designated by the Minister, as chairman, and two other members, one of whom may be a woman, to be appointed by

the Lieutenant Governor in Council and to hold office during good pleasure. The Commission will not receive payment for its services, but its expenses are to be defrayed out of general Provincial funds. The jurisdiction of the Commission will extend only to industrial establishments or factories, and will therefore not include shop assistants, domestics and other classes whose wages are regulated under similar laws in some of the other Provinces. The Commission has authority, either itself or through one of its members, to investigate the conditions of the work done by women in factories, and of the wages paid them. It may also examine the employers' books and pay lists and exact from them all information it may judge necessary in connection with the work done by the women employed by them. The Commission has full authority in regard to the calling of witnesses, ordering the production of books, etc. If the the Commissioners believe that the wages paid in any establishment are insufficient, they may summon to a conference a number of persons, one half the number to be selected by the workers and the remainder by the employers; the Commissioners subsequently adding a number of "disinterested" persons to take part in the conference. One of the members of the Commission will act as chairman. This conference after hearing all sides, will determine by a majority vote of its members, the minimum wage to be paid to the workers concerned. The decision of such a conference is to be submitted to the Commission, "which may approve, reject or amend the same," or may order the holding of a new conference. It may be noted that the Minimum Wage Boards of Alberta, British Columbia and Ontario, before fixing minimum wage rates, also summon conferences of persons similarly chosen, the orders which follow such meetings generally representing a compromise between the views of the interested parties. In these provinces, as in Quebec, the Boards are not bound by the decisions of the conference. The orders of the Quebec Commission will be compulsory, and will take effect sixty days after their publication in the *Quebec Official Gazette*, but the Commission may extend this interval if it is judged expedient to do so. The Commission has authority to issue special permits for lower rates than the minimum for apprentices, for women who are unable to do a full day's work, and for girls under 18 years of age. An employee who receives wages lower than the rate prescribed for her class may recover, the same by means of proceedings in court. In such cases the employer will incur a penalty of \$50 for each offence.

Apprenticeship in the building trades.

One of the main features of the seventh convention of the Association of Canadian Building and Construction Industries, reported elsewhere in this issue, was the apprentice competition held in the Montreal Technical School on Friday, January 30, 1925. Forty apprentices from the bricklaying, carpentry and plastering trades in various cities of Quebec and Ontario competed for silver cups and certificates donated by the Montreal Builders' Exchange. The work of the boys was judged to be very creditable and the competition was keen. The employers showed even more interest in the event than the apprentices, and the contest, which is the second held by the Association, served to stimulate interest in the subject of apprentice training. The work done by the candidates was photographed by representatives of two motion picture companies, and it is expected that the films will be shown throughout Canada and the United States.

The Association is deeply interested in the problem of training mechanics in the building trades, and is endeavouring to secure the assistance of the various governments in establishing trade schools and organized apprenticeship throughout the Dominion. It was announced at the convention that the Quebec government had appointed a committee to arrange for the establishment of a trade school for carpenters, bricklayers and plasterers in connection with the Montreal Technical School, and that this school would possibly be in operation next winter. The Association intends to further the policy of securing similar schools in other localities and to make them an integral part of a national system of apprenticeship in all building trades.

Workmen's compensation inquiry in Manitoba

The special committee appointed by the Manitoba Government last year to study the subject of workmen's compensation with a view to stabilizing legislation on this subject, concluded its work toward the end of January. Some account of the progress made by the committee was given in the December issue of the *LABOUR GAZETTE*. No general agreement had been reached at that time by the committee in regard to the main subjects of difference between the employers and employees. This deadlock still existed when the committee concluded its work. They were agreed as to certain amendments of a minor character, chiefly concerned with the smoother admin-

istration of the Act. They also joined in recommending a reduction in the weekly minimum compensation from \$15 to \$12.50, and a sliding scale of compensation for the children of dependants, as in Alberta. The members, however, continued to be divided on the employees' proposals for substantial increases in compensation rates and retro-active provisions, and on the reductions in rates and payments by employees for medical aid, as proposed by the employers. The report to be submitted to the Legislature will, it is understood, state the demands that have been put forward by the two parties concerned, without making any joint proposals in the way of a compromise. The action taken on the report by the Legislature will be stated in the LABOUR GAZETTE when the proceedings at the present session are outlined.

Minimum wage administration in Ontario. Reference was made in the November issue of the LABOUR GAZETTE to attempts alleged to have been made by the firm of

Willards Chocolates, Limited, of Toronto, to evade the orders of the Minimum Wage Board. These charges were made by the District Trades and Labour Council. The Board subsequently, at the suggestion of the Attorney General of the province, held an investigation under the Public Inquiries Act, into the charges affecting the administration of the Act, the Board, the labour union movement, and the manufacturers concerned being represented at the investigation by counsel. The inquiry concluded at the end of January, after numerous witnesses had been heard, the chairman, Dr. MacMillan, announcing that a report would be issued in due course giving the conclusions reached by the Board. An outline of this report will be given in a future issue of this GAZETTE.

Hours of retail clerks at Montreal. Retail traders and their employees at Montreal are asking the city council to amend the existing by-law, which was passed in

August, 1919, to govern the hours of closing of stores. This by-law ordained that all stores, with certain exceptions, should close at seven o'clock on Mondays, Tuesdays, Wednesdays and Thursdays; nine o'clock on Fridays, and eleven o'clock on Saturdays. The exceptions included tobacco, news-stands, flower, fruit, pastry, ice cream or refreshment stands and drug stores. Days excepted from the above rules were eves of Epiphany, Good Friday, Immaculate Conception, May 24, Dominion Day, All Saints', Ascension and

Labour Day; the days following December 15 to the end of the year are also free days in which early closing is not enforced.

The store-keepers and employees ask that this by-law be amended so as to close all stores, except groceries, meat markets and those above excepted, at six o'clock on every weekday except Saturday, and then, at ten o'clock. They also ask that during January and February, and in July and August, the stores be closed every day in the week, including Saturday, at six p.m. The reasons for this request are that store clerks have now to work some sixty-one working hours in a week, while office clerks are favoured with a forty-one hour week, a difference of twenty hours a week, which could be devoted to recreation, rest or improvement.

Municipal co-operation in mothers' allowances.

A conference on the work of mothers' allowance boards in Ontario was held last month at Chatham at a joint meeting of the city and county bodies. After four years' administration of the Ontario act the municipalities of the province have raised no question as to the payment of their share of the allowance. The Reverend Peter Bryce, chairman of the provincial commission, stated that the amount expended on allowances throughout the province during the first working year of the commission was \$775,000; in the second year, \$1,400,000; in the third, \$1,613,000, and in the year ending October 31, 1924, \$1,715,000. These costs are divided equally between the municipal and provincial governments. The cost of administration, Mr. Bryce continued, has been reduced to 4½ per cent per annum and it is expected that this year the act will be administered on a basis of 4 per cent. At the present time, more than 4,100 families, including some 2,500 children, are receiving aid from the commission.

The chairman commented on the valuable public service that is discharged by the members of the various local boards, who devote much of their time to this work without remuneration. He called attention to a recent provision that has been already noted in the LABOUR GAZETTE (June, 1924, page 472) for the benefit of families in which the fathers are afflicted with blindness. The Board has concluded an agreement with the Canadian National Institute for the Blind whereby any man recommended by the Board will be taught a trade and will be paid a wage and his family looked after by the allowance board while he is learning the trade.

The Chatham conference believed that further provision should be made under the Act

for dealing with cases for desertion, and that the present law, which gives an allowance only when a husband has remained away from his family for five years, should be modified by a reduction in the five-year period. This subject is to be investigated by the various women's organizations in the Province with a view to having family desertion made a serious offence against the law. The provincial Board takes no action in divorce cases, such as is taken in some states in the United States where provision is made through mothers' allowances for families that have been divided by a judicial decree.

Rehabilitation of handicapped workers in Ontario.

The recent amendment to the Workmen's Compensation Act of Ontario, making provision for the retraining of injured workmen, took effect on January 1, the proclamation required to give effect to the amending act having been published in the *Ontario Gazette* in January. This new feature of workmen's compensation in Canada was noted in the *LABOUR GAZETTE* last June, when the enactments at the last session of the Provincial Legislature were outlined. The new section which is now in force reads as follows:—

44c. To aid in getting injured workmen back to work and to assist in lessening or removing any handicap resulting from their injuries, the Board may take such measures and make such expenditures as it may deem necessary or expedient, and the expense thereof shall be borne, in Schedule 1 cases, out of the accident fund, and in Schedule 2 cases by the employer individually, and may be collected in the same manner as compensation or expenses of administration; provided that the total expenditure under the provisions of this section shall not exceed \$100,000 in any calendar year.

Ontario by this enactment is the first of the Provinces of Canada to apply to civilians the principle of "rehabilitation" which has been followed with marked success in the retraining of disabled ex-soldiers. Some account of the work of the Vocational Training Branch of the Department of Soldiers' Civil Re-establishment, and also of the recent progress of civilian rehabilitation in the United States, was given in the *LABOUR GAZETTE* in its issue of October, 1924.

Progress of civic superannuation

In an article in the *LABOUR GAZETTE* of May, 1924, on various municipal superannuation schemes in existence in Canada, it was stated that an effort was being made to increase the rate of policemen's pensions at Hamilton, Ontario, from 40 to 50 per cent of their salary in the last year of service. This movement has since been carried a stage fur-

ther, the committee in charge of the fund having recommended the increase to the Police Commissioners. The police benefit fund, which was established in 1893, now amounts nearly to a quarter of a million dollars. Last year slightly more than \$10,000, it is stated, was distributed to retired officers. Each man on the force is required to contribute 7 per cent of his salary, and has the right to vote on withdrawals from the fund.

No further official action has been taken at Toronto since May, 1924, when it was noted in the *LABOUR GAZETTE* that a civic superannuation scheme was under consideration. One of the city controllers stated recently that there was no immediate intention of introducing a pension by-law. He recommended superannuation, however, as likely to prove beneficial on the ground of efficiency and economy.

Last November the employees of the City of Ottawa presented a petition to the Board of Control asking for the establishment of a general civic superannuation fund on a contributory basis. The city now contributes annually to Firemen's Benevolent Association and to the Policemen's Superannuation Fund. The Vancouver City Council is still considering the question of civic pensions, but the special committee in charge of the inquiry had not presented their report at the end of the year.

Prevalence of industrial diseases

The Canadian Medical Association is giving publicity to a series of articles prepared by Dr. T. C. Routley, secretary of this organization, on the subject of the health of workers in industry. One of these articles relates to the prevalence of occupational diseases in Ontario. "The incidence of such diseases in industrial plants in Ontario," it is stated, "is shown to be high by reports from the Division of Industrial Hygiene. Figures in 1923 showed that of cases voluntarily reported to them, not including others found in special investigations, there were 38 of lead poisoning, 13 from benzol, 7 from mercury, 6 from potassium cyanide, carbon monoxide 2, dry asthma 2, and conjunctivitis from wood alcohol 3, besides 111 cases of skin eruptions and individual cases of cancer (of occupational origin), teakwood poisoning and aniline poisoning. Special investigations into 9 paint plants showed 8 cases of lead poisoning, into 3 storage battery plants, 46 cases of lead poisoning, in another plant, 48 cases of nickel rash, and in several rubber plants, 15 cases of occupational poisoning. Occupational diseases present a great problem, and as yet in

Canada barely touched, but if only for its demonstrated power, where put in operation, to control sepsis, social diseases, tuberculosis and other dangerous infections among workers, industrial hygiene has already amply justified itself. When it is universally recognized by all businesses as it is to-day by the great insurance companies, that preventive medicine conserves not only health but vast wealth, then it will be able to do its best work."

British industrial welfare society

In an article in the December issue of this GAZETTE, describing the work of the Miners' Welfare Fund of Great Britain, reference was made to the work of the Industrial Welfare Society, the statement being made that the latter society is maintained by the Fund. Mr. Robert R. Hyde, director of the Society, writes from London to correct this statement, giving the actual facts as follows:—

The Industrial Welfare Society is a voluntary organization consisting of about 700 firms and it exists for the purpose of extending the welfare movement and of supplying information on all welfare matters. The Society was working in the coal field prior to the setting up of the Miners' Welfare Fund and a great deal of valuable work had already been accomplished in the Mining Industry. The establishment of the Fund led to so great an increase in the demands made on the Society for information that it became necessary to set up a special Department to deal exclusively with miners' welfare questions. This Department is subsidized by the Miners' Welfare Fund Central Committee but in no sense is the Industrial Welfare Society maintained by the Miners' Welfare Central Committee.

"Labour's money" and industrial undertakings.

In a recent work entitled "Labour's Money," Richard Boeckel describes for British readers the new financial policy of some of the large American labour unions. He points out that trade unionism on this continent, as in Europe, took a new turn after the war. Labour men discovered that the strike weapon was not sufficient to win security against unemployment, more leisure, better working conditions, or a fairer share in the wealth produced by labour. They also found shortcomings in the method of workers' joint control of industry, the real controllers being discovered, not as members of boards of directors, but as the financiers who control industrial credit. Attention was therefore directed to securing financial power by founding

co-operative banks, or by gaining control of established banks and turning them into co-operative banks. These banks in furtherance of the general policy of "working through capitalistic methods towards a new social order," have in their turn organized and financed industrial undertakings on co-operative lines. Some of these undertakings have been noted from time to time in the LABOUR GAZETTE. Mr. Boeckel cites as an illustration of the application of financial power by labour the action recently taken by the garment workers at Cleveland. When the Cleveland garment manufacturers objected to a renewal of an agreement with their organized workers, the latter immediately, with the help of the Brotherhood Co-operative Bank, organized a co-operative factory for the production of cloaks, costumes and dresses for wage-earning women. For similar reasons and in a similar way, the Cigar Makers' Union founded successful cigar factories and printers set up plants under their own control in the printing trade. During the miners' strike of 1922 the Locomotive Engineers' Union founded the Coal River Collieries Company. They acquired control of 6,000 acres of coal lands, installed modern safety devices, replaced dilapidated miners' shacks, installed up-to-date sanitation, and otherwise improved labour conditions. Difficulties arose later, however, between the Locomotive Engineers' Union, the employer, and the United Mine Workers, representing the employees, thus presenting the same problem that has frequently arisen in connection with the relationship between a co-operative organization and its employees.

Workers' educational international

The Secretary of the International Federation of Trade Unions, John W. Bowen, writing in the *International Trade Union Review*, published by that organization at Amsterdam, states that the successful development of a "Workers' Educational International" is now one of the chief specific objects of the Federation. Representatives of twenty countries and of over a million working class students attended the International Workers' Educational Conference held last year at Oxford. The delegates were agreed as to the necessity of sending some measure of international co-ordination in the movement. "The chief resolution passed," the writer states, "was one which constituted the International Federation of Labour Organizations concerned with Workers' Education, and appointed an International Committee to draw up its constitution, such committee to work under the auspices of the International Federation of Trade

Unions and to consult with the Labour and Socialist International and with the Co-operative and Youth Educationals in the work of drafting this constitution."

The conference further agreed to form an International Educational Fund to be used for the following purposes:—

1. Providing for the collection and compilation of information of interest to organizations concerned with workers' education.

2. Providing for the publication of a review and of other reports, and of translations of publications of use to workers' educational associations.

3. Assisting the exchange of students, of teachers, and of visitors between different countries.

4. Assisting the organization of summer schools.

5. Establishing an International Workers' College.

6. Meeting office expenses entailed in the foregoing proposals.

Stabilizing employment in electrical industry

The General Electric Company of the United States announced on November 7 as part of its plan for stabilizing employment, that the sum of two million dollars had been set aside in connection with the company's works at Schenectady, New York, for the purpose of keeping certain departments of the works in operation during the seasonal slump in orders. Every department capable of producing goods for stock was expected to be kept occupied as the result of this policy, the stock being stored for future disposal. The company, as a general rule, produces goods only upon order, but in order to avoid laying off thousands of employees it is now producing electrical apparatus for stock. Plans to stabilize employment in the railroad industry were recently discussed by the Executive Committee of the Association of Railway Executives by the elimination as far as might be possible of seasonal employment, and a committee was appointed to confer on this subject with the interstate commerce commission.

The British *Ministry of Labour Gazette* for January, 1925, gives the following statement upon the policy of the British Government with regard to trade boards as contained in the reply of the Minister of Labour to a question in the House of Commons on December 16:—

The Government adheres to the principle that the grave evil of sweating must be prevented, and endorses the view which was reached unanimously by the Committee of Enquiry presided over by the present Lord

Chancellor, that the trade boards system is necessary for this purpose. The Government are satisfied that this principle, which is the one contained in the 1909 Act, can be, and should be, enforced under the existing Acts without any further amendment, and they do not propose to introduce new legislation. In reaching this decision, they have it in mind so far as the existing Boards with minimum rates in operation are concerned, that many of the principal changes advocated by the Cave Committee can be, and in some cases have been, adopted without legislation. As regards the question of the formation of district machinery, this matter is one which must be approached with caution, and is at the moment being carefully considered. It is not a matter which in the main would require new legislation to carry out the Cave Committee's conclusions. So far as the application of the Acts to new trades are concerned, the Government will adopt the principles which were recommended strongly by the Cave Committee in that (a) they will only extend the Acts to new trades where it has been clearly ascertained by systematic investigation that sweating conditions prevail in any trade, and (b) then only after a public inquiry to examine the facts and to hear objections in any case of doubt.

The General Assembly of the Province of Nova Scotia has been summoned to meet on February 26 for its annual session.

Miss Margaret Sutherland, of Vancouver, has been appointed a member of the Mothers' Pensions Board of British Columbia.

Mr. Hugh B. Gilmour, of Vancouver, has been reappointed a member of the Workmen's Compensation Board of British Columbia for a further period of ten years.

A committee of the Women's Council at St. John, New Brunswick, has completed a survey of the dependent families in the city in order to further the work of the committee appointed by the provincial government early last year to investigate and report upon the question of mothers' allowances (*LABOUR GAZETTE*, June, 1924, page 481). The local committee found that there were 76 widows and deserted wives in the city. In a recent lecture at St. John, the Reverend Dr. George Keirstead, chairman of the provincial committee on mothers' allowances advocated the appointment of a child welfare supervisor for the province, a juvenile court, and other reforms on behalf of children.

The first members of the Board of Examiners in Barbering, under the Barbers Act enacted at the recent session of the Legislature of British Columbia, have been appointed as follows: Albert E. Gilbert, of Vancouver, master barber, for one year; Marshall Portice, of New Westminster, journeyman, for two years; and John McCurdy Cooper, of Victoria, journeyman, for three years. The provisions of this act were outlined in the last issue of the *Labour Gazette* (page 23).

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

The Labour Situation

THERE was a large reduction in employment at the beginning of January, as is usual at that time of year. The declines were very slightly smaller than on January 1, 1924, but the situation was less favourable than on that date.

The offices of the Employment Service of Canada reported a continued decline in the transactions during the month of December, 1924, as compared with the preceding month and with the corresponding period of 1923.

The following is a summary of employment conditions at the end of January, 1925, as reported by superintendents of the Employment Service of Canada.

In the Maritime Provinces logging was being carried on briskly with an occasional increase in demand. In the construction groups a cessation of work was shown, as most large contracts were completed leaving a considerable number of skilled mechanics, carpenters and plasterers, etc., unemployed. Outdoor labour and casual jobs were available in small numbers and some workers were placed with the railways for track clearance.

In Quebec little improvement was reported in the industrial situation. The demand for bushmen had subsided slightly, the camps in operation having their quota of men. However, with the opening of the spring log driving, renewed activity was expected. Quietness prevailed throughout the province in the construction groups, especially in the skilled building trades, but this was slightly offset in the larger municipalities by the casual work offered on harbour improvements and street cleaning, etc. The manufacturing industries were as active as could be expected at this season of the year; several pulpwood and saw-mill centres were busy. The superintendent reported that employment conditions in this province might be considered better than at the same time a year ago.

In Ontario the seasonal industrial depression continued very marked, the activities of all manufactures being especially quiet and skilled factory workers registering in increased numbers. At the larger offices large numbers of construction workers and trades mechanics were unemployed and the relief measures and casual work available was not sufficient to meet the requirements. The demand in the farm group was about as previously reported, the greater number of vacancies offered being in the Western Peninsula, near Chatham, St. Thomas and London. The logging industry continued to provide a large part of the em-

ployment in the province, while railway and highway clearance in the northern sections called for several large gangs of men. Applications from women had increased at the offices but difficulty was experienced in finding sufficient trained cooks to meet the requirements.

In the Province of Manitoba a satisfactory response of farm hands was reported, although the demand had slackened considerably. Indications of improvement in the early spring are shown. Very little activity was reported in the construction groups and, apart from vacancies for carpenters and inside workers, together with a steady call for casual labour, few opportunities were available. Gradual curtailment of orders in the logging groups was reported, due to the fact that the camps in Ontario and Manitoba have their complement of workers. In the women's sections there was an increase in orders for farm household workers, while an enlarged registration of applicants for city and hotel and institutional work was recorded.

The farming group in Saskatchewan reported a decreased demand with no difficulty experienced in filling all orders for married couples. The quietness in construction, characteristic of this period, was uninterrupted. Work on railway and city streets supplied the greater part of casual employment. The demand in the logging group was very slight, while the women's section reported continued slackness.

Fewer farm hands were required at present in the offices in Alberta; general improvements being anticipated for the early spring. Some temporary and casual labour was required for subway, sewer work, and railway construction jobs, but on the whole few opportunities were available. Quietness prevailed in logging, most camps having sufficient workers. The supply of women workers continued in excess of the demand.

In British Columbia temporary work was provided for many shovelling snow on streets and railways, while the power plant construction, the demolition of buildings and bridges in some localities will afford work to many for some weeks to come. This, in addition to municipal and governmental relief measures, has relieved the unemployment situation to a considerable extent. While the calls for bushmen have fallen off slightly, the small orders for teamsters, skidders, sawyers, etc., were easily met. There was an increased registration of mill labourers with very few vacancies available. Experienced household workers

were not obtainable in sufficient numbers to meet the demand for women household workers.

EMPLOYERS' REPORTS.

Employment at the beginning of January suffered the curtailment always indicated at the first of the year; the number of workers released was, however, slightly smaller than on January 1, 1924. Contractions were registered in all industries except coal mining. The heaviest decreases were in manufacturing, but construction and transportation also recorded important losses.

There were reductions in payroll in all provinces, those in Quebec and Ontario being most extensive. In the Maritime Provinces, manufacturing, mining and construction showed large declines, which, however, were partly offset by important gains in logging and transportation. In Quebec, the greatest contractions occurred in manufacturing, transportation and construction, while there were also pronounced decreases in trade, logging and mining. In Ontario, manufacturing, construction and trade reported the heaviest reductions. Trade and mining were slacker, but logging registered considerable improvement. In the Prairie Provinces, construction, transportation and manufactures recorded reduced activity while coal mining afforded considerably more employment and logging was busier. In British Columbia employment in food, lumber and iron and steel plants, in logging, mining and construction showed curtailment.

All the cities for which separate tabulations are made registered declines, those in Montreal being most extensive. In that city, the closing of the harbour caused considerable losses, while manufacturing and construction recorded reduced activity. In Quebec, leather factories, construction and transportation reported decreases. In Toronto, employment in manufacturing showed a large falling off; trade, construction and transportation also registered declines. The most pronounced shrinkage in Ottawa was in lumber mills, but construction was also slacker. In Hamilton improvement in textile and rubber factories was offset by declines in food, iron and steel plants and in transportation and trade. In Winnipeg, there were moderate declines in a number of industries, those in manufacturing and construction being most pronounced. In Vancouver, lumber, textile, food, iron and steel plants registered curtailment of operations and construction also afforded less employment.

Within the manufacturing industries, the greatest losses were in iron and steel, lumber, food and tobacco; declines on a somewhat

smaller scale took place in leather, pulp and paper, textiles, clay; and stone, non-metallic mineral product and chemical factories. In spite of improvement in logging camps in the Maritime Provinces and Ontario, there was a net decline in employment in this industry. Coal mining on the whole employed larger working forces, while contractions were indicated in metallic ore and in non-metallic mineral mines. Transportation, construction and trade recorded large seasonal declines; communication and services employed rather smaller working forces than at the beginning of December.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of January, 1925.

TRADE UNION REPORTS.

The term unemployment as used in the following report has reference to involuntary idleness, due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lock-outs, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Unemployment as indicated by reports received from 1,529 trade unions locals at the end of December, with a combined membership of 158,367 persons was more prevalent than in either the previous month or December 1923, 11.6 per cent of the members being idle as compared with percentages of 9.7 at the end of November and with 7.2 at the end of December, 1923. The downward tendency shown at the end of December, 1924, was a continuation of the movement begun at the end of September. This unemployment was mostly due to slackness in the building trades and unusual dullness among garment workers. Nova Scotia, Alberta and British Columbia unions reported improvement in comparison with November and the percentage out of work in Saskatchewan remained unchanged. Quebec, Ontario and Manitoba showed substantial declines from November, chiefly due to seasonal unemployment in the building trades in all three provinces, and in addition, owing to inactivity among garment workers of Quebec and steam railway employees in Manitoba. In comparison with December, 1923, less favourable conditions prevailed in all provinces except Nova Scotia, Alberta, and in Saskatchewan and in the latter

province no change occurred. Unemployment in the manufacturing industries as reported by 415 unions having an aggregate membership of 44,949 persons was slightly greater at the end of December than in the previous month, 20.9 per cent of the members being idle as compared with 17.5 per cent at the close of November. As mentioned above, the greater part of the unemployment was registered in the garment trades, especially in Quebec, though reductions were also shown by cigar makers, wood, textile, hat, cap and glove, iron and steel, and glass workers. Papermakers, printing tradesmen and metal polishers, however, were slightly more fully employed. A much lower level of employment was maintained in the manufacturing industries during the period under review than in December, 1923, when 7.8 per cent of the members were idle. The coal mining situation was better than in November, Nova Scotia, Alberta and British Columbia all showing improvement. Asbestos miners in Quebec reported no idle members. The percentage out of work in the building and construction group as reported by 180 organizations with 18,086 members was 24.9 as compared with 14.2 per cent in November and with 21.7 per cent at the close of December, 1923. Considerable unemployment in comparison with November was registered by all tradesmen in the group with the exception of electrical workers who reported a nominal change for the better. In comparison with December, 1923 bricklayers, masons and plasterers, electrical workers and plumbers and steamfitters were the only tradesmen to record gains. The percentage of idleness in the transportation industry increased slightly during December 5.5 per cent of the members being out of work as compared with 4.0 per cent in November. Steam railway employees (whose returns constitute over 81 per cent of the entire group membership reporting) were less active than in the previous month. Street and electric railway employees were not quite so fully engaged and employment for navigation workers continued to be slack. In all transportation groups less work was afforded than in December, 1923. Telegraphers, particularly in Ontario, reported more unemployment than in November. Retail clerks were not so busy, though the percentage out of work was slightly greater than in December, 1923. A small reduction in comparison with November was reported by hotel and restaurant employees, but theatre and stage employees, barbers and stationary engineers and firemen were a little better employed. Lumber workers and loggers were slacker. Fishermen reported no idle members.

A summary of unemployment as reported by trade unions during the quarter ending December 31, 1924, appears elsewhere in this issue.

The number of applications registered at the offices of the Employment Service during December, 1924, was 37,187, showing a decline from the 40,078 applications registered during the preceding month and a slight decline from the registration of 35,559 during the corresponding month of 1923. During the month under review the applications from men were 29,523, and from women 7,664. Employers notified the Service of 23,233 vacancies, of which 16,416 were for men and 6,817 for women, in comparison with 23,438 during the preceding month and with 23,833 opportunities for work during December, 1923. During the month the offices referred 22,433 persons and effected a total of 21,219 placements, of which 12,814 were in regular employment and 8,405 in casual work. During the preceding month placements totalled 18,995, and during the month of December, 1923, 22,151 placements were made. It will be noted from the above figures that a decline in employment generally is shown in Canada in contrast with the preceding month, and with a year ago, although on the whole this decrease is not very great. In another section of this issue will be found a detailed statement of the work of the offices for the month of December, 1924, and also for the quarterly period September to December.

PRODUCTION REPORT.

The Dominion Bureau of Statistics reports that the production of pig iron in Canada during December was 22,544 gross tons or slightly less than the November output of 22,994 tons. No foundry iron was produced in December, while 19,400 tons were made in the preceding month. Basic iron rose from 3,594 tons in November to 12,653 tons in December, and malleable iron, of which there was no production in November, amounted to 9,891 tons. The total production of pig iron in Canada during 1924 was 593,024 gross tons, a decrease of 33 per cent from the 880,018 tons of 1923, but an increase of 55 per cent over the 383,057 tons of 1922. The average *per capita* production of pig iron in Canada in 1924 was 144 pounds, as compared with 215.5 pounds in 1923, 95.6 pounds in 1922, and 151.4 pounds in 1921.

The production of steel ingots and castings in Canada during December was 26,239 gross tons, or 15 per cent over the 22,744 tons of November. The rise was in basic open hearth

steel ingots, this grade advancing by 3,537 tons to a total of 25,584 tons. The cumulative production for the twelve months of 1924 was 650,690 tons, comprising 625,175 tons steel ingots and 25,515 tons direct steel castings. The average *per capita* production of steel in Canada was 158 pounds in 1924; 217 pounds in 1923; 121 pounds in 1922 and 170 pounds in 1921.

A report from the Department's correspondent at Cobalt shows that ten cars containing approximately 776,091 pounds of silver ore were shipped from the Cobalt camp during the month of January, as compared with seven cars of silver ore, containing 505,620 pounds, in the previous month. The Nipissing mine shipped 324 bars, containing 384,983.34 ounces of silver, and The Mining Corporation of Canada shipped 187 bars, containing 188,411.49 ounces of silver, making a total of 511 bars, containing 573,394.83 ounces of silver, shipped during the month of January, as compared with 347 bars, containing 399,749.45 ounces, shipped in the previous month.

A report from the Department's correspondent at New Glasgow, Nova Scotia, gives the following figures showing the production of coal in Pictou County, Nova Scotia, for the month of December, 1924: Acadia Coal Company, Limited, 38,750 tons; Greenwood Coal Company, Limited, 3,071 tons; and Intercolonial Coal Company, Limited, 11,853 tons. Complete figures for the coal production in Canada are not available for the month of December, but the statistics for the previous month are given at the end of this section.

The report of the British Columbia Forestry Branch shows that 214,505,407 feet of timber, board measure, was scaled in the province during December, 1924. The total includes Douglas fir 82,808,974 feet; red cedar, 59,136,771 feet; spruce, 18,519,892 feet; hemlock, 28,605,366 feet; balsam, 4,762,521 feet; yellow pine, 2,650,028 feet; white pine, 5,377,885 feet; jack pine, 1,707,561 feet; larch, 7,453,002 feet; cotton wood, 479,262 feet; cypress, 30,770 feet; and species not specified, 2,973,375 feet.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, according to a preliminary statement, amounted to \$13,692,872 during the first twenty-one days of December, 1924, as compared with \$20,946,123 in the month of November. The gross earnings from January 1, to December 21, 1924, were \$229,964,318, a decrease of \$16,657,414 from the same period in 1923.

No statement for the ten days ended December 31, 1924, or for the calendar year

have been issued as it is essential before making actual returns to check all stations on the system.

The gross earnings of the Canadian Pacific Railway were given in a preliminary statement as \$15,690,172 for December, 1924, in comparison with \$18,100,945 in the previous month and \$19,136,674 in December, 1923. The gross earnings for the year ended December 31, 1924, were \$182,502,156 and for 1923, \$195,837,090.

Coal Statistics for November.—The output of coal from Canadian mines during November increased 16 per cent over the production for the preceding month, the figures being 1,545,751 tons for November and 1,326,500 for October. The tonnage for November, however, remained 6 per cent or 97,518 tons below the average for the past five years. The greatest increases for the month occurred in Alberta where 788,000 tons was produced during the month as against 482,000 tons in October. This advance which was due to the settlement of the coal strike in District 18 during October was partly offset by losses in Nova Scotia. Due in part to lessened shipments to Quebec, the output for Nova Scotia fell from 613,000 tons in October to 494,000 tons in November. Production from the three remaining coal-producing provinces was much the same as in the preceding month.

The total number of men employed in the coal mines of Canada during November was 28,904 of whom 22,411 worked underground and 6,493 on surface, as compared with a total of 27,843 in October, of whom 21,418 worked underground and 6,425 on surface, production per man was 53.4 tons for November, as against 46.5 tons per man for October. During November the production per man-day was 2.6 tons, as compared with 2.5 tons in October.

BUILDING PERMITS AND CONTRACTS AWARDED.	According to the Dominion Bureau of Statistics the value of building permits issued in 56 cities during December declined by 34.5 per cent as compared with the previous month; there was also a reduction of 9.4 per cent as compared with December, 1923. The total for December, 1924, stood at \$6,259,942 as compared with \$9,555,472 in November, 1924, and \$6,912,400 in December, 1923.
--	---

According to the *MacLean Building Review* issued by MacLean Building Reports, Limited, the value of contracts awarded in Canada during January amounted to \$8,934,700 compared with \$6,538,600 in January, 1924. Residential building accounted 29 per cent of the January total amounting to \$2,591,700; busi-

ness building amounted to \$1,873,900, or 21 per cent; industrial building to \$546,500, or 6.1 per cent; and public works and utilities, \$3,922,600, or 43.9 per cent. The activity was distributed among the provinces as follows: Ontario, 36.1 per cent; Quebec, 31.3 per cent; Prairie Provinces, 18.2 per cent; British Columbia, 12.1 per cent; and the Maritime Provinces, 2.2 per cent.

FOREIGN TRADE.

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in December, 1924, the merchandise entered for consumption amounted to \$60,946,487 as against \$65,656,071 in December, 1923. The domestic merchandise exported amounted to \$124,429,462 in December, 1924, as compared with \$118,964,536 in November, and \$123,880,430 in December, 1923. Foreign merchandise exported amounted to \$1,032,592 in December, 1924, and \$1,035,297 in December, 1923.

The chief imports in December, 1924, were: fibres, textiles, and textile products, \$13,100,206; non-metallic minerals and products, \$10,684,870; iron and its products, \$8,737,673; and agricultural and vegetable products, mainly foods, \$7,511,196.

The chief exports in the same month were: in the groups of agricultural and vegetable products, mainly foods, \$60,085,945; wood, wood products and paper, \$22,162,468; animals and animal products, \$16,012,989; and non-ferrous metals and their products, \$9,265,216. During the nine months ending December, 1924, exports of agricultural and vegetable products, mainly foods, were valued at \$334,268,079; wood, wood products and paper at \$189,944,613; animals and animal products at \$124,453,228; and non-ferrous metals and their products at \$62,447,324.

Strikes and Lockouts

The time loss due to industrial disputes was greater in January than in December, 1924, but less than during January, 1924. There were in existence during the month ten disputes, involving 694 employees, and resulting in a time loss of 4,882 working days, as compared with three disputes in December, 1924, involving 125 employees and resulting in a time loss of 1,865 working days. In January, 1924, there were recorded 13 disputes, involving 14,292 workpeople and resulting in a time loss of 209,834 working days. Eight new strikes and lockouts commenced during January, with a time loss of 2,822 working days. One of the strikes and lockouts commencing prior to January, and six of the strikes and lockouts commencing during January ter-

minated during the month. At the end of the month, therefore, there were three strikes and lockouts on record affecting 285 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

Retail food prices were again somewhat higher. The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.77 at the beginning of January, as compared with \$10.58 for December, 1924; \$10.78 for January, 1924; \$10.52 for January, 1923; \$11.03 for January, 1922; \$14.48 for January, 1921; \$15.30 for January, 1920; \$16.92 for June, 1920 (the peak); \$12.42 for January, 1918; and \$7.73 for January, 1914. The most important advances occurred in the prices of beef, eggs, butter, bread, flour and potatoes with less important advances in pork, rolled oats and cheese. The prices of beans and sugar were slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$21.09 for January as compared with \$20.90 for December, 1924; \$21.23 for January, 1924; \$21.13 for January, 1923; \$21.52 for January, 1922; \$25.30 for January, 1921; \$24.15 for January, 1920; \$26.92 for July, 1920 (the peak); \$19.80 for January, 1918; and \$14.49 for January, 1914. Fuel showed little change, while rent was slightly lower.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics again showed a substantial advance, being 165.2 for January as compared with 160.9 for December, 1924; 156.7 for January, 1924; 151.4 for January, 1923; 151.7 for January, 1922; 200.6 for January, 1921; 233.4 for January, 1920; 256.7 for May, 1920 (the peak); and 206.1 for January, 1919. In the grouping according to chief component material seven of the eight main groups advanced and one was unchanged. The vegetables and their products group showed the most important advance due to higher prices for grains, flour and bread. The other groups which advanced were: animals and their products due to higher prices for hogs, meats, hides, leather, and cheese; fibres, textiles and textile products due mainly to increases for wool; iron and its products because of higher prices for pig iron; non-ferrous metals due to increases in the prices of most of these metals; wood, wood products and paper, and chemicals and allied products. Non-metallic minerals and their products were unchanged.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF JANUARY

DURING the month of January the Department received the reports of three Boards of Conciliation and Investigation appointed to deal with disputes between (1) The Canadian Pacific Railway Company and certain of their employees in the Commercial Telegraph Service, being members of the Commercial Telegraphers Union of America; (2) The Canadian National Telegraphs and its commercial telegraphers, members of the same union; (3) The Dominion Coal Company, Limited, the Nova Scotia Steel and Coal Company, Limited, and the Acadia Coal Company, Limited, and their employees, being members of District 26, United Mine Workers of America.

Applications Received

Three applications for the establishment of Boards of Conciliation and Investigation were received during the month, as follows: (1) from the Dominion Coal Company, Limited, the Nova Scotia Steel and Coal Company, Limited, and the Acadia Coal Company, Limited, in connection with a dispute with their

employees, being members of District 26, United Mine Workers of America. A Board was appointed, its members being Mr. J. H. Winfield, manager of the Maritime Telephone Company, Halifax, Nova Scotia, Chairman, appointed on the nomination of the other two members; Mr. W. E. Thompson, barrister, of Halifax, Nova Scotia, appointed on the recommendation of the employers; and Dr. J. W. Robertson, of Ottawa, Ontario, appointed by the Minister in the absence of a recommendation from the employees. The report of the Board is given below; (2) from certain employees of the Marconi Wireless Telegraph Company of Canada, Limited, being wireless telegraphers members of the Canadian Marconi Wireless System Division No. 59, Commercial Telegraphers' Union of America; (3) from certain employees of the Federal Department of Marine and Fisheries, being radio-telegraphers, members of Canadian Radio Division No. 65, Commercial Telegraphers' Union of America. The question of the revision of the salaries of these employees is now receiving the attention of the Civil Service Commission.

Report of Board of Conciliation and Investigation in Case of the Canadian Pacific Railway Company and its Commercial Telegraphers

Reports were received from the members of the Board of Conciliation and Investigation established to deal with a dispute between the Canadian Pacific Railway Company and its commercial telegraphers, being members of the Commercial Telegraphers' Union of America. The Board was constituted as follows: Mr. R. Home Smith, of Toronto, appointed as chairman on the recommendation of the other two members; the Honourable F. H. Phippen, K.C., of Toronto, appointed on the recommendation of the employers; and Mr. James Simpson, of Toronto, appointed on the recommendation of the employees.

Report of Board

IN THE MATTER of the Industrial Disputes Investigation Act, 1907, and of a dispute between The Canadian Pacific Railway Company (Employer), and certain of its employees in commercial telegraph service, members of the Commercial Telegraphers' Union of America (Employees).

We, the undersigned Chairman and Members of the above Board of Conciliation, hereby publish the annexed Schedule of rules

as our finding in this matter and recommend the adoption of such schedule as the settlement of all matters in dispute herein between the parties hereto. We have also annexed hereto our several reasons for adopting the schedule as a settlement of the matters referred to us for adjustment.

Dated January 10, 1925.

(Sgd.) R. HOME SMITH,
(Sgd.) F. H. PHIPPEN.

The points of agreement and disagreement with the majority report are clearly set forth in my minority report attached.

(Sgd.) JAMES SIMPSON.

RULES AND WAGES FOR COMMERCIAL TELEGRAPHERS AND CLERKS OF THE CANADIAN PACIFIC RAILWAY COMPANY

Article 1

1. Employees assigned to Commercial Telegraph service, whether operated by the Morse System, telephone or any automatic device of any character or who are required to devote any portion of their time to the transmission or receiving of telegraph matter by any device whatsoever (not including Agents, Wire Chiefs, Traffic Supervisors or Traffic Chiefs having authority to hire or discipline employees), will be considered Commercial Telegraphers within the meaning of this

schedule. This does not apply to employees handling such matter by telephone during the act of filing for transmission or delivery.

2. Morse Telegraphers when not required to work as such, shall, if competent, have the right to operate any automatic device for the purpose of transmitting or receiving telegraph matter at the rate he was receiving in the percentage or optional group as Morse Telegrapher in the office affected. Seniority shall govern.

3. When additional telegraph positions are created compensation will be fixed in conformity with that for positions of the same class as shown in this schedule.

Article 2

1. Telegraphers' right of promotion will extend over each Telegraph Superintendent's division, and will be governed by merit, fitness and ability. Where these are sufficient, the senior telegrapher will be given preference.

2. When a vacancy occurs, the same will be filled by the appointment of the senior telegrapher, without discrimination, who in opinion of the proper authority, is capable of filling the position.

3. A complete list of all telegraphers within each Superintendent's Division, showing seniority standing and salary, will be supplied monthly to the representative of the Telegraphers, and a copy posted on the Bulletin Board. This list compiled according to seniority in the ratings shall be subject to correction on proper representation from any telegrapher or his representative.

4. In case of reduction of staff, the junior telegrapher from point of service on the Superintendent's district will be dispensed with, and if reduction is necessary in higher grades, the junior in higher grade will have the preference of continuing in the service, but at a reduced salary, and so on through each class until the junior class is reached.

5. Any Telegrapher in good standing, whose services have been dispensed with on account of reduction of staff, will be given preference of re-employment when a vacancy occurs.

6. Any Telegrapher in good standing whose services have been dispensed with on account of reduction of staff, will, upon request, be transferred to any point on the system where a vacancy may occur, retaining continuous service record, but ranking as a new man in the ratings. Such Telegrapher will be entitled to free railway fares for himself and family but will not be entitled to free transportation of household effects.

Article 3

1. A Telegrapher declining or being unable to accept promotion, does not forfeit his right to the same or any other position he may be entitled to under seniority, when a vacancy occurs, but will rank junior to the telegrapher getting the position.

2. A Telegrapher on leave of absence when a vacancy occurs will not be debarred from claiming position and receiving the appointment upon resuming duty, if he is entitled to it.

3. All vacancies with a statement of wage rates shall be immediately bulletined by the Superintendent, and such vacancies shall be filled on the first of the following month, except in case of reduction of staff, or inability to obtain telegraphers of the necessary ability.

4. Any Telegrapher who is required to perform the duties of a chief or devote any portion of his time to such work, for a period of not less than sixteen days, shall not be included in the telegraphers' ratings.

5. Permanent Chiefs promoted from the ranks, will retain their seniority rights in the ratings, for a period of three months, provided that in the event of a chief being reduced to the rank of an operator after three months after promotion, he shall be retained in the Company's optional percentage until such time as there is a vacancy in the ratings which his seniority entitles him to.

Article 4

1. No telegrapher shall be suspended (except for investigation), discharged or disciplined, until his case has been first investigated, and he has been proved guilty of the offence charged against him. A Telegrapher may have the assistance of a co-telegrapher if he so desires. Should no decision be reached within ten days, he shall receive his regular pay until the decision is arrived at. If a telegrapher is found blameless in the matter under investigation, he will be paid at regular rates for all time lost and necessary extra expenses while attending such investigation (if away from home), and reinstated.

2. A written statement setting forth the results of an investigation and the reasons thereof, will be furnished by the Company to the local board of adjustment, if requested by it.

Article 5

1. Telegraphers shall be granted leave of absence each year with pay at regular wages as follows:—One week after the first year and two weeks after two years' service.

2. Applications for leave of absence filed in January of each year, will be given preference in the order of seniority of applicants from point of service. Applicants will be advised in February of the dates allotted to them. A vacation list shall be posted in February showing dates allotted. January applicants will have preference over later applicants. The Company will, whenever possible, arrange vacations between and including the months of April and October, when so desired.

3. In the event of a telegrapher entitled to a vacation with pay being discharged or leaving the service on proper notice before obtaining a vacation that has been deferred after date allotted, he shall be paid salary for the same.

4. Half holidays will be allowed on the following public holidays:—New Year's Day, Good Friday, Victoria Day (or King's Birthday), Dominion Day, Labour Day, Thanksgiving Day and Christmas Day.

5. All time worked on Sundays or on half holidays accruing to employees on public holidays shall be paid for on the basis of time and one-half in addition to monthly rate. It being understood that the Company may assign part of Saturday night's staff, whenever practicable, to Sunday night duty on regular hours as part of their regular week's assignment.

6. Telegraphers when called upon to perform duties at other than their regular place of employment, shall be allowed all necessary expenses incurred, and overtime for time travelling in excess of their regular tricks, between the hours of 8 a.m. and 11 p.m. When assigned to such duties a telegrapher shall be advanced a reasonable amount of expense money.

7. When regular relieving agents are appointed, they will not be included in the telegrapher's ratings while engaged in such duties, but will retain all seniority rights and will receive one (1) dollar per day expenses while away from headquarters, and will be paid the same wages as the men they relieve, provided such wages are not less than their own.

8. Where telegraphers are required to use typewriters, the same will be provided and maintained by the Company.

Article 6

1. At offices where two or more telegraphers are employed, the hours of duty shall be as follows:—Eight hours shall constitute straight day duty, beginning and ending between 7 a.m. and 6 p.m. Seven hours shall constitute all night duty beginning at or later than 8 p.m. Seven and one-half hours shall constitute all other tricks. No trick shall be split more than once nor extended over twelve hours. At all

other offices the hours of duty shall be eight hours within ten consecutive hours.

2. No telegrapher shall be compelled to work more than five consecutive hours without lunch relief.

3. Any overtime accruing within eight hours' service shall be paid for pro rata. All overtime accruing after eight hours shall be paid for at the rate of time and one-half.

4. The average minimum performance on all trunk circuits (not including automatic circuits) of over five hundred miles shall be thirty messages per hour, and on all other first-class circuits thirty-three messages per hour allowing thirty words or fraction thereof to count as one message in all classes of traffic. Chief Operators and Traffic Chiefs shall determine the carrying capacity of the circuit, and any loss through interruption shall not be charged against the telegrapher's performance, the Company to produce evidence substantiating any charge made against a telegrapher's performance.

5. When a telegrapher entering the service is paid a higher wage than the minimum fixed rating, he shall be included in the optional rating until such time as his seniority in the service entitles him to a position in the fixed ratings.

Article 7

1. Telegraphers leaving the service of their own accord shall be required to give the Company fifteen (15) days' previous notice in writing.

Before dispensing with the services of a telegrapher (other than when discharged) the Company shall give such telegrapher fifteen (15) days' previous notice in writing. At the expiration of any such fifteen days' notice, if the Telegrapher is still retained in the service for more than an additional seven (7) days, the Company shall be required to give a further fifteen days' notice.

2. A telegrapher leaving the service of the Company will, upon request, as soon as practicable, be furnished with a certificate by the proper official, stating term or terms of service, capacity in which employed and whether leaving the service of his own accord or discharged. If discharged, cause of dismissal will be stated.

3. If detained more than five days waiting such certificate, the Telegrapher will be paid regular wages for all time in excess of five days. Unless otherwise requested, this certificate so requested will be mailed to the Telegrapher at his last place of employment.

4. Whilst former employees of the Company in good standing willing to work are out of employment, married women whose husbands are working and contributing to their support shall not be employed on any scheduled position in the telegraph department. This provision shall not affect any married woman in the employ of the Company at the time this schedule is signed. This provision shall not prevent the employment of married women on relief or holiday work, providing ex-employees of the Company in good standing who are out of work do not desire the position.

Article 8

1. The rate for Morkrum employees shall be \$100 per month for the first year's service and \$105 per month thereafter.

Article 9

1. Telegraphers' representatives shall have the right to represent the clerical staff of the Telegraph Department in negotiations with the Company regarding conditions of employment, rates of pay, etc.

2. The following shall not be included in this schedule:—The staffs of the General Manager, Assistant Managers and Superintendents; the Assistant Agents at Montreal, Ottawa, Toronto, Winnipeg, Calgary and Vancouver; special representative, Night

Chief Clerk and Head Bookkeeper at Montreal, Toronto and Winnipeg.

3. Eight hours shall constitute a day's duty for all clerks. No trick shall be split more than once nor extended over twelve hours.

4. The preceding articles shall apply to the clerical staff with the exception of:—

Article 1, Paragraphs 1 and 2.

Article 3, Paragraphs 4 and 5.

Article 5, Paragraphs 6 and 7.

Article 6, Paragraphs 1, 3, 4 and 5.

Article 8.

5. Any employee required to devote the major portion of his time to the performance of clerical duties shall be included in the clerical staff.

6. Clerks who have been promoted to telegraph positions upon being affected by staff reduction, shall have the right to use service seniority in returning to their former clerical positions.

Article 10

1. The minimum rate for junior clerks under 18 years of age entering the service will be \$55 per month. For the second year's service the rate will be \$65, and for the third year, \$75. At the end of the third year's service, such clerk will be eligible for a vacancy in the \$100 rating.

Experience in another department or clerical work of a similar nature in other industries shall count towards the apprenticeship term.

2. For office boys and check clerks entering the service, the minimum rate will be \$45 per month. At the expiration of six months' service, the rate will be \$50 per month.

Duration of Agreement

This agreement will be effective and will remain in effect subject to thirty days' notice given by either party.

Interpretation of Art. 5, Paragraph 5

When a telegrapher is regularly assigned to Sunday night duty as part of his week's assignment, all overtime worked will be paid at the rate of time and one-half.

Explanatory

All questions in dispute will first be referred to the officer of the Company having immediate jurisdiction, by the telegrapher aggrieved. If reasonable efforts in this direction do not result in a satisfactory adjustment of the case, he may then file a statement giving full particulars, together with all correspondence in connection with the matter, with his local chairman, who will give it prompt attention.

Statement by Chairman

IN THE MATTER of the Industrial Disputes Investigation Act, 1907, and of a dispute between The Canadian Pacific Railway Company (Employer) and certain of its Employees in Commercial Telegraph Service, members of the Commercial Telegraphers' Union of America (Employees).

The Honourable JAMES MURDOCK,
Minister of Labour,
Ottawa.

The Board of Investigation and Conciliation in this dispute has been faced not only with the task of determining the important matters in issue between the Employer and the Employees, but has also been called upon

to revise and correct the working rules in the existing schedules. Both parties submitted numerous amendments and presented their cases in the fullest possible manner at sixteen meetings of the Board, the Employer being represented by Messrs. J. McMillan, Mitchell, Thompson and Scott, and the Employees by Messrs. Pawson, Chapman and Schnur.

Since the close of the last public sitting, the Board has held nineteen private meetings, and attached hereto is the schedule of rules which I recommend be adopted.

The Board would like to take this opportunity of expressing its high appreciation of the manner in which both Employer and Employees presented their cases and facilitated a pleasant and still thorough discussion of the matters in dispute.

It is not necessary to deal with all the changes made in the rules, as suggested amendments were considered affecting almost every article and clause. There are, however, some matters of particular importance with which it may be advisable to deal specifically.

1. The Employees asked for the recognition of the Union and for the closed shop, and these requests I am unable to see my way clear to recommend.

2. The Employees pressed strongly for a general increase in the wage scale and for amendments to the rules, which if granted would result in increased overtime, in some cases of a punitive nature.

The Employer asked for approximately a 5 per cent reduction in all rates of pay, plus a change in working conditions by the establishment of the six day week and straight eight hour tricks, thus reducing its operating costs.

The Employer submitted a chart prepared upon data secured from the LABOUR GAZETTE, which indicated that the cost of living had increased between the years 1918 and 1920, during which period the Employees had secured increases in pay, and that the cost of living had decreased from the high point in 1920 until in 1924 it was back to the figures of the year 1918. It would appear that these increases in wages were recommended by the previous Boards, largely because of the then constantly increasing cost of living. The Employer contended that it is now entitled to a corresponding decrease in rates of pay.

My own view is that no decrease should be made at the present time; firstly, because while the rise in the cost of living was continuous, the men were necessarily late in securing their two increases and they should now have the benefit of the reverse condition, and, secondly, because it is by no means certain that the cost of living is not now showing an

advancing tendency. It is only fair to point out that the men did not accept the figures as shown in the chart submitted by the Employer, but they did not contend that there had been no decrease during the last two years.

I have formed the opinion that the rates of pay in the present schedule are on the whole not unreasonable. I feel also that serious attention must be paid to the prevailing state of trade, depressed business conditions and unemployment. I therefore cannot see my way clear to recommend any increase in the rates of pay or any changes in the rules which will increase overtime and thus raise to the Employer the cost of conducting its business.

3. The Board was pressed by the Employees to eliminate the geographical wage differential by raising the eastern rates of pay so as to correspond with those in force west of Winnipeg. The Employees did not ask, and I presume would not accept, a standardization of wages which would make any decrease in the western rates at meeting the situation half way. I therefore recommend that no action be taken to remove the existing differential.

4. The Employees asked that the rates of pay for the Morkrum and other automatic operators be raised to equal the Morse schedule. I cannot recommend that this request be granted.

5. The Employees asked that the existing rule covering vacations with pay be amended by providing that Employees be entitled to two weeks' leave of absence after one year's service instead of after two years' service. I recommend that this request be granted, and have so amended the rule.

6. The Employer contended for a straight eight-hour trick in place of the 7, 7½ and 8 hour tricks, and also pressed strongly for a six-day week. I cannot recommend that either of these requests be granted.

7. The Employees asked for full public holidays in place of the half holiday rule now in force. This would mean an increase in overtime and I cannot recommend that the request be granted. I would, however, earnestly recommend that the Employer and the Employees endeavour to arrive at a working arrangement which will permit of a full holiday to a portion of the staff on each of the holidays named in the rule.

8. I would recommend an addition to the rules of a provision which will limit the employment of married women whose husbands are able to support them.

All of which is respectfully submitted.

Yours truly,
(Signed) R. HOME SMITH,
Chairman.

Statement by Board Member representing Employers

IN THE MATTER OF the Industrial Disputes Investigation Act, 1907, and of a dispute between The Canadian Pacific Railway Company (Employer), and certain of its employees in Commercial Telegraph Service, members of the Commercial Telegraphers' Union of America, (Employees).

The Honourable JAMES MURDOCK,
Minister of Labour,
Ottawa.

Two questions are raised before the Board in respect of which I am unable to agree with the finding of the Chairman.

In 1920 the men applied for a Board to consider an increase in wages. This claim was based on the then increased cost of living. The 1920 Board, under the Chairmanship of the late Judge Gunn, after mature consideration, granted increases, which, in the opinion of the Board, fully took care of the added living cost and which were accepted by the men.

On the present hearing, the Company submitted uncontradicted evidence that the cost of living since the 1920 hearing had decreased over fifteen per cent. The application of the men for an increase on the present hearing was based entirely on the socialistic idea of dividing amongst the workers that which the employer was, supposed to have.

The Company strongly urged a change in two rules which it claimed worked great inconvenience to the Company with added expense and without any real advantage to the men.

It is in the memory of all when workers strove for the establishment of the eight hour day. Telegraph companies as public service corporations necessarily furnish a twenty-four hour service for seven days a week. The Company is desirous that the twenty-four hours should be divided into three tricks of eight hours each. It claims that it is unduly hampered by the present system of breaking the twenty-four hours into uneven periods of eight, seven and one-half and seven hours, involving as this does, the payment of overtime for what the Company claims should be straight work and making it unnecessarily difficult for the Company to arrange its staff. The Company also asks a six-day week. That is, so far as necessary, that the Company should be permitted to assign parts of Sunday as regular tricks, Sunday employees being released on a week day so that no operator would be compelled to serve more than six tricks of eight hours each as a week's work. The eight-hour trick and six-day week are

in force with both the Press and Railway Telegraphers.

This proposed re-arrangement of the tricks would only affect those employees who at present are working the seven and one-half and seven hour periods. To compensate the men for this proposed change, the Company was willing to substantially scale down the reduction in wages which, based on the reduced cost of living, it claimed it was entitled to receive. In other words, granted an eight-hour trick and six-day week, it was willing to accept about a five per cent reduction on certain of the more highly paid classes of labour without change in the wages of other of its employees, in lieu of about a fifteen per cent straight reduction, which, based on the cost of living figures, it claimed to be entitled to.

The Company's position to me seems most reasonable. I think it should have been cheerfully accepted by the men having regard to the decreased earnings of the Company and to the present operating, living and business conditions throughout Canada. It was brought to the attention of the Board that wage reductions have recently been ordered by Boards and accepted by both the Press and Railway Telegraphers. The men, however, absolutely refuse to consider the Company's proposal. The Chairman, for the reasons stated, (I understand as a temporary measure) supports the men's position. In this I am compelled to differ with him. I would unhesitatingly grant the changes claimed by the Company.

On the other points raised by the men, whilst I might not have gone quite as far as the Chairman had I alone been deciding the questions, on the whole I think I should not dissent from his findings. Whilst as above indicated I would have differed somewhat from the conclusions which the Chairman has reached had I the sole determination of this matter, yet for the sake of avoiding a disagreement which might render our work futile, I have decided to accept the Chairman's findings and have signed the schedule.

All of which is respectfully submitted.

(Signed) F. H. PHIPPEN,
Member of the Conciliation Board.

Statement by Board Member representing Employees

IN THE MATTER OF the Industrial Disputes Investigation Act, 1907, and of a dispute between the Canadian Pacific Railway Company (employer), and certain of its employees in commercial telegraph service, members of the Commercial Telegraphers' Union of America, (employees).

The Honourable JAMES MURDOCK,
Minister of Labour,
Ottawa.

As the representative of the employees on the Board I have carefully studied the findings of the Chairman, Mr. R. Home Smith, and also the acceptance of the same, with the objections, by the representative of the company, Mr. F. H. Phippen, K.C. With some of the findings of the Chairman, including the rejection of the company's proposals to reduce rates of pay, introduce the six-day week and the three eight-hour trick system, I am in hearty accord. I also accept with pleasure the granting of one week's vacation with pay after one year's service and two weeks' vacation with pay after two years' service, as against the present rule, which provides for one week's vacation with pay after two years' service and two weeks' vacation with pay after three years' service. Other changes in the rules of a minor character I regard as in the interests of the employees.

In the more important findings of my colleagues on the Board rejecting the following demands I am in entire disagreement:—

- (1) That the operators of the automatic machines be granted the same rates of pay as the Morse operators.
- (2) That the Geographical Wage Differentials be eliminated.
- (3) That new Clerical Wage Levels be established.
- (4) That General Wage Increases be granted.
- (5) That full Public Holidays be granted.
- (6) That the Union Shop Principle be recognized.
- (7) That the Percentage Ratings be reduced from three to two.

Objections to the foregoing demands were raised by my colleagues on the ground that the present was no time to increase the operating costs of the company, having regard for the existing industrial and financial condition throughout the Dominion. As each of these demands involved an added outlay by the company in the interests of the employees a resolute stand in opposition to their acceptance was taken by my colleagues.

In justification of my disagreement with my colleagues I desire to deal with each of the employees' demands and the reasons why I support the same as being worthy of more favourable consideration by them.

- (1) That the Operators of the Automatic Machines be granted the same rate of pay as the Morse Operators.

In my judgment the excellent brief prepared in the interests of the employees to

support this demand was powerfully convincing. It dealt exhaustively with (a) The economic justification of the demands, (b) Experience in other Industries, (c) Technological justification. In brief the employees maintained that the advantages accruing to the telegraph industry by reason of the invention and improvement of new machines should neither be enjoyed exclusively by the company, nor be instrumental in reducing the wage standards of those who operate these machines. They submitted figures to show that through the introduction of the automatic machines the number of employees necessary to send and receive a given number of messages had been greatly reduced, while the volume of messages had been greatly increased per unit of employees. In spite of this fact, however, the company had succeeded in maintaining lower wage levels for the operators of automatic machines than the wage levels for the operators of the Morse. Thus the number of employees was being reduced to harmonize with the reduction in the number of machines, while at the same time the company is effecting economies in the lowering of the wages of the operators of the automatic machines.

In seeking to raise the wage levels of the operators of the automatic machines to those of the Morse the employees were merely endeavouring to accomplish what has already been done in many other industries where newly invented and improved machines have been introduced. In some of these industries organized bodies of employees were able to establish a priority right which enabled their members to develop the necessary skill or dexterity to operate the new or improved machines without suffering any reduction in wages. In these same industries the employees were afterwards successful in obtaining wage increases from time to time, and thus improved their standards of living. In other industries, where the employers had succeeded in training new employees to operate the new or improved machines, the wage levels of those displaced by the new operators were maintained and afterwards increased.

The brief of the employees dealing with this important demand was a recognition of the necessity to maintain the highest possible standards of living for machine operators without regard for the quality of skill or dexterity required to operate the machines. They evidently had in mind the tragic possibilities resultant upon the gradual reduction of wages as the simplification of processes followed the invention and improvement of new machines. The employees contended that a single telegraph wire is nearly seven times

as productive under the automatic machine system as under the Morse system. This fact alone will serve to indicate to what extent the company can displace one quality of service by substituting another quality of service made necessary by the introduction of the new machines. I could deal more exhaustively with this important demand and the justification for supporting it, but I have set forth some of the most fundamental reasons to sustain my objections to the finding of my colleagues.

(2) That the Geographical Wage Differentials be eliminated.

In justifying this demand the employees submitted evidence to show that in practically all departments of the railway service the universal standardization principal had been adopted with the result that the running trades, the shop crafts, and the construction and maintenance departments have a standard wage all over the respective systems. Even in the telegraph industry the companies have long since recognized the justice of wage standardization for no geographical differential exists in the automatic or clerical departments. The differential applies alone to the Morse Telegrapher, and the demand made by the employees was to have a standard rating for all offices where more than two telegraphers are employed. Including Winnipeg and west thereof to the Pacific Coast the present Morse top rating is \$163.75 per month; east of Winnipeg the Canadian National top rating is \$155.25; on the C.P.R. system the top wage for Ontario and Quebec is \$155.25, while in the Maritime Provinces there is still another differential for the St. John and Halifax offices, where the top rating is \$142.00 per month. The Canadian National System does not discriminate against the Maritime Section in this regard. The contention of the employees is that there is no justification for this geographical differential and they asked that universal ratings be adopted. This demand, in my judgment, was reasonable and should have been granted.

(3) That new Clerical Wage Levels be established.

In making this demand the employees stated that both the minimum and maximum rates of pay were too low. Long and efficient service was not recognized and opportunity for commensurate remuneration was denied this class of employees. They pointed out that the present minimum rating for junior clerks on both lines is \$55.00 per month. The maximum on the C.P.R. for senior clerks who are not in specified positions is \$100.00, while on

the Canadian National lines it is \$95.00. The wage rates on the C.P.R. are more or less standardized all over the system, while on the Canadian National this condition does not exist. The employees propose that there should be a general standardization of clerical wage levels on both systems with a graduated scale for junior clerks for the first three years, after which they shall go into the senior class where there shall be another graduated scale for the next three years. By this process there would be more incentive for the junior clerk to remain in the service and there would also be a commensurate wage for the senior who has completed six years' service. As this demand was a serious effort to help the lowest paid workers in the service I think adjustments should have been agreed to along the lines suggested.

(4) That general wage increases be granted.

The finding of my colleagues on this important demand was that having regard for the reduction in the cost of living and the general unsatisfactory financial and industrial condition throughout the Dominion it should not be granted. I regard this demand of the employees as one based upon the consciousness that despite the increases granted by previous Boards of Investigation and Conciliation, the wages or salaries of those engaged in the telegraph industry had never reached that level attained by employees in other industries performing duties similar in character. Particularly was this the case when compared with men and women engaged in the printing industry where the machine processes bear a similarity to those in the telegraph business, especially so in the large daily newspapers. In this industry wages have advanced to higher levels than in the telegraph industry. The employees did not regard the reduction in the cost of living as a conclusive argument against their request for general wage increases. They pointed out that while the increased cost of living had assisted them in obtaining previous wage increases, at no time had rates of pay been fixed at the standards suggested by the cost of living budgets prepared by them and submitted to Boards of Investigation and Conciliation. Therefore, despite the reduction in the cost of living since 1920, there was still a substantial margin between what they regarded as a proper wage to maintain the standard of living they desired and the wages or salaries now received.

In addition to maintaining this position they also maintained that the revenues of the C. P. R. were sufficient to permit favorable adjustments in the wage levels without impairing the financial stability of the Company. In this connection they also pointed out that,

even though the Canadian National system could not show as satisfactory a financial statement as the C. P. R., the men and women engaged on the system should be treated the same as the employees in other departments of the Canadian National system and not compelled to suffer because the Government had accepted a legacy from the previous owners of the railways now in their charge which made profitable operation more difficult than in the case of the C. P. R.

In the brief prepared by the employees, it was pointed out that in the 1923 report on telegraph statistics, published by the Government Bureau of Statistics, it was shown that the average wage of telegraph workers employed in the two Canadian commercial companies for the year 1921 was \$795.00. For the year 1923 the average wage was \$701.00—a reduction of \$94.00. These figures, which are contained in the companies' own reports to the Government, include not only the wages of the monthly workers and overtime paid, but salaries of all officials as well. This would indicate that the average wages of the workers in the industry are even less than \$701.00 a year shown. All of which should clearly demonstrate that, in spite of increased productivity, in spite of the fact that the total number of employees was increased by 835 over the period mentioned, the average wage has been reduced. Approximately one million and a half more telegrams and cablegrams were handled in 1923 than in 1921.

In citing this section of the brief prepared by the employees I do not desire to hide the fact that, while the average wage of the workers in the telegraph industry was down to \$701 a year, a large number of those for whom general wage increases were being asked receive more than twice that amount per year. That fact, however, in no sense removes the justification for the demand made by the employees. I believe, therefore, that despite the reasons given by my colleagues for their findings on this important demand adjustments could have been made, which, I feel sure, would have been accepted by the employees, even though such adjustments might not have met the maximum demands made.

(5) That full Public Holidays be granted.

It is only fair to state that, despite the fact that my colleagues did not grant this important demand because it would add to the operating costs, they were not averse to the adoption of the principle of giving the employee the full public holidays, providing the business of the company did not suffer and providing a mutual arrangement could be reached between the company and the em-

ployees through conference. The Chairman of the Board, in particular, was strongly favourable to the employees involved receiving all the holidays enjoyed by employees in other industries. He desired, however, to see that a sufficient staff were on duty to handle the holiday business. His chief objection to the granting of the demand of the employees was the added cost consequent upon the payment of overtime rates of pay to those who worked on the holidays, even *pro rata* or time and a half rates.

My observations as the representative of the employees are that under no circumstances should these employees be penalized because the nature of the industry is such that they cannot enjoy the same advantages the employees in other industries have. Their services are just as essential to the Company as the services of other employees are to the companies for which they work. It is merely the accident of industry that the needs of the public demand that some men and women shall work on public holidays while others play. For that reason if some employees in the telegraph industry have to forego the pleasure of joining the great majority of citizens on public holidays they should not only be entitled to whatever monetary consideration is allowed the employees who are given their full public holiday, but should receive the extra financial consideration in the form of time and a half pay as a fitting compensation for their sacrifice in the interests of both the public and the companies which employ them. It is also claimed by the employees that unless the labour used by the companies on public holidays is paid for at a much higher rate than the labour used on other days the tendency of the companies is to minimize the advantage of the holiday to the employees and keep a staff on duty out of proportion to the business demand. For these reasons I feel that the Board should have accepted the offer of the employers' representatives to adequately staff the offices of the Company on public holidays with only a *pro rata* overtime wage for those who worked on holidays.

(6) That the Union Shop Principle be recognized.

The employees' demand for the recognition of the Union Shop Principle was based upon the well-recognized fact that there can be no freedom of contract where a trades union is not recognized. They go further and contend that an employee has a legal right to sell his labour under conditions satisfactory to himself or herself and has a legal right to refuse to labour under conditions unsatis-

factory to himself or herself. In other words this legal right justifies him in refusing to work with those who contribute to the reduction of his standard of living by refusing to give collective strength to collective action in the interests of all those who desire to collectively sell their labour. The employees also contend that apart from the legal rights of the individual worker there is a much more binding moral obligation resting upon a man to share in the collective action which makes possible the improvement of the economic and social conditions of those who unite to bring about those conditions. These improvements, however, are not confined to those who struggle to obtain them, but are enjoyed by those who not only refuse to assist in obtaining them but either wilfully or unconsciously make difficult the obtaining of these advantages.

The employees, therefore, asked for a recognition of the Union Shop, believing that not only would the recognition of that principle enure to the advantage of the employees, but inevitably would work out to the advantage of the company in establishing harmony among the employees of the company and increasing efficiency in all departments.

Justification for this demand is found in the fact that the Company already deals directly with the officials of the union of Commercial Telegraphers. It also recognizes the principle of collective bargaining, but from a sense of pride in what is purely traditional it refuses to recognize the union to which the great majority of its own employees belongs. I believe that the demand for a recognition of the Union Shop principle should have been granted.

- (7) That the Percentage Ratings be reduced from three to two.

Report of Board of Conciliation and Investigation in Case of Canadian National Telegraphs and its Commercial Telegraphers

Reports were received from the members of the Board of Conciliation and Investigation established to deal with a dispute between the Canadian National Telegraphs and its commercial telegraphers, being members of the Commercial Telegraphers' Union of America. The Board was constituted as in the previous case.

Report of Board

IN THE MATTER of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Canadian National Telegraphs (Employer) and certain of its employees in Commercial Telegraph Service, members of the Commercial Telegraphers' Union of America (Employees).

It is peculiar to the telegraph industry that Morse telegraphers are paid rates of pay on a group basis. These groups are set apart on a percentage basis of the whole staff of Morse telegraphers employed, and reach the groups through seniority, fitness and ability. Each group has a different rate of pay, the highest pay going to the first percentage rating, the second highest to the second percentage rating group, and the third highest pay to the third percentage rating group. In addition to these three groups there is an optional rating group where Morse telegraphers can be paid not less than \$110 a month, but as much more as the Company desires to pay. This system is quite acceptable to the Company but not to the employees, who contend that there should be no difference in the pay of competent telegraphers. For that reason they asked that, as a means to the end they have in view, the number of the percentage ratings be reduced from three to two, thus eliminating the rate of pay fixed for the third percentage rating group. There is no question but that the Company effects a substantial saving by the perpetuation of the percentage rating system, and in my judgment the employees were justified in asking for the elimination of the third percentage rating.

Some consideration should have been given to the demand for an adjustment upward of the wages of the installers and foremen of the installation department, but the general ruling of my colleagues against any increase in operating costs made this impossible.

Respectfully submitted,

(Sgd.) JAMES SIMPSON,

Member of the Conciliation Board.

We, the undersigned Chairman and Members of the above Board of Conciliation, hereby publish the annexed Schedules of Rules as our finding in this matter, and recommend the adoption of such schedules as the settlement of all matters in dispute herein between the parties hereto. We have also annexed hereto our several reasons for adopting the schedules as a settlement of the matters referred to us for adjustment.

Dated January 10, 1925.

(Sgd.) R. HOME SMITH,

(Sgd.) F. H. PHIPPEN,

The points of agreement and disagreement with the majority report are clearly set forth in my minority report attached.

(Sgd.) JAMES SIMPSON.

CANADIAN NATIONAL TELEGRAPHS—RULES FOR TELE-
GRAPHERS

The following rules shall govern the telegraphers employed by the Canadian National Telegraphs.

Article 1

1. Employees assigned to commercial telegraph service, whether operated by Morse system, telephone or automatic device of any character, or who are required to devote any portion of their time to the transmission or receiving of telegraph matter by any device whatsoever, will be considered commercial telegraphers within the meaning of this schedule.

This does not apply to the following:—

All Traffic Managers,
Assistant Traffic Managers at Montreal, Toronto and Winnipeg,

All Early Night Traffic Managers,
All Late Night Traffic Managers.

2. In the event of a Morse Telegrapher being required by the Company to operate any automatic device, he shall not suffer any loss of rating during the time he is so employed.

3. When additional telegraph positions are created, compensation will be fixed in conformity with that for positions of the same class as shown in this schedule.

Article 2

1. Right of promotion shall extend over each Telegraph Superintendent's District. Seniority shall govern where ability is equal and sufficient.

2. Seniority in the office shall govern assignment of permanent tricks regardless of sex. It is conceded that the Company shall have the right to assign newly trained automatic operators for the first three months without regard to the above rule, after which time seniority shall govern.

3. Vacancies will be filled by the appointment of the senior competent telegrapher who makes application, the Company to be the judge of qualifications; the Company to bulletin locally all vacancies in special positions occupied by Morse Telegraphers as such. Also vacancies in supervisory or like positions which are covered by these rules. Full information will be given on request regarding vacancies. Special positions are those held by Telegraphers in newspaper offices, Grain Exchanges and Stock Exchanges.

4. All vacancies (except in emergency cases) and new positions will be bulletined throughout the district within five days from the date that vacancy occurred, stating wage rate, and applications must be made within ten days from date of bulletin. Such positions will be filled within thirty days from date of bulletin.

5. Vacancies created through leave of absence for periods exceeding fifteen days will be filled during such leave of absence according to these rules.

6. A telegrapher employed will, after thirty days' continuous satisfactory service, be considered a regular employee.

7. A list of all telegraphers within each superintendent's district showing the seniority and wage of each telegrapher shall be furnished not later than the tenth day of each month to the Chairman of each district and a copy posted on the bulletin board.

This list shall be compiled according to seniority in the ratings and shall be subject to correction during the current month on proper representation from any telegrapher or his representative.

8. When a telegrapher entering the service is paid a higher wage than the minimum fixed rating, he shall be included in the optional rating until such time as his seniority in the service entitles him to a position in the fixed ratings.

9. Employees promoted from the ranks shall retain their seniority rights to which their service entitles them.

Article 3

1. In the event of staff reductions from point of service in the Superintendent's District, the junior telegrapher shall be dispensed with first.

This rule shall apply to employees within their own department, excepting where an employee is qualified and competent to operate apparatus of another department. In such case the seniority shall extend to Morse, Telephone, and Automatic Departments, and an employee may bid in a position held by a junior. This exception will also apply to city branch offices which are operated by Morse, telephone or any automatic device in the district affected.

The Company will, where practicable, provide and extend facilities so that employees may qualify themselves to fill vacancies.

2. Any telegrapher in good standing who is laid off on account of staff reduction shall, upon request, be given a certificate and, upon re-entering the service within one year, will hold seniority for time actually worked.

Telegraphers affected by staff reduction shall be given preference in filling new positions or vacancies.

Telegraphers laid off will return to the service in the order of their service seniority and will be allowed not more than twenty days in which to return to the service after being called by the Company. A copy of such notification will be furnished the district chairman.

3. Whilst former employees of the Company in good standing willing to work are out of employment, married women whose husbands are working and contributing to their support shall not be employed on any scheduled position in the telegraph department. This provision shall not affect any married woman in the employ of the Company at the time this schedule is signed. This provision shall not prevent the employment of married women on relief or holiday work, providing ex-employees of the Company in good standing who are out of work do not desire the position.

Article 4

1. Telegraphers declining promotion do not forfeit any rights to the same or any other position they may be entitled to when a vacancy occurs, but will rank junior to the telegrapher receiving promotion.

2. A telegrapher absent on leave when a vacancy occurs will not be debarred from claiming position and receiving the appointment upon resuming duty if he is entitled to it.

3. If a telegrapher be granted leave of absence by the Company for a period of three months or less (in any twelve months) he may retain the position for that period, after which time he shall be considered out of the service.

4. In case of *bona fide* sickness his leave of absence shall be extended if necessary, but he shall not be included in the ratings.

This clause shall not apply in the event of a telegrapher wishing to transfer from one position to another in the Company's service.

5. Any telegrapher who is required to perform the duties of a chief or devote any portion of his time to such work, for a period of sixteen days or less, shall be included in the telegraphers' ratings.

6. Any telegrapher in good standing whose services have been dispensed with on account of reduction of staff, will, upon request, be transferred to any point on the System where a vacancy may occur, retaining continuous service record, but ranking as a new man in the ratings. Such telegrapher will be entitled to free railway fares for himself and family, but he will not be entitled to free transportation of household effects.

7. A telegrapher, other than in the case of staff reduction, desiring to transfer outside his own district shall not carry his seniority in the ratings at the point

transferred to, but shall carry his service seniority. In the event of transfer there must be a vacancy at the point transferred to.

8. In the absence of any good reason to the contrary, the last telegrapher automatically transferred into a higher rating, through the variation of the monthly list, shall, in case of reduction in the said rating, be the first one set back into the next lower rating.

9. Permanent chiefs promoted from the ranks will retain their seniority rights in the ratings for a period of three months provided that, in the event of a chief being reduced to the rank of an operator after three months after promotion, he shall be retained in the Company's optional percentage until such time as there is a vacancy in the ratings which his seniority entitles him to.

10. Permanent supervisors and wire chiefs shall not hold seniority as such from the time of appointment.

Article 5

1. No telegrapher shall be suspended (except for investigation), discharged, or disciplined, until his case has been investigated and he has been proven guilty of the offence charged against him, and upon his request to the Chief Operator particulars of the charge will be given in writing. A Telegrapher may, in such cases, have the assistance of a co-telegrapher, if he so desires. Should no decision be reached within ten days, he shall receive his regular pay until the decision is arrived at. If a telegrapher be found blameless of the matter under investigation, he will be paid his regular rating for all the time lost and necessary extra expense while attending the investigation (if away from home) and reinstated. He will also have, without discrimination, the right to appeal from the local to the general officers of the Company.

Article 6

1. Telegraphers shall be granted leave of absence each year with pay at regular wages as follows:

One week after the first year, and two weeks after two years' service.

2. Applications for vacations filed in January of each year shall be given preference in the order of seniority of applicants from point of service, and a vacation list shall be posted in February showing dates allotted.

January applicants shall have preference over later applicants.

So far as possible the Company will arrange vacations between and including the months of April and October, when desired.

3. In the event of a telegrapher entitled to a vacation with pay being discharged, or leaving the service on proper notice before obtaining a vacation that has been deferred after date allotted, he shall be paid wages for the same.

Article 7

1. Half holidays will be allowed on the following public holidays: New Year's Day, Good Friday, Victoria Day (or King's Birthday), Dominion Day, Labour Day, Thanksgiving Day and Christmas Day.

2. A telegrapher when called upon to perform duties at other than his regular place of employment shall be allowed all necessary expenses incurred, and overtime for travelling between the hours of 8 a.m. and 11 p.m. in excess of his regular trick. When assigned to such a duty, a telegrapher shall be advanced a reasonable amount of expense money when desired.

3. When regular relieving agents are appointed, they will not be included in the telegraphers' ratings while engaged in such duty, but will retain all seniority rights, and will receive one dollar per day expenses while away from headquarters, and will be paid the same wages as the man they relieve, provided such wages are not less than their own.

Article 8

1. When telegraphers are required to use typewriters, the same will be provided and maintained by the Company.

Article 9

1. The Company will, upon request, meet a committee, which committee shall be known as the General Committee, for the purpose of adjusting grievances and negotiating schedules of rules and wages. When called upon to do so by the Company the Committee shall produce proxies, showing that they are authorized by the majority of employees covered by these rules to represent such employees.

2. Any employee or employees having a grievance may take the matter up and may have the assistance of a co-employee, if he or they so desire, and all employees shall have the right of appeal, either alone or with the assistance of such co-employee (and personally or in writing) from the local officers to the General Officers of the Company.

All questions in dispute will first be referred by the telegrapher aggrieved to the officer of the company having immediate jurisdiction.

Article 10

1. A telegrapher discharged or leaving the service in good standing will be paid in full and upon request given a certificate stating length and character of service, and if discharged, the reason therefor.

In case of delay, he will be paid regular wages for each day detained in excess of three days.

Unless the employee otherwise directs, this certificate so requested shall be mailed to him at his last place of employment. A certificate shall be deemed to have been given when mailed.

2. Telegraphers leaving the service of their own accord will be required to give the Company fifteen days' previous notice in writing.

3. Before dispensing with the services of a telegrapher (other than when discharged) the Company will give such telegrapher fifteen days' previous notice in writing. At the expiration of any such fifteen days' notice, if the telegrapher is still retained in excess of seven days in the service, the Company will be required to give a further fifteen days' notice.

A telegrapher resigning in good standing will be given preference in re-employment over other applicants, when a vacancy occurs.

Article 11

1. The average minimum performance on all trunk circuits (not including automatic) of over five hundred miles shall be thirty messages per hour, and on all other first-class circuits thirty-three messages per hour, allowing thirty words or fraction thereof to count as one message in all other matter. Any loss through interruption to wire shall not be charged against the telegrapher's average, and in event of a telegrapher's average being challenged, the Company shall be required to furnish evidence to substantiate such charge.

Article 12

1. At offices where two or more telegraphers are employed, the hours of duty shall be as follows: Eight hours shall constitute straight day duty, beginning and ending between seven a.m. and six p.m. Seven hours shall constitute all night duty, beginning at or later than eight p.m. Seven and one-half hours shall constitute all other tricks. No trick shall be split more than once, nor extend over twelve hours. At city one-man branch offices, the hours of duty shall be eight hours within ten consecutive hours.

2. No telegrapher shall be compelled to work more than five consecutive hours without lunch relief.

3. (a) Overtime accruing within eight hours' service shall be paid *pro rata*. Overtime after eight or nine

hours' service, as the case may be, shall be paid for at time and one-half.

(b) At offices (aside from city branch offices) where only one man is employed, *pro rata* time will be paid for the ninth hour and time and one-half thereafter.

4. All time worked on Sunday shall be paid on overtime basis, as per paragraph 3, article 12.

The Company may assign part of Saturday night staff to Sunday night duty on regular hours, such duty being considered part of the regular week's service. When telegraphers so assigned are required to perform service on Saturday nights, they will be paid for such service at overtime rates.

5. Employees working straight tours of duty will be granted short reliefs as follows:—

Male—Ten minutes on each portion of tour.

Female—Fifteen minutes on each portion of tour.

Employees working split tours:—

Male—Ten minutes on longer portion of tour.

Female—Fifteen minutes on longer portion of tour.

Where split tours are divided equally, employees will be entitled to one relief on each portion of tour.

CANADIAN NATIONAL TELEGRAPHS—RULES AND WAGES FOR CLERICAL STAFF

The following rules shall govern the clerks employed by the Canadian National Telegraphs as covered by this schedule.

The following rules do not apply to the staffs of Superintendent's and Executive Offices, it being understood that such employees do not come within the scope of this schedule.

Article 1

1. Right of promotion will be governed by seniority where ability is equal and sufficient.

2. Vacancies will be filled by the appointment of the senior competent clerk without discrimination, who makes application, and who, in the opinion of the proper authority, is capable of filling the position; the Company to bulletin all vacancies throughout the district affected.

3. A clerk will, after fifteen days' satisfactory service, be considered a regular employee.

4. Any employee required to devote the major portion of his time to the performance of clerical duties shall be included in the clerical staff.

5. When additional positions are created, compensation shall be fixed in conformity with that for positions of the same class as shown in this Agreement.

6. A list showing the seniority and salary of all clerks employed at each office will be posted on the bulletin board and revised monthly, within ten days from the first of each month. A copy of this list will be furnished to the local chairman of the Employees' Committee.

Article 2

1. In case of reduction of staff, the clerk or clerks last employed will be dispensed with first.

2. Clerks who have been promoted to telegraph positions, upon being affected by staff reduction, shall have the right to use service seniority in returning to their former clerical positions.

In such event a clerk's seniority as a telegrapher shall be cumulative and upon being returned to the telegraph staff, shall be allowed seniority as a telegrapher for the time actually worked as such.

3. Any clerk in good standing who is laid off on account of staff reduction will upon request be given a certificate of service and upon re-entering the service within one year, will hold seniority for time actually worked.

4. Clerks affected by staff reduction will be given preference in filling new positions or vacancies.

5. Clerks laid off shall return to the service in the order of their service seniority and shall be allowed not more than twenty days in which to return to the service after being called by the Company, a copy of such notification to be furnished the District Chairman.

6. Any Clerk in good standing whose services have been dispensed with on account of staff reduction shall, upon request, be transferred to any point on the system where a vacancy occurs, retaining continuous service seniority, but ranking as a new employee on the district. Such Clerk will be entitled to free railway fares for himself and family but he will not be entitled to free transportation of household effects.

7. Whilst former employees of the Company in good standing willing to work are out of employment, married women whose husbands are working and contributing to their support shall not be employed on any scheduled position in the telegraph department. This provision shall not affect any married woman in the employ of the Company at the time this schedule is signed. This provision shall not prevent the employment of married women on relief or holiday work, providing ex-employees of the Company in good standing who are out of work do not desire the position.

Article 3

1. Clerks declining promotion do not forfeit any rights to any other position they may be entitled to when a vacancy occurs, but will rank junior to the clerk receiving the position.

2. Clerks absent on leave when a vacancy occurs to which they are entitled will not be prevented, on return within thirty days, from claiming the position.

3. Senior qualified clerks will be deemed eligible and considered in line of promotion to the higher positions in the telegraph service.

4. If a clerk be granted leave of absence by the Company for a period of three months or less (in any twelve months) he may retain the position for that period, after which time he shall be considered out of the service.

In case of *bona fide* sickness his leave of absence shall be extended, if necessary.

This clause shall not apply in the event of a clerk wishing to transfer from one position to another in the Company's service.

In the event of any clerk of at least two years' consecutive service desiring to be transferred to another office of the Company where a vacancy exists, he shall, if duly qualified, upon application therefor, be given the preference over any new employee, but shall rank as a new man in the office or district transferred to. This shall not affect his service seniority.

Article 4

1. No clerk shall be suspended (except for investigation), discharged or disciplined, until his case has been investigated and he has been proven guilty of the offence charged against him, and upon his request to the Manager, particulars of the charge will be given in writing. A clerk may, in such cases, have the assistance of a co-clerk, if he so desires. Should no decision be reached within ten days, he shall receive his regular pay until the decision is arrived at. If a clerk be found blameless of the matter under investigation, he will be paid his regular rating for all the time lost and necessary extra expense while attending the investigation (if away from home) and re-instated. He will also have, without discrimination, the right of appeal from the local to the general officers of the Company.

2. Seniority in service shall govern assignment of hours, regardless of sex.

Article 5

1. Clerks shall be granted leave of absence each year with pay at regular wages, as follows: One week after the first year and two weeks after two years' service.

2. Applications for vacations filed in January of each year will be given preference in order of seniority of applicants from point of service, and a complete vacation list shall be posted in February showing dates allotted. January applicants will have preference over later applicants. So far as possible, the Company will arrange vacations between and including the months of April and October, when desired.

3. In the event of a clerk entitled to a vacation with pay being discharged or leaving the service on the proper notice before obtaining a vacation that has been deferred after time allotted, he shall be paid wages for the same.

Article 6

1. Half holidays will be allowed on the following public holidays: New Year's Day, Good Friday, Victoria Day (or King's Birthday), Dominion Day, Labour Day, Thanksgiving Day and Christmas Day. All time worked in excess of the half holiday shall be paid for at the rate of time and one-half.

Article 7

1. Any employee or employees having a grievance may take the matter up and may have the assistance of a co-employee, if he or they so desire, and all employees shall have the right of appeal, either alone or with the assistance of such co-employee (and personally or in writing), from the Manager to the Superintendent, from the Superintendent to the General Superintendent and thence to the General Manager.

2. All questions in dispute will first be referred by the employee aggrieved to the officer of the Company having immediate jurisdiction.

Article 8

1. A clerk discharged or leaving the service in good standing will be paid in full and upon request given a certificate stating length and character of service and, if discharged, the reason therefor. In case of delay, he will be paid regular wages for each day detained in excess of three days. Unless the employee otherwise directs this certificate so requested shall be mailed to him at his last place of employment. A certificate shall be deemed to have been given when mailed.

2. Clerks leaving the service of their own accord shall be required to give the Company fifteen days' previous notice in writing.

Before dispensing with the services of a Clerk (other than when discharged) the Company shall give such employee fifteen days' previous notice in writing. At the expiration of any such fifteen days' notice if the employee is still retained in excess of seven days, the Company will be required to give a further fifteen days' notice.

A Clerk resigning in good standing will be given preference in re-employment over other applicants, when a vacancy occurs.

Article 9

1. Eight hours shall constitute a day's duty. No trick shall be split more than once nor extended over twelve hours.

2. No employee shall be required to work more than five consecutive hours without lunch relief.

3. Overtime shall be paid for at *pro rata* rates, excepting Sunday work, which shall be paid for at the rate of time and one-half. The Company may assign part of Saturday night's staff to Sunday night duty as part of their regular week's assignment.

Article 10

1. Any employee who is required to do relief work for a period exceeding ten days within any thirty-day

period will during the time he is so employed, receive the same wages as the employee relieved, providing such wages are not less than his own.

CANADIAN NATIONAL TELEGRAPHS—RULES FOR INSTALLERS, 1924

The following rules shall govern the installers employed by the Canadian National Telegraphs as covered by this schedule.

Article 1

1. Employees assigned to the work of installation and repair of inside apparatus and wiring shall be considered installers within the meaning of this schedule.

2. The right of promotion shall be governed by seniority where ability is equal and sufficient.

Article 2

1. In case of reduction of staff, the junior installer will be dispensed with first and shall be given at least fifteen days' notice.

2. At the expiration of any such fifteen days' notice, if the installer is still retained in the service in excess of seven days, the Company shall be required to give a further fifteen days' notice.

3. Installers leaving the service of their own accord shall be required to give the Company fifteen days' previous notice in writing.

4. Any installer in good standing whose services have been dispensed with on account of reduction of staff will be given preference of employment when a vacancy occurs.

5. No installer shall be suspended (except for investigation) discharged or disciplined, until his case has been investigated and he has been proven guilty of the offence charged against him, and upon his request to the Manager, particulars of the charge will be given in writing. An installer may, in such cases, have the assistance of a co-installer, if he so desires. Should no decision be reached within ten days, he shall receive his regular pay until the decision is arrived at. If an installer be found blameless of the matter under investigation, he will be paid his regular rating for all the time lost and necessary extra expense while attending the investigation (if away from home) and reinstated. He will also have, without discrimination, the right of appeal from the local to the general officers of the Company.

Article 3

1. Eight consecutive hours, exclusive of the meal hour, shall constitute a day's work.

2. After eight hours' work overtime will be paid at the rate of time and one-half.

3. On New Year's Day, Good Friday, Victoria Day (or King's Birthday), Dominion Day, Labour Day, Thanksgiving Day and Christmas Day, installers will be paid for all work at *pro rata* rates per hour, in addition to their regular wage.

4. All time worked on Sundays shall be paid for at the rate of time and one-half.

Article 4

1. An installer who has been in the service for one year will be allowed one week's vacation with full pay; and after two years' service he shall be allowed two weeks' annual vacation with full pay. The Company will endeavour to make all vacation reliefs between the months of April and October.

Article 5

1. An installer when required to travel from headquarters shall be furnished with transportation and sleeping berth, together with a reasonable allowance for meals, and hotel accommodation, while away from such headquarters.

2. An installer will be paid pro rata time if required to travel in excess of his regular daily trick between the hours of 8 a.m. and 11 p.m., two hours to be deducted for meals.

3. If required, an installer will be advanced funds to meet travelling expenses.

Article 6

1. If an installer receives leave of absence for a period of three months or less, he may retain his position and seniority for that period. If his leave of absence be extended for an additional three months, he may retain his seniority for such period, and his position will at once be bulletined vacant, but this is not intended to apply in cases of *bona fide* sickness.

Article 7 (Wage Rates)

The rate of pay for all installers shall be sixty cents per hour for the first year and seventy cents per hour thereafter, these rates to be effective April 1, 1923.

Statement by Chairman

IN THE MATTER of the Industrial Disputes Investigation Act 1907, and of a dispute between The Canadian National Telegraphs, (Employer), and certain of its employees in Commercial Telegraph Service, Members of the Commercial Telegraphers' Union of America, (Employees).

To the Honourable JAMES MURDOCK,
Minister of Labour,
Ottawa.

The Board of Investigation and Conciliation in this dispute has been faced not only with the task of determining the important matters in issue between the Employer and the Employees, but has also been called upon to revise and correct the working rules in the existing schedules. Both parties submitted numerous amendments and presented their cases in the fullest possible manner at sixteen public meetings of the Board, the Employer being represented by Messrs. Barber, Stewart, Drake, and Crilley, and the Employees by Messrs. Young, Bradley, Schnur, Lynch and McMahon.

Since the close of the last public sitting, the Board has held nineteen private meetings, and attached hereto is the schedule of rules which I recommend be adopted.

The Board would like to take this opportunity of expressing its high appreciation of the manner in which both Employer and Employees presented their cases and facilitated a pleasant and still thorough discussion of the matters in dispute.

It is not necessary to deal with all the changes made in the rules, as suggested amendments were considered affecting almost every article and clause. There are, however, some matters of particular importance with which it may be advisable to deal specifically.

1. The Employees asked for the recognition of the Union and for the closed shop, and these requests I am unable to see my way clear to recommend.

2. The Employees pressed strongly for a general increase in the wage scale and for amendments to the rules, which if granted would result in increased overtime, in some cases of a punitive nature.

The Employer submitted a chart prepared upon data secured from the LABOUR GAZETTE, which indicated that the cost of living had increased between the years 1918 and 1920, during which period the Employees had secured increases in pay, and that the cost of living had decreased from the high point in 1920 until in 1924 it was back to the figures of the year 1918. It would appear that these increases in wages were recommended by the previous Boards, largely because of the then constantly increasing cost of living. The Employer contended that no further increases should at this time be granted.

It is only fair to point out that the men did not accept the figures as shown in the chart submitted by the Employer, but they did not contend that there had been no decrease during the last two years.

I have formed the opinion that the telegraphers' rates of pay in the present schedule are not unreasonable. I feel also that serious attention must be paid to the prevailing state of trade, depressed business conditions and unemployment. I therefore cannot see my way clear to recommend any increase in the rates of pay or any changes in the rules which will increase overtime and thus raise to the Employer the cost of conducting its business.

It was strongly pressed by the Employees that the rates of pay for the clerical staff should be raised, and emphasis was laid upon the contention that the scale for the Canadian National Telegraphs' clerical employees is lower than that of the Canadian Pacific Railway Company.

The evidence submitted to the Board upon this contention was not such as to allow the Board to come to a definite conclusion. The Employer alleged that its system of book-keeping and office administration was essentially different from that adopted by the Canadian Pacific Railway Company, and that the duties performed by the officials and clerks of one company were not the same, notwithstanding that their titles might appear to be identical. Some cases of individual employees were cited in which the Employees contended that the rates of pay were unfairly low, and while the Board cannot make a finding upon the evidence submitted in these

cases, I am satisfied that there may be some instances of hardship, and I would strongly recommend that the Employees and the Employer confer to the end that these may be dealt with in a spirit of fairness towards the particular employees involved, so that this source of irritation and friction may be removed.

3. The Board was pressed by the Employees to eliminate the geographical wage differential by raising the Eastern rates of pay so as to correspond with those in force West of Winnipeg. The Employees did not ask, and I presume would not accept, a standardization of wages which would make any decrease in the Western rates as meeting the situation half way. I therefore recommend that no action be taken to remove the existing differential.

4. The Employees asked that the rates of pay for the Morkrum and other automatic operators be raised to equal the Morse schedule. I cannot recommend that this request be granted.

5. The Employees asked that the existing rule covering vacations with pay be amended by providing that employees be entitled to two weeks' leave of absence after one year's service instead of after two years' service. I recommend that this request be granted, and have so amended the rule.

6. The Employer contended for a straight eight-hour trick in place of the 7, 7½ and 8-hour tricks, and also pressed strongly for a six-day week. I cannot recommend that either of these requests be granted.

7. The Employees asked for full public holidays in place of the half holiday rule now in force. This would mean an increase in overtime and I cannot recommend that the request be granted. I would, however, earnestly recommend that the Employer and the Employees endeavour to arrive at a working arrangement which will permit of a full holiday to a portion of the staff on each of the holidays named in the rule.

8. I would recommend an addition to the rules of a provision which will limit the employment of married women whose husbands are able to support them.

Owing to a difference of opinion between the two Unions, in which the Company's linemen have membership, the Board after advising with the Department found itself unable to consider the linemen's case as presented by one of the Unions.

All of which is respectfully submitted.

Your truly,

(Sgd) R. HOME SMITH,
Chairman.

Statement by Board Member representing Employers

IN THE MATTER of the Industrial Disputes Investigation Act, 1907, and of a dispute between The Canadian National Telegraphers (Employer) and certain of its Employees in Commercial Telegraph Service, Members of the Commercial Telegraphers' Union of America (Employees).

To the Honourable JAMES MURDOCK,
Minister of Labour,
Ottawa.

Two questions are raised before the Board in respect of which I am unable to agree with the finding of the chairman.

On the present hearing, the Company submitted uncontradicted evidence that the cost of living since the wage schedules were last fixed by a Board had decreased over fifteen per cent. The application of the men for an increase on the present hearing was based entirely on the socialistic idea of dividing amongst the workers that which the employer was supposed to have.

The Company strongly urged a change in two rules which it claimed worked great inconvenience to the Company with added expenses and without any real advantage to the men.

It is in the memory of all when workers strove for the establishment of the eight hour day. Telegraph Companies as public service corporations necessarily furnish a twenty-four hour service for seven days a week. The Company is desirous that the twenty-four hours should be divided into three tricks of eight hours each. It claims that it is unduly hampered by the present system of breaking the twenty-four hours into uneven periods of eight, seven and one-half and seven hours, involving as this does the payment of overtime for what the Company claims should be straight work and making it unnecessarily difficult for the Company to arrange its staff. The Company also asks a six-day week. That is, so far as necessary, that the Company should be permitted to assign parts of Sunday as regular tricks, Sunday employees being released on a week day so that no operator would be compelled to serve more than six tricks of eight hours each as a week's work. The eight-hour trick and six-day week are in force with both the Press and Railway Telegraphers.

This proposed re-arrangement of the tricks would only affect those employees who at present are working the seven and one-half and seven hour periods. To compensate the men for this proposed change, the Company was willing to substantially scale down the reduction in wages which, based on the reduced cost of living, it claimed it was entitled to

receive. In other words, granted an eight-hour trick and six-day week, it was willing to accept about a five per cent reduction on certain of the more highly paid classes of labour without change in the wages of other of its employees, in lieu of about a fifteen per cent straight reduction, which, based on the cost of living figures, it claimed to be entitled to.

The Company's position to me seems most reasonable. I think it should have been cheerfully accepted by the men having regard to the decreased earnings of the Company and to the present operating, living and business conditions throughout Canada. It was brought to the attention of the Board that wage reductions have recently been ordered by Boards and accepted by both the Press and Railway Telegraphers. The men, however, absolutely refused to consider the Company's proposal. The Chairman, for the reasons stated (I understand as a temporary measure) supports the men's position. In this I am compelled to differ with him. I would unhesitatingly grant the change claimed by the Company.

On the other points raised by the men, whilst I might not have gone quite as far as the Chairman had I been alone in deciding the questions, on the whole I think I should not dissent from his findings. Whilst as above indicated I would have differed somewhat from the conclusions which the Chairman has reached had I the sole determination of this matter, yet for the sake of avoiding a disagreement which might render our work futile, I have decided to accept the Chairman's findings and have signed the schedule.

All of which is respectfully submitted.

(Sgd.) F. H. PHIPPEN

Member of the Conciliation Board.

Statement by Board Member representing Employees

IN THE MATTER OF the Industrial Disputes Investigation Act, 1907, and of a dispute between the Canadian National Telegraphs (employer), and certain of its employees in commercial Telegraph service, members of the Commercial Telegraphers' Union of America (employees).

To the Honourable JAMES MURDOCK,
Minister of Labour,
Ottawa.

The report I have presented in the case of the Canadian Pacific Telegraphs and its

employees in the commercial telegraph service, members of the Commercial Telegraphers' Union (pages 110-114), covers the same important matters as those involved in the case of the Canadian National Telegraphs and certain of its employees, with one or two exceptions.

The Canadian National Telegraphs did not ask for a wage reduction of five per cent, as did the Canadian Pacific Telegraphs, but they did join with the C. P. R. in demanding the six-day week and the three eight-hour tricks. The action of the Chairman in refusing to grant these demands met with my approval. On all other matters similar to those in the case of the C. P. R. I take the same stand in the C. N. T. case.

The employees did ask that the clerical staff of the C. N. T. be placed on the same basis as the C. P. R. so far as wages were concerned, but my colleagues attached some value to the representations of the C. N. T. officials that the difference in the systems of the two companies justified the C. N. T. in not paying as high a rate of wages as the C. P. R. I failed to attach the same value to the representations of the C. N. T. officials as my colleagues, because under the systems adopted by both companies a good day's work is demanded from each employee. I not only, therefore, agree with my colleagues in recommending that the employees and company get together to adjust the apparent injustices in the clerical staff of the C. N. T., but go farther and recommend that the wages of the clerical staff of the C. N. T. be advanced to the wage levels of the C. P. R. clerical staff, as a government owned system cannot afford to pay its employees less than the privately owned system for similar services.

In the revision of the rules governing the C. N. T. telegraphers, clerical staff, and installers, I believe that the changes made are in the main in the interests of the employees. Such changes as suggested by the Company and accepted by the Board are of minor importance and do not affect the employee detrimentally.

Sincerely yours,

(Sgd.) JAMES SIMPSON,

Member of the Conciliation Board.

Report of the Board in Dispute between certain coal mining companies in Nova Scotia, and their employees, members of District 26, United Mine Workers of America

A report was received from the Board of Conciliation appointed in connection with the dispute between the Dominion Coal Company, Limited, the Nova Scotia Steel and Coal Company, Limited, and the Acadia Coal Company, and their employees, members of District 26, United Mine Workers of America. The Board was constituted as stated on page 106.

Report of Board

IN THE MATTER of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Dominion Coal Company, Ltd., the Nova Scotia Steel and Coal Company, Ltd., and the Acadia Coal Company, and certain of their employees, being members of District No. 26, U.M.W. of America.

To the Hon. JAMES MURDOCK,
Minister of Labour,
Ottawa.

SIR,—A Board of Conciliation and Investigation was applied for on the 31st day of December, 1924, by Mr. J. E. McLurg, Vice-President of the above-named companies, in the matter of a dispute respecting a new agreement between the companies and the said employees, in which the companies asked for a decrease from the existing rates of wages, which the miners' representatives refused to consider. The contract which then existed was due to expire January 15, 1925.

The application stated that there were 12,500 employees directly affected.

The Hon. James Murdock, Minister of Labour, authorized the establishment of a Board, which was completed on January 23. The companies nominated Mr. W. E. Thompson, of Halifax, as their representative. The employees declined to name a representative, and the Minister appointed Dr. J. W. Robertson, of Ottawa, to represent the employees. These two members of the Board recommended to the Minister that Mr. J. H. Winfield, of Halifax, be appointed as third member of the Board and Chairman, which recommendation was accepted by the Minister and the appointment was made.

Previously to the completion of the Board, information was received to the effect that a judgment of the Privy Council had declared the Industrial Disputes Investigation Act to be *ultra vires*. Notwithstanding such reported decision of the Privy Council, the Government decided that the organization of the Board be proceeded with, and communi-

cated with the parties to the dispute to that effect, inviting their co-operation.

Mr. McLurg, on behalf of the operators, agreed on January 8 that: "The Companies on their part will scrupulously observe the law, and that all collieries which the companies have work for will accordingly be operated on January 16 next, and thereafter, until the Board submits its findings, at the same rates of pay and on the same conditions as provided for in the agreement at present in force."

On the same date, Mr. John W. McLeod, President, and Mr. A. A. McKay, Secretary, U.M.W., District No. 26, informed the Minister that: "The District Executive were prepared to instruct the membership of this district to continue at work after the 15th instant, providing we receive from you confirmation of the assurances as set out in Mr. McLurg's telegram to you this date."

The Board met in Halifax on January 27 and organized, and it was decided to hold the first public session in the city of Sydney on January 29. On that date the Board met at the Court House, Sydney, the employers being represented by Mr. J. E. McLurg, Mr. H. J. McCann, and Mr. M. A. Doak. The employees were represented by Mr. John W. McLeod, President, Mr. Alex. E. McKay, Secretary of the United Mine Workers of America, District No. 26, and Mr. William Hayes, International Representative for District No. 26.

President McLeod addressed the Board to the effect that the employees had had no part in the appointment of the Board; that they did not believe the Board would be of any value to them; that it had no power to conduct an investigation; that they denied its authority and that the employees would decline to recognize the Board or appear before it. He then filed with the Board a written document, which he stated set forth the position of the employees, a copy of which is transmitted herewith, and asked permission to withdraw. At the request of the Chairman he remained for a short time, during which it was agreed that direct negotiations between the operators and the employees should be resumed on the following day, January 30, the Chairman stating that the Board would be within call to render any assistance in its power.

The Board found itself in a very difficult position owing to the recent reported decision of the Privy Council with respect to the Act

under which the Board was constituted; felt that it was thereby deprived of legal status and was unable to do more than attempt a friendly offer of assistance to both parties. The employees, in their written statement to the Minister, had suggested the need of a searching inquiry into the affairs of the companies; but, since they had declined to appear before the Board, any investigation that might have been held would have been *ex parte*, and the Board would have had no legal means of summoning witnesses or taking evidence under oath. Consequently, any such attempt at an investigation would have been inadvisable and ineffective.

At eleven o'clock on the 30th January the representatives of the operators and employees met, the Board being in session in an adjoining room. That conference ended at 12.30, and Mr. McLurg appeared before the Board and stated that no progress had been made or seemed possible and that he had suggested to the representatives of the employees that the Board might be called in to see if it could suggest any means of breaking the apparent deadlock, but the employees had refused to meet the Board in any way as a Board.

President McLeod called a convention of delegates of the various locals of District No. 26, U.M.W. of America, to be held at Sydney on February 4 to, as stated in the Press, "discuss the ultimatum of the companies for a 10 per cent reduction in wages." Dr. Robertson secured permission to address, and did address, the delegates in session on the afternoon of the 4th February for the purpose of presenting information and giving such explanations as he hoped might lead to a friendly settlement of the dispute.

The convention, which the delegates had decided should hold its sessions in private, adjourned at noon on the 6th. That afternoon a document was handed to Dr. Robertson from the District Executive of the miners, but unsigned, a copy of which is transmitted herewith marked "Appendix B."

The Board is of the opinion:—

(a) That due to the unfortunate relations existing for many years between the operators and the employees, as set forth in the statement of the employees submitted to the Minister and further elaborated in the statement submitted to the Board, no permanent improvement in industrial relations can be expected until complete confidence is established between the operators and the employees, which may possibly be brought about by a fair and impartial inquiry by a competent authority, with a view to ascertaining the actual necessary cost of mining, transporting and

selling coal, the ability of the companies to pay a rate of wages satisfactory to the employees, to earn a fair return on capital invested, and the bearing which the attitude and action of the employees have in relation to the efficient and profitable carrying on of operations.

Such an inquiry could not be expected to produce the desired results unless the report of its findings were followed by an earnest and sustained effort to furnish explanatory educational information based thereon, for the purpose of bringing about a better understanding of the true relations of both parties to each other.

(b) That under prevailing conditions many of the employees are unable to obtain more than meagre part-time employment in the winter season entailing serious far-reaching hardships, and that this deplorable state of affairs can probably only be remedied by the companies being able to secure remunerative outlets for their product when access to the markets in Central Canada is cut off by the closing of navigation, prohibitive railroad freight rates and other causes.

All of which is respectively submitted.

(Signed)

J. H. WINFIELD,
Chairman;
W. E. THOMPSON,
Member;
JAS W. ROBERTSON,
Member.

APPENDIX A

To the Chairman and Members of the Conciliation Board:

GENTLEMEN,—The District Executive Board has submitted its reply to the application of the Corporation for a Conciliation Board to the Honourable the Minister of Labour. We presume that copies of our reply have been handed to this Board, and in order that the statement may be on record, and in order to emphasize certain portions of its contents, we desire to file with you, as part of your record, the following statement, together with our original reply.

We also wish to have recorded the formal protest of the District Executive against the majority of this Board on account of bias. The protest was forwarded to the Honourable James Murdock, Minister of Labour, and is as follows:

GLACE BAY, N.S., Jan. 26, 1925.

HON. JAMES MURDOCK,
Minister of Labour,
Ottawa, Ontario.

Although not a party to formation of present Board we feel bound to make formal objection to personnel

on ground of bias. Chairman J. H. Winfield is managing Director of Maritime Telegraph and Telephone Company which has Besco for a most substantial customer. Colonel Thompson is president of Thompson Adams Co., Ltd., which Company obtains insurance contracts from Besco. Suggest majority of Board is bound by their own interests to find against us. In addition Dr. Robertson as Chairman of Royal Commission here one year ago was unable to detect Besco falsehood under his very eyes. For a sample that no spy system was maintained and labour unrest result of agitation. With Board constituted as at present safe to predict they will not recommend any increase in our wages though they can see our membership unemployed and starving. Surely matters raised in our reply are of sufficient importance to Nova Scotia and Dominion of Canada to merit investigation by less partial Board.

JOHN W. McLEOD,
Pres. District 26, United Mine
Workers of America.

A. A. McKAY,
Sec'y. District 26, United Mine
Workers of America.

In continuation of our reply and consistent with our attitude we wish to further address this Board as follows:

Quoting from the official minutes of December 31, 1924, page 7 of the recent negotiations between the Company representatives and ourselves as follows:

Realizing that the interest of the men, the company and the general public will be best served if these negotiations result in an agreement being arrived at which will be embodied in the contract, the representatives of the company make this last definite and final offer, for the express purpose of arriving at a final settlement. This offer is a straight decrease of ten per cent from the existing rates for both contract and day paid men, to be embodied in the contract, effective from January 16, 1925, to November 30, 1926.

It is to be distinctly understood that this final offer of a ten per cent decrease is made solely for the purpose of effecting a settlement by negotiation and it is to be understood by the Executive of the U.M.W. that if this offer is not accepted to-day, it is withdrawn.

This was the final offer of the Company and can refer, if necessary, to the statements of Vice-President McLurg during the course of the negotiations in which he informed me that no contract would be signed by his Corporation that did not carry a reduction of wages. Our answer was that none would be signed that carried any reduction from the present rate of wages.

Why Are You Here?

Have you come to see why this Corporation:

- (1) Takes from our wages to pay graft to the Newfoundland Government; or
- (2) Takes from our wages to pay dividends on stock that represents no physical assets; or
- (3) Takes from our wages to pay high salaries to dissolute and incompetent officials; or
- (4) Takes from our wages to finance industrial skin games like the Halifax Shipyards; or

(5) Takes from our wages to make good the incompetency of its Sales Department; or

(6) Takes from our wages to pay princely salaries to a President, Vice-President, General Managers, General Superintendents and Superintendents, and Assistant Superintendents without number; or

(7) Takes from our wages to pay exorbitant rates for insurance to a Company in which the President is interested; or

(8) Takes from our wages to maintain a Pimp and Spy System which they swear does not exist; or

(9) Takes from our wages to maintain a slush fund to pay agents to write attacks on us in the Press under the guise of disinterested citizens; or

(10) Takes from our wages to maintain a London office for Sir Newton Moore, an improperly salaried Vice-President, to pretend he is interested in the Nova Scotia Coal Industry; or

(11) Takes from our wages to pay the cost of wild-cat capital expenditures like Jubilee Colliery abandoned as soon as built.

Are You Here to Find Out:

(1) Why Nova Scotia coal sells in Montreal for one-half the price it brings in Halifax.

(2) Why the natural resources of this province are milked for the benefit of some disreputable stock market plungers.

(3) Why five million tons of coal are taken annually from our mines and result annually in bringing the men who take it out nearer and nearer to starvation.

(4) Why this corporation cannot conduct its business for 12 months without the aid of Royal Commissions, Conciliation Boards, Militia, Mediators and Provincial Police.

(5) Why any drunken reprobate who toots for the government is given a job while our men who have grown up in the industry are being laid off.

(6) Why this industry should continue at all when it cannot pay its men even starvation wages.

(7) Why the company pretends to negotiate with us and at the same time builds stalls for its horses at its steel plant and makes general preparations for a lockout.

(8) Why these preparations are set out in detail in an inspired article in the corporation's newspaper *The Glace Bay Gazette*, while our negotiations are pending, and which article of 6th January indicates the absurdity of your sitting at all.

(9) Why the *Glance Bay Gazette* and *Sydney Record* did not publish our statements replying to the calling of your Board, the one being the corporation's paper at Glance Bay and the other at Sydney.

(10) Why this corporation, trying to break our unions and strikes, spends enough money to give us substantial increases in wages.

Or Does It Happen That You Are Here:

(1) To see our half-clothed and half-fed workers and their women and children.

(2) To speak to the health officers who tend them for sickness brought by their conditions.

(3) To talk to the Salvation Army Officers who scatter relief amongst them; or

(4) To visit the schools from which so many children are absent through lack of food and clothing.

(5) To visit the cold, leaky homes of miners whose women and children sleep without decent beds, mattresses or bed clothes.

(6) To inquire from the charitable and relief organizations in Sydney and in the Colliery Districts as to conditions due to low rates and unemployment.

(7) To consult the merchants who are unable to trade with our impoverished people.

(8) To see Cape Breton children clothed in cotton rags and flour bags, and fed on soup made from potato parings.

Why Are You Here:

One of you gentlemen is Managing Director of a company that has "Besco" for one of its largest customers. Another of you is president of a company that gets insurance contracts from Besco. That is a prejudiced majority of the Board, and we are bound to say we believe *you are here* to help take a few more rags from our backs and a little more food from our tables.

We believe you are here to help Besco beat us. You are not an impartial Board. You have not authority to investigate our grievances. Don't burlesque the sufferings of humanity by simulating an investigation. Better leave us to our annual battle to stave off the starvation which this incompetent and dishonest corporation attempts to impose on us. If you think we are "Red," try living on the income from 150 days work at \$3.50 a day, less 10 per cent. Better to indulge in that fashionable pastime that consists of convincing the public we are a mob of 15,000 irreconcilable destructionists; but for shame sake and for the sake of commonsense don't mimic holding a fair and impartial inquiry.

Before you go, listen if you like to the company's hoary tales:

(1) That our men are well paid and trot out their faked pay-rolls and their hardy annual of the local contract man who gets good wages *when he works* and which wages he is expressly subject to lose on thirty days' notice, when the company thinks it is not getting adequate return for what it is paying.

(2) That their costs are so high that coal can't be mined at a profit with present wage rates, while the labour cost is less than 40 per cent of the total cost of coal.

(3) That the investments of widows and orphans are being jeopardized and that we should have more consideration for widows and orphans of the type of Roy Wolvin, Sir Richard Squires, Grant Morden, Hector McInnes, J. F. M. Stewart, and Sir Newton Moore.

(4) That labour unrest is due to agitators and not to grievances.

THE DISTRICT EXECUTIVE BOARD,
DISTRICT No. 26, UNITED MINE
WORKERS OF AMERICA.

APPENDIX B

Dr. J. W. ROBERTSON,
Member Conciliation Board,
Sydney, N.S.

SIR,—You realize that a very serious situation exists here. Probably it profits little for us to call attention to the fact that we have been shouting for years that Besco was ruining not only us but the entire community here. We merely refer to it to link the present with the past. At the present you may see for yourself soup-kitchens, bread-lines, people feeding from the refuse dumps, suffering and starvation. The situation is naked. Look at it. These are our people brought to this condition by Besco.

Your Board appears anxious to bring about an improvement. We had nothing to do with the constitution of your Board and we have been sceptical of any good it might do as it has been customary to whitewash Besco and damn us.

However, if your Board is sincere we will do our part. We will temporarily continue the present status, pending proper remedial measures as follows:

Continue work at the rates paid January 15, 1925, for a period not exceeding four (4) months from January 16, 1925, upon the following conditions:

First: Within the period of four (4) months from January 16, 1925, a full, fair and impartial investigation will be made into the organization, direction, administration and financing of the corporation, in all their branches, including its costs of production,

transportation, and distribution, and appropriate action taken upon the result of that investigation.

Second: All our members during the above period of four (4) months be given employment of not less than four (4) days a week, or wages in lieu of employment, at the places they customarily offer themselves for work.

We do not think we should be asked to accept the corporation's unsupported guarantee of fulfilment of this proposal, for it has not been a custom with it in the past faithfully

to observe the undertakings which it gives its employees.

You are aware that we feel that the rates of wages of our members should be revised upwards, and in some instances substantially so. Yet we make this proposal to do our part to meet the present emergency.

DISTRICT No. 26, U.M.W. of A.,

.....
President.

.....
Secretary-Treasurer.

Railway Socialization in Sweden

In 1920 the first Labour Government in Sweden, of which Mr. Branting was head, appointed a "Socialisation Commission," to examine the question of transferring to the community the ownership or control of such natural resources or means of production as it might be considered desirable to nationalize.

The Socialization Commission in its report describes the new organization which it proposes as an independent public undertaking exclusively owned by the state. The administration is in its main principles determined by the government authorities and subject to their supervision, but the management and conduct is entirely independent of the political organization of the state.

The following are the most important points in regard to the proposed undertaking:—

The supreme authority in the undertaking will be an assembly meeting once a year, consisting of chairman and 28 members. Of these, the chairman and 8 members will be chosen by the Crown, 8 by parliament—four by each chamber—six by the employees of the state railways, and six by various organizations interested in the railway traffic. The assembly will elect the board of directors and auditors, and decide all questions of responsibility. It will also approve the accounts and balance sheet and determine the application of the yearly surplus. The assembly will further have the exclusive power of deciding on all constructive work and purchases requiring new capital.

The management of the undertaking will be carried on by a board of directors elected by the assembly and consisting of six persons, who will choose among themselves the chief of the undertaking. The power of final decision in regard to engagements and wages will be entrusted to the board of directors in accordance with its task of managing and being answerable for the direction of the under-

taking. Only the fixing of rules for the conclusion of agreements and the settlement of disputes between the undertaking and its employees, or in other words, the establishment of the method of negotiating agreements, will be in the jurisdiction of the assembly.

In connection with the position of the workers under the scheme of socialization, attention is called to the safeguard furnished by the representation of the staff in the assembly, the guaranteed method of negotiation, and a strong trade union organization against encroachments on the reasonable rights of the employees on the one hand, and precipitate interruptions of work on the other hand. Against unwarranted demands on either side, resulting in interruptions of work, excessive charges or other inconveniences, public opinion, which in such cases would be particularly sensitive to disturbances, would also constitute a powerful obstacle.

The Commission points out that it is impossible to prevent special interests from exercising an influence on the state railway undertaking. They will in all circumstances find some means of expression. As indicated in the proposal of the Commission, a direct representation of the separate group interests appears to be preferable, all the more so as it is reasonable to hope that by this means such interests will be more effectually committed to a positive co-operation in the development of the undertaking.

According to recent statements in the Legislature of the Province of Quebec there are 618 cheese factories and 725 butter factories in the province. During 1924, 46,890,579 pounds of cheese and 59,214,767 pounds of butter were produced. Duties for inspection purposes were imposed on these factories by an act of 1915 (chapter 31), but were abrogated in 1923 (chapter 33).

STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1925

THE number of strikes and lockouts in Canada in existence at some time or other during the month of January was ten, as compared with three in December. The time loss for the month was less than in January, 1924, being 4,882 working days, as compared with 209,834 working days in January, 1924. The considerable time loss and number of employees in January 1924, was chiefly due to a strike of coal miners in Nova Scotia.

Date	Number of disputes	Number of employees involved	Time loss in working days
January, 1925.....	10	694	4,882
December, 1924.....	3	125	1,865
January, 1924.....	13	14,294	209,834

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees, and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

Two disputes, involving 100 workpeople, were carried over from December. One of the strikes beginning prior to January, and six of the strikes commencing during January terminated during the month. At the end of January, therefore, there were on record three disputes, clothing workers at Montreal; boot factory employees at Montreal, and moulders at Hamilton. The record does not include minor disputes as described in the previous paragraph, nor does it include any dispute after information has been received indicating that employment conditions are no longer affected, but which the union or organization concerned has not yet called off. Information is available as to three such disputes, namely, moulders at Galt, commencing August 2, 1922; moulders at Guelph, June 2, 1924, and street railway employees at St. John, N.B., June 29, 1921.

The figures printed are inclusive of all strikes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received till some time after its commencement.

Information was received in the Department during January, but too late for inser-

tion in the January issue of the LABOUR GAZETTE, of a strike of coal miners at Drumheller, Alta., which began December 29, and terminated January 10.

Of the strikes which commenced during January, three were against the discharge of employees, two against reductions in wages, one was for increased wages, one for a change in working conditions; one for the renewal of an agreement; one for one day off in seven; and the tenth, a strike of bakers in Montreal, was against an increase in the price of bread. Of the strikes and lockouts which terminated during the month, four resulted in favour of employees, one in favour of employers, and two ended in a compromise, the employees being partially successful.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement.

COAL MINERS, DRUMHELLER, ALTA.—A strike of 30 coal miners occurred at Drumheller, Alta., on December 29, in protest against the discharge of employees for incompetence. After negotiations the employees were reinstated. Work was resumed January 10.

COAL MINERS, DRUMHELLER, ALTA.—A strike of coal miners at Drumheller, Alta., on January 5, involving 110 employees, was against the discharge of an employee, while another strike, at the same place and time, involved 90 employees, and was for a change in working conditions. Negotiations were carried on between the parties concerned, and as the men's demands were granted in both cases, work was resumed January 7.

BAKERS (JEWISH), MONTREAL, QUE.—The employees went on strike January 24, in protest against an increase of one cent per loaf in the price of bread. After being on strike four days the employers reduced the price to the previous rate, ten cents per loaf, and the employees resumed work on January 28.

BOOT FACTORY EMPLOYEES, MONTREAL, QUE.—On January 26, a strike occurred at Montreal of 200 boot factory employees against changes in piece rates, the employees believing that these changes involved a reduction in wages of between 50 and 75 per cent. At the end of January this dispute remained unterminated.

MOULDERS, HAMILTON, ONT.—About 15 moulders went on strike January 30, against a reduction in wages. The firm concerned had posted a notice of a 10 per cent reduction to take effect January 30, and the men stopped work. This strike remained unsettled at the end of the month.

LABOURERS, EDMONTON, ALTA.—A strike of 50 labourers occurred at Edmonton on January 2, when the men employed on a subway under construction demanded an increase in wages from 25 cents and 30 cents per hour to 45 cents per hour. Negotiations were carried on and work was resumed January 22, at 40 cents per hour.

COOKS AND WAITERS, WINNIPEG, MAN.—A strike of 18 cooks and waiters in a Winnipeg restaurant, demanding one day off in seven, took place January 2. The following day the employer claimed that the strikers' places had been filled by other workers who were granted the one day off.

LAUNDRY WORKERS, OTTAWA, ONT.—A strike of 60 laundry workers occurred on January 8, when the company concerned refused to renew an agreement which had been in existence the previous year, and which expired January 7, 1925 (LABOUR GAZETTE, February, 1924, page 172). The company asked for a month to consider the extension of the agreement, but the employees refused the company's request and went on strike. Negotiations were carried on which resulted in the agreement being renewed for a year, with a slight change in the wording of two of the clauses. Work was resumed January 10.

STRIKES AND LOCKOUTS DURING JANUARY, 1925.

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to January, 1925.			
MINING, NON-FERROUS SMELTING AND QUARRYING— Coal miners, Drumheller, Alta.	30	240	Commenced December 29, against discharge of employees. Settled by negotiations, and employees reinstated. Work resumed January 10.
MANUFACTURING— <i>Clothing, including knitted goods:</i> Clothing workers, Montreal, Que.	70	1,820	Commenced December 2, against discharge of employees. Unterminated.
(b) Strikes and lockouts commencing during January, 1925.			
MINING, NON-FERROUS SMELTING AND QUARRYING— Coal miners, Drumheller, Alta.	110	220	Commenced January 5, against discharge of employee. Settled by negotiations and work resumed January 7, when discharged employee was reinstated.
Coal miners, Drumheller, Alta.	90	180	Commenced January 5, for change in working conditions. Settled by negotiations and work resumed January 7; working conditions improved.
MANUFACTURING— <i>Vegetable foods:</i> Bakers, Montreal, Que.....	51	204	Commenced January 24, against increase in price of bread. Settled by negotiations and work resumed January 29, when price of bread was reduced.
<i>Boots and shoes:</i> Boot factory employees, Montreal, Que.	200	1,200	Commenced January 26, against reduction in wages. Unterminated.
<i>Iron, steel and products:</i> Moulders, Hamilton, Ont.....	15	30	Commenced January 30, against reduction in wages. Unterminated.
CONSTRUCTION— <i>Railway construction:</i> Labourers, etc., Edmonton, Alta.	50	850	Commenced January 2, for increased wages. Settled by negotiations and work resumed January 22.
SERVICE— <i>Personal—domestic:</i> Cooks and waiters, Winnipeg, Man.	18	18	Commenced January 2, for one day off per week. Settled by replacement January 3.
Laundry workers, Ottawa, Ont.	60	120	Commenced January 8, for renewal of agreement in effect during 1924. Settled by negotiations and work resumed January 10.

STRIKES AND LOCKOUTS IN CANADA DURING 1924

THE year 1924 was marked by a smaller number of strikes and lockouts than 1923 or 1922, which years in turn had shown lowest numbers of disputes since 1915. Of the 73 disputes in existence during the year, 10 were carried over from 1923, there being 63 which began during the year. At the end of the year two disputes were still in existence, one of clothing workers in Montreal which began in December, and one of coal miners at Drumheller, Alberta, which began on December 29. The numbers of employees involved and the time loss in man working days were much greater than in 1923, and nearly as great as in 1922, owing to a strike of over 7,000 coal miners in Alberta and British Columbia, which lasted from April to October, causing a time loss of over one million working days. A strike of similar magnitude and duration had occurred in 1922 also.

The other principal disputes during the year included a strike of about 10,000 coal miners in Nova Scotia in January and February, and the strike of job printing compositors for the 44-hour week which began in 1921 and continued in Canada in six cities, being not called off until August 30, 1924. A strike of loggers in British Columbia in January and February involved over 1,500 employees, causing a time loss of nearly 45,000 working days.

In addition to the above there were two strikes of clothing workers in Montreal, each of which caused time losses of over 10,000 working days, and a strike of boot factory employees at Quebec caused a time loss of nearly eight thousand working days. A dispute at Hull, Que., involving about 275 match workers in an alleged lockout caused a time loss of about 12,000 working days. A strike of carpenters and shipwrights, engaged in shipbuilding at Vancouver, B.C., involved 150 men for nearly six weeks and caused a time loss of over 5,000 working days. A strike of postal employees involving nearly 2,000 men for 12 days in June, caused a time loss of over twelve thousand days. A strike of fishermen in British Columbia, involving over 500 men for a week, caused a time loss of about 4,500 days. A strike of painters in Montreal, and a strike of plumbers in Hamilton, each caused time losses of somewhat more than 2,000 working days. Apart from the above, none of the disputes during the year caused as much as 2,000 working days, and only six caused a loss of more than 1,000 days.

The figures in this report are inclusive of all strikes which come to the knowledge of the

department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. So far as concerns figures given with respect to duration of strikes, numbers of employees concerned, etc., it is impossible always to secure exact information, but the estimate made in such cases is the result of painstaking methods in the collection of data, and, with increasing experience in dealing with the subject it is believed that the statistics indicate the conditions with reasonable precision. The estimate of time loss is reached by multiplying the number of working days during which each strike lasted by the number of employees involved in the dispute from time to time so far as known.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together, the term dispute being used with reference to either.

A strike or lockout included as such in the records of the Department, is a cessation of work involving six or more employees and lasting one working day or more. Disputes of less than one day's duration and disputes involving less than six employees have not been included in the published record, but a separate record of such disputes has been maintained in the Department during 1924. Any such disputes involving a time loss of ten working days or more have been included in the published record, there being 5 of these involving 26 employees and resulting in a time loss of 760 working days.

The accompanying chart of the time loss in working days by groups of industries for each year back to 1901, shows that in mining considerable time loss occurred in 1903, 1909, 1910, 1911 and 1913, and again in 1917, 1919, 1922, 1923 and 1924. In metal trades no great time loss appeared except in 1919, when the strikes in the metal trades in various cities and the general strike in Winnipeg in sympathy with the metal trades' strike there, caused a time loss of about two million days. In 1918, 1920 and 1923, however, the time losses (in these trades) were larger than in other years. In building and construction considerable time loss appeared in 1903, 1907, 1911 and 1919. In transportation there was considerable time loss only in 1901, due to a strike of trackmen, in 1908, due to a strike of railway shop machinists and in 1918 and 1919 due to numbers of strikes in street rail-

TIME LOSS IN WORKING DAYS THROUGH STRIKES AND LOCK-OUTS BY GROUPS OF INDUSTRIES EACH YEAR 1901-24

RESULTS OF STRIKES AND LOCKOUTS ACCORDING TO NUMBERS
OF EMPLOYEES INVOLVED IN 1901-1924

way operation, as well as among freight handlers, in local transportation, cartage, etc.

TABLE I.—RECORD OF STRIKES AND LOCKOUTS BY YEARS

Year	Number of disputes		Disputes in existence in the year		
	In existence in the year	Beginning in the year	Employers involved	Employees involved	Time loss in working days
1901.....	104	104	273	28,086	632,311
1902.....	121	121	420	12,264	120,940
1903.....	146	146	927	50,041	1,226,500
1904.....	99	99	575	16,482	265,004
1905.....	89	88	437	16,223	217,244
1906.....	141	141	1,015	26,050	359,797
1907.....	149	144	825	36,224	621,962
1908.....	68	65	175	25,293	708,285
1909.....	69	69	397	17,532	871,845
1910.....	84	82	1,335	21,280	718,655
1911.....	99	96	475	30,094	2,046,650
1912.....	150	148	989	40,511	1,099,208
1913.....	113	106	1,015	39,536	1,287,678
1914.....	44	40	205	8,678	430,054
1915.....	43	38	96	9,140	106,149
1916.....	75	74	271	21,157	208,277
1917.....	143	141	714	48,329	1,134,970
1918.....	196	191	766	68,489	763,341
1919.....	293	290	1,913	138,988	3,942,189
1920.....	285	272	1,273	52,150	886,754
1921.....	145	138	907	22,930	956,461
1922.....	85	70	569	41,050	1,975,276
1923.....	91	77	419	32,868	768,494
1924.....	73	63	415	32,494	1,770,825
Total.....	2,915*	2,803	16,406*	835,689*	23,118,849

*In these totals figures for disputes extending over the end of a year are counted more than once.

From the chart showing results of the settlements arrived at it appears that the majority of employees were successful or substantially successful in 1905, 1906, 1915, 1917 and 1918, periods of steadily rising prices and expanding business, but were unsuccessful in 1908, 1919 and 1920, years of uncertainty in industry.

TABLE II.—STRIKES AND LOCKOUTS, 1924, BY NUMBER OF EMPLOYEES INVOLVED

Number of employees involved	Disputes		Number involved	Time loss	
	Number	Per cent of total	Em- ployees	Working days	Per cent of total
10,000 and over.....	1	1.4	10,585	315,405	17.8
5,000 and under 10,000	1	1.4	7,403	1,224,159	69.1
2,500 and under 5,000	4	5.5	6,736	84,707	4.8
1,500 and under 2,500	1	1.4	1,200	1,200	0.1
1,000 and under 1,500	1	1.4	573	4,584	0.3
500 and under 1,000	10	13.7	3,496	79,640	4.5
250 and under 500	7	9.6	839	25,191	1.4
100 and under 250	14	19.1	957	11,223	0.6
50 and under 100	15	20.5	517	13,632	0.8
25 and under 50	19	26.0	188	11,084	0.6
Under 25.....					
Total.....	73	100.0	32,494	1,770,825	100.0

In Table II the analysis by the number of employees shows that there were few dis-

putes involving large numbers of employees, but that the time loss due to these was very great, most of it being due to the two strikes of coal miners, namely, that in Alberta and British Columbia, involving over 7,000 men for nearly six months, and that in Nova Scotia involving over 10,000 men for nearly six weeks. The other strikes involving large numbers of employees were mentioned in paragraphs two and three.

TABLE III.—STRIKES AND LOCKOUTS, 1924, BY TIME LOSS

Period of working days lost	Disputes		Num-ber in- volved	Time loss	
	Num- ber	Per- cent of total	Em- ployees	Work- ing days	Per- cent of total
100,000 days and over..	2	2.7	17,988	1,539,564	86.9
50,000 days and under 100,000.....	2	2.7	1,880	87,098	4.9
25,000 and under 50,000.	5	6.8	5,561	70,133	4.0
10,000 and under 25,000.	4	5.5	893	29,292	1.7
5,000 and under 10,000.	4	5.5	1,068	14,652	0.8
2,500 and under 5,000.	5	6.8	551	10,240	0.6
1,500 and under 2,500.	6	8.2	1,693	7,538	0.4
1,000 and under 1,500.	10	13.7	1,151	6,923	0.4
500 and under 1,000.	8	11.0	798	2,874	0.2
250 and under 500.	11	15.1	517	1,863	0.1
100 and under 250.	16	22.0	394	648	0.0
Under 100.....					
Total.....	73	100.0	32,494	1,770,825	100.0

In Table III, the analysis by time loss shows that most of the disputes caused little time loss, being due to a small number of disputes involving large numbers of employees as in Table II.

TABLE IV.—STRIKES AND LOCKOUTS, 1924, BY DURATION

Period of Duration	Disputes		Num- ber in- volved	Time loss	
	Num- ber	Per- cent of total	Em- ployees	Work- ing days	Per- cent of total
Under 5 days.....	26	35.6	3,625	6,388	0.4
5 days and under 10...	11	15.1	1,826	12,476	0.7
10 days and under 15...	7	9.6	2,175	14,563	0.8
15 days and under 20...	4	5.5	1,805	12,738	0.7
20 days and under 30...	5	6.8	795	19,560	1.1
30 days and over.....	18	24.7	22,168	1,703,260	96.2
Untermiated or in- definite.....	2	2.7	100	1,840	0.1
Total.....	73	100.0	32,494	1,770,825	100.0

In Table IV, the analysis by duration shows that out of the 73 disputes in existence during the year, 26 were under 5 days' duration, and 11 were of five days or over and under 10, thus making 37 disputes, or over half of the

disputes under 10 days in duration. There were, however, 18 disputes of 30 days or over in duration, and as these included the two principal strikes of coal miners, this group caused most of the time loss for the year.

TABLE V.—STRIKES AND LOCKOUTS, 1924, BY PROVINCES

Province	Disputes		Number involved	Time loss		
	Number	Per cent of total	Employees	Working days	Per cent of total	
Nova Scotia.....	9	12.3	12,747	322,574	18.2	
Prince Edward Island.....						
New Brunswick.....	1	1.4	57	1,026	0.1

(a) One strike in both Alberta and British Columbia counted in each but only once in the total. In this case the number of employees and time loss in each province was allocated to it.

(b) Strike in Note (a) excepted.

In Table V, the analysis by provinces shows that the disputes causing most of the time loss as well as including most of the number of employees involved, were in Nova Scotia, Alberta and British Columbia, on account of the two principal coal strikes as well as a number of smaller strikes of coal miners. Next to these the provinces of Quebec and Ontario experienced considerable time loss, that in Quebec being due to disputes involving large numbers of employees, namely strikes of clothing workers in Montreal.

In Table VI, the analysis by industries shows most of the time loss to be due to disputes in mining, but that there was considerable time loss in logging, due to the strike of lumber workers in British Columbia; also in manufacturing of clothing, due to several strikes of clothing workers, chiefly in Montreal; boot-making, chiefly in Quebec City; printing and publishing, due to eight strikes of job office printing compositors in six cities carried over from 1921; wood products, due to an alleged lockout of match workers at Hull, Que., and in public administration, due to a strike of postal employees in various cities.

In Table VII, the analysis by causes shows that 39 out of the 73 disputes were over questions of wages, of which nine were against de-

creases. There appear five disputes for shorter hours, and one against longer hours. There appear 12 disputes over questions of unionism,

of which three were for recognition of union. There appear 11 disputes against discharge of employees. The analysis of results shows that of the 20 disputes over increases in wages, three ended in favour of the employees, nine in favour of the employers, and eight were partially successful or ended in compromises. Of the nine disputes over decreases in wages, four ended in favour of employees, four in favour of employers, and one was partially

successful. Of the 73 disputes for the year, 17 were in favour of employees, 29 were in favour of employers, 23 were compromises or partially successful. Of the four which were indefinite or unterminated, two were unterminated at the end of the year, one was settled by a reference to arbitration which had not been completed, and as to the other information was unobtainable.

Table VIII shows disputes in the various industries by methods of settlement. It appears that 30 out of the 73 in existence were settled by negotiations between the parties concerned, while 11 were settled by conciliation or mediation, and in nine disputes the employees returned to work on employers' terms. The 12 disputes in the column headed "Otherwise" included the strikes of job office printing compositors carried over from 1921, which the union called off at the end of August.

In Table IX with figures by months, it appears that most of the time loss occurs during the spring and early summer months. For those months where great time loss appears it is usually due to a strike of coal miners. In May and June, 1921, however, considerable time loss appeared, due chiefly to strikes in the building trades against reductions in wages. In May, June and July, 1920, considerable time loss appeared due to strikes in the building trades, metal trades and of coal miners.

Table X gives the list of strikes and lockouts in detail as to causes, results, etc. As explained in paragraph six, this list does not include disputes involving less than six employees or of less than one day in duration unless they cause a time loss of ten man working days or more. There were no disputes in existence during 1924 omitted from the list for this reason. In addition to those listed there were on record during the year a number of disputes which have been recorded as terminated because reports indicated that in-

dustrial conditions were no longer affected and there were certain other disputes causing cessation of work which could hardly be classed as strikes or lockouts although sometimes referred to as such. During 1924 these were as follows:—

The strike of moulders at Guelph beginning on June 2, 1924, was recorded as terminated August 25, the employees being replaced, but the union did not call off the strike by the end of 1924. The strikers, however, had obtained work elsewhere.

A dispute of street railway employees at St. John, N.B., resulting in a cessation of work in June 29, 1921, had not yet been called off by the union at the end of 1924, and there were still a number of men receiving strike pay. Reports indicated that employment conditions were no longer affected shortly after the cessation of work as the employees were replaced. Early in 1922 a large number of the employees secured work elsewhere.

A strike of moulders at Galt, Ont., August 2, 1922, was terminated by the end of the month by the replacement of strikers but the union had not called off the strike by the end of 1924. The strikers, however, obtained work elsewhere.

A cessation of work involving 12 stone masons on a building at Montreal, June 5, 1924, was due to a clause in the contract that the employees should be members of a certain union. Of the 12 men who left when notified of this, ten returned within a few hours and joined the union.

A dispute between the theatrical employees' union and certain moving picture theatres at Hamilton as to recognition of the union led to a declaration by the union that a lockout had been begun by the proprietors of these theatres, on the ground that they refused to employ members of a union. The employers reported that no dispute with their employees had occurred as the latter did not belong to the union.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING DECEMBER

THE British *Ministry of Labour Gazette* for January contains the following table which analyses the disputes in progress in December, 1924, in Great Britain and Northern Ireland by groups of industries, and indicates the number of workpeople involved at the establishments concerned and the approximate time lost during the month in all disputes in progress:—

Groups of industries	Number of disputes in progress in December			Number of work-people involved in all disputes in progress in Dec.	Aggregate duration in working days of all disputes in progress in Dec.
	Start- ed before Dec. 1	Start- ed in Dec.	Total		
Mining and quarrying.....	6	11	17	10,000	41,000
Metal, engineering and shipbuilding.....	6	11	17	2,000	24,000
Textile.....	6	6	6	1,000	11,000
Other.....	12	13	25	3,000	16,000
Total, Dec., 1924..	24	41	65	16,000	92,000
Total, Nov., 1924..	32	40	72	15,000	134,000
Total, Dec., 1923..	12	12	24	10,000	83,000

Of the 41 disputes beginning in December, 17, directly involving 3,000 workpeople, arose

out of demands for advances in wages or other wages questions; 12, directly involving 3,000 workpeople, on questions respecting the employment of particular classes or persons; 6, directly involving 3,000 workpeople, on details of working arrangements; and 6, directly involving 2,000 workpeople, on other questions. In addition about 4,000 workpeople were involved, either directly or indirectly, in 24 disputes which began before December and were still in progress at the beginning of that month. The number of new and old disputes was thus 65, involving about 16,000 workpeople, and resulting in a loss during December of about 92,000 working days.

Settlements were effected in the case of 26 new disputes, directly involving 9,000 workpeople, and 10 old disputes, directly involving 4,000 workpeople. Of these new and old disputes, 9, directly involving 3,000 workpeople, were settled in favour of the workpeople; 9, directly involving 3,000 workpeople, in favour of the employers; and 18, directly involving 7,000 workpeople, were compromised. In the case of 4 disputes, directly involving 1,000 workpeople, work was resumed pending negotiations.

RECENT LABOUR LEGISLATION IN SASKATCHEWAN

SEVERAL measures affecting labour were enacted by the Legislative Assembly of Saskatchewan at the recent session, which opened on November 13 and closed on January 16, being the fifth session of the fifth legislature of the Province. The laws relating to insurance and public health were revised and consolidated, and legislation was passed dealing with the liquor question. Considerable time was spent in a discussion of certain matters of Federal jurisdiction and resolutions were adopted for presentation to the Dominion authorities. These matters concerned the question of railway freight rates, the construction of branch lines by the Canadian National Railways, and soldiers' pensions. The text of the resolution in reference to soldiers' pensions, which was adopted unanimously, was as follows:—

(1) That, for the purpose of making more suitable and adequate provisions for ex-service men and their dependents, the Government of Canada should at the next session of Parliament again introduce a Bill to amend The Pensions Act, and that there be included

in such Bill the provisions contained in Bill No. 255 of last session, which were passed by the House of Commons but were deleted therefrom by the Senate;

(2) That the Government of Canada be asked to take the necessary steps to make effective the recommendations contained in the fifth report of the Select Special Committee on Pensions, Insurance and Re-establishment of Returned Soldiers, made to Parliament at its last session, which said report was in effect that the interests of the returned men will be better safeguarded and the intent of Parliament will be better carried into effect by a more sympathetic interpretation of The Pensions Act and its schedules, and that this can best be carried out by the reorganization of the Board of Pension Commissioners for Canada and the medical services attached thereto.

Employment Offices.—The Employment Agencies Act (Revised Statutes, Chapter 184), which was revised last year by the addition of a new section prohibiting private agencies from using the word "Saskatchewan" as part of their designation (LABOUR GAZETTE, May, 1924, page 375), was further amended by the addition of new sections permitting town, village or rural municipalities in which there is no government employment office to es-

establish an employment office, and to charge employers availing themselves of its services such fees as may be fixed by bylaw, the municipal clerk or secretary-treasurer being required in such cases to notify the Commissioner of the Bureau of Labour and Industries and to furnish reports as required. It will be recalled that the original act prohibited any person, firm, or association from conducting an employment office for gain.

Mechanic's Lien.—A new subsection was added to the section of the Mechanic's Lien Act which relates to the registration of liens in reference to certain administrative details.

Licensing of Bakers.—By the Bread Sales Act every person conducting a bakeshop was required to carry a license issued by the municipality, no license to be issued until the medical health officer shall have given a certificate that all regulations and conditions have been met.

Licensing of Hawkers and Pedlers.—The Hawkers and Pedlers Act was amended in the section that was added to the act in 1922 and further amended in 1924, excepting certain persons from the definition of "hawkers and pedlers." The new amendment requires persons selling lumber or coal to obtain a hawkers' or pedlers' license but excepts from this provision those who reside or have a place of business in the municipality in which the sale takes place. Farmers selling products of their own farms were excepted only when these farms are in Saskatchewan (corresponding amendments were made in the City Act, the Town Act, the Village Act and the Rural Municipalities Act). The section relating to the payment of pedlers' fees was amended by the insertion of a new clause requiring applicants to take an affidavit that they had not previously operated as transient traders during the period covered by their license. The penalty for operating without a license must not be less than \$10 for the first offence, and not less than \$50 for the second offence.

Thresher's Liens.—A new Thresher's Lien Act was enacted, being a redraft of the earlier act (Revised Statutes, Chapter 208). This Act gives every person who threshes grain or causes grain to be threshed for another person at a fixed price, a lien upon such grain for 60 days after completion of the work, for the purpose of securing payment, this lien to have priority over all writs of execution against the owner of the grain, subject to the provisions of the Chattel Mortgage Act. The act in its new form contains provisions relating to the power of the lien holder to take grain, the quantity that may be retained, the

right to sell again and apply the proceeds of such sale, the lien holders' right to demand a statement of amount of grain threshed, etc.

Thresher Employees' Act.—This Act (Revised Statutes, Chapter 209) was amended in the section which relates to the liability of the third person in cases where an employee has a claim against the earnings of his employer for the amount of his wages in the hands of a third person for whom threshing has been done. The section, as revised, requires that the third person hold available for 60 days sufficiently money to meet any claim for wages. Changes were also made in the section relating to procedure in cases where claims are contested.

Single Transferable Vote.—Provision was made by an amendment to the City Act enabling city councils to submit to the electors a by-law for the election of the mayor and aldermen by the system known as the single transferable vote, the proposed system being set forth in the by-law.

A resolution in favour of a general minimum wage act for British Columbia was passed at a meeting at Esquimalt last month as follows: "Resolved that this meeting go on record as favouring the adoption of a minimum wage bill for labour in the province and that such a bill be drafted with a view to making working conditions better for the white people by removing the unfair competition now existing, and that such protection as deemed necessary for the assistance of the industry of agriculture, by exempting such industry from the minimum wage in respect to the clearing of land and general farm labour, be provided for."

A bill to establish a legal minimum wage in all industries was introduced recently in the legislature of South Africa. Under its provisions a central wage board of three members, appointed by the Minister of Labour, would be set up, with the duty of recommending a minimum wage in each industry by districts. In each industry, the employers and employees, respectively, would appoint two assessors to assist the board, which would make its recommendations to a Minister who would then fix the minimum wage. The Minister would not be compelled, however, to accept the Board's findings unaltered. In case either the employer or the employees object to the wages as fixed, the Minister must appoint an arbitrator to examine the position anew and report to him. The Minister would then give his decision, which would be final.

INDUSTRIAL DISEASES UNDER ONTARIO WORKMEN'S COMPENSATION ACT

Stone workers' or grinders' phthisis added to list for compensation

THE following notice was published in the *Ontario Gazette*, January 24, 1925, adding stone workers or grinders' phthisis to the list of industrial diseases that are compensable under the Workmen's Compensation Act of Ontario. It may be noted that under Section 2 of the Act, which came into effect on January 1, 1915, the Board has power to add to the list of "industrial diseases" that is contained in Schedule III of the Act, and to declare by a Regulation that any other disease falls within this category. The diseases mentioned in Schedule III are as follows: anthrax, lead poisoning or its sequelae; mercury poisoning or its sequelae; miners' phthisis (this disease added by amendment in 1917); phosphorus poisoning or its sequelae; ankylostomiasis (a

disease of miners). The regulation just issued is as follows:—

94. It is hereby declared that stone workers' or grinders' phthisis, due to employment in quarrying or in cutting, crushing, grinding, or polishing of stone, or in grinding or polishing of metal, and benzol poisoning due to employment in any process involving the use of benzol, shall be industrial diseases within the meaning of The Workmen's Compensation Act as if the words "stone workers' or grinders' phthisis" were inserted in the first column of Schedule 3 of the Act, and the words "quarrying, cutting, crushing, grinding, or polishing of stone, or grinding or polishing of metal" were inserted opposite thereto in the second column of the said Schedule, and as if the words "any process involving the use of benzol" were inserted opposite thereto in the second column of the said Schedule.

This regulation was passed on December 24, 1924, and approved by the Lieutenant-Governor in Council January 13, 1925.

BRITISH COLUMBIA HOURS OF WORK ACT, 1923

New Orders Issued by Board of Adjustment

THE Board of Adjustment under the Hours of Work Act of British Columbia, 1923, issued an order, dated January 14, 1925, rescinding the order which was reprinted in the last issue of the *LABOUR GAZETTE*, permitting workers in the shipbuilding and metal trades industries to work 15 hours per man per month, over and above the 8-hour per day limit prescribed for industry generally, in order to execute work necessary to keep other industries in operation.

New Exemptions Allowed

The Board further issued the following new orders:—

Having regard to the nature and conditions of the industrial undertakings hereinafter mentioned, the condition of employment and welfare of employees, the Board of Adjustment after inquiry, held pursuant to the "Hours of Work Act, 1923," and subject to the approval of the Lieutenant-Governor in Council, hereby exempts to the extent hereinafter stated from the provisions of section 3 of the said Act, the industrial undertakings and workers engaged therein, hereinafter mentioned, namely:—

1. All workers employed in saw-mills, planing mills and shingle mills in the district east of the Cascade Mountains shall be permitted to work one hour per day in excess of the limit prescribed by section 3 of the Act; the total hours worked not to exceed 54 per week.

2. All engineers, firemen, and oilers engaged in saw-mills, planing mills, and shingle mills, in charge of steam plants operating on a one-shift basis, in the

district east of the Cascade Mountains, shall be allowed to work further overtime to the extent of one and one-half hours per day to cover preparatory and complementary work in addition to the said 54 hours per week.

3. All workers employed in the lumber and shingle manufacturing industries as operators of launches; all persons engaged in booming operations; all workers engaged as operators of transportation systems in connection with shipping, and planing operations in connection with shipping, necessary to fill urgent orders.

4. All workers employed in ship repair plants, engineering works, machine shops, foundries, welding plants, sheet-metal works, belt-works, saw-works, and all like plants doing repair work, when engaged on urgent repair work which must of necessity be done, in order that other industries shall not be seriously handicapped in their operations.

5. All bakers employed in the baking industry shall be permitted to work ten (10) hours per man per month in excess of forty-eight (48) hours per week, and all bakery salesmen or deliverymen twenty-six (26) hours per man per month in excess of 48 hours per week.

6. All workers engaged in industries whose shipping operations are of an intermittent nature shall be permitted to work such overtime as may be necessary to enable urgent shipping orders to be executed.

7. That part of the undertaking of the West Kootenay Power and Light Company, Limited, at Lower Bonnington, B.C., being the construction work in progress in connection therewith, until the 1st day of February, 1925.

8. All workers employed by The Laminated Materials, Limited, of New Westminster, as veneer operatives, cement spreaders, and those engaged in the finishing department, are exempt from the provisions of section 3 of the Act until the 6th day of March, 1925.

ANNUAL REPORT OF THE DEPARTMENT OF LABOUR OF CANADA

THE annual report of the Department of Labour of Canada, recently issued, describes the work carried on by the various divisions of the Department during the fiscal year ending March 31, 1924. The Department's activities are shown as divided into ten sections, as follows: 1. Work in connection with the Industrial Disputes Investigation Act, 1907; 2. Other conciliation work; 3. Fair wage administration; 4. Collection and publication of labour statistics; 5. Publication of the LABOUR GAZETTE; 6. Administration of the Combines Investigation Act, 1923; 7. Work in connection with the Employment Service of Canada; 8. Administration of the Technical Education Act; 9. Administration of the Government Annuities Act, and 10. Work in connection with the League of Nations International Labour Conference.

Industrial Disputes Investigation Act, 1907.—The complete absence of strikes in the twenty-eight cases dealt with under the Industrial Disputes Investigation Act, 1907, was the outstanding feature of the record for the year, the strike which had threatened when each application for procedure under the statute was made having been averted. Eighteen Boards of Conciliation and Investigation functioned during the fiscal period; five of these had been established during the preceding year.

The report gives full particulars as to the cases dealt with during the year. (A summary of the year's proceedings under the Act appeared in the LABOUR GAZETTE for August, 1924.) The report also contains a full account of the legal proceedings in connection with the refusal of the Toronto Electric Commission to recognize a board under the Act, including the text of the judgments delivered in the Ontario courts on the subject of the validity of the Act; and an outline of the proceedings in Parliament on proposed amendments to the Act. These subjects have already been dealt with in the LABOUR GAZETTE.

Conciliation Work.—In addition to the administration of the Industrial Disputes Investigation Act, the services of the Department of Labour were utilized during the year in connection with the settlement of a number of labour disputes. In some instances the Minister of Labour assisted personally, and in other cases the good offices of the department were exerted through the fair wages officers who are stationed at different industrial centres.

Fair Wages.—As a result of experience gained in the administration of the fair wages policy of the Government of Canada, as set forth in the Order in Council of June 7, 1922, certain amendments were made in this Order in Council on April 9, 1924, on recommendation of the Minister of Labour, which, without altering the scope and intent of the policy, are intended to make its purpose clearer and more definite.

The fair wages policy of the Government of Canada has been in effect since 1900 and is based on a resolution of the House of Commons which was adopted at the session of 1900 as follows:—

"That it be resolved, that all government contracts should contain such conditions as will prevent abuses which may arise from the subletting of such contracts, and that every effort should be made to secure the payment of such wages as are generally accepted as current in each trade for competent workmen in the district where the work is carried out, and that this House cordially concurs in such policy, and deems it the duty of the Government to take immediate steps to give effect thereto.

"It is hereby declared that the work to which the foregoing policy shall apply includes not only work undertaken by the Government itself, but also all works aided by grant of Dominion public funds."

During the year 1923-24 the Department of Labour prepared fair wages conditions in connection with the execution of 79 contracts. These are divided among the different departments of the Government as follows: Public Works Department, 43; National Defence, 2; Interior, 2; Trade and Commerce, 1; Marine and Fisheries, 10; Indian Affairs, 11; Railways and Canals, 10.

Labour Statistics.—During the year statistics of strikes and lockouts, wages and hours of labour, prices and cost of living, employment and industrial accidents were collected and published regularly in the LABOUR GAZETTE, annual reviews also appearing soon after the close of the calendar year. In accordance with the Statistics Act, 1918, and under arrangements with the Dominion Statistician, approved by Order in Council dated October 16, 1922, certain classes of these statistics are collected and published in co-operation with the Dominion Statistician, in close association with statistics of general social and economic conditions as organized in the Dominion Bureau of Statistics. The classification of industries and occupations drawn up in the bureau is followed in the compilation of the statistics of labour.

Labour Gazette.—The LABOUR GAZETTE was published regularly during the fiscal year in English and French, its total monthly average circulation being 12,400 copies.

Combines Investigation Act.—At the close of the fiscal year 1923-24 the Combines Investigation Act had been in operation for a little over seven months; during this period various inquiries and representations were received in the Department of Labour relative to the Act, but no formal applications, in accordance with section 5 of the statute, were received. The report notes that "the fact that no formal applications were filed during the first year does not perhaps measure the value of the Act; no doubt, quite apart from any proceedings, there is value in the moral effect which the enactment of this law has had upon business in general through the instrument which has been placed at the disposal of the public for its own protection against combines of a detrimental nature." Several applications under the statute have been received during the present fiscal year.

Employment Service.—An outline of the Dominion-Provincial employment organization was given in the LABOUR GAZETTE for December, 1924. At the beginning of the year offices were conducted at 69 centres, but at the close of the year this number had been reduced to 67. One new office, located at Penticton, B.C., was opened during the year; the offices at Amherst, N.S., The Pas, Man., and Macleod, Alberta, were closed. For the purpose of co-ordinating the efforts of the various local offices, and to enable the transfer of any kind of labour from districts over supplied to those where a dearth exists, Clearing Houses have been established at eight centres throughout Canada. Those for provincial clearance, operated by the provincial governments as part of the Employment Service of Canada, are situated at : Montreal, Toronto, Winnipeg, Regina, Edmonton and Vancouver. Those for interprovincial clearance operated by the Department of Labour in the interests of the Employment Service of Canada are: Eastern Clearing House, Ottawa; Western Clearing House, Winnipeg.

Technical Education.—The first half of the ten-year period during which federal grants are available under the provisions of the Technical Education Act ended on March 31, 1924. In some provinces the growth of vocational education has been slow, due to industrial and financial depression, but, on the whole, fairly satisfactory progress has been made and the prospects for future growth are encouraging. The statistical tables for the

year under review show increases over the previous year in almost every department of the work. The amount expended by the Provincial Governments decreased from \$1,835,093.21 to \$1,817,443.38, but the federal grants paid to the provinces increased from \$648,227.03 to \$888,391.62. Federal grants have enabled the provinces to build and operate schools which offer a variety of courses specially designed to meet the educational and vocational needs of young people entering industrial life and of workers who desire supplementary education and training. The organization, administration and control of education, however, is entirely in the hands of the provincial and local authorities. Usually the initiative rests with the local school boards. The provincial governments render assistance as requested or advise the local officials in order that the work might be organized in conformity with existing regulations and thereby become entitled to provincial and federal grants. In a few cases, assistance is sought from the federal authorities in connection with the organization of new work, but ordinarily the Dominion Government is called upon to approve, for the purposes of federal grants, the work already being done. Notes on work in connection with the work under the Technical Education Act are published from time to time in the LABOUR GAZETTE.

The Technical Education Branch has continued to issue the "Vocational Education" bulletins. Five bulletins were issued during the year dealing with the problems of evening schools, apprenticeship, vocational guidance, teacher-training and government publications for use in vocational schools.

Dominion Government Annuities.—An increasing interest in Dominion Government annuities was manifested throughout Canada as the result of the inauguration of a publicity campaign, purchase money received during the fiscal period aggregating \$1,458,975.92, a figure greatly in excess of that for any previous year. This amount covered 409 contracts for annuities (217 immediate and 192 deferred), totalling \$174,574.35.

League of Nations International Labour Conference.—The proposals emanating from the successive International Labour Conferences were received in due course by the Canadian Government and have been brought to the attention of the competent legislative authorities, as required by the treaty terms. It should be noted that certain of the proposals were regarded by the federal law officers as coming within Dominion jurisdiction, whilst others were deemed to be within pro-

vincial authority and were accordingly referred to the several Provincial Governments for attention. The Department of Labour is entrusted with the duties arising out of the relations of Canada with the International Labour Organization. These have entailed much correspondence, not only with the International Labour Office, but also with other departments of the Dominion Government, with the provinces and with employers' and workers' organizations. Replies have also been prepared in the Department of Labour to various questionnaires which were circulated on behalf of the International Labour Office.

The performance of these duties has necessarily entailed a close study on the part of officers of the department of the various technical questions which have figured on the various Conference agenda and meetings of the Governing Body and of questionnaires received from the International Labour Office.

A bulletin entitled "Canada and the International Labour Conference" was issued by the Department of Labour in February, 1922, for the purpose of furnishing information in reference to the International Labour Organization and the subjects which have received attention at the hands of this body.

INDUSTRIAL CONCILIATION IN FRANCE

THE question of conciliation and arbitration in trade disputes was the chief item on the agenda for the 24th session of the Superior Labour Council of France, held from 17-20 November last.

The Council it may be recalled, is composed as follows: employers' representatives, 32; workers' or salaried employees' representatives, 32; Paris Chamber of Commerce, 1; consumers' co-operative societies, 1; producers' co-operative societies, 1; members of the Institute of Professors of the Faculty of Law in Paris (nominated by the Government), 3; members of the Senate (nominated by their fellow-members), 3; members of the Chamber of Deputies (nominated by their fellow-members), 5.

Mr. Justin Godart, Minister of Labour, who presided, pointed out that the conciliation act of 1892 was regarded with indifference by both parties owing to the absence of a compulsory clause in its provisions. From 1893 to 1920 recourse had been had to the act in only 4,379 strikes out of 23,711. "The question we have to consider," he said, "is whether, when all peoples are hoping for the replacement of warfare by arbitration, this means to peace, with its precedent stage of conciliation, shall or shall not be proclaimed by the law of France to be the means which should be applied for the settlement of all disputes between employers and their work-people."

The Council adopted the following resolutions:—

That when the establishment of direct relations between the representatives of the two parties has failed to settle the difference by conciliation, a fresh effort of conciliation shall be made, either according to a procedure on which the two parties have agreed,

or, failing such agreement, before the trade councillors (*conseillers prud'hommes*) of the employers and workers in the trade group concerned, where they exist, or, failing this, before a judge. (Adopted by 44 votes to 8, with 3 abstentions).

That this fresh effort of conciliation shall be compulsory, on the demand of either of the two parties or on the invitation of the representative of the public authority or of his substitute. (Adopted by 34 votes to 24).

It is understood that, as regards the interpretation of the word "parties," the representatives of the trade unions of either party shall be regarded as qualified to demand a fresh effort of conciliation. (Added to the resolution by 35 votes to 24).

The following resolutions were also adopted:—

In the event of a breakdown of the conciliation effort, it would be desirable to arrange for the publication of an account of the steps taken for conciliation under the conditions and in the form prescribed by the Act of 1892.

Alongside the procedure for conciliation, and in order to meet the possibility of its failure, it is desirable to organize a scheme of voluntary arbitration.

For the purpose of the appointment of arbitrators, the two parties should approach either a single person chosen by agreement between them, or one or more persons chosen in equal numbers, by the employers and the workers respectively, from among the members of the trade councils (*conseils de prud'hommes*) in the trade group concerned.

The award of the arbitrator or arbitrators should be published according to the procedure laid down in the Act of 1892.

The New Brunswick Sheep Breeders' Association, has marketed co-operatively 42,788 pounds of wool of the 1924 clip. Of this amount 22,000 pounds have been exported to the United States. The co-operative marketing of wool was started in 1914 in the county of Sussex, New Brunswick, and about 1918 the movement had extended throughout the province.

ANNUAL REPORT OF LABOUR DEPARTMENT OF QUEBEC

THE annual report of the Minister of Public Works and Labour of the province of Quebec for the year ended June 30, 1924, has recently been issued. It contains information respecting the construction, renewal and repair work carried out by the Province during the year, the work of the provincial employment bureaus, and that in connection with the inspection of industrial establishments and public works.

Although industry was not quite as prosperous as hoped for, there was no great change in the employment situation nor was there any strike during the year. A complaint was made to the Registrar of Councils of Conciliation and Arbitration respecting Sunday work at Hemmings Falls, with regard to which an inquiry was made and a report submitted.

Employment Service.—The report of the provincial employment bureaus showed that the five bureaus had found places for 18,267 persons, an increase of 191 over the year 1922-23. The Quebec and Three Rivers offices made increases, and there was an increase in the Montreal bureau in the number of men placed, but a decrease in the number of women. Sherbrooke increased in the number of women placed, but decreased in the number of men. The total number of applicants registered for work was 38,855, the number of vacancies notified by employers was 18,709, and the number of situations offered by bureaus, 20,619. The building industry engaged most of the workmen; then in order of importance came lumbering, agriculture, manufacturing and the placing of freight handlers and railway labourers. An extraordinary demand for hotel employees was also noted, believed due to the number of tourists attracted by the good roads of the province.

The report shows that there was no increase in the number of licensed registry offices, and no complaints were made against these offices during the year. These offices are visited periodically and they also send a detailed report of their operations to the federal authorities. This is done under an arrangement that is renewed each year by the Federal and Provincial authorities. As regards private agencies for servants, a number of complaints were received as to alleged overcharges and other abuses by certain proprietors of such agencies. It was recommended that these should be abolished, at least at Montreal, as the provincial bureau is now in a position to secure gratuitously all servants required, and the competition by these agencies is injurious to the success of the offices created by the government.

Inspection of Industrial establishments and public works.—By order in council 1036, of

1921, the province of Quebec was divided into three divisions for inspection purposes. The staff for the carrying on of this work in the year under review consisted of ten inspectors and three inspectresses, two members of the Council of Conciliation and Arbitration for settling disputes in the province, and a board of examiners of stationary engineers consisting of three members. The inspection of heating appliances in public buildings under the new law for the prevention of fires, was carried out satisfactorily and many repairs were made at the request of the officers. A number of principals of colleges and convents in the province asked to be relieved of the payment of the annual fee of five dollars which they have to pay the inspector, and it is stated that a proposition to pay a fixed salary to boiler inspectors is under consideration. Amendments are recommended in the regulations concerning boiler construction and regarding the inspection of second hand boilers, special reference being made to owners of industrial establishments, especially in country districts, who buy second hand boilers without consulting the department, and do not obtain guarantees or even have the boilers inspected by the department's officers before paying for them. In this way they run the risk of having the compression of the boilers reduced to such an extent as to be of no use for their business.

Accidents.—The number of accidents reported during the year under review totalled 1,183, of these 18 were fatal, 72 were serious and 1,093 were slight. Investigations into the causes of accidents totalled 90. The number of children registered for employment during the year was 2,877, making a total in the four year period ending June 30, 1924, of 19,011.

The West Canadian Collieries, Limited, of Blairmore, Alberta, has recently installed a pneumo-gravity coal cleaning equipment at its Greenhill mine, this being said to be the first equipment of the kind in Canada, and the third on the continent. Its advantages are summarized by the *Western Canada Coal Review* as follows: "It minimizes loss on coal for a given ash reduction, is easy of operation and control, requires a minimum of labour, reducing instead of increasing moisture, and is capable of being operated the year round. By its use the company avoids paying freight charges on unnecessary ash, saves in the handling of coal; decreases the probability of clinking; and permits working of coal seams hitherto deemed too high in ash content to operate successfully."

WORKMEN'S COMPENSATION IN QUEBEC

Recommendations of Special Commission Presented to Provincial Legislature

THE report of the Commission appointed under an act of 1922 of the province of Quebec (chapter 38) to study the subject of workmen's compensation in the province; was laid before the legislature by the Minister of Public Works and Labour on January 26. The act referred to provided as follows:—

The Lieutenant-Governor in Council may create a commission composed of five persons, chosen by him, of whom one representing the Government presides *ex officio*, two representing the employers and two representing the labourers, to inquire into the labour conditions in this province, with regard to the system or systems it would be expedient to establish in order to fix and determine indemnities or compensation in case of accidents to workmen in the course of or occasioned by their work.

A commission was appointed in October, 1923, in accordance with this act, its members being as follows:—

Chairman: Ernest Roy, K.C. (afterwards the Honourable Judge Roy) of Quebec.

Representing the employers: Joseph Alexandre Bothwell, manager of the Brompton Pulp Company, East Angus; and E. Gaudiose Brousseau, president of the Builders' Exchange, Quebec.

Representing the employees: Gustave Franco, of Montreal (for the International Unions), and Pierre Beaulé, of Quebec (for the National Unions).

Secretary, Alfred Crowe.

During the past year the commissioners held meetings in various industrial centres in the Province, evidence being received at each point from the employers and the employees. The Commissioners in their report agree as to certain important recommendations, but agreement was not reached on other matters and in regard to these the employers' and the employees' representatives submit independent recommendations.

General Report

The general report recommends that all branches of industry, with several exceptions, should come under the Workmen's Compensation Act; also that the law apply to all work done by school corporations, church corporations, municipalities, and federal and provincial governments when the law would apply if such work were done by private employers.

The maximum of salary that may be earned annually by a workman who is otherwise

eligible for benefits should be \$2,000 a year instead of \$1,500. The basis of arriving at the indemnity should be the daily salary multiplied by 300, no matter how many days are worked during the year. The law should apply only to accidents in the province, unless the victim was hired in the province and has no recourse in the Province where the accident occurred.

An organization should be created which would be advised of accidents in an official manner, and which would have complete statistics of accidents in the province.

In order to avoid litigation the term "principal means of support should be so defined as to permit the benefits to go not only to the wife of the victim of the accident and his children, but also to the parents where the victim of the accident has contributed to the support of such parents.

It is recommended that the funeral costs be raised to \$125.

Instead of payment of indemnities in lump sums, the commission is of opinion that the indemnities should be paid periodically in the case of fatal accidents or of permanent incapacity, and that the payments be always direct, either to the victim of the accident himself, or, in case of fatality, to the heirs. It is recommended that the main dispositions of the law be affixed in each factory.

Points of Disagreement

The representatives of labour ask that the rate of indemnities be raised to 66 per cent of the salary, and the representatives of the employers suggest that it be left at 50 per cent. The labour men believe the medical and hospital costs should be paid by the employer until cure, whereas the employers' representatives suggest that medical treatment be paid by them for a period of six months from the date of the accident.

As regards the amount of the capital on which the indemnity is to be fixed, the employers recommend the amount should be on a basis of four times the yearly salary, with a minimum of \$2,000 and a maximum of \$4,000. The labour men believe that the capital should not be definitely fixed, but should fluctuate according to the age of the widow and the number and age of the children under 16 years of age, and be sufficient in any event to guarantee a monthly payment of \$40

to the widow and \$10 per child, with the added provision, however, that the monthly payments must not exceed two-thirds of the salary of the victim.

The labour men ask that what are known as occupational sicknesses should come under the law, but the employers are not in favour of this proposal.

The employers are opposed to the principle of compulsory insurance, believing that the law should permit the large industries with financial strength to assure themselves. The employers desire that all paper and pulp industries, in all their branches, should come under the law. They believe that the victim of an accident, where possible, shall give notice of such accident to the employer within a period of two weeks under pain of losing all rights. They believe that the cases should be heard before the ordinary courts, as now, with, however, an appeal to the King's Bench, the judge to fix the indemnity, and, if in need of expert opinion, name three physicians, as a commission.

The labour men ask that the commission form of compensation be brought in, such commission to consist of at least three members, the cost of the service to be borne by the province. To supplement the commission form of workmen's compensation, they propose obligatory insurance, they believe also that the funeral costs should be \$150. They believe when there is only one dependant, a widow or an invalid husband, the indemnity should be a monthly payment of \$40, and, in addition, a sum of \$100 paid within thirty days after death. When there are children under 16 an additional \$10 a month is asked for each child, but in no event is the monthly payment to be more than 75 per cent of the salary. When the dependants are children only, it is asked that the payment be \$15 per month per child under 16, but not more than \$60 a month in all. In the event of the widow marrying again, the payments cease, but not without the payment as final compensation of a sum equal to two years of the indemnity, such payments to be made to the children. In the case of permanent incapacity, the labour men ask that the indemnities be equal to 66 per cent of the difference between the weekly salary gained and that which the workman can gain after the accident. In the case of partial temporary incapacity the rate asked is 66 per cent of the difference during the time of the incapacity.

The commission attaches a report of the College of Physicians and Surgeons which was asked to make recommendations. The college suggests that all medical costs be borne

by the employers. It is suggested that there be a special commission of physicians, labour men, employers and insurance companies to establish a schedule of medical rates. In the event of litigation before the courts, the college recommends that the court establish a commission of three experts chosen from a list of names prepared by the minister on recommendation of the universities and the college. The college is of opinion that in all cases the workman should choose his physician.

Mr. Gustave Franco adds a detailed report on the acts in force in England, France, Belgium, Switzerland, and also gives a study of the American law and those in force in other provinces of Canada.

Summary of Recommendations

1. All industries and branches of industries connected with any industrial undertaking should, with certain specified exceptions, come within the jurisdiction of the Act.

2. All corporations, public or private, church building works, school corporations and municipalities should come within the purview of the Act if they execute or cause to be executed any work or perform any services that would come under the Act if executed by a private individual. The federal and provincial governments should be requested to conform, in like circumstances, to the Act.

3. All employees irrespective of amount of wages earned engaged in industries or branches of industries governed by the Act should come within its application.

4. The maximum wage taken into consideration in fixing indemnities should be \$2,000.

5. The base of the annual wage should be regulated by the daily wage earned at the time of the accident, multiplied by 300, whatever the number of days worked may be in the year.

6. The Act should be confined to accidents occurring in Quebec only, except where the person injured was employed in Quebec, and was not entitled to any compensation in the province where the accident occurred, in which case no right to double compensation shall be granted.

7. The principal or the general contractor should be jointly and severally held responsible with all their sub-contractors.

8. The necessity of court procedure to establish the extent of partial or permanent incapacity should be eliminated.

9. Notice of accident should be given by the employer and by the employee to an organization to be established under the Act. This body should investigate all cases in accordance with a prescribed form giving the nature and

circumstances of the accident, and other particulars.

10. The methods of claiming indemnities should be simplified.

11. The words "principal support" should be omitted, and the benefits of the Act extended not only to the heads of families and surviving children, but also to the ascendants and dependants of which the person injured was the support or one of the supports, in proportion to the amount contributed to the latter by the victim at the moment of the accident.

12. The workers representatives recommend that the rate of the indemnities be raised to 66½ per cent of the wages; the employers' representatives recommend that the indemnity remain at 50 per cent.

13. Medical, surgical and hospital expenses should be charged to the employer up to the time of recovery from the injury; the employers' representatives recommend that it should only be for a period of six months from the date of the accident.

14. Medical, hospital and funeral expenses should be assumed by the employer in the case of a fatal accident even where there is no dependant.

15. Funeral expenses to the extent of \$125 should be charged to the employers.

16. The choice as to doctor and the hospital should be by arrangement between the employer and the person injured or his representatives, but should as much as possible be in accord with the religion and language spoken of the victim of the accident, and in an institution recognized by the government.

17. Insurance should be compulsory under a responsible collective, mutual or individual system.

18. A system of control for the fixing of premiums, the proportion of capital constituting the annuities, a guarantee as to the solvability of the insurers, is suggested.

19. Periodical payments should be made instead of a lump sum in the cases of fatal accidents or of total, permanent or serious partial incapacity.

20. Indemnities should always be paid to the person injured or to his legal representatives, but never to an intermediary.

21. The employers' representatives suggested that the maximum capital for the calculation of the indemnity should be four times the annual wages with a minimum of \$2,000 and a maximum of \$4,000. The workers' representatives suggested that the capital used to fix the compensation should not be stationary, but should fluctuate according to the age of the widow and the number and age of the children under 16 years; it should be suffi-

cient to guarantee a monthly payment of \$40 to the widow and of \$10 to the child but the total amount of this monthly allowance should not exceed the two-thirds of the victim's wages.

22. The provisions of the Act (both in French and in English) should be displayed in a prominent place in the different departments of all industrial establishments or other coming under the Act.

23. Occupational diseases. The representatives of the workers ask that reparation be granted for loss resulting from certain occupational diseases in the same way as the industrial accidents. The representatives for the employers believe that the present time is unsuitable for such an extension of the Act.

The Government and Compensation

The Honourable L. A. Taschereau, Premier of the Province, in the course of a speech in the Legislature on January 13, said:—

The Commission charged with the task of studying the Workmen's Compensation Act promise their report shortly. We will study it with interest, because if Quebec is the pioneer in the realm of labour legislation we do not wish to lag behind now. We are ready to give to the workmen all the wise amendments which the experience of the past and of neighbouring lands can suggest. I know that our Commission has carried out a conscientious work and that their suggestions cannot but improve the relations between employer and workmen, and assure to them the full measure of aid and protection due to them by the State.

In this connection, I wish to call attention to another advantage which we wish to give to our workmen, and which will not weigh in any way upon their employers. The Workmen's Compensation Act provides for an indemnity payable to the workman in case of accident, or to his widow or children if the accident should prove fatal. We have thought of the matter of educating these young children, and we will ask the House to vote a credit for the purpose of providing education in the primary schools for the sons of the workers killed at work. The employer assures to them their bread; we wish to feed their minds. This is a measure in which this province takes the initiative. I trust it will be appreciated by the working class, and that later on the sons of the workers will be proud of the province which concerned itself with the task of educating them as their fathers would have liked to do. . . . In a young country such as ours the compensation which the employer pays to his workmen is a heavy charge on industry, and, yet, the indemnity paid barely provides for the living of the widow and orphans of the unfortunate workmen. It follows therefore that the education of the children suffers. It is not sufficient to help the primary, technical schools and the universities. We must interest ourselves in the fate of these orphans. Why should not the children of workmen killed by accident be provided with scholarships by the government as is done for those of wealthier classes, young ecclesiastics and young laymen, for whose education in Europe we pay, and who are recruited from the best of our educational institutions? The legislation that we propose to lay before the House on behalf of the sons of workmen might well be inserted as an amendment to our law providing scholarships.

WORKMEN'S COMPENSATION IN GREAT BRITAIN IN 1923

"Statistics of Compensation and of Proceedings Under The Workmen's Compensation Act, 1906, and the Employer's Liability Act, 1880, During the Year 1923" have been issued by the British Home Office. They show an increase over the figures for 1922 both in the number of cases and the amount of compensation paid.

The number of persons who came within the provisions of the first-named Act in the seven great groups of industries in which returns are called for—mines, quarries, railways, factories, docks, constructional work, and shipping—was 7,342,311, as compared with 7,205,609 in 1922. The number of cases rose from 392,912 in 1922 to 480,035 in 1923, an increase of 22.2 per cent, and the compensation paid rose from £495,728 to £7,134,096, an increase of 9.8 per cent.

Taking the fatal and non-fatal cases separately, the number of fatal cases rose from

2,489 in 1922 to 2,657 in 1923, and the compensation paid increased from £546,889 to £591,164. The non-fatal cases increased 390,423 in 1922 to 477,378 in 1923, and the amount paid from £5,948,839 to £6,542,932. The proportion of compensation paid in the seven industries in fatal cases was 8.3 per cent. The percentage for the different industries works out as follows: shipping, 31.7; factories, 6.3; docks, 10.1; mines, 7.4; quarries, 13.3; constructional work, 9.3; and railways, 19.2.

Attention was drawn in the volume for 1922 to the remarkable rise during the last few years in the number of cases and compensation paid in the mining industry. This movement was continued in 1923, the mines accounting for almost the whole of the increase in the fatal cases and a large proportion of the increase in the non-fatal cases.

WORKMEN'S COMPENSATION IN THE UNITED STATES IN 1924

A SUMMARY of compensation legislation in the United States in 1924 was recently contributed to the *New York Times* by John B. Andrews, Secretary American Association for Labour Legislation.

The most notable gain of the year in compensation legislation, he states, was made in New York, where the "waiting period" immediately following an accident during which no compensation is paid was reduced from fourteen to seven days. This new act extends the protection of the compensation law to 25,000 additional injured workers and their dependants annually, thus removing the cause of a great deal of hardship and many appeals to charity. It adds a million and a half dollars each year to the benefits payable to industrial cripples.

The half million civilian employees on the federal payroll throughout the country are now assured of full compensation benefits when stricken with illness due to their employment as well as when accidentally injured. Congress amended the Federal Accident Compensation law so as to reaffirm the original intent to include the victims of occupational diseases also under the act. Payments for such disabilities, which were

stopped for a time by arbitrary action of the Controller General, will now continue.

Pioneer action was taken by Utah in the adoption of a new legal safety code for coal mines which requires the rock dusting of mines to prevent coal dust explosions. In giving the effect of law to these new safety requirements the Industrial Commission had the co-operation of all coal operators in the State. Coal dust explosions have taken a greatly increased toll of lives during the past year. Utah's enlightened code sets a standard for the thirty other bituminous States.

Eight of the eleven States which held legislative sessions in 1924 improved their workmen's compensation laws. In two States action was taken with a view to rehabilitation of industrial cripples. Congress extended the Federal Rehabilitation act and the Maternity act to Hawaii. Louisiana accepted the Shepard-Towner act, making a total of forty-one States that have by legislative action entered into co-operation with the Federal Government in maternity and infancy care.

Four legislatures voted on ratifying the child labour constitutional amendment. One was favourable and three opposed. Six States made further restrictions on the working hours of women and minors.

INTERPROVINCIAL OR INTERSTATE CO-OPERATION IN LABOUR LAWS

Paper read by Dr. J. W. Macmillan, Victoria College, Toronto, Chairman of the Ontario Minimum Wage Board, at the Annual Convention of the American Association for Labour Legislation, Chicago, December 28-30, 1924

I WISH to state that this paper is something of a compilation. The sketch of the Constitutional Phase is by Prof. O. D. Skelton. Some of the material used in the section "Influences Emanating from the Federal Power" was gathered by Prof. R. M. Maciver. Dr. John B. Andrews has given help, and I have drawn upon a paper by Frederick P. Lee, read at our meeting a year ago, and published in the *Labour Legislation Review* for March, 1924.

On the face of it, wherever several human persons or groups are engaged in similar enterprises, there will inevitably occur the constant play of the forces of suggestion and imitation. Without any organization, or even conscious communication, each will be influenced by what others have done and are doing. Some social psychologists might find an illuminating topic in such a process as the arrival and spread of the movement for Workmen's Compensation Acts on this continent. Imported from Europe, in a double stream from Great Britain and Germany, it showed itself first in federal legislation at Washington, and then spread among the States. Certain types of laws were adopted by prominent industrial states, and became the norms which others copied or varied from. In a few years practically the whole of the United States had responded to its influence. No two of the forty-odd laws are identical, and no one of them but owes a great deal to the others.

A similar process followed in Canada. One and another of the nine provinces passed laws, showing the effect of both the British and American precedents. Ontario, the chief industrial province, was one of the last to act. It was more deliberate than its sister provinces, and after a careful study adopted a law largely modelled on that of the State of Washington. Since then many of the other provinces have remodelled their laws according to the standards erected by Ontario.

Some forms of social legislation become epidemic at times, and spread rapidly by contagion. Others lack the fever quality, and require a persistent propaganda. Periods of reaction intervene, during which legislators are immune to the human appeal. These periods pass, and the sense of social justice revives. Material things seem less supremely

important, and human concerns are marked up to higher values. And through these varying conditions the forces of human association are constantly at work. If it went no further than this we should still have co-operation in an informal and unofficial form between the Federal and State or Provincial powers, and between the several states or provinces. But it does go much further, and I shall try to show in what ways this co-operation has been brought under conscious control, and so made more immediately and practically effective. Moreover, this survey may suggest what further organization is possible and desirable.

The Constitutional Phase

First, let me present a summary of the Constitutional Phase of our subject. In both, or may we say in all three, of the democracies of North America, the question of constitutional authority meets the reformer on the threshold of every legislative proposal. It may be worth while to present a brief summary of the constitutional position in Canada, and to compare it with the situation in the United States. In some respects the position and the problems are very much alike, but there are important and significant differences. Since both the United States and Canada have adopted the federal basis of government, both share in the advantages of flexibility and the disadvantages of divided authority which that system entails. In both countries there is the uncertainty as to where the line of demarcation is to be drawn, the possibility of dispute as to whether it is the federal legislature or the state or provincial legislature which has the power to act in a certain field. In both countries this inherent difficulty is increased by the adroitness of politicians in evading troublesome questions by insisting that the power to act rests with the government on the other side of the jurisdictional fence—in other words, the situation makes it easier to play the favourite game of buck-passing. In both countries, again, it is to the courts that we look to draw these line-fences, to determine whether an act passed by a certain legislature is constitutional, as the phrase runs in the United States, or *intra vires*, as the lawyers have made the customary tag in Canada.

In the division of powers between the federal and the local authorities, the difference between the two countries is more in form than in actual content. In Canada the powers of both the Dominion and the Provinces are definitely enumerated in the British North America Act, which is the backbone of our federal constitution, whereas in the United States constitution, of course, it is only the federal powers that are specified and enumerated. In the actual division of powers, the most important difference is that in Canada criminal law and marriage and divorce (excepting the solemnization of marriage) are assigned to the federal parliament. For the regulation of social and industrial affairs, the more important of the enumerated federal powers are,—the regulation of trade and commerce, banking, marriage and divorce, the criminal law, and taxing power. The Provinces derive their authority in this field mainly from the clause giving them control over "property and civil rights in the province," which means that the whole broad field of contract and individual relationship, except for areas specifically cut out, falls to the local governments. But in addition to these enumerated powers, both Dominion and Provinces are given a general grant of power; the Provinces, as to "all matters of a merely local or private nature in the Province," and the Dominion, as to matters affecting "the peace, order, and good government of Canada, in relation to all matters not coming within the classes of subjects by this Act assigned exclusively to the legislatures of the Provinces." In other words, the Dominion is made residuary legatee as to matters of national and the Provinces as to matters of local importance.

To illustrate: Both Dominion and Provinces have at times regulated or prohibited the liquor traffic. The courts have upheld the provincial laws licensing sale or prohibiting sale or manufacture under the enumerated provincial powers, "municipal institutions," "shops, saloon, tavern, and other licenses," and "all matters of a merely local or private nature." Local acts attempting to prevent importation into the province, however, have been held *ultra vires*, and to make provincial laws fairly water-tight it became necessary for the Dominion parliament in 1919 to pass a law empowering any province to prohibit import as well as manufacture or local sale. The Dominion, on the other hand, cannot license local traffic, but it may prohibit the manufacture, sale, or importation of liquor throughout the country, or empower a county or province to prohibit sale, on the strength partly of the trade and commerce clause, but mainly

of the peace, order, and good government residuary power.

Again, members of the Association will be familiar with the Industrial Disputes Investigation Act, more briefly known as the Lemieux Act, whereby the Dominion forbids a lockout by employers or a strike by workmen in mines or public utilities before the dispute has been investigated by a special board. Though the law was passed seventeen years ago, its constitutionality was not seriously questioned until the past year, when the Toronto Electric Commission challenged it. The court of first instance declared the Act *ultra vires* on the ground that the relations between employers and employees in such cases fell under the heading of civil rights, and so within the legislative competence of the province, the court holding further that the Dominion's residuary "peace, order and good government" power could not override an enumerated provincial power. A higher court, however, has this spring upheld the Act, agreeing with the latter principle laid down by the lower court, but contending that the Act rested not merely upon the residuary power but upon two enumerated Dominion powers, the regulation of trade and commerce, and the criminal law. A further appeal has been made to the Privy Council. This is the court of last resort and its decision is expected at any time.*

On the whole, the division of jurisdiction is not unlike in the two countries. There are, however, two important points of difference yet to be noted. In the first place, the Canadian federal government has the power to disallow or annul within a year any provincial law whatsoever, even if undeniably within the constitutional competence of the province. This sweeping power or review was one of several devices to strengthen the federal power insisted upon by those who thought the United States had gone to an extreme along States' rights lines: It will be remembered that the main lines of the Canadian constitution were determined in 1864, when the Civil War in the United States was still raging. In practice, the power has not been freely used; it was early challenged by the upholders of provincial rights; to-day it is used sparingly, and never to overrule a measure clearly of provincial concern and competence, whatever be the opinion of the federal authorities as to its fairness or expediency.

More important is the distinction in the judicial power or review in the two countries. The courts count for much less in social legislation

* The decision of the Privy Council in this case is given in the present issue of the LABOUR GAZETTE.

in Canada than in the United States, because of the fact that a Canadian legislature is supreme within its assigned field, instead of being, as in the United States, compelled to observe limitations, compelled not to interfere with individual freedom of contract or not to take property without due process, limitations which in the United States afford the courts incessant opportunity for considering *how* a given legislative authority has exercised its powers. All that a Canadian court can do is to decide whether the legislature which passed a law was on the right side of the jurisdictional fence; if it was, the court cannot inquire into the reasonableness or fairness of its action. Those clauses of the United States federal and state constitutions which were designed to protect individual rights, and which it is sometimes alleged, frequently protect corporation wrongs, have no parallel in the Canadian constitution. It has not been necessary in Canada to develop elaborate theories of police power to enable the state to enact what it considers social justice. In this respect we have followed the British tradition of the supremacy of the legislature. And in actual practice we think that we have not lost anything in the protection of individual rights by throwing the responsibility on the legislatures rather than on the courts.

Influences Emanating from the Federal Power

Secondly, I wish to enumerate the various ways in which the influence of the federal power has affected laws and standards throughout the states or provinces.

(1) The first method is by means of taxation. Several decisions by the Supreme Court of the United States have laid down the principle that a federal tax must be a true tax. It must not be an expedient for effecting reforms by means of taxation. The child labour tax case and the grain future tax case serve to show that the social gains of taxation are to be limited to the incidental results which arise from a revenue-producing measure. Certain taxes have incidental results of this nature, as the tariff and inheritance and income taxes, which are common to both countries. In United States are also found oleomargarine and narcotic drug taxes, which are of the same type.

(2) The second method is by federal regulation of interstate commerce. Such matters as the inspection of vessels, the fixing of railway rates and practices, and the prescribing of approved types of bills of lading, commission procedure and the like are common to both countries, though accomplished, to some extent, in different ways.

(3) The third method is the use of publicity. The widespread publication of reports as to wages, hours and conditions of work is a check of great importance upon practices which offend public opinion. It furnishes a "white list" for the guidance of the public. Even where no compulsion is used in the gathering of information this purpose is served. For the refusal of any firm to permit the inspection, or furnish the information, is in itself an accusation which pleads in the ears of the public against the concern which loves darkness rather than light. The presumption is that its deeds are evil.

(4) The fourth method is that of conference and persuasion. This has developed rapidly within recent years in Canada. In September, 1919, an Industrial Conference was called at Ottawa by the Dominion Government. To it came not only representatives of the provincial governments, but delegates from organizations of employers and employees, and from such interests as the Bankers, the Farmers and the Universities. Its programme for the most part consisted of the discussion of matters of possible social legislation. Following this, a Dominion-Provincial commission met on April 20, 1920, to discuss uniformity in labour laws throughout Canada. This commission was made up of three representatives from each of the Provincial and the Dominion governments. One of these three represented the government, one the employers and one the employees in the several jurisdictions. The subjects discussed were,—Workmen's Compensation, Minimum Wages, Factory Inspection, and the Regulation of Mines. The commission discussed these and appointed a committee to report upon each of them. The reports of these committees were later included in the report of the commission and sent down to the several governments. A proposal to establish an organization for the promotion of the uniformity of labour legislation came to nothing because of the variance of opinion it provoked. Since then the Dominion Government has held several conferences with the provinces in connection with the labour sections of the Peace Treaties. Each signatory section binds itself to bring before the competent authorities those draft-conventions which are adopted by the Geneva Conferences by a two-thirds majority. Canada is a member of the League of Nations, and most of the matters dealt with under the labour sections of the constitution of the League are of Provincial concern. The most recent Canadian conference of this sort was held in September, 1923. Seven of the nine provinces were represented. The conference was purely consultative, yet, as the Provincial represen-

tatives included Premiers and Cabinet Ministers the conclusions reached were of moment. Twenty-one items were dealt with, on most of which unanimous decisions were reached. On the question of the eight-hour day it was agreed that the federal Department of Labour should make a survey throughout the Dominion and report to each of the Provincial governments, and that a stated case as to jurisdiction, whether federal or provincial, should be laid before the Supreme Court of Canada. A similar survey was decided upon regarding night work by young persons, and the use of white lead in painting. The conference unanimously recommended that the provinces forbid night work by women and the employment of children under fourteen years of age. The question of employment was divided into four sections, three of which, prohibiting private employment agencies, regulating the recruiting of workers in foreign countries, and the provision of "buffer" employment by means of public works, were concurred in. No action was taken regarding the fourth, which dealt with unemployment insurance. The one item which clearly came within the sphere of Federal legislation was that of a weekly rest day. This was agreed to by all present.

I know of nothing of this sort having developed within the United States. Should that country join in the League of Nations such conferences would doubtless be set up. There seems to be no reason, however, why they should not be set up, if thought desirable, quite apart from any connection with the Versailles Treaty. The International Labour Conference, held in Washington in 1919, was more or less of this character.

Again, the question of unemployment during the winter was taken up at a conference called by the Dominion Government last September and attended by representatives of the provinces, and the larger municipalities, and the organizations of employers and employees. A number of resolutions were agreed upon, including a basis of proportionate payments for emergency relief in the cities. The minutes of the conference were printed and distributed widely for the purpose of educating public opinion on the question.

(5) The fifth method is the effective use of subsidies by the federal power. When it pays the piper it may call the tune. When it partly pays the piper it may forbid certain tunes. In both countries this plan is applied to technical or vocational education; to road building, and to agriculture. In the United States is also found the Sheppard-Towne Maternity scheme. In Canada a housing scheme has been launched on the same lines. A notable

example of this type of co-operation is found in the Canadian employment service. The flow of labour is on the national scale, as provincial boundaries mean nothing in the labour market. Yet the authority lies with the provinces. Hence a scheme has been worked out and has been in successful operation for some years by which a nation-wide system of free employment exchanges is maintained. The federal government pays its way by means of proportionate grants of money given to the provinces on condition of their participating in the joint scheme, and maintaining certain standards of operation.

(6) The sixth method is the unsubsidized initiation of movements and setting of standards. We have two conspicuous examples of this method in Canada. One of these is in the collation of statistics. A Dominion Bureau of Statistics was set up in 1918, with which the Provinces were invited to align themselves. For example, as regards vital statistics, a number of conferences of officials, reaching back to 1893, were held, finally issuing in the happy result that since 1920 we have had uniform vital statistics from the several Provinces in Canada. The same result has been attained as regards mining, agriculture, and some other departments of national activity.

The other example is in the activity of the Commission of Conservation from 1910 to 1920. By means of annual meetings, the publication of bulletins, and the employment of a corps of expert advisers, the Provinces have been led to deal in an intelligent and more or less uniform fashion with such matters as forestry, fire prevention, the development of water-powers, the preservation of game and town-planning. The model town-planning Act drawn up by the commission has now been made into law by five Provinces. This commission has since been dissolved, but its work endures.

(7) The seventh method is of a unique type, and consists in the passing of enabling legislation by the federal power whereby the provincial power may use, for certain specified purposes, the federal authority. An outstanding instance of this, in Canada, is the Juvenile Courts Act of the Dominion Parliament, which confers on the Provinces the right to employ criminal proceedings in the trials of juvenile offenders. Otherwise two courts would be required, the one to handle the criminal side of each case, and the other to deal with the protection and salvage of the socially abnormal child.

(8) The eighth method is exemplified in the comprehensive proceedings which apply to de-

serting husbands. Here we have an international extradition treaty between the United States and Canada, to which is attached the co-operation of the federal and state or provincial powers—the one dealing with the crime committed, and the other with the support of the deserted family.

(9) Besides, and this is the ninth and last method by which the federal influence reaches the states or provinces, there are those central bureaus of information and persuasion upon whose literature and expert counsel the component states or provinces feed. Here the international line is almost obliterated, for we in Canada sit in at the table and devour the bulletins of the Bureau of Labour Statistics, the Child Welfare Bureau and the Women's Bureau, as if we were at home. We cannot too greatly thank Uncle Sam for this generous and continuing hospitality. We have our own Dominion Labour Department, Children's Bureau, and Health Service, fashioned on the same plan. It is too much to hope that our small country should be able to return, in any considerable degree, the favours we thus receive. We should be glad to think, however, that now and then some morsel produced in Canada might be worth tasting across the border.

Here, then, are nine methods in which the federal power has already shown that it can, without violation of constitutional rights, accomplish such purposes as it may cherish respecting human welfare. The list of examples I have given is by no means exhaustive, and, naturally, my recital of what has happened in the United States must seem very incomplete to my friends from that country. I venture to hope that the account of our Canadian experiments may be some recompense for the lack of complete description of similar movements in the United States.

It is worth noting, as we pass, that the federal power in both countries seems to be more interested in social welfare than most of the provinces or states. This may be due in part to the fact that the inclusive authority is better protected against the competition of rivals with lower standards, in part to the superior sense of dignity and responsibility which it feels, and in part to the fact that it is the central authority above all which kindles the nation's affections. Pity and the sense of justice are akin to loyalty.

Interstate or Interprovincial Treaties

Passing from those movements where the federal power takes the lead, I note that a recent tendency toward interstate or inter-

provincial treaties has shown itself. I know of three instances of this sort.

(1) The state of Oregon has passed a law providing for an eight-hour day in the lumbering industry, with the condition that it shall go into force when the adjoining states enact a similar law.

(2) The Province of British Columbia has passed a law for a general eight-hour day in industry, conditional as to enforcement upon the other Provinces passing a similar law. It is only fair to say that the condition here is far less likely of fulfillment than in the case of Oregon.*

(3) It has been announced that the Provinces of Ontario and Quebec, which are the two leading industrial provinces of Canada, will join in legislation forbidding the reckless and competitive bonusing of industries by municipalities.

Co-operation between Administrative Commissions

A fourth type of co-operation is that between administrative commissions. There are certain labour laws, like the typical factory acts, where the administrative body is given no discretion. The Inspector can say to the people concerned only this: "Here is the law, my business is simply to see that you obey it." But there are other labour laws, like the Minimum Wage Acts, where the administration is given a vast amount of discretion. The law empowers and obligates the commission to use its discretion in all that it does. The concrete regulations which are imposed upon the industries are not determined by the legislature but by the commission. Thus there are two spheres of possible co-operation—the legislative and the administrative. And, in the case of Minimum Wage Laws, at least, the administrative sphere is much the more important. It is plain that two Minimum Wage Acts may be identical, and yet the wage schedules under one be double that of the other. On the other hand, two Minimum Wage Acts may differ as to the constitution of the administrative commission, the function of trades-boards, the method of enforcement, the penalties attached, and many other particulars, and yet the wage schedules be the same. There is here a sphere of co-operation capable of large development. It is not too much to expect that the commissions should deal fairly and sincerely with each other, and co-ordinate their orders so as to at once pro-

*An Act coming into force Jan. 1, 1925, provided for the 8-hour day and 48-hour week in private and public industrial undertakings with exceptions under certain circumstances under the control of a Board of Adjustment.

tect their clients and silence the ever-ready criticism that such orders penalize the employers in certain states or provinces.

Education

A fifth method of interprovincial or interstate co-operation may be suggested in closing. It is through the education of the public. All laws are educative, and legislators, like manufacturers, often find that their by-products are of surprising value. Moreover, such legislation as we have in mind to-day requires an enlightened public opinion for its very existence. As one reviews the history of the passing of long succession of laws which protect the workers, from the first factory acts of Britain onward, one sees that their chief sanction has been the informed moral judgments of the people at large. Many of them were passed in a popular outburst of righteous wrath provoked by the exposure of revolting conditions. And all of them endure, not be-

cause they represent a political victory of the labour interest, but because they are "broad based upon the people's will."

It is greatly desirable that the people should learn many things which are commonplace to social workers in the industrial order, such as the small proportion of production cost which often goes to wages, the financial burden imposed by sickness, irregular employment, labour turnover, and the lack of training of workers. It would help to enforce the lesson that labour is not a commodity if it were generally recognized that labour is a commodity, and an exceedingly valuable commodity. If everybody knew that a man at his work is an instrument and a marvellous machine it would not be so easy to cry up the sanctity of property and cry down the sanctity of human life. Perhaps it would be better if we did not say "labour is not a commodity," but said "labour is a commodity, and more than a commodity."

CONVENTION OF ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES

THE seventh convention of the Association of Canadian Building and Construction Industries was held at Montreal on January 28 to 30. The principal subjects discussed included the training of apprentices, the shortage of skilled labour and the need of more building in winter.

The report of the secretary showed that about 33 per cent of total construction during 1924 had been made up of residential building, with the same proportion of engineering construction, such as roads, sewers, wharves, etc. The balance remaining to be divided between business and industrial left comparatively little work to be divided among the numerous firms in Canada engaged in those types of construction. When it was further taken into consideration that the great bulk of the work which was undertaken was confined to Ontario and Quebec, the serious condition which had been faced by many a contractor and supply man in 1924, can be appreciated. Comparatively few labour troubles occurred in the industry during the year, largely because work was scarce and many skilled men migrated to the United States where good wages were available.

Mr. J. M. Piggott, in his presidential address, referred to the loss sustained by Canada through migration to the United States. He quoted figures showing that 200,690 persons from the Dominion had crossed

the border permanently during the year ended July 1, 1924. From information available, it would appear that Canada's net loss to the United States in the calendar year 1924 was about 250,000; it could be estimated that some 100,000 of those emigrants were between the ages of 18 and 35, individuals who represented the greatest potential asset for Canada of the future.

Winter Construction Recommended

He pointed out that in order that the industry might be placed on a firm footing the risk of unemployment should be reduced to the minimum, and for that reason urged the association to promote winter construction and an all-year programme in the building trades. Last year, he said, would have to be counted as one of the lean periods in the era of depression that the construction trades had suffered. But it was hoped that the dullness was passed.

The subject of all-year construction was further discussed on the occasion of a joint meeting of the association with the Engineering Institute of Canada. Mr. J. P. Anglin, who presided at this conference, said: "To induce skilled Canadian workmen to remain in their own country, and not go across the border in the slack winter building period, is one of the main reasons why every endeavour should be made to facilitate and encourage a

12 months' construction plan. Not only contractors, but the labourers themselves have shown an earnest desire to put an end to the seasonal activity in the building trades and substitute all-year-round operations." Winter building was very little if any, higher in cost than summer works, and he was convinced that winter-built concrete was just as good as summer concrete if care were taken.

Mr. C. D. Harrington, of the Anglin-Norcross Company, Limited, Montreal, discussed winter methods in excavation, preparations for foundations, concrete work and masonry work, explaining various devices which had been found helpful. Thorough inspection and great care were essential to success, but he could not see any real reason why construction work should be let up on account of the winter. Any reputable contractor could, with care, close supervision, and a very small additional expense, overcome all the difficulties presented, and, in a great many cases, owners would receive returns on their investments much more quickly.

Mr. C. N. Shanly, of Price Brothers, Limited, Kenogami, stated that some operations were better adapted to winter than to summer conditions. Experience in pouring concrete in Northern Quebec had shown that in winter a much better selection of labour was available, the water was low, and, where the job was situated at some distance from the railway, haulage costs might be reduced 60 per cent. On the other hand, the heavy clothing which impedes movement, and the necessity that the men should frequently stop and warm themselves, shorter hours of daylight, protection and housing of machinery in winter operations, were a detriment.

Apprentice Training

Thirty-five apprentices from the bricklaying, plastering and carpenters' trades took part in a competition at the Montreal Technical

School. Several prizes were awarded by Mr. J. M. Piggott and a cup for the best grand aggregate was given to N. Bagg, a plasterer employed by Messrs. R. D. Clark & Sons, Limited. It was announced that a similar competition would be held in Toronto next year.

Mr. Douglas Bremner, president of the Montreal Builders' Exchange, alleged that carpenters, bricklayers, plumbers, plasterers and others engaged in the building trade do not give adequate returns for the wages they are paid. Not, he said, because they are lazy or unwilling to do the work, but because they are not properly educated or trained in their various trades. Many of them, including foremen, he stated, do not even know the elementary and basic principles of their trade, and for this reason the training of apprentices was of such importance for the building trade. Mr. Bremner announced that he had been authorized by the Hon. L. Athanase David, provincial secretary, to state that a committee has been appointed to study the question of apprenticeship, and that all reports regarding this must be in the hands of the Government by May 1.

Election of Officers

The officers for the coming year were elected as follows: President, John V. Gray, Toronto; first vice-president, H. J. Mero, Windsor, Ont.; eastern vice-president, Douglas Bremner, Montreal; western vice-president, A. J. Bonnet, Winnipeg; hon. treasurer, Frank E. Waterman, Toronto; hon. secretary, Samuel Dinsmore, Windsor, Ont.; members of the executive: for the Trade Contract Section, Sidney Jones, London, Ont.; for the Manufacturing and Supply Section, A. G. McLaughlin, Toronto; for the General Contractors' Section, C. Blake Jackson, Toronto. Joseph M. Piggott, of Hamilton, the retiring president, remains on the board for the next year.

Age of School Attendance in the United States

The proposed amendment to the constitution of the State of Michigan to provide that every child between the ages of 7 and 16 years must attend a public school until he had completed the eighth grade, was submitted to the people at the Nov. 4 election, and was defeated by a two to one vote. A similar proposal was defeated four years ago.

Voters in the State of Washington also defeated an amendment designed to compel attendance at public schools until the age of 16.

A Federal district court has recently declared unconstitutional the Oregon law requiring attendance at public rather than parochial or private schools. (Springfield, Mass., Republican, Nov. 7, 1924; Bureau information.)

OCCURRENCE OF "BUMPS" IN SPRINGHILL COLLIERY

Report by George S. Rice, M.E., Chief Mining Engineer of the United States Bureau of Mines

IN a report on "Occurrence of Bumps in the Springhill No. 2 Mine of the Dominion Coal Company" recently printed in booklet form by the Nova Scotia Department of Public Works and Mines, George S. Rice, M.E., chief mining engineer of the United States Bureau of Mines, declares that "bumps in the Springhill colliery are primarily the result of too great pressure, due to the depth of over-lying measures, for the strength of the coal as a pillar." Mr. Rice carried out his investigations on September 19 and 20, 1924, following an invitation from the Mines Department for the purpose of receiving suggestions which might lead to a remedy and a cessation of accidents due to "bumps." (LABOUR GAZETTE, September, 1924, page 732 and November, 1924, page 911). The report notes the occurrence of 77 bumps listed in the fourteen-month period between July 4, 1923 and August 25, 1924.* Two fatalities due to bumps have been reported since Mr. Rice's investigation, one occurring on the east side and the other on the west. (LABOUR GAZETTE, December, 1924 and January, 1925).

Of the 77 bumps referred to in the report, 8 occurred on the east side and 69 on the west side of the colliery. The number of accidents resulting from these "bumps" is given as 23, and the number of miners killed and injured as 25. In the 23 accidents, 6 men were killed by 4 "bumps" and 19 men were injured by 18 "bumps." By location two men were killed by one accident in an incline heading (on the east side) and two men injured in incline headings. All the other accidents were in bords, except one where a miner was injured in a counter level or air way. Mr. Rice adds:—

The most notable thing is that 20 out of 25 men were killed or injured in driving bords nominally 10 feet wide, whereas in drawing back the 35 foot wide pillars none were killed. Usually pillar drawing is held to be more dangerous than solid work. The figures support the idea that the coal pillars are overloaded, and, on the other hand, that the accident danger at the goave edge is relatively small in the Springhill mine.

Mr. Rice refers extensively to a paper by Mr. J. C. Nicholson, in charge at Springhill,

* One fatality occurred on July 13, 1923; two on September 25, 1923; one on December 20, 1923; and two on August 4, 1924, all of which have been listed in the quarterly reports of fatal accidents published in the LABOUR GAZETTE.

given before the Nova Scotia Mining Society, which says:—

Apart from the noise, bumps consist chiefly in upheaval of the pavement and dislodgement of large quantities of coal. They are not generally accompanied by falls of roof except where the roof has been previously broken, in which case there have been falls of considerable extent. These bumps are accompanied by some very wonderful phenomena. For instance in one of the most severe, the jar was felt in the town as far back as three-quarters of a mile behind the out-crop and so great as to rattle dishes on the shelves, which at the same time directly over the workings it could scarcely be detected. At another time a bump occurred in a bord where a pack or crib 7 feet high made of 4 foot sticks had been built on the high side. After the bump, this crib was found tight against the low side with not a stick displaced.

Mr. Rice notes that "Such phenomena are not at all unusual in bumps; apparently a wave motion is set up in the immediate roof when that is a strong and somewhat flexible shale." He remarks that the problem of bumps not only concerns Springhill but other mines, and mines yet to be started in many coal fields where the beds attain great depths and have other conditions similar to those found in the Springhill Mine. He cites other instances of bumps in coal mines including bumps at the Coal Creek Mines, Crownsnest Pass Coal Field, British Columbia,† the heaviest of which was on November 8, 1896; bumps at South Staffordshire (England) Ten Yard Seam; bumps at the Black Diamond Mine, State of Washington; bumps at the Carbonado Mine, State of Washington; and "bounces" or "bumps" at Sunnyside Mine, Utah. He explains that "bumps are manifestations of force of several different kinds: (a) By direct pressure of overlying strata which gives a unit stress on a pillar, large or small, in excess of the unit crushing strength of the pillar material, causing the edges to burst off—this is true of coal or rock or artificial support. . . . (b) By a shock wave through the immediate roof of the mine, due to masses of rock of higher stratum falling through openings made by subsidence of the immediate roof, the shock wave affecting mine openings—especially when the immediate roof has considerable elasticity.

The summary and conclusions of the report are given as follows:—

† Report on "Bumps and Outbursts of Gas in Mines of the Crownsnest Pass Coal Field," by George S. Rice, Annual Report of Minister of Mines of British Columbia, 1917.

1. Bumps in the Springhill colliery are primarily the result of too great pressure, due to the depth of overlying measures, for the strength of the coal as a pillar.

2. The critical depth for the original bord and the pillar mining method appeared to be about 1,500 feet from the surface.

3. For the improved mining method still in use, the critical depth appeared to be about 2,000 feet.

4. The present mining has the defect of making the "break line of the goave" nearly parallel with the strike (level) of the seam, and the retreat is downhill and this tends to throw an added weight on the pillars.

5. Had the pillar method been so planned by retreating in 4 or 5 levels at a time with the break line nearly parallel with the dip, overloading of the pillars might have been prevented for a greater depth than now obtains.

6. In any event, it does not seem possible to devise any pillar plan which will avoid bumps or bursting of pillars at very great depths (3,000 feet and over), because the unit compression strength of the coal as a pillar, except one of impracticable size will not at these greater depths exceed the unit pressure of the overburden. This statement is predicated on continuance of the present strong roof and strong pavement on the West side of the mine, which are stronger than the coal.

7. With a weak roof or with a soft bottom, "bumps" do not occur anywhere to my knowledge, as with such conditions either the roof or the floor flows or squeezes into the openings and a weak roof cannot bring sufficiently high unit pressure on the coal to make it violently rupture.

8. The only final remedy to prevent rupture of pillar or bumps in deep mining under the conditions of hard roof and pavement, is, in my opinion, to mine by some form of long wall. I never heard of bumps being experienced in longwall mining.

9. Practically all deep coal mining in Europe employs the advancing longwall method except where sand or gravel is available for hydraulic stowing. Sand is, I believe, not available at Springhill, at any reasonable cost.

10. It is not practicable at Springhill to use advancing longwall as there is no material available for pack walls. Retreating longwall must therefore be employed.

11. Trial longwall faces on the West side above the 5,900 level, the faces parallel with the dip, is recommended.

12. Plans should be made, in my opinion, for a complete change of mining system below the 5,900 levels, East and West, to a retreating longwall with faces in steps. Pneumatic hammer picks can probably be used to advantage and either drag scrapers or shaking conveyors should be used to transport and load the coal on mine cars in the respective levels, the details to await the results of the trial faces.

13. I believe that if a longwall system is used such as indicated in the body of the report, bumps would not occur.

In his "Conclusions Regarding Present Mining Methods," Mr. Rice states:

"Based on the foregoing facts and theoretical considerations, I conclude that improvement can be made in the present method along lines suggested by your commission of October, 1923, viz, increasing the size of pillars, between bords—I would propose increasing them still more, say to 40 to 45 feet—keeping the bords and headings as narrow as possible, 10 feet at the bottom, 12 feet at the top, shortening the bords by shortening the distance between incline headings, and also I would propose paying more attention to keeping the retreat line or line of break as straight as possible, which I note has been better done on the East side than the West side. Nevertheless, I believe that while such improvements will lessen the frequency of bumps in the present bord workings above level 5,400, that even with these improvements the method will not be successful in eliminating bumps, and I feel certain will not with the increased depths below the 5,400 level, where the depth is 2,245 feet. In other words, the weight is too great for coal pillars to stand.

¶Owing to the general anxiety caused by recurrence of bumps following a change in the system of mining which at first looked favourable, an investigation was requested by the Minister of Mines and Public Works of Nova Scotia. Accordingly Mr. Thomas J. Brown, Deputy Minister and Inspector of Mines, on October 25, 1923, convened a committee of three miners, three representatives of the British Empire Steel Company, and three inspectors of mines, including himself. Mr. Brown's report rendered on November 8, 1923, embraces the collective views of the committee on the causes of bumps at Springhill, including the previously agreed width of (10 feet) and bord pillar (35 feet) and the departure from this plan by widening the bord, etc.

DOMESTIC WORKERS AND THEIR EMPLOYMENT

THE Women's Bureau of the United States Department of Labour has recently issued a bulletin on Domestic Workers and their Employment Relations, being a study based upon records of the Domestic Efficiency Association of Baltimore, Maryland. This association was organized in September, 1921, for the purpose of standardizing domestic service. It is not a money-making enterprise, but acts as an employment bureau and to furnish housekeepers with efficient workers. One section of the report contains a study of the records of the Association, and another discusses efforts made for the readjustment of domestic service by various organizations in-

cluding the Young Women's Christian Association, as well as measures adopted in various countries, including Austria, Germany and Poland, and the movement since the war to bring about reforms in domestic service in Great Britain.

The bulletin states that there is great need for efficient and well-trained domestic workers; that employees as a rule are given no systematic training for domestic occupations, but are usually expected to pick up their knowledge haphazardly; that lack of standardization has been a great difficulty where individual households with their different methods and varying standards must

serve as the training schools, especially where the householders have had no training that fits them to be adequate instructors; that the close personal relationship characteristic of domestic service as it exists at the present time, especially where domestics live in the homes where they work, has proven a decided handicap, as has also the custom of having long and indefinite hours of service. While employers complain of the irregularity of domestics who live out in regard to the time of arrival in the mornings, they fail to consider that these domestics have cause to complain of irregularity in respect to the hour of departure in the evening. Domestic service is of such a nature that the time for its performance covers a long span of hours, but a revision of household schedules is often possible. Householders complain of the "labour turnover" among domestics, but employees might complain equally of the migratory habits of many employers which introduce a seasonal nature into domestic

work. The report notes the absence of an incentive for domestic workers, as there is little chance for promotion. It states, however, that "It may be discouraging to employees to have comparatively little chance for financial advancement, but it is just as discouraging for householders in need of domestic assistance to be forced to pay a goodly wage to unskilled labour as must be frequently done." Attention is drawn to the practice of some employees of leaving a position without notice and to the habit of some employers in dismissing their employees without notice. The system of "references" in vogue is also an arrangement difficult for both employers and employees, for the latter because they must depend in seeking other positions upon the more or less biased statements of former employers, and for the householders because they must rely upon the opinions of other persons whose standards must be decidedly different from their own.

An International Survey of Economic Reconstruction

On the initiative of the American Committee of the International Chamber of Commerce, a project has been launched for an economic world survey, for the purpose of determining "what measures must be taken to solve the problems that will arise in the wake of the adoption of the Dawes plan and to stimulate production, revive industry and restore international trade." An outline of the Dawes plan was given in the November issue of the *LABOUR GAZETTE*, page 964.

The survey will be made by an International Committee composed of business representatives of all the important commercial nations of the world. To this end the Committee on Economic Restoration of the International Chamber, of which Mr. Fred I. Kent is chairman, will be enlarged by the addition of members from the countries now represented and from other countries which play an important part in international trade. The membership of this committee as now constituted includes:

Sir Felix Schuster, of England; Mr. Maurice Lewandowski, of France; Mr. Alberto Pirelli, of Italy, a member of the committee of experts which formulated the Dawes plan; Mr. K. A. Wallenberg, of Sweden; Mr. Marcel Desprit of Belgium; and Mr. Westerman, of Netherlands.

The survey will be preliminary to the Brussels meeting of the International Chamber, to be held during 1925, at which the report of the

committee will form the basis of discussion of the general problem of economic restoration by the business interests of the thirty-nine countries represented in the Chamber's membership. The Brussels meeting will be of the nature of an unofficial international economic conference and, it is expected, will result in the adoption of certain definite principles of economic reconstruction.

Child Labour Law in Argentina

On September 30, 1924, the Congress of Argentina, enacted a new child labour law which applies to the entire country. It raises the minimum age for employment in industrial and commercial establishments from 12 to 14 years, and establishes a minimum age of 12 for other employments. Children under 18 years may not be employed over five hours a day and 36 a week, and women over 18 years of age may not be employed over 8 hours a day and 48 hours a week. The old law provided for a 48-hour week for persons under 16 years of age. Night work and employment in dangerous occupations are prohibited for boys under 18 years of age and for women of all ages. The law also prohibits the employment of women for six weeks before and six weeks after childbirth. Nursing mothers are given a rest period of fifteen minutes every three hours.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the LABOUR GAZETTE relate to activities which have a direct bearing on the training of apprentices and industrial workers, and are therefore of interest in connection with the work carried on in Canada by the secondary vocational schools in receipt of federal grants under the Dominion Technical Education Act. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

Toronto.—Scientific measurement of the fitness of apprentices for the printing industry has been made a compulsory test for admission to the Toronto Typographical Union. Henceforth no youth will be accepted for membership in the union until he has passed the set psychiatric tests.

It is stated that there is no other labour union in the world thus mentally measuring its future members. The test was decided upon by the apprenticeship committee of the local union and endorsed by the officers of the local organization.

New Brunswick.—The special course in automotive electricity and acetylene welding conducted under the direction of the Provincial Vocational Board opened in St. John on January 7th. The enrolment was so large that it was necessary to provide additional classes in the evening. The course is for garage workers and is now in its second year of operation in St. John.

Technical Education in Nova Scotia

The following extracts from an article by Dr. F. H. Sexton, Principal of the Nova Scotia Technical College at Halifax, appearing in the *Halifax Herald* of December 31, 1924, gives some idea of the progress of technical education in that province.

Technical education was established in Nova Scotia in 1907. Such a step was imperative because industry had thrown off its responsibility with respect to training its workers. Apprenticeship used to provide boys with the chance of learning a trade and they paid for their instruction by promising to work for a long stated period at a low rate of wage. Then came the introduction of machinery and specialization. Machinists divided into automatic-machine tenders, lathe hands,

fitters, die-makers, grinders, etc. Carpenters became form-makers, finishers, lathers, floor-layers, cabinet makers, etc. Where there had been 100 recognized vocations there developed over 20,000 different occupations. For many of these a week to a month was all the time required to learn the rudiments of the job. So industry called for trained workers and shed once and for all the task of education. In only a few occupations and by relatively few employers is there any regular apprenticeship or training carried on at the present time. Consequently, the public school system had to be enlarged to meet the new needs of helping to prepare boys for industry, and to assist those who were employed in improving themselves. This has given the school severe tasks which they bravely assumed and are striving earnestly to discharge.

Evening technical schools are run co-operatively by the Technical College and the towns where they are organized, each bearing about equal parts of the expense. The instruction is given throughout the six winter months so that people engaged in business, industry, or the home may study some subject in the evenings which will help them in their daily work. The instruction covers a wide range of commercial, scientific, industrial and home-making courses, and is practically free. The student does not have to lose an hour from his employment and may in this manner prepare himself for advancement.

The evening coal mining and engineering schools are held in practically every colliery town in the province. The subjects cover the wide range of knowledge necessary to prepare men for examinations through which they may become certified stationary engineers or mine officials. They have been carried on for many years and have been developed to a high stage of efficiency.

Short-term courses are held at the Technical College in Halifax for the first three months of each year when industrial operations usually pass through their slackest period. They are planned for men in industry who find they cannot advance without some more technical knowledge. The instruction given is of a higher order than that offered in the evening or correspondence courses. No examination is required. The student need only to have had public school education through Grade VIII and enough industrial experience to prove to the college he can benefit by the instruction. Such subjects

are given as Land Surveying, Architectural Drafting, Automobile Mechanics, Marine Engineering, Electrical Machinery, Technical Chemical Analysis, etc.

The correspondence study courses were the last established and have the widest application because no one in the province can be isolated so that he does not get mail at regular intervals. The subjects cover a very wide range including preparatory, commercial, industrial and home-making courses. Nearly 100 different subjects are offered. All of the work is conducted on a strictly educational basis and every student registered gets individual help and attention. Although only established recently, the courses have grown steadily in favour and are reaching a wider number of men and women each year. One corporation, the Maritime Telegraph and Telephone Co., has co-operated closely with the college and is actively promoting the training of any and all of its technical employees through a splendid series of correspondence study courses in telephony.

In the evening technical schools there are registered 2,500 pupils; the evening coal mining schools have over 600 students; and in the correspondence courses are over 700 people pursuing various studies.

Printing Arts Course to Aid Apprentices

A new correspondence course in the printing arts, under direction of a newly organized bureau of education of the International Typographical Union, was commenced on January 1 in Indianapolis, Indiana, according to an announcement by Mr. James M. Lynch, president of the union, who stated that, "The energy and resources of the union will be devoted to extending work of the educational bureau as rapidly as is practical. The newly installed executive council looks upon apprentice training as of vital importance. The I.T.U. protective and beneficial institutions, such as the Union Printers' Home at Colorado Springs, Colo., mortuary benefit and old-age pension, have accomplished much in strengthening the organization, but the future welfare of the union requires elevation of craftsmanship and sound education of succeeding generations of printers. Employers do not object to paying good wages to good printers, but they will complain against good wages for incompetent men. The same applies to any other trade. It is our ambition to light the way for other trades in this problem of education."

Under the by-laws of the Typographical Union, the course in printing by apprentices is compulsory. They are required to begin their

educational work in the third year of their six-year apprenticeship and the work must be completed before they are admitted to membership. The new bureau will provide adequate methods for checking up the progress of each apprentice in his studies and for determining if he has profited by his studies. In addition to the merely technical operations of the printing craft, the course will carry instruction in English, punctuation, art in its relation to printing, and in advertising composition. The policy of permitting the student to select subjects, not included in the fundamental course, will be pursued. Test questions for use in examination of apprentices by local committees will be supplied by the bureau.

Apprenticeship in the Printing Trades of New York City

As a result of negotiations and arbitration, an agreement was recently entered into between the Publishers' Association of New York City and the International Printing Pressmen and Assistants' Union of North America, together with its subordinate New York Union, which agreement included, among other things, the following provision for the training of apprentices:—

"Apprentices shall be selected by the employer through his foreman and may be placed in the discretion of the employer at any task in the pressroom at any time. Each office may have one apprentice for each six journeymen, or major fraction thereof, and shall have at least one apprentice for each ten journeymen, or major fraction thereof, and as many flyboys and carriers, selected by the employer, as desired by each office. Candidates for apprentices shall be not less than 19 years of age, shall be of good character and physical health, shall have had a common school education, and shall file with their application two references from persons other than their parents as to their qualifications.

"The parties to this agreement recognize and accept mutual responsibility in the establishment and maintenance of an adequate system of apprenticeship, and guarantees are hereby given by the parties hereto to give to apprentices ample opportunities for the development of the necessary mechanical and executive experience in order to assure competent craftsmanship. Apprentices shall be registered in triplicate form as provided by the laws of the International Printing Pressmen and Assistants' Union of North America, the apprentice's certificates to be signed by the publisher or foreman of the newspaper on which the apprentice is employed, and by the

representative of the local office of the union, each holding a copy of the certificate of apprenticeship, and the third copy to be held by the President of the International Printing Pressmen and Assistants' Union of North America.

"The union agrees that every facility and encouragement shall be accorded apprentices in carrying out its share of the mutual responsibility for developing competent journeymen.

"The International Printing Pressmen and Assistants' Union of North America obligates itself to furnish the apprentices with a free correspondence course dealing with technical questions involved in the operation of newspaper printing presses, and in dealing with paper and inks, and to render such other assistance as may be necessary to carry out the joint obligations afore noted.

"Annual examinations shall be held of all apprentices employed. The examining board in each office shall be the foreman and a journeyman member selected by the chairman of the chapel, but in case of a disagreement between them, the foreman's decision shall prevail. A report upon the progress made by the apprentices thus examined shall be made out in triplicate form, one for the employer, one for the local office of the union, and one for the President of the International Printing Pressmen and Assistants' Union of North America.

"It is agreed that, in the event of a branch technical trade school being established in New York City by the International Printing Pressmen and Assistants' Union of North America, the employer will co-operate in drafting and executing detailed plans for extending to apprentices opportunity for instruction that shall make for proficiency in their craft and improvement in their station.

"The employer shall afford apprentices every opportunity to master the work of a journeyman that the foreman deems consistent with the efficient management of the room. To this end, should the union fail to provide the requisite number of journeymen for one or more full days or nights, or should a journeyman be absent from his station temporarily during the day or night, the foreman shall give the opportunity of learning the duties of such position to an apprentice. When temporarily employed for one or more full days or nights as above, the apprentice shall receive the day or night wage which the journeyman would have been paid. The foreman shall distribute the opportunities to learn the trade among all the apprentices in the room according to his judgment, and, as above, or from time to time, as he finds it

practical, shall assign apprentices otherwise to work on presses, but in no case shall any such assignment be made when it involves, directly or indirectly, any increase in the number of journeymen and apprentices.

"Apprentices shall be selected by the foreman from the qualified flyboys or carriers, and they shall be rated as to the apprentice grade by two factors: first, efficiency; second, length of service. The apprenticeship system herein established is not intended, and will not be permitted to abridge the right of the employer to determine the number of flyboys and carriers to be employed, but only to create a definite system of instruction, promotion and advancement for all those worthy of it, with appropriate and certain increases in pay.

"The term of apprenticeship shall be five years. At the satisfactory conclusion of his term of apprenticeship, an apprentice shall be eligible to journeyman membership in the union, and may be employed as a journeyman, provided there is a journeyman vacancy which he may fill. The employer may employ new apprentices at any time, provided the ratio of apprentices to journeymen does not exceed that provided above. A graduate apprentice may continue to fill the position of an apprentice while waiting for a journeyman vacancy."

Apprenticeship in Australia

Speaking in Melbourne, as President of the Master Builders' Association, Mr. J. L. Gillon said:—

"As employers and citizens we deplore the fact that many young Australians are drifting into dead-end jobs which may be remunerative for a few years in youth, but which eventually land them among the unskilled unemployed. We are anxious to devise a means whereby we will be assured of filling the ranks of skilled artisans from within the trades. The suggestion that employers as a body give countenance to, or participate in, the importation of skilled workers from overseas, or that immigrants are given employment in preference to Australians, is totally wrong. As a matter of fact, our association has been invited to give some guarantees in respect to the introduction of skilled workers from Great Britain, but this we have refused to do. Such skilled artisans who come to Australia come either on their own initiative or at the invitation of their relatives and friends. I want to emphasize that they do not come at the instigation of the association. Although it is over-stating the case to say that there are practically no apprentices in

the building trades, we agree that there are insufficient to meet normally expanding requirements, and, in the interests both of the community and of ourselves as builders, we would welcome the adoption of a system which would guarantee that the skilled trades could be supplied by Australian artisans properly taught. The question of apprenticeship in the building trades cannot be dissociated from the question of continuity of employment. Although there are exceptions, the general run of contractors find the intermittency of work a fatal obstacle. Most contractors have periods in which there would be no work for apprentices, yet if they indentured them under existing conditions they would be obliged to keep them continuously employed over a period of years unless they could arrange a transfer. That is the crux of the question. One suggestion is that the new law should make it possible for an apprentice to be indentured either to an individual builder or to such an organization as the Master Builders' Association. If this were adopted, those builders having continuous work, and not wholly dependent upon successful tendering, could, as now, indenture their apprentices. Those who have no guarantee of continuous work could utilize and assist in training those boys who were apprenticed to the trade through the association, and the association would be responsible for their employment and their training. That, I think, is a feasible scheme, and the only one as far as I know at present which would enable the building trade to carry anything like its full quota of apprentices.

"On the question generally, the association is eager for a satisfactory system, and is ready to consider any proposition advanced, provided it is reasonable. Our experiment with the brick makers' class has proved quite successful as far as it has gone, although it was opposed by the union at the outset. In any scheme adopted there must, of course, be reciprocal obligations, and means of ensuring that they will be honoured. The apprentice who, after about a year's tuition, leaves his employer and becomes an improver, is not a tradesman, and probably never will be a thoroughly good one. This habit has been very prevalent in Melbourne in recent years. The half-trained youth is tempted by the higher wages offering for an improver, and the original employer is deprived of his services at a period when he is beginning to become useful, although he cannot be said to be a tradesman. This has had the effect of choking off many employers who would, in other circumstances, be willing to take a

quota of boys and train them thoroughly. It will be necessary to remove the temptation for apprentices to go out as improvers with a trade partly learned, and an important point is that both parents and youths should realize that the years spent in completely mastering a trade are years well spent, even if the wages received are lower during that period than those offering for outside jobs. A man who has mastered a trade is always an asset to the country and, almost invariably, he is self reliant. He who acquires a complete knowledge of his calling in his youth is, whatever he be, a valuable citizen, and in later years he will never count as wasted the time spent in learning the trade."

Vocational Guidance

The responsibilities of the High School Principal for the vocational guidance of young people was clearly pointed out by Edward Ryneerson, President of the National Society of Secondary School Principals, at the last annual meeting of the association in Cleveland. Mr. Ryneerson is director of vocational guidance at Pittsburg, and President of the National Vocational Guidance Association of the United States, and is thoroughly familiar with the vocational guidance being done throughout the United States. His address should be of particular interest to every high school principal and teacher, but it also indicates the need for co-operation with the schools on the part of employers, parents and industrial workers. The following brief summary of the paper emphasizes the importance of organized and systematic guidance in connection with the education of all young people:—

1. The school is the one organization that is specifically fitted to do systematic, continuous guidance. In other words, guidance is the sole reason for the school.

2. The object of vocational guidance is not to prescribe a vocation for the child, but to get the parents, teachers, and child "to bring to bear on the choice of a vocation organized information and organized common sense"; not to decide for the child what he shall do, but to provide him with the necessary information so that he can choose wisely.

3. In photography snapshots usually give flat pictures; time exposure is necessary to give detail, definition, and depth to a picture. The same law holds in regard to impressions on the mind. "Short cuts" through school often result in superficial education.

4. Placement is only one part of vocational guidance, but getting jobs is never to be considered its main function.

5. The employer and the school should understand each other better. The employer should make more use of the school records of his applicants, and the school should never lose sight of the fact that the employer could give it many practical suggestions which would make the school subjects more attractive and helpful to the child.

6. The secondary school principal is challenged to provide suitable courses for "all the children of all people"; to see that "every member of a democratic society shall get all the education and that sort of education for which as a free spiritual agent in the relation of citizen he has the capacity and need."

7. The principal must think of the leisure time of his future men and women and must offer guidance suitable for the avocation.

8. Vocational education must not be side-tracked. Whether we will or no, a very large percentage of our pupils will enter the unskilled, semi-skilled, or skilled labour. Does the school bear any responsibility for the kind of workers or citizens they will become?

9. Again the conservation of human beings challenges every educator. Shall we give it up?

10. Very little, if anything, worth while comes haphazardly. Intelligent guidance is absolutely necessary.

11. Who can estimate the value of a counselor's work in dollars if he keeps only one child in school? Don't say we cannot afford one more salary.

12. The vocational guidance programme ought to be so complete that it will be working at every point in the pupil's career rather than at a few specific times.

Stockholm, Sweden.—The elementary-school board of Stockholm has recently opened a

vocational guidance office which works in co-operation with the public employment office. The office assists both boys and girls and in addition to the usual business hours is open several evenings in the week in order to allow parents to accompany their children. On leaving school young persons fill out a form showing their plans for the future and their vocational aptitudes. Teachers are required to give information about the pupils on the same form. This form is presented to the vocational guidance office, which through its relation to the public employment service is able to give applicants useful advice about the opportunities in the callings for which they are fitted. In each case, however, the applicant is left to make his own choice. During its first month's activities (May, 1924), the office received 657 applications for employment and was notified by employers of 527 vacancies. Of these vacancies 392 were filled. (Industrial and Labour Information, Geneva, Oct. 13, 1924).

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Illinois Mine Safety Conference

THE Illinois Mining Safety Conference, arranged jointly by the National Safety Council's mining section, the state Department of Mines and Minerals, the United States Bureau of Mines and the United Mine Workers of Illinois, the state operators' association and the Illinois Mining Institute, was held at Springfield on January 15 and 16. The four sessions of the conference were presided over by men representing the various interests, a coal operator presiding at the first session, the head of the Illinois Mine Workers at the second, the head of the state Department of Mines and Minerals at the third, and an operating official at the last. The secretary of the conference was a representative of the National Safety Council.

More than 55 per cent of the major accidents underground are due to falls of coal, said C. E. Anderson, mine manager of the Valier Coal Company, Valier, Illinois. He said this is partly due to the miner's own carelessness or failure to take down loose coal. He proposed: (1) greater care on the part of the miner, enforced by closer supervision; (2) better propping of roof with timber also enforced by better supervision and (3) the compulsory use of a good tool-steel pinch bar five feet long with which to work down loose standing coal. This bar should be sharp at one end and have a flat bit on the other end

six inches long bent at an angle of twenty-two degrees for leverage.

The superintendent of the same mine also discussed the accidents which take place at the working face claiming that the percentage of face accidents is high partly because noise at the face prevents a man from hearing warning sounds of weakening roof or coal. Carefulness by the man himself, he said, was the best preventive. He touched upon various standard methods of mine protection, especially rock-dusting from faces outward to prevent coal-dust explosions which he thinks is the greatest of all face dangers. He advocated safety organizations in every mine, comprising the mine management and a safety engineer, which should hold weekly meetings.

Mr. George L. Mercer, statistician for the Illinois Mine Workers, declared that in the United States the mining accident rate is higher than in any other industry. In the last thirty-six years in Illinois one man had been killed in every 11.75 men employed and since 1883 one in every 1.38 has suffered 30-day injuries. Gas and dust explosions, he said, constituted only about 12 per cent of the menace, that about 10 per cent die from powder and 6.9 per cent from gas, while "46.2 per cent die from roof and coal falls, a cause that picks them off by ones and twos".

The safety inspector of the Crerar Clinch Coal Company said safety rules actually en-

forced save lives. His mine rules which are compulsory provide that on grades over 4 per cent, trips must carry drags, timbering must be carried within 8 feet of faces before the coal is shot, first-aid equipment must be always within 2,000 feet of advancing workings, etc. Men are discharged for not obeying these rules, he said.

Another safety inspector pointed out that the co-operation of the officials of the United Mine Workers, all the way down from district president, was necessary in order to get complete obedience to mine regulations, but, on the side of the miners it was claimed that the operators often make such a course difficult. Officials had been condemned by union members for assisting in the discharge of a union man for failure to obey rules at mines where the operators were themselves violating laws and were not penalized. Inclosed safety lamps ought to be compulsory, he said, but the company ought to be compelled to move gas everywhere and all the time. He thought companies often relaxed their efforts as soon as closed lamps were installed.

Frank Farrington, president of the Illinois Mine Workers, pledged the co-operation of his organization in support of safety. He said one mistake made by the United Mine Workers in the past had been in defending mine workers whether they had been right or wrong, and that whoever was in the wrong ought to be told so.

Report on Miners' "Beat Knee", "Beat Hand", and "Beat Elbow"

A report giving the results of an inquiry into miners' "beat knee," "beat hand," and "beat elbow," undertaken by the British Medical Research Council at the instance of the Mines Department, has recently been published. These three diseases are identical as to their cause and pathology. They are generally regarded as peculiar to coal mining, although cases also occur among metalliferous miners, and occasionally in other occupations. They are the result of festered blisters, involving the surrounding tissues, the signs and symptoms being those of local cellulitis. This group ranks high among the diseases for which compensation is paid. The following are the conclusions reached by the Council:—

The diseases now reported upon are important not merely on account of the mining industry in compensation, but because of the amount of suffering and disability they originate. Although ranking below miners' nystagmus in prevalence, beat knee for year after year has stood second, and beat hand third in the long list of diseases included in the schedule entitling to compensation under the Workmen's Compensation Act, 1906. Beat elbow and synovitis of the wrist are of less magnitude, but even these in comparison with other compensation diseases, such as lead-poisoning

and anthrax, stand high for the average annual number of cases.

No indications have been found that either of the diseases has been diminished in prevalence. Hence we conclude that no effective means, such as have been taken to reduce the prevalence of accidents in mines, or of lead poisoning in factories, have been adopted for their prevention.

1. The underlying cause for each of the diseases is the same—repeated trauma. The way in which this occurs varies for each disease, but it is always directly connected with methods of work; thus, the knee is injured by constant work in thin seams, and the hand by getting hard coal or using picks with rough handles.

The first line of prevention, then, is to guard against repeated trauma, or to minimize the results so far as is practicable.

2. The determining cause of an acute condition is the ingress of infection to tissues of lowered resisting power. No suggestion has been made, nor have we found reason to conclude that the infecting agents differ in any way from the usual micro-organisms which cause inflammation and suppurative cellulitis under such circumstances. Nor has evidence been forthcoming that some collieries have more cases than others owing to some infection existing in the workings.

The exact method of ingress of infection varies from case to case. It may be by some minute puncture, or through sodden skin, or from an infected blood-stream. The fact is that the infection is generally personal, i.e., it is present on the skin or in the blood.

The second line of defence is then avoidance of infection by keeping the skin clean and the general health good.

3. Even when infection has occurred but is in the preliminary stages an acute condition can often be prevented by recourse to early treatment, for example, by the application of tincture of iodine. When the preliminary stages are passed surgical treatment is needed; this treatment should be skilled, and should be carried out by those with experience. The condition of beat hand may be cited as one where lack of expert treatment may result in the functional loss of a hand for a skilled worker.

The third line of defence then lies in the proper equipment and use of first aid stations in close touch with skilled surgical advice, which is particularly needed for cases of beat hand.

4. These lines of defence can be strengthened by:—
i (a) the abolition of garters or other construction bands worn below the knee,

(b) the use in thin seams of suitable knee pads, and
(c) attention to smoothness of pick handles.

ii. Increased attention to cleanliness of the skin. In this connection we consider that as the erection of pit head baths is extended, attention should first be paid to collieries where thin seams are worked.

iii. Improvement of first aid stations directly under medical supervision, together with a spread of knowledge concerning the importance of their use.

Temperature a contributory factor to accidents

Dr. H. M. Vernon, investigator for the Industrial Fatigue Research Board, speaking at the conference of the Industrial Welfare Workers held at Swanwick, Derbyshire, England, and attended by welfare workers from nearly one hundred important industrial concerns throughout Great Britain and others from foreign countries, stated that atmospheric conditions under which industry is carried on might have a great influence on the frequency of accidents. In one factory it had been found that there was a minimum of

accidents when the temperature was 65 to 69. When the temperature fell five degrees there were six per cent more accidents. At another five degrees lower, accidents increased by 16 per cent, while another drop in the temperature of five degrees involved a thirty-five per cent increase in the number of accidents. At temperatures above 69 degrees accidents again increased in frequency.

This idea is also borne out by Mr. Lee K. Frankel, Ph. D., second vice-president of the Metropolitan Life Insurance Company in a recent booklet "Health of the Worker, How to Safeguard It". He states that the desirable temperature for a workroom will vary from 60 to 65 degrees Fahrenheit for work involving much physical exertion, to less than 70 degrees for other work. Ordinarily a temperature of 68 degrees produces maximum efficiency and is most comfortable for workers. "The New York State Commission on Ventilation," he says, "found that a higher temperature increased the heart-rate, affected the body-temperature and blood pressure, increased the rate of respiration, and substantially reduced efficiency. When the temperature was increased to 75 degrees Fahrenheit, the amount of heavy physical work performed decreased 15 per cent; the decrease amounted to 28 per cent at a temperature of 86 degrees." Mr. Frankel further states that fifty per cent humidity of air is a desirable moisture content for the ordinary room at a temperature of 68 degrees.

Most of the provinces of Canada have made provision requiring employers to regulate the temperature so that there will be no danger to the health of the workers, and to prevent overcrowding of rooms. In Ontario, Alberta and Saskatchewan, the temperature must not be less than 60 degrees Fahrenheit unless authorized by the inspector in writing. The following are provisions contained in the Factory Act of Ontario:—

(c) heat the premises throughout and regulate the temperature so as to be suitable for the work to be performed therein, and not to be injurious to the health or comfort of the employees; but in no case shall the temperature be less than 60 degrees Fahrenheit unless authorized by the inspector in writing;

(d) ventilate the factory or shop in such a manner as to keep the air reasonably pure and so as to render harmless, as far as reasonably practicable, all gases, vapours, dust or other impurities generated in the course of any manufacturing process or handicraft carried on therein that may be injurious to health;

(e) not allow over-crowding while work is carried on therein, so as to be injurious to the health of the person employed therein, the standard to be allowed being 300 cubic feet of room space for each employee.

Rest Pauses and Industrial Fatigue

"Reverie and Industrial Fatigue" was the subject of a paper read by Mr. Elton Mayo,

of the University of Pennsylvania, at the recent Toronto meeting of the British Association for the Advancement of Science. This paper has since been reprinted in the *Journal of Personnel Research*. The term "reverie" is used by the writer to denote a condition of mental preoccupation induced in the workers in certain industries by the monotonous nature of their employment. The paper gives the results of an inquiry into the causes of a high rate of "labour turnover" in the spinning department of a large factory:—

The general condition of affairs seemed satisfactory. The employers were unusually enlightened and humane; the factory was exceedingly well organized in respect of the items specified above, and was generally successful from the standpoint of production and of morale. Four financial incentive schemes were in operation and were working sufficiently well. But in spite of these devices, the labour turnover in the spinning department was, at the time of investigation, unduly high. Whereas the general labour turnover of the factory in other departments was estimated at 5 or 6 per cent per annum, in the spinning department, it was estimated by an executive authority as approximately 250 per cent. Every year one hundred hands had to be taken on in order to keep forty working. The difficulty tended to be most acute when the factory was busily employed and most in need of men.

The inquiry resulted in the findings enumerated below:—

1. As ordinarily carried on, the operation of spinning-mules tends to produce physical postural fatigue. Its relative monotony also induces dispersed thinking and states of reverie which are apt to be pessimistic.
2. The introduction of rest-pauses relieves this condition and greatly increases production by (a) restoring normal circulation and relieving postural fatigue, and (b) effectively interrupting pessimistic reverie.
3. In the instance described, the rest-pauses are chiefly effective because they eliminate pessimistic reverie.
4. The rest-pauses must be introduced and accompanied by instruction in the technique of relaxation.
5. The rest-pauses are more effective when of regular or assured incidence.
6. By these means, in the instance described, a high labour turnover ("temperamental" in character) was got rid of, productive efficiency increased and the general morale greatly improved.
7. Many types of factory operation resemble spinning in that they encourage states of reverie mentally harmful to the individual. Some modification of the present technique would be capable of effective application in such instances.

Protection on Concrete Buildings

A coroner's jury at Toronto, on January 16, after investigating the circumstances of the death of a carpenter who fell from the fifth storey of a building under construction, recommended that the city building by-laws should be amended to afford protection on buildings of concrete construction. A building inspector informed the jury that the existing by-laws required scaffolds on buildings under construction that were over two stories in height, but he did not consider that this by-law applied to the building where this accident occurred, as it was of concrete construction, and the work was being done from the inside.

TRADES AND LABOUR CONGRESS OF CANADA

Legislative Programme submitted to Dominion Government

THE legislative proposals of the Trades and Labour Congress of Canada were laid before the Government at Ottawa on January 31, by a large delegation composed of the Executive Committee of the Congress, supported by representatives of various labour organizations in Canada and others, the delegates being as follows:—

Tom Moore, president, J. T. Foster, vice-president, James Simpson, vice-president, Bert Merson, vice-president, and P. M. Draper, secretary-treasurer, Trades and Labour Congress of Canada; A. Bastien, general organizer, American Federation of Labour; Leon Worthall, organizer, Journeymen Barbers' International Union; E. W. A. O'Dell, organizer, Boot and Shoe Workers Union; John McLeod, vice-president, Bricklayers, Masons and Plasterers International Union of America; George Ashley, vice-president, Bricklayers, Masons and Plasterers International Union of America; Frank McKenna and Louis Beuloin, vice-presidents, Brotherhood of Railway Carmen of America; James Marsh, organizer, United Brotherhood of Carpenters and Joiners of America; E. Ingles, vice-president, and John Noble, organizer, International Brotherhood of Electrical Workers; Donald Dear, vice-president, International Association of Fire Fighters; W. F. Bush, Executive Board member, United Garment Workers of America; J. A. McClelland, vice-president, and Harry Kerwin, organizer, International Association of Machinists; W. V. Turnbull, vice-president, United Brotherhood of Maintenance of Way Employees and Railroad Shopmen, and J. W. Jewkes, secretary-treasurer, Canadian Pacific System Division, United Brotherhood of Maintenance of Way Employees and Railroad Shopmen; Robert Livett, organizer, United Mine Workers of America; Fred Molineaux, organizer, and R. Gervais, organizer, Brotherhood of Painters, Decorators and Paperhangers of America; John W. Bruce, organizer, United Association of Plumbers and Steamfitters; George R. Brunet, vice-president, Printing Pressmen and Assistants' Union of North America; George Sangster, organizer, Journeymen Tailors' Union of America; A. E. Thompson, representative, International Typographical Union, and J. A. P. Haydon, president, Ontario-Quebec Conference Typographical Unions; E. Hamelin, president, National Association of Marine Engineers of Canada; Alex. McMordie, secretary, and John J. Reeves,

vice-president, Federated Association of Letter Carriers; Bob Tallon, president, and Chas. Dickie, secretary, Division No. 4, Railway Department, American Federation of Labour; Magnus Sinclair, Amalgamated Association of Street and Electric Railway Employees of America, and Jos. Corbett, General Chairman, Brotherhood Railway Carmen of America, Joint Protective Board, Central Division, Canadian National Railways.

The Government was represented by the Right Honourable W. L. Mackenzie King, Prime Minister; the Honourable W. R. Motherwell, Minister of Agriculture; the Honourable H. S. Beland, Minister of Health; the Honourable Chas. Stewart, Minister of the Interior; the Honourable Ernest Lapointe, Minister of Justice; the Honourable Chas. Murphy, Postmaster General; the Honourable A. B. Copp, Secretary of State; the Honourable E. J. McMurray, Solicitor General; the Honourable H. B. McGiverin, Minister without portfolio; the Honourable J. H. King, Minister of Public Works, and the Honourable James Murdock, Minister of Labour.

The Prime Minister pointed out that the large number of the Cabinet Ministers present demonstrated the Government's recognition of the importance of the proposals which labour had to submit, and expressed himself as deeply impressed with the representative nature of the delegation. After hearing the addresses of the delegates he promised that the proposals submitted by them would receive the careful attention of the Government.

The proposals submitted by the delegates were as follows:

1. *Legal limitation to the hours of work to not more than eight in the day and forty-eight in the week.*—The deputation urged that immediate effect be given to the eight-hour day Draft Conventions of the International Labour Organization so far as lay within the province of the Dominion Government. Reference was made to the action taken in asking the Supreme Court to rule in regard to Provincial and Federal jurisdiction on this matter and the request was made that competent counsel, selected in agreement with the Trades and Labour Congress of Canada, should be attached as Advisory Counsel to the Department of Justice during the hearing of this case.

2. *Unemployed Insurance.*—The delegation pointed out that numerous public bodies were in favour of old age pensions and referred to the inability of the workers themselves to make provision against the oft-recurring periods of unemployment. The detailed proposals submitted by the Congress to the Government a year ago were endorsed, and the opinion again expressed that unemployment relief is a joint responsibility of the Federal Government, Provincial Legislatures and municipalities.

3. *Immigration and Emigration.*—Favourable mention was made regarding the measures taken by the Government during the past few years to amend the Immigration Act by removing therefrom the objectionable clauses inserted during the session of 1919 and which discriminate against British-born subjects, allow of deportation for political offences without trial by jury, and considerably increase the number of those who are placed within the prohibited classes. Regret was expressed that this legislation had been, on each occasion, rejected by the Senate, and the request was made that the Government would again introduce legislation to remove these objectionable clauses. The delegation protested against the continued influx of industrial workers notwithstanding the volume of unemployment existing in Canada, and asked for amendments to the Immigration Act which would place in the prohibited classes all contract labour, except such as was approved by the Employment Service Council of Canada.

The assistance of the Government was solicited to make representations to the United States Government which would remove the discrimination of the United States *Quota* law as between Canadian born and other Canadian citizens. The desire for total exclusion of Oriental labour was reiterated, and the Government was asked to strictly apply all present laws dealing with such labour.

The delegation further proposed measures for the discouragement of immigration of children under school age into Canada; for the abolition of bonuses to private employment agencies; for the formation of a Dominion Advisory Council of Immigration along the lines of the Employment Service Council of Canada; for solicitation of the aid of the British Government to obtain closer supervision of all emigration advertisements and control of booking agencies in Great Britain. It was also proposed that all land settlement and colonization schemes be made equally well known and available for those resident in Canada.

4. *Old Age Pensions.*—Action was urged to give prompt legislative effect to the report of the committee which dealt with this subject at the last session of Parliament.

5. *Industrial Disputes Act.*—Attention was drawn to the changes necessitated by the decision of the Privy Council in declaring this Act *ultra vires* of the Dominion Government. Labour, it was stated, recognized the value of this Act in assisting in maintaining industrial peace and stability and the benefit it had been to the public generally. It was contended that provincial legislation would not be a satisfactory substitute as it would lead to lack of uniformity in the various provinces, which was contrary to the policy agreed upon by employers and employees at the National Industrial Conference, 1919. The insertion of similar provisions in the Railway Act, Shipping Act, etc., to those contained in the Industrial Disputes Act might likewise create confusion through placing its administration in several departments of the Government instead of being centralized through the Labour Department, where it properly belongs.

Labour's position was that the Government should take the necessary steps to enable them to re-enact this legislation with the amendments previously sought by Labour, and if it was decided to secure changes in the British North America Act that the Congress would be prepared to submit a further detailed brief to either the Government or any Committee Parliament may set up to deal with the question.

6. *Election Act Amendments.*—The deputation asked for amendments to the Election Act so as to provide for proportional representation in group constituencies and the transferable vote in single constituencies; the creation of public holiday on election day, or alternately, rearrangement of the hours of voting so as to give better opportunities to workers to cast their ballot. Abolition of the forfeiture of election deposits and repeal of those sections of the Franchise Act 1920 which prohibit trade unions and similar organizations contributing to election campaign funds, were also proposed.

7. *Conference on Unemployment.*—The Government was commended for its action in convening the conference of representatives of the Provincial Governments and various organizations to meet with members of the Federal Government in September last, and also for publishing the report of the conference. Strong dissatisfaction was expressed by the deputation that no further action has been taken by the Federal Government to give

effect to the recommendations adopted at the conference, and these were again brought to the attention of the Government, which was strongly urged to co-operate with the provincial and civic authorities in relieving the present distressful conditions of the unemployed.

8. Injunctions and amendments to the Criminal Code.—Cases were quoted showing the continuance of the practice of using the injunction to prevent peaceful picketing and strikes in accordance with British practice, and the suggested amendments to the Criminal Code submitted on previous occasions were again urged. The amendments previously asked for, which would restore the right of freedom of speech and assembly and prevent indiscriminate arrests for sedition, seditious conspiracy, etc., were also brought forward.

9. Fair Wage Regulations.—The delegation in view of the commitments of the Dominion Government by its signature to the Peace Treaty to the application of the eight-hour day, and of the fact that 50 per cent of the industrial workers in Canada now enjoy the eight-hour day, asked that the fair wage clauses be amended by striking out that section referring to prevailing rates in the districts where Government contracts are being undertaken, and by substituting therefor clauses providing for an eight-hour day.

Attention was drawn to the non-compliance with clause 5 of the Fair Wage Order in Council 1922 and strict observance regarding inspection of labour conditions asked for.

Repeal was asked for that section relating to agreements added by Order in Council of April 9, 1924, as this was held to nullify the original purpose and intent of fair wage policies. It was also requested that contractors violating fair wage clauses should be subject to penalties in addition to payment of back time, and that the application of the fair wage regulations should be extended to work done by commissions, etc., wherever Government money is being expended. It was also asked that the fair wage policies, as laid down by Order in Council, should be made into an Act of Parliament.

10. Representation on Research Council.—The delegation asked that the promises made by the Prime Minister, in a letter dated April 1922, regarding labour representation on the Research Council, should be implemented by the appointment of a labour representative among the fifteen members of the Governing Council.

11. Abolition of the Senate.—The deputation informed the Government that there had been no change in the belief of the Trades and Labour Congress of Canada that the best interests of the country would be served by the abolition of the Senate. It was pointed out, however, that labour would support the Government in any measure which would restrict the powers of the Senate, especially so far as vetoing legislation passed by the House of Commons, reduce the number of Senators, or make the Senate more representative and answerable to the people for its actions.

12. International Labour Office.—The delegates referred to the appointment of workers' representatives and advisers to the annual meetings of the International Labour Organization, and expressed the hope that the Government would continue to adhere firmly to the spirit and letter of the Peace Treaty in making these nominations in the future.

The Government was commended for passing legislation giving effect to four Draft Conventions of the International Labour Organization pertaining to the age of employment of children at sea; compulsory medical examination of the same and provision of unemployment indemnity in case of loss or foundering of ships. The Government was further asked to implement this legislation by the filing of formal ratification with the League of Nations.

In addition to conventions and recommendations of the International Labour Organization, previously referred to, it was pointed out that a number of other proposals were considered as coming within Federal jurisdiction. Foremost amongst these were the conventions providing for one day's rest in seven; for the compilation of emigration as well as immigration statistics, and for the substitution of free Government agencies for private employment agencies. It was urged that the Government should enact legislation giving effect to all of these international proposals as come within their jurisdiction.

13. Shipping Act.—The deputation gave a résumé of the efforts made during the past several years to obtain amendments to this Act to meet the requirements of several classes of labour covered by the same, with particular reference to the Marine Engineers. It had been stated that a new Act was to be presented to Parliament, and strong disappointment was expressed at the delay which had occurred in dealing with so important a matter. In asking that legislation should be introduced on this question at the forthcoming session, the request was made that representa-

tives of the Marine Engineers organization should be conferred with before the Act was submitted to Parliament.

14. Political rights of Federal, Provincial and Civic Employees.—It was suggested that the growth in the numbers of persons employed in the public services and publicly owned utilities of Canada required that such employees should be placed on an equal plane with other citizens of Canada in the exercise of political freedom.

Other Proposals.—The Government further was asked to give consideration to the creation of an independent tariff commission on which labour shall have representation; to give effect to the several requests of the Postal Workers Organizations for higher remuneration and improvement in working conditions; to discontinue payments of subsidies to the Royal Mail Packet Company and equip the Canadian Government Merchant Marine Steamers to properly carry on this business between the Maritime Provinces and the British West Indies; to enact legislation making possible the registration of union labels; to repeal the sales tax; to give legislative effect to the report of Government Commission (1921) on

prison reform; to simplify legislation relating to, and encourage the development of co-operative societies; to create joint councils in the Federal Civil Service similar to those existing in the British Civil Service; and to take whatever action may be possible to give effect to the report of Parliament relative to the reimbursement of Home Bank Depositors.

It was further stated that a number of other matters of a departmental nature would be brought by the Congress Executives to the attention of the Ministers in charge of the respective Departments most closely concerned. The interview would be, in this way, confined to discussion of a smaller number of subjects.

Postal Employees.—The delegation stated that a strong feeling existing in labour circles against the penalties that had been inflicted on the Postal Workers who took part in the recent strike, in having caused them to work for two months, after the settlement of the strike at a considerably less salary than their regular classification called for, and the Government was urged to make payments to the men of the amounts due to them.

NOTES ON LABOUR UNION ACTIVITIES

Quebec Executive, Trades and Labour Congress of Canada

The Quebec Executive of the Trades and Labour Congress of Canada presented to the Provincial Cabinet on January 21 a list of legislative measures desired by labour. These demands were in line with the resolutions adopted by the Trades and Labour Congress of Canada at its annual meeting in London, Ontario, last September.

The provincial executive committee composed of Messrs. Gus. Francq, Omer Fleury, Jos. Pelletier and J. A. Belland. Mr. J. T. Foster, vice-president of the Trades and Labour Congress of Canada, supported the delegation. Premier Taschereau and his colleagues after discussing some of the points raised promised due consideration and stated that in the course of the present session, in addition to taking up the workmen's compensation act, general questions affecting labour would be considered. It was stated further that the Government intended to create a Minimum Wage Commission shortly in accordance with the provisions of the Women's Minimum Wage Act of 1919. In regard to the Fair Wage proposals it was intimated that the Government was willing to

give greater powers to Fair Wage Officers, so that they could alter rates of wages, each side having the right of appeal to the Minister.

The delegation presented a memorandum, containing the most urgent of their recommendations. They asked for:

1. *Legislation emanating from decisions of the International Labour Conference.*—(a) The establishment of an 8-hour day in industrial commercial enterprises.

(b) The adoption of legislative measures so as to insure greater protection to women and children employed in industrial and commercial enterprises.

(c) Co-operation with the other provinces with a view to securing ratification by Canada of the other conventions and recommendations.

(d) Official representation of the province of Quebec at the annual conferences of the International Labour Organization.

2. *Sunday labour and the law relating to one day's rest in seven.*—While there was a notable decrease last year in Sunday labour in large industries, it was claimed that there were still many industries in which this system is still in force, and that the law of one

day's rest in seven for employees in hotels, clubs and restaurants is being continually violated owing to a wrong interpretation given which is, "that, provided the employee has had 24 hours rest distributed over several days in the week, the law has not been broken." It was suggested that the act should therefore be amended to read as follows: "that the employees are to be given one day's rest out of 44 consecutive hours in each week."

3. Abolition of private employment offices.

4. *Fair wage in government contracts.*—In April 1908, the Quebec Legislature adopted the following resolution, which was presented by the Hon. Mr. Taschereau and supported by the Hon. Mr. Roy:—

"Resolved: That all government contracts shall contain conditions which will anticipate any abuses which are likely to occur in sub-contracts, and that every effort should be made to pay the employees in the locality where the work is being executed, the same current wages as competent workers are receiving, and that this House concurs heartily in this policy and believes that it is the duty of the government to give immediate effect to the present resolution."

This resolution was almost identical with that adopted in March 1900 by the House of Commons, and the provincial government is conforming to this resolution to the extent that it is having inserted in its contracts the following clause:—

"The contractor is to pay to the employee engaged on the said works, the wages that are generally accepted as the current wages paid to competent workmen of each trade, in the locality: the contractor is obliged to conform to the text of this clause."

The delegation pointed out that there was nothing in this clause, determining the rate of wages to be paid, nor the number of working hours to be fixed, nor was there anything giving authority to the fair wage officer to fix them, nor to put them into force, and in case of dispute the employee is compelled to have recourse to the law.

It was also requested that a statute be adopted along the general lines of the Federal order in Council approved June 7, 1922, and amended by a further order in council, dated April 9, 1924, which renders its application easier, clearer and more definite. It was believed that instead of inserting this clause in a contract at the time of its signature, it would be more satisfactory if it were inserted in the applications for tenders which should be completed by the adding of the scale of wages to be paid and the number of hours worked during the execution of the contract. As a measure of protection for both the employer and employee, the statute might state that if the work is likely to extend over a protracted period (one year or one season) the Minister of Labour would have the power to

modify or vary the scale of wages from time to time, according to the circumstances or the exigencies of the industry involved. The conditions in the government contracts governing employees should also be rendered more effective by giving authority to fair wage officers to make investigations and to see that the terms of the contracts are lived up to. This would render it unnecessary for the employee to take action in a court of justice in order to obtain what is due him.

5. Allowance to mothers of needy families.

6. *Appointment of a minimum wage commission for women.*—This commission should be appointed without delay under the authority of the law of March 17, 1919.

7. *Educational Measures.*—The delegation, while recognizing all that the government has done in the way of developing public instruction suggested the following additional measures:

(a) Free tuition and compulsory school attendance.

(b) Compulsory and uniform teaching of French and English in all the schools of the province.

(c) The issuing of all books by the government on the recommendation of the boards of education, and their sale to the scholars at cost price.

(d) Uniformity in all school books throughout the province.

(e) Free tuition, technical or otherwise, in all provincial government schools.

(f) Permission to teach to be granted only to those holding a Normal School certificate, except for teaching in primary courses such as in kindergartens, other similar institutions and technical courses.

(g) Any person under the age of 21 working in a factory or elsewhere, who is unable to read or write, readily, in one of the two official languages of this country, to be compelled to follow a night course.

(h) An amendment to the Schools Act with a view to fixing a minimum wage rate for teachers which would be in keeping with the cost of living, and to permit of action being taken against school commissions who pay less than the minimum wage.

(i) The appointment of a Minister of Education whose duty it will be to superintend the proper administration of school boards, and who will see that all other rules and regulations are enforced.

(j) Inquiry whether it would not be expedient to change the system of granting scholarships to students who intend to complete their course in other countries, and instead to bring

professors of renown to this country. This would advance the standard of colleges and universities by turning out men of parts in the different sciences.

(k) The re-opening of the School of Arts and Trades.

8. Compensation for industrial accidents.—

As the commission appointed for the study of compensation for industrial accidents had finished its investigation, it was asked that the report be distributed and that legislation be enacted on the lines suggested.

9. Right of Labour Organizations.—Notwithstanding that the law in relation to strikes and lockouts (Statutes of 1921, Chapter 46, Article 2520c) states that the law is relevant "to the dismissal of one or more employees by reason of his or their affiliation with labour associations;" and that disputes should be submitted to a board of arbitration, it is claimed that the civic authorities in Montreal require persons seeking the position of constable in the Police Department to sign a sworn statement to the effect that they will not become members of any union or association other than a benevolent society or one having a superannuation fund or of the police athletic association of Montreal. It was proposed that section (b) of article 2520 of the Act be amended as follows:—

"(b) The refusal to employ one or more applicants or the dismissal of one or several employees by reason of their affiliation with labour associations."

10. Industrial Hygiene.—It was suggested that regulations governing hygiene be adopted making compulsory the removal of old wall paper before the new paper is laid; the washing off of walls covered with kalsomine or other colouring before the work of renovating is proceeded with; the prohibition of the use of paint sprayers, or at least the controlling of their use to the extent of protecting the health of the employees who operate these machines or who are in proximity thereto; the examination of barbers and sanitary inspection of barber shops. The relations existing between customer and barber are, it was claimed, of great importance, in the sense that there is the risk of infection by the customer and vice versa if the barber lacks experience or a knowledge of hygiene, and there should be a regular inspection of hair dressing establishments in order to ascertain if the rules of hygiene are being observed.

Federation of Catholic Workers of Canada

The executive council of the Federation of Catholic Workers of Canada laid before the Government of Quebec on January 29 the

proposals of the Federation in regard to labour legislation at the forthcoming session of the Provincial Legislature. The resolutions of the annual convention of the Federation, held last August at Port Alfred, Quebec, were given in the September issue of the *LABOUR GAZETTE*. The delegation was composed of the following:—Mr. Pierre Beaulé, president; Achille Morin, vice-president, Hull, J. G. Bolduc, vice-president, Three Rivers; J. A. Comeau, Treasurer, Lachine; Ferdinand Laroche, secretary; the Reverends A. J. Coté and Belisle, chaplains; Mr. T. Poulin, assistant-secretary, and Messrs. Langlois, Lacombe and Samson, representing employees of the south shore, and many others.

The principal requests which were submitted were as follows: uniformity in hours of labour; cessation of Sunday labour; the establishment of night classes for workers; the making of grants to industrial schools; readjustment in hours of labour of machine operators in pulp and cotton mills; the putting into force of women's minimum wage act; cessation of night work, and the introduction of a bill in regard to the barber's trade, the act to be entitled "The Barber's Act" of the Province of Quebec.

The delegates further asked that the bureau of appraisers be authorized to enforce the law governing stationary engineers of Quebec; that the bill respecting sanitary plumbing adopted by the congress held at Montreal in 1922, and re-adopted in 1923 and 1924, be put into force; that the necessary steps be taken to prevent unemployment, either by reviving local industries or by giving aid to those which already exist; that the building trades and the consumers be asked to co-operate with the workers in furthering this policy; that work on public enterprises be available to the unemployed during the slack season; that grants be made for the establishment and maintenance of union employment offices, and that every means be used to stimulate the government policy of colonization.

Mr. Beaulé, on behalf of the delegates, renewed the appeal for the establishment of a Superior Council of Labour and urged the necessity of the formation of such a body in order that labour may be brought into closer touch with the department. He added that the National Workers desired no change in the administrative head of the provincial department of labour.

The Premier assured the delegation that the government would give its earnest consideration to the requests submitted on behalf of the workers. It is expected that the government will appoint a boiler inspector shortly.

Legislative Proposals of the Alberta Federation of Labour

Among the requests made by a delegation from the Alberta Federation of Labour which waited on the provincial government on January 28 were the following: employment and relief for the unemployed; fair wage clause in all provincial contracts with a fifty cents an hour minimum; provision under the Factories Act for government inspection of all elevators and for better sanitation; increase in the minimum wage provisions and a minimum penalty for violations of the Minimum Wage Act to be imposed by magistrates and justices of the peace; revision of the hours of labour to provide an eight-hour day; more rigid safeguards for the protection of wages under the Mechanics' Lien Act, establishment of a minimum for capital investment in coal mining enterprises, and the giving of bonds by a company to insure the payment of wages to all employees.

The delegation also requested changes in the Compensation Act to provide for frost-bites to workmen being considered as accidents; that the government take some action in regard to health insurance, and that provision be made for a definite outline of conditions under which payments should be made under the Mothers' Allowance Act; that regulations governing the barbering trade be established; that the matter of old age pensions be investigated, looking to co-operation with federal authorities; that provincial legislation be enacted to maintain the Industrial Disputes Investigation Act; that regulations prohibiting the use of damaged motion picture films be passed, and that all school books used in Alberta be compiled and printed in the province. In view of an investigation which was under way by the Alberta coal commission, the labour leaders did not press for any definite changes in the Mines Act, asking, however, that the Federation be given an opportunity to discuss any amendments before being dealt with by the legislature.

Trade Union Insurance Schemes

A mutual life insurance company has recently been organized by the anthracite miners of the United Mine Workers of America, its purpose being to procure insurance at rates below those obtainable from regular insurance companies. The company, which is known as the John Mitchell Life Insurance Company, is officered, with the exception of Mr. Mitchell and the technical staff, by members of the United Mine Workers. Much of the actual business is to be transacted through the union, since a large part of the savings in the cost of doing business is to

come from having the local unions handle the collection of insurance premiums. The plan is to apply the principle of group insurance, taking each local in the district as a group, with the purpose of getting the benefit of group insurance rates. It is proposed to charge the same rate for miners of all ages, the rate being fixed at \$9 per annum for a \$500 policy. It is three years since the project was first broached, and the raising of the \$200,000 required to be put up in order to get a charter was completed in October of last year. Offices have been opened at Hazelton, Pennsylvania. With the growth of the organization in the hard coal district its sponsors also look forward to an extension of its activities among the United Mine Workers in the bituminous field.

The International Brotherhood of Electrical Workers has adopted a plan of life insurance which is designed to provide for those members who wish to carry additional insurance protection as well as permitting the insurance of members families and others at reasonable cost.

An unemployment insurance fund has been set up in the cloth hat and cap industry in Milwaukee. The plan, which is the result of an agreement between the manufacturers and the United Cloth Hat and Cap Makers of North America, provides for weekly contributions of 5 per cent of payroll by employers, similar to the plan in effect in St. Paul and in New York, although in latter, contribution is 3 per cent of payroll. The agreement will run to September 1, 1925. An agreement was also recently signed whereby the Amalgamated Clothing Workers of New York and the men's clothing manufacturers have set up a system of unemployment insurance for 50,000 workers whereby contributions of 3 per cent of the weekly payroll in the industry is taken equally from both employers and the union members. The first year's fund, it is said, may reach \$2,000,000. Last July the New York cloak and suit employers signed an agreement for a similar fund with the Ladies' Garment Workers' Union, 2 per cent of which is to be contributed by the employers and 3 per cent by the 50,000 workers involved. It is also stated that negotiations are under way in the fur industry for an unemployment insurance agreement between the manufacturers and the International Fur Workers' Union.

Miners' Jacksonville Wage Agreement

The executive board of the United Mine Workers of America has refused to consider a proposal in a letter of the Association of the Bituminous Coal Operators of Central Pennsylvania to readjust the Jacksonville

wage agreement (see LABOUR GAZETTE, April, 1924, page 277). In reply to the Association's request for suggestions for relief in the coal industry, the executive board states that "the development of new coal fields and the opening of new mines must be checked until the demand and the supply counterbalance."

Headquarters for Typographical Union

The International Typographical Union recently purchased a palatial home in Indianapolis, Indiana, which will become the headquarters of the Union on April 1. Officials of the Union state that they were compelled to seek new quarters owing to the expansion of the organization's business and the high rental rates prevailing in the business district claiming that the new headquarters will afford greater room at less cost and also offers a sound investment. The Typographical Union is one of the wealthiest trades unions and has about \$5,000,000 of its funds invested in bonds. It has also a \$3,500,000 investment in the Union Printers' Home at Colorado Springs, Colorado.

Joint Council Plan for Printers

Major G. L. Berry, international president of the Printing Pressmen and Assistants' Union, at a meeting held recently in Toronto, under the auspices of the Toronto Allied Printing Trades Council, attended by both employers and employees, declared that the promise of stability for the industry lay in the International Joint Conference Council.

This council, which was formed in 1919, with arbitration and conciliation as its fundamental principles of procedure, was stated to have been started at an unfortunate time, because it had been too late to prevent the struggle over the 44-hour week and had been prevented from functioning effectively by reason of that struggle. The intention now was, however, to organize for effective operation, and to this end district councils were planned which would have their own statisticians, their appointed times of meeting, and their definite fields of activity and jurisdiction. Among the more important matters over which the district councils, representative of both the employers and employees, would have jurisdiction were mentioned wage schedules, trade policies, matters of legislation, working hours and shop practices, consideration of the causes of disputes, apprenticeship conditions and improved technical processes within the industry.

Trade Union Housing Scheme

Four unions in the needle trades in New York City, the International Ladies Garment Workers Union, the Amalgamated Clothing Workers of America, the International Fur Workers Union and the United Cloth Hat and Cap Makers are planning to build a series of model apartment houses, to be occupied by their own members. The project will cost about \$1,000,000. The architect has been successful as a builder of multi-family housing of an economical character. The financing of the enterprise will be done by two of the labour banks established in New York.

LABOUR AND MIGRATION PROBLEMS

THE General Council of the British Trades Union Congress, in October, 1923, appointed two representatives to confer with Mr. Tom Moore, President of the Trades and Labour Congress of Canada, and Mr. E. J. Holloway, of the Melbourne Trades Council, Australia, who were in England at the time, for the purpose of reaching an agreement on the question of emigration. An agreement was reached concerning the underlying principles of emigration regulations, emigration agencies, the application of old age pensions to immigrants and transfers of trade union members to corresponding unions in the countries to which they emigrate. An enquiry was made among the affiliated unions on these points and, with regard to the last point, it was found impossible for the General Council to secure a co-ordinated policy, but generous assistance will be rendered by the Council to unions desirous of reducing to

a minimum the inconvenience to which members who emigrate are subjected. On the other three points, a resolution was submitted by the Council to the Trades Union Congress in September, 1924, and, with the addition of a clause concerning the framing of emigration regulations by the Government in consultation with the General Council, adopted. The text is as follows:—

(a) The Emigration Regulations shall be so devised and enforced as adequately to protect labour standards.

(b) That in the framing of the regulations and in the administration of schemes under the regulations the General Council of the Trades Union Congress, as representing organized Labour, shall be consulted.

(c) That all emigration agencies shall be registered and brought under direct Government regulation and control.

(d) That representation be made to the British, Colonial and Dominion Governments to secure an arrangement by which old age pensions may be paid to settlers leaving their native countries to join their families in accordance with the principle known in the

Colonies as "re-union of families." A similar regulation to apply in the case of old people returning to this country.

Overseas Settlement Delegation

The British Overseas Settlement delegation which came to Canada last year on the invitation of the Dominion Government (LABOUR GAZETTE for September and October, 1924, pages 738 and 821) recently presented its report to the Secretary of State of the Colonies (Cmd. 2285). The delegation was instructed to obtain information regarding the system of child migration and settlement in Canada, including the arrangement of the Receiving Homes to which the children proceed on arrival, the manner in which the children are placed out in Canadian households, the system of inspection of the households, both before and after placing, and the subsequent supervision of the children. The commission recommended that, except in the case of children accompanying their parents, government assistance should be limited to children who are of school-leaving age. The members of the delegation consider that, on the whole, the present system works satisfactorily, and that the prospects for the boys and girls in Canada are better than they would have been had they remained in the United Kingdom. In view of the excess of females in the United Kingdom and of males in Canada they recommended the sending of more girls than boys to Canada, and suggested greater care in the method of selection, especially in regard to the psychological test. They also recommended that in all cases the home should be inspected prior to the placing of the child, that children should be visited about once a month after placing and at least once a year by a government inspector. Other recommendations were the simplification of the present system of Receiving Homes, and co-operation among the various philanthropic societies in the United Kingdom engaged in sending out parties of children, in the work of inspection, and in the fixing of standard rates of wages.

Social Service Council and Child Immigration

The Social Service Council of Canada, at its recent convention held at Hamilton, Ontario, approved the following proposals in reference to the immigration of children into Canada. No immigrant child, even if otherwise satisfactory, should be accepted by the

Dominion immigration officials in Britain who has not passed successfully three tests—tuberculin test, Wasserman reaction test, and a psychiatric test.

While it is impossible to lay down rigid rules as to the desirable frequency of inspection, (a) no child should be sent to a foster home from an agency until that foster home has been inspected and passed upon by an official duly appointed by the provincial government or the department of immigration; (b) no child while in a foster home should be permitted to go for a longer period than six months, after being placed, without such official governmental inspection, while, in cases which present any difficulty, inspection should be more frequent than this.

Agencies should be allowed to bring immigrant children from Britain to Canada under the present scheme only when provided with a license by the department of immigration, such license to be subject to recall in cases of verified and serious complaint regarding the welfare of the children; it should be made an offence punishable by fine or revocation of license, or both, for any agent of an agency to misrepresent the age of any child at the time when it is placed in a foster home. Every agency bringing immigrant children from Britain to Canada be required to file annually with the Department of Immigration the names of the superintendent, inspectors and other officials, with their addresses and a statement of their ages and qualifications.

Action should be taken by each of the provincial governments making it compulsory that they be notified of the bringing into the respective provinces of each child who comes to Canada from any country in care of an agency; in provinces such as Ontario, which have legislation governing the conduct of private employment bureaus, the statutes should be widened so as to include within their scope agencies bringing immigrant children from England and placing them out at work.

As the demand in Canada is for children to work on farms or in households, only boys and girls of post-school age should be brought to Canada by immigration agencies. The government should establish farms under the supervision of practical farmers, where boys of a better class between the ages of 15 and 18 could be given a year's practical training before they are sent out to work.

CANADIAN CO-OPERATIVE CONGRESS

THE Congress of the Co-operative Union of Canada was held in Toronto on November 27 and 28, W. C. Good, M.P., president of the Union, occupying the chair. The statistics for 1923 indicated that the well-established societies had been able successfully to withstand the recent depression and to increase their volume of business. These statistics refer to seven distributive societies, as compared with 12 in 1922, and one co-operative marketing association, namely the United Grain Growers, Limited, which is engaged chiefly in the marketing of grain, cattle and hogs. All the societies recorded an advance in trade compared with the previous year, the aggregate increase for the seven distributive societies being \$324,971. The sales of these seven societies exceeded those of the twelve which reported in 1922 by \$83,183, and the net surplus by \$15,151. The aggregate sales for 1923 reached the sum of \$2,249,379, on which a net surplus of \$172,972 was realized. This net surplus averaged 78.26 per cent on the capital invested, against 58.6 per cent in the previous year, so that there was an improvement of 19.66 per cent. At least \$140,991 of the net surplus was returned to consumers in dividends on purchases. Six of the seven societies declared dividends ranging from 10 to 3 per cent.

The aggregate membership of the seven distributive societies was 4,646, the British Canadian Society at Sydney Mines accounting for as many as 2,515 members. The share capital of the societies was \$221,004, loan capital \$160,651, value of stock in trade \$232,294, other assets \$286,846, reserves \$97,590, dividend on purchases \$140,991. A total sum of \$158,691 was paid in salaries and wages. The United Grain Growers Limited had a membership of 35,880. Share capital was \$2,821,305, value of stock in trade \$533,269, other assets \$8,033,048, reserves \$1,200,834, and net profits \$532,171, a dividend of 8 per cent being realized on the share capitalization.

According to the United Board, a reason for the failure of certain co-operative societies in Canada is that they are usually organized "in times of prosperity, with the view of protecting consumers against organized efforts unduly to increase retail prices," but with little attention being given to impressing the members with what the movement is intended to do. The Board suggested that the sound development of the movement in Canada was restrained through the failure of many societies to practise sound methods in business and administration. New consumers' societies were

at an initial disadvantage compared with their competitors, in that the directors were usually without business experience, and should not be expected, at first, to appreciate what is usually required of them in the discharge of the duties of direction and supervision. Many failures are attributed to this fact.

The Board sustained the action of the Guelph and Woodstock Congresses in resolving to urge upon *bona fide* societies throughout the country to seek affiliation with the Union, recommending this course to other affiliated societies. A fund of \$1,000 was created in the spring of 1924 through the munificence of a friend of the movement, which it had been decided to use for educational purposes, and to get into closer touch with non-affiliated societies.

Resolutions were adopted by the Congress: (1) approving of the reduction of the sales tax, and urging the removal of same by the federal government; (2) urging provincial governments to enact laws to insure the furnishing, compilation and publication of the financial and business statistics of co-operative societies; (3) urging the affiliated societies to co-operate more closely with the Union in placing at the service of the movement the judgment and experience of each, with the view of avoiding losses in operation and in the promoting of solid and successful expansion; (4) urging the *bona fide* societies to seek affiliation with the Union; (5) calling the attention of the federal premier to his promise of sympathetic consideration of the request of the Congress for federal co-operative legislation, and urging him to introduce a government bill in the next session of parliament; (6) suggesting that trades unions and other democratic bodies sympathetic to the co-operative movement elect a committee on co-operation, and that in the event of co-operative societies being organized that they should be launched with great care and prudence and with the advantage of the experience and judgment of the organized movement and subject to its guidance.

It was agreed that a vice-president, resident in each province, be elected, the selection to be made by the United Board after consultation with the societies in the various provinces. The following officers were elected: W. C. Good, M.P., president; A. E. Webster, vice-president; and George Keen, general secretary-treasurer, and editor of "*The Canadian Co-operator*."

Co-operative Societies in Great Britain in 1923

The *International Co-operative Bulletin* for January contains the following information regarding industrial co-operative societies in Great Britain in 1923, according to returns compiled by the Chief Registrar of Friendly Societies:—

The number of industrial co-operative societies in Great Britain furnishing returns in 1923 was 1,529. The aggregate membership of these societies at the end of 1923 was 4,558,000. Their sales in the year amounted to £253,212,000 (including farm and dairy produce valued at £1,524,000, and wholesale as well as retail sales) and resulted in a net surplus, before deduction of interest on share capital, of £17,546,000. The total share, loan and reserve capital was £134,082,000. As compared with 1922, membership increased by 59,000 or 1.3 per cent, while capital was increased by £7,175,000, or nearly 5.7 per cent. Of this latter increase £3,226,000 was attributable to the retail and productive societies, while additional loans and deposits received by the English and Scottish wholesale societies accounted for the remaining £3,949,000. The per cent was wholly attributable to the retail societies, both the wholesale and productive societies showing increases. Although in the aggregate the sales of the retail societies showed a decrease in value, the decrease was not commensurate with the continued fall in retail prices, as measured by the Ministry of Labour monthly indices, and in many instances an increase was reported in the quantity of goods handled. There was an increase in the aggregate surplus on the year of £2,381,000. Of this increase the retail societies were responsible for about 82 per cent, and the wholesale and productive societies for the remainder.

The total number of persons directly employed by societies at the end of 1923 (including coolie labour employed in the English and Scottish Wholesalers' Joint

Tea, etc., Overseas Department) was about 184,000, or nearly 4,000 more than in the preceding year. This increase was mainly attributable to the wholesale societies. In the aggregate wages amounted to £24,097,000, or 4.9 per cent less than for 1922. The retail societies were largely responsible for this decrease. . . .

In 1923, the wholesale societies returned a surplus on production of £536,000, as against £451,000 on the preceding year. In addition credit was taken in 1923 for £199,000 profit on their joint tea, etc. account, as compared with £180,000 in 1922. The 150 productive societies returned a surplus of £247,000, or 4.8 per cent more than in 1922. For retail distributive societies the corresponding figure is not ascertainable.

Profit Sharing With Employees.—Of the 1,143 societies engaged in industrial production, 75, employing 9,692 persons in production, with wages amounting to £1,211,000, allotted a sum of £46,381 to these employees as a bonus on wages in 1923, but the average rate of bonus on wages was practically the same as that for 1922.

Eighty of the 93 associations of workers, with sales amounting to £2,963,000, or nearly 96 per cent of the total sales of the associations at work, made returns showing the extent to which their employees shared in the membership, capital and management of the associations. The returns showed that the total membership of these associations in 1923 was 28,397, of whom 4,618, or 16 per cent, consisted of employees; 18,485, or 65 per cent of other individuals; and 5,294, or 19 per cent of other societies. Of the 7,633 persons employed by the association 61 per cent were members of the associations employing them. Of the £1,581,000 share and loan capital, £276,000 or 17 per cent, belonged to employees; £673,000, or 43 per cent, to other individuals (including loans from non-members and bank overdrafts), and £632,000, or 40 per cent, to other societies. The number of committeemen of the associations was 681, of whom 294 or 43 per cent were employees of the association, 261, or 38 per cent, were other individual members, and 126, or 10 per cent, were representatives of other (shareholding) societies.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Meeting of the Governing Body

THE Governing Body of the International Labour Office held its 25th Session at Geneva on January 8 to 10 under the chairmanship of Mr. Arthur Fontaine, French Government delegate. It was decided that there should be two sessions of the International Labour Conference in 1926, held in immediate succession, one devoted to questions relating to labour in general and the other concerning maritime labour (continuing the work which was begun by the Genoa Conference of 1920). The session will consider general labour questions and particularly the simplification of the inspection of emigrants on board ship. The following two items were inscribed on the agenda of the session which will deal with maritime questions, namely:—

The international codification of the rules relating to seamen's articles of agreement, and

The general principles of the inspection of the work of persons employed on board ship.

It is possible that a further item on the agenda of this Conference will relate to the

hours of work of seamen; the inclusion of the last question will, however, be dealt with at the April meeting of the Governing Body.

The Governing Body agreed that its Chairman and Vice-Chairmen should, form a Permanent Emigration Committee, which is also to include a number of experts. The list of experts will be drawn up at the next session of the Governing Body. Certain names were suggested and approved to be added to the Correspondence Committee on Industrial Hygiene and further names will be considered at the April meeting.

The Director, M. Albert Thomas, stated that six International Labour Conventions had been ratified since the last session of the Governing Body last spring thus bringing the total number of ratifications registered with the League of Nations up to 142.

The next quarterly session of the Governing Body will be held on April 2, 1925.

International Labour Office Building

An interesting ceremony took place on December 19 in the new building which is be-

ing erected for the International Labour Office in Geneva. It is the custom in Geneva, as in other parts of Europe, to set up a tree or bush when the heavy masonry work on a building has been completed. The new home of the International Labour Office reached this stage shortly before Christmas and the ceremony of setting up the "bouquet" was attended by the Director and the various chiefs of division and heads of section in the Office, as well as by Mr. Epitoux, the Swiss architect in charge. The Director briefly addressed the workers, thanking them on behalf of the International Labour Office for the energy and rapidity with which they had worked. He thought it a matter for congratulation that, throughout the period of building, no labour dispute had troubled the good relations between the Office and its temporary employees, and he liked to think that this—and also the rapidity with which the work had been completed—might be in some part due to the consciousness of the workers that they were helping to erect a building which was to be used by an institution created to promote the interests of the working classes. He himself and his colleagues would endeavour to be worthy of the building which had been created for them by the workers.

Gifts for the New Premises

Announcement has already been made by various Governments of gifts for the furnishing or decoration of the new premises of the International Labour Office in Geneva, as follows:—

Canada.—The doors for the main floor.

Great Britain.—The expenditure of 100,000 Swiss francs (£4,000 sterling), the final form of which is still to be decided.

Czechoslovakia.—A chandelier for the Governing Body room.

Roumania.—The furnishing of a room in the Roumanian style.

Denmark.—An *objet d'art* from the Royal Porcelain Manufactory in Copenhagen.

Finland.—A mural painting for the entrance hall.

France.—A Gobelins tapestry for the decoration of the Governing Body room.

Netherlands.—A painting by Ferdinand Bolle.

Switzerland.—Two stone figures for the main entrance.

Ethiopia.—A magnificent rhinoceros horn mounted in silver by workmen of Ethiopia, and forming a stand for a silver-framed autographed portrait of the donor, His Imperial Highness Tafari Makonnen.

Japan.—A pair of *cloisonné* vases.

India.—The woodwork for the decoration of the Governing Body room.

Belgium.—A bronze statue by Constantin Meunier.

Engineers and Chemists

Under the title "Engineers and Chemists, Status and Employment in Industry," the International Labour Office has just published the first number of a series of Studies and Reports concerning professional workers. The report, which was prepared for the Committee on Intellectual Co-operation of the League of Nations, with which the International Labour Office has always been in close co-operation, embodies information received from 25 countries: Argentina, Austria, Belgium, Brazil, Bulgaria, Chile, Czechoslovakia, Denmark, Ecuador, Finland, France, Germany, Great Britain, Greece, Hungary, Italy, the Netherlands, Panama, Peru, Poland, Rumania, Spain, Switzerland, the United States and Uruguay.

The points on which information was particularly asked for each country, and which are covered in the report, are: (1) The meaning of the terms "engineer" and "chemist," methods of obtaining and protecting these titles; (2) Facilities for finding employment, the extent of unemployment, and the position of foreign chemists and engineers; (3) The contract of employment, including provisions on business secrets and unfair competition, which are a special feature of engineers' contracts; (4) Hours and conditions of work; (5) Salaries, etc., including provisions respecting patent rights—a matter of the greatest importance to professional and technical workers in industry; (6) Insurance and similar institutions, if any, open to such workers; (7) Problems of professional organization; (8) Any special complaints or desires of engineers and chemists.

Italy and the 8-Hour Day

The Government of Canada has been notified by the Secretariat of the League of Nations that the Italian Government has ratified the convention limiting the hours of work in industrial undertakings to eight in the day and forty-eight in the week which was adopted by the International Labour Conference at Washington (October 29–November 29, 1919).

The entry into force of this convention is subject as far as Italy is concerned, to the following reservation contained in the instrument of ratification:—

"Subject to the condition that it shall only come into force when the ratifications, without reservations or other conditions, of the following members of the International Labour Organization have been registered with the Secretariat of the League of Nations: Belgium, France, Germany, Great Britain and Switzerland."

EFFECT OF THE EIGHT HOUR DAY ON PRODUCTION IN FRANCE

THE weekly publication of the International Labour Organization at Geneva, *Industrial and Labour Information*, summarises various reports recently published by the Ministry of Labour in France, on the extent to which conditions of production and labour in that country have adapted themselves to the eight-hour day. The reports show that a marked improvement has been effected in production, partly attributable to better equipment and organization, and partly to the new limit on working hours. The results obtained in some important establishments are summarized below:—

A File Factory.—Hourly output, which was $3\frac{3}{4}$ in 1914, rose to $4\frac{1}{4}$ in 1919. Workers receive a premium based on average monthly production.

Foundries at Albi.—Hourly output has increased by 450 kilogrammes, or by rather more than 83 per cent. Changes were made in equipment, organization of work, rest periods, etc.

Sedan Factories for the Construction of Spinning Machines.—These do not work overtime, but have obtained an increase of output both by general measures and by improvements of detail.

Terrot Factories (manufacture of cycles and motorcycles)—Annual production, per worker, has increased from 1 in 1913 to 1.40 in 1924. Equipment was improved, pay for piece-work standardized, etc.

"Le Réveil" Factories.—A producing association of employees at Bourg-Fidèle (Ardennes)—Daily production, after having been less and then equal to, with same staff, now exceeds by 1 or 2 per cent the daily production of the ten-hour in vogue before the war. The work turned out is as carefully finished as before.

Edge-Tool Factories of the East of France.—The system of piece-work pay known as the "Devis-Rowan" system has resulted in an increase of hourly output which has the effect of making output for the eight-hour day approximately equal to a ten-hour day in 1914.

A Tool Factory reports that in 1920 a comparison between the monthly tonnage of tools manufactured on a ten-hour day with

those manufactured on an eight-hour day showed that the production for the two periods in question was in the proportion of 1 to 1.5. The last information communicated by the management showed that, on an average from 1919-1923 inclusive, production increased by 30 per cent over 1914 production. This is attributed partly to improved equipment, abolition of rest periods in the middle of the day, etc.

Wire Mills in East of France.—The workers produce about 40 per cent more than on a ten-hour day before 1914.

Cotton Spinning Mill of Annecy (which works 1,000 spindles) states that daily output at first only fell 6 per cent, thanks to increase in hourly output, which rose 13.5 per cent. In 1921, hourly output was higher by 20.8 per cent than that on the ten-hour day. Output, therefore, for eight-hour day showed an increase of 6.60 per cent over the old system hours of work.

Berlaimont and Douai Coopering Factories.—In the Berlaimont factory the comparison between pre-war results on the ten-hour day and post-war results on the eight-hour day show that, in the first eight hours of work, output has been eight articles per hour or 64 for the eight hours, whereas it was only 72 for the ten hours. The ninth hour gave only five articles, and the tenth hour three articles. In the Douai factory the output per hour per man immediately went up, and with the same staff where 160 articles per month were produced, 1,000 are now produced. From these figures it would appear that the output of the ninth and tenth hours were, per hour, only half the average of the eight preceding hours. Therefore, the wages corresponding to the casks manufactured during those two hours cost double what they cost in the previous eight hours. It was also noted that, during December, 1923, when one hour's overtime was done per day by all the staff, there was no improvement in output and no fall in the cost price in comparison with the other months.

Vassaux Factories (which manufacture articles in ebony)—the output with eleven workers is 20 per cent higher than that obtained with 13 workers under the ten-hour system.

WOMEN'S INDUSTRIAL ACCIDENTS IN NEW YORK STATE

THE New York State Department of Labour has issued a report based upon a case study of five hundred women compensated for permanent partial injuries out of a total of 1,292 similar accidents to women in the State, during the period from July 1, 1918, to June 30, 1920. It is explained that the study was limited to permanent partial injuries, which are injuries lasting in character, but partial in as far as they effect the earning capacity of the worker. Each woman was interviewed in person, the questionnaire used having been formulated after consultation with the Women's Bureau of the United States Department of Labour, which has made a study of compensable accidents occurring to women in New Jersey, Ohio and Wisconsin. Special care was taken that the cases should be representative of the entire State. Women from cities of the first, second and third class were included, as well as a number of women living in rural communities but working in nearby small industrial centres. A summary of the findings resulting from the study is given as follows:—

Permanent partial injuries to women were caused in two-thirds of the cases by power machines. The punch press was responsible for half the machine accidents; 60 per cent of the punch press accidents occurred in the metal industry. Falls of persons caused 15 per cent of the accidents; the handling of objects, 9 per cent, and hand tools 7 per cent. Accidents from these causes occurred largely to non-machine workers. Falls caused the majority of accidents to cleaners and hotel and restaurant workers. Handling of objects caused half of the accidents to janitresses; hand tools caused the majority of accidents to non-machine factory workers.

The greater proportion of injuries were minor in character; 12.8 per cent of the injuries were major and 87.2 per cent were minor. Over two-thirds of the injuries occurred to the fingers of workers. Some form of infection resulted in 18.4 per cent of the injuries.

At the end of an average period of four years, over one-fifth (21.2 per cent) of the women were still out of industry as a result of their accident; over a quarter (26.4 per cent), though they returned to work, had not been able to regain their earning capacity; over half (52.4 per cent) had succeeded in maintaining their earning capacity.

The intent of the New York law in indemnifying permanent partial injuries is to pay not only for the period of total disability but for partial loss of earning power. However, a fifth of the women have been culminated from industry because of the accident. For 21.8 per cent of the women who returned to work, three-quarters of the compensated period had been consumed during the total disability period. For 11 per cent the period of total disability had equalled or exceeded the compensation period. Of the women returning to work but never regaining their earning capacity, 12.3 per cent had expended the whole of their compensated period during the period when they were totally disabled for work. More than any one factor, the degree of impairment determined the woman's ability to make a satisfactory readjustment; 28 per cent of the women with major but 56 per cent of those with minor injuries have succeeded in regaining their earning capacity. The proportion of women making a satisfactory industrial adjustment fairly consistently increases with the decrease in the amount of compensa-

tion, indicating that the New York State schedule of award correctly estimates the relative seriousness of the injuries listed. However, injuries extremely minor in character have had a very serious effect upon the industrial life of a large number of workers. For example, of the 76 women with injuries to one finger other than index or thumb, 16 never regained their earning capacity, and 13 have been permanently eliminated from industry.

The occupation of the woman at the time of the accident is related to her final readjustment in the following general ways:—

The occupation determines on an average the seriousness of the injury. Machine accidents did not result in as serious impairments as non-machine accidents. There was also a great difference in the seriousness of injuries to the women on the various types of machines; punch press injuries were not as serious as injuries on textile machines; women employed on mangles had a higher proportion of major injuries than women in any other occupational group.

Where the occupation was low paid and offered little chance for advancement as in the case of cleaners, unless an adjustment could be made at the same wage-earning capacity the women were largely forced entirely out of industry. A change in work after the accident was largely influenced by the occupation at the time of the injury. Over half of the machine operators rehabilitated on a different line of work, over three-quarters of the inexperienced machine operators never returning to their machines. But women in the other occupational groups largely made their readjustment at the same type of work.

Lack of schooling has handicapped women in their industrial adjustment. Women with less than grammar schooling and women who were unable to speak English have made the poorest recovery.

The two extremes of age, the oldest and the youngest workers, have made the poorest industrial readjustment. Of girls under eighteen, less than half have regained their earning capacity, and of children under sixteen, 5 are on a lower earning capacity, and one has never been able to return to work following her injury. Of the 23 women sixty years or over, 12 are out of industry and 3 are on a lower earning capacity.

A change in work after the accident was accompanied by a loss in earning capacity. Almost half of the women who never returned to their old occupation were on a lower earning capacity while less than one-fifth of those remaining at their former work were on reduced earnings. The workers who have remained with their former employers have made the best individual readjustment.

Consideration is also given in the report to the question of the social adjustment of the women workers. Compensation, it is stated, is indemnity for loss of industrial capacity, but it does not attempt to meet the problem of social readjustment which for the woman worker especially is one of the most serious handicaps which follow a permanent injury. The loss of self assurance which so often comes to a woman with the realization that she is maimed or disfigured presents a serious social handicap. Recreational activities are curtailed as a result of finger injuries. Eye injuries also cut off social activities. Even for the woman who rehabilitates satisfactorily in industry an injury which impairs her efficiency as a housekeeper is a serious handicap.

EMPLOYMENT AND WAGES IN VARIOUS INDUSTRIES IN CANADA

Reports of Dominion Bureau of Statistics on (a) dairy factories, 1923; (b) the cotton textile industry, 1923; (c) the woollen textile industry, 1923; and (d) the leather boot and shoe industry, 1923

THE Dominion Bureau of Statistics has recently issued reports on the dairy factories, the cotton textile industry, the woollen textile industry and the leather boot and shoe industry in 1923. Previous reports in this series relating to other industries were outlined in the LABOUR GAZETTE for January, 1925, and previous issues.

Dairy Factories

The number of dairy factories in operation in 1923 was 3,007, comprising 1,201 creameries, 1,421 cheese factories, 360 combined butter and cheese factories and 25 condenseries. Compared with the previous year the creameries, combined factories and condenseries show increases in number respectively of 35, 8 and 2, while the cheese factories show a decrease of 133. Twenty-one of the 25 condensed milk factories were in Ontario, 3 in British Columbia and 1 in Nova Scotia. Of the 2,982 butter and cheese factories, 1,660 were in Quebec, 993 in Ontario, 84 in Alberta, 66 in Saskatchewan, 57 in Manitoba, 33 in Prince Edward Island, 32 in New Brunswick, 31 in British Columbia, and 26 in Nova Scotia. There were 407 butter and cheese factories operated by co-operative associations, 527 by joint stock companies, and 2,048 by individuals and partnerships. Of the condenseries, 24 were operated by joint stock companies and one was operated individually. The total number of patrons (farmers who supply milk and cream to dairy factories) for all factories in 1923 was 347,854, divided as follows: patrons of creameries, 262,167; of cheese factories, 46,424; of combined factories, 27,907; and of condenseries, 11,356. The number of butter and cheese factories in operation for periods of less than 120 days numbered 110, for periods of from 120 to 239 days, 1,850, and for periods of 240 days and over, 1,022. Nearly all of the condenseries were in operation for the full year, 23 being in the group of those operating 240 days and over and two in the group of from 120 to 239 days.

The total value of all products of dairy factories in 1923 was \$120,120,390, comprising butter, \$56,873,510; cheese, \$28,645,192; condensed products, \$10,040,318; whole milk and cream sold, \$19,896,136; ice cream, \$3,514,046;

whey butter, \$386,356; and sundry items, \$764,832. The increase over the previous year in the total value of production was \$15,148,344 or 14 per cent. The quantity of milk delivered to butter and cheese factories in 1923 was 2,600,447,454 pounds and to condenseries 344,443,814 pounds, a total of 2,944,891,268 pounds. This is an increase over the preceding year of 203,355,030 pounds. Increases are shown in quantities of milk delivered to cheese factories, combined factories and condenseries, and a decrease in the quantity delivered to creameries. The quantity of cream (expressed in pounds of butter fat) delivered to butter and cheese factories in 1923 was 114,236,770 pounds butter fat, and to condenseries, 875,933 pounds butter fat, a total of 115,112,703 pounds butter fat. This is an increase over the preceding year of 10,999,102 pounds butter fat, of which the increase in the deliveries of cream accounted for 10,871,519 pounds butter fat. Adding to the milk delivered to the factories the equivalent in milk of the butter fat content of the cream, the total quantity of milk required to supply the factories in 1923 is shown to have been 6,233,825,353 pounds, an increase over the preceding year of 517,763,535 pounds.

The total value of the capital employed in the operation of the dairy factories in 1923 was \$39,120,207, an increase over the previous year of \$2,295,888. Of the total capital invested \$31,758,316 was invested in the butter and cheese factories and \$7,361,891 in the condenseries.

The total number of persons employed in dairy factories in 1923 was 10,160, and the total amount paid in salaries and wages was \$9,935,414. In the butter and cheese factories there were employed 3,883 persons on salaries who received for their services \$3,760,773, and 5,483 wage-earners, their wages totaling \$5,230,174. In the condenseries the number of salaried workers employed was 120, their salaries amounting to \$213,191, and 674 wage-earners who received a total of \$731,276. A statement showing the number of wage-earners on the fifteenth of each month shows July with the highest employment, 6,618, and January with the least employment, 3,093. The amount paid to the patrons of butter

and cheese factories in 1923 was \$82,392,739 and to the patrons of condenseries, \$6,748,593, a total of \$89,141,332 for patrons of all factories.

Cotton Textile Industry

The report on the cotton textile industry is made up of five sections, each dealing with a separate phase of the industry (1) cotton yarns and cloth; (2) cotton thread; (3) cotton batting and wadding; (4) cotton and wool waste; (5) cotton goods not otherwise specified. The total value of production shows a large increase over 1922 in each section, cotton yarn and cloth mills accounted for an increase of \$7,159,257; cotton thread factories an increase of \$128,998; cotton batting and wadding mills, \$240,969; and establishments producing cotton and wool waste, \$175,585. The total value of products amounted to \$86,464,312, and the total capital invested to \$88,631,621, an increase of \$7,286,026 over the total for 1922. Of this amount mills manufacturing cotton yarn and cloth alone contributed \$6,743,759. The number of persons employed in the whole of the cotton textile industry increased from 19,941 in 1922 to 20,316 in 1923 which is equivalent to 1.8 per cent. Salaries and wages also rose from \$14,635,249 in 1922 to \$15,114,385 during 1923 or 3.2 per cent.

Woollen Textile Industry

The report of the woollen textile industry covers four sections (1) woollen cloths; (2) woollen yarns; (3) carpets, mats and rugs; and (4) woollen goods not otherwise specified. There were in all 141 establishments operating during 1923 as compared with 137 in the previous year. The capital investment was \$37,102,382 in 1922 and \$43,148,218 in 1923 while the value of the products rose from \$29,062,751 in the former year to \$33,472,087 in the latter. Employees on salaries numbered 579 in 1922 and 626 in 1923 and the amount of salaries paid increased from \$1,286,068 to \$1,386,172. The number of employees on wages was 7,470 in 1922 and 8,264 in 1923 and the wages paid amounted to \$5,904,476 in the former and \$6,687,577 in the latter year.

In the woollen cloth industry a total of 66 mills reported operations, of which 46 were in Ontario, 11 in Quebec, 5 in Nova Scotia, and 4 in New Brunswick. This is an increase of two mills over 1922, both of which are located in Nova Scotia. The capital invested in the industry for 1923 was \$22,527,138 as compared with \$20,846,502 in the previous year while the net increase in value of production over 1922 amounted to \$1,044,338. The total number of persons employed rose from 4,939

in 1922 with a payroll reported at \$4,247,750 to 5,327 with an expenditure on account of salaries and wages of \$4,729,714 in 1923, an increase of 388 employees and \$481,984 in the payroll. Employees on wages numbered 4,956 (2,647 made and 2,309 female) their wages totalling \$3,963,137. The number of days in operation on full time during the year averaged 258.0, on part time, 11.9, and number of days idle, 34.1. The average number of hours worked by the wage earners per day or shift was 9.5 and per week, 53.1.

The number of establishments engaged in the manufacture of woollen yarns in 1923 was 19. The capital invested amounted to \$9,279,418, and the value of the products totalled \$7,405,132. The total number of employees rose from 1,283 in 1922 to 1,464 in 1923, an increase of 181. The payroll also increased from \$1,015,555 in 1922 to \$1,171,363 in 1923, an increase of \$155,808. The average number of wage-earners employed during the year was 1,396 (618 male and 778 female) with wages totalling \$1,013,898. The days in operation during the year on full time averaged 238.9, on part time 12.6 and the number of days idle averaged 52.5. The number of hours worked by employees per day or shift averaged 8.2 and per week 52.0.

In the carpets, mats and rugs industries there were 23 establishments reporting during the year. The total value of the products in 1923 was \$3,808,914, an increase of \$338,512 over the previous year. The total capital invested in the industry was \$4,130,485. The total number of persons engaged in the industry in 1923 was 1,021 (722 male and 309 female), a net increase of 130 over the total reported for 1922, whilst the combined salary and wage payments was \$69,738 higher than the previous year. Wage-earners employed during the year totalled 945 (660 male, 285 female), and wages paid \$893,055. The number of days the plants were in operation during the year on full time averaged 254.4, on part time 23.1 and the number of days idle averaged 26.5. The hours worked by wage-earners per days or shift averaged 8.4 and per week, 47.2.

Leather Boot and Shoe Industry

The number of establishments engaged in the manufacture of leather boots, shoes and slippers in 1923 was 186 compared with 181 in 1922. Included with the total for each of the two years are 7 establishments manufacturing boots and shoes with felt uppers. Of these establishments 101 were in Quebec, 69 in Ontario, 7 in British Columbia, 5 in New Brunswick and 4 in Nova Scotia. The total

value of production in 1923 was \$45,596,012, an increase over the preceding year of \$94,154. The capital invested in the industry in 1923 represented a total value of \$30,333,531, an increase over the preceding year of \$651,670. There were 14,043 persons employed in the establishments in 1923, this number comprising 1,604 (1,352 male, 352 female), salaried employees and an average for the year of 12,439 wage earners (7,785 male, 4,654 female). The industry also gave employment to 348 (26 male, 322 female) outside piece-workers. The amount paid in salaries during the year was \$3,460,123, for wages \$10,491,321, and for piece workers \$76,407.

Boot and Shoe Findings, Leather.—There were 16 establishments in operation in 1923 (9 in Quebec and 7 in Ontario) engaged in the manufacture of boot and shoe findings of leather. The total value of production for the year was \$1,277,337. The capital invested in the industry amounted to \$1,208,264. There were 40 employees on salaries (33 male, 7 female) their salaries totalling \$68,117. The number of wage-earners employed was 308 (238 male, 70 female) with wages totalling \$230,462.

In the cotton yarn and cloth section the number of mills reporting during 1923 was 34, of which 16 were in Quebec, 13 in Ontario, 4 in New Brunswick, and 1 in Nova Scotia. The total value of products amounted to \$79,333,985 of which the province of Quebec contributed \$57,201,805, the province of Ontario, \$15,129,723 and the Maritime provinces \$7,002,457. The total capital invested in the industry was \$82,843,739 of which \$58,750,952 was invested in Quebec and \$16,263,921 in Ontario. The total number of persons employed in the industry was 19,244. The number of male employees rose from 10,565 in 1922 to 11,087 in 1923, an increase of 522. On the other hand, the total number of female employees fell from 8,447 in 1922 to 8,157 in the following year. The total expenditure on account of salaries, wages and payments to piece-workers rose from \$13,764,623 in 1922 to \$14,101,099 in 1923, being an increase of \$336,476. Employees on wages received \$12,907,042 in 1923, salaried employees \$1,193,481, and piece-workers, \$576. The month of greatest employment was April with 11,269 male and 8,454 female employees engaged, while the month of least employment was August with 9,943 male and 7,452 female employees. The average days in operation per mill on full time was 272.2, on part-time 15.0, and idle, 15.8. The average hours worked per day or shift was 9.2 and per week, 50.8.

In the cotton thread section the number of operating establishments declined from 7 in 1922 to 5 in 1923, of which 3 were in Quebec and 2 in Ontario. The value of the products manufactured was \$4,486,339 as compared with \$4,357,341 in 1922. The amount of capital invested in the industry was \$4,015,023 as compared with \$3,342,060 in the previous year. Salaried employees numbered 86 (62 males and 24 females) with total salaries of \$165,100, while employees on wages numbered 664 (155 males and 509 females) with total wages amounting to \$492,609. The number of employees increased by 9 over the previous year whilst the payroll decreased by \$8,367. The number of days in operation during the year at each plant averaged 273.2 on full time, 19.2 on part-time, and the number of days idle averaged 11.6. The hours worked per day or shift by employees averaged 8.8 and per week 48.2.

In the batting and wadding industry there were 3 establishments operating, two of which were in the province of Ontario and one in Quebec. The value of the products manufactured was \$756,216 as compared with \$515,247 in the previous year. In 1923 the amount of capital invested was \$679,136 and in 1922 \$690,823. Salaried employees numbered 15 in 1923 and 12 in the previous year while their salaries amounted to \$41,271 in 1923 and \$35,855 in 1922. Employees on wages numbered 86 in 1923 and 71 in 1922 while wages amounted to \$80,619 and \$62,521 respectively for these two years. Thirteen of the employees engaged during 1923 were female and 88 were male. The number of days in operation on full time during 1923 averaged 279.0 and on part time 18.0; the number of days idle averaged 6.3; the number of hours worked by wage-earners during the day and week were 9.6 and 53.3 respectively.

In the cotton and wool waste industry there were 6 establishments reporting, of which four were located in the province of Quebec and two in Ontario. The capital investment for the year 1923 was \$756,694 and for the previous year \$872,703. There was, however, a net increase over the year 1922 in the value of production which amounted to \$1,507,147 in 1923 and \$1,331,562 in 1922. The total number of employees rose from 105 in 1922 to 142 in 1923 (104 male and 38 female), an increase of 37. The total payroll also increased from \$106,174 in 1922 to \$141,534 in the following year. The number of days the factories were in operation on full time averaged 302, and the days idle averaged 2. The number of hours nominally worked by

the wage-earners per day or shift was 9.5 and per week 54.6.

In addition to the above there were 7 establishments engaged in the manufacture of products which cannot be classified in any of the four sections already mentioned. Five of these were in Ontario and two in Quebec. The amount of capital invested in these industries in 1923 was \$337,029 and the value of the products was \$380,625. There were 26 employees on salaries who received for their

services \$47,638 and 48 employees on wages with wages totalling \$39,695. In addition to these there were 5 outside pieceworkers who received for their services \$4,800. Of the total employees 45 were males and 34 were females. The average number of days the factories were in operation on full time throughout the year was 269.5, on part time 2.0, and idle, 32.4. The number of hours worked by the wage-earners per day or shift was 8.5 and per week 46.5.

EMPLOYMENT IN THE CAPE BRETON MINES

THE *Canadian Mining Journal* contained in a recent issue an interesting historical and descriptive article on "Cape Breton's Coal and Steel Industries." Some of the sections dealing with employment in the mines are given below.

When the war broke out in 1914, the producing capacity of the coal mines in the Sydney district had been brought up to 6,000,000 tons annually, but during the years that have intervened the outputs have been lessened by causes arising out of the war. The miners of Nova Scotia enlisted in numbers so large as to seriously reduce the production of coal during the war years, and possibly for a number of years to come. Some 4,000 men left the collieries for the Front, and in their ranks were included the actual miners of coal and young men who would, but for the events of the war, have become miners. The places of these men have never been filled, and probably cannot be, until new generations have made up the fearful wastage of the war years.

As at the summer of 1924, the coal miners in the Sydney district have a capacity for output of over 18,000 tons per day. This comes from fifteen mines in the Glace Bay district, producing 15,000 tons per day, and from four mines in the Sydney Mines district producing in excess of 3,000 tons per day. In addition to the men employed at the mines, there is required to prepare and transport this coal to markets a large force of railway employees, pier men, steamship crews and the workmen at the discharging plants in Montreal, Quebec, Halifax and St. John, N.B. Exclusive of the crews of the freighting fleets and not including the operation of the British Empire Steel Corporation on the mainland of Nova Scotia, some 12,000 men are daily employed, directly and indirectly, in connection with the production of coal in the Sydney district. The pay

roll of this large number of employees is between \$15,000,000 and \$17,000,000 per year and probably not less than 60,000 persons are directly dependent for their livelihood on the production of coal in the Sydney field.

While the mining of coal in the Sydney district is a century-old industry, it is only within the last twenty-five years that it has afforded whole-time employment to the mining population. In the old days, as the local consumption of coal was negligible, shipments were concentrated into the summer, and during the winter the mines were largely idle. The workmen were chiefly persons living on small farms near the shore, and they were partly employed in coal mining, and partly in farming and fishing. This made for a self-reliant, capable population, but it was not an economical method of mining coal and did not permit of great expansion in coal sales. The long periods of idleness made it impossible to provide work for great numbers of men, or to attract new men from outside. The provision of steady, all-year-round employment, was made possible by the commencement of the steel plants about 1900, and by the larger scale-development of the Montreal market a little later. It is customary in Cape Breton to store large quantities of coal on the ground during the winter months, which serves the purpose of augmenting employment and increasing the amount of coal available for shipment during the summer. The combination of steel manufacture with coal mining has brought about a very stable condition of employment, when compared with previous conditions. Depressed trade conditions, of course, affect Cape Breton, and periods of diminished employment cannot be prevented, but the average number of working days per year at the mines in Cape Breton is as great, and probably much greater, than in the bituminous coal regions of the United States.

THE EMPLOYMENT SITUATION AT THE BEGINNING OF JANUARY, 1925, AS REPORTED BY EMPLOYERS

EMPLOYMENT of the beginning of January, 1925, suffered the pronounced curtailment always shown at the first of the year; the losses affected approximately the same number of workers as those reported on January 1, 1924, but were considerably smaller than on the same date in 1923 and 1922. The Dominion Bureau of Statistics tabulated returns from 5,813 employers, whose payrolls declined by 57,227 persons to 690,538 on January 1, 1925; the number released by the reporting firms at the same time last year was 57,581. The index number stood at 83.9, compared with 90.8 on December 1, 1924, and with 88.7, 86.3 and 77.9 on January 1, 1924, 1923 and 1922, respectively. The decline in

to the opening of the winter ports. State-ments were received from 510 firms, employ- ing 58,554 workers or 718 less than on De- cember 1, 1924. Very much more pronounced declines had been indicated at the beginning of January, 1924.

Quebec.—The contractions in manufactures, transportation and construction were greatest, but there were also decreases in trade, log- ging and mining. Within the manufacturing division, the most severe losses were in lum- ber, pulp and paper, tobacco, iron and steel, while the only important additions to staffs were in textiles. The working force of the 1,263 reporting employers aggregated 187,551 compared with 210,316 in the preceding month.

employment at the end of the year is illus- trated in the accompanying chart, which shows that the movement practically paralleled that indicated at the same period of the two preceding years.

The trend of employment in all industries except coal mining was generally unfavour- able; manufacturing reported the heaviest de- creases, largely on account of shutdowns over the holidays and for inventories. Construc- tion and transportation also registered im- portant contractions.

Employment by Provinces

There were reductions in payroll in all pro- vinces, the curtailment of operations in Que- bec and Ontario being most extensive.

Maritime Provinces.—Manufacturing, (es- pecially of textile, lumber, food, iron and steel products), mining and construction showed marked losses in employment, while large gains were recorded in logging and transporta- tion; those in the latter reflected activity due

Ontario.—The largest reductions in Ontario were in manufacturing, notably in iron and steel, lumber, food and textiles, and in con- struction and transportation. Employment in trade and mining also declined, while con- siderable improvement was registered in log- ging. A combined payroll of 288,774 workers was employed by the 2,689 firms reporting; on December 1 they had 314,167 employees. This contraction affected a rather smaller number of workers than that indicated on January 1, 1925, but the situation then was more favour- able.

Prairie Provinces.—Construction, transporta- tion and manufactures recorded reduced activ- ity. On the other hand, coal mining afforded considerably more employment and logging was also busier. Returns were received from 759 employers, whose staffs aggregated 93,712, as compared with 97,279 in the preceding month. The shrinkage recorded on the same date of the preceding year was a good deal more extensive.

British Columbia.—According to the 592 reporting firms, their working forces decreased from 66,731 persons on December 1 to 61,947 at the beginning of January. Losses on the same scale were reported on January 1, 1924, when employment was in somewhat greater volume. Activity in food, lumber, iron and steel plants, logging, mining and construction declined.

The following table gives the index number of employment in the five areas into which the country is divided in these statistics:—

(Number employed in January 1920 = 100)

District	Relative weight	Jan. 1, 1925	Dec. 1, 1924	Jan. 1, 1924	Jan. 1, 1923	Jan. 1, 1922
Maritime Provinces.....	8.5	78.5	79.3	86.3	90.8	78.1
Quebec.....	27.1	85.0	95.3	90.5	83.5	74.4
Ontario.....	41.8	81.4	88.4	86.1	85.6	78.3
Prairie Provinces.....	13.6	88.1	91.8	94.3	90.0	82.8
British Columbia.....	9.0	92.9	100.0	90.9	88.3	79.9
Canada.....	100	83.9	90.8	88.7	86.3	77.9

Employment by Cities

All the cities for which separate tabulations are made registered declines; those in Montreal were greatest.

Montreal.—The closing of the harbours caused losses in employment in Montreal, and tobacco, food, iron and steel works and construction also reported much less activity. Statements were compiled from 694 firms, employing 93,881 workers as compared with 105,974 at the beginning of December.

Quebec.—Leather factories, construction and transportation recorded decreases. The 95 employers making returns reduced their working forces by 496 persons to 8,271 on January 1.

Toronto.—Employment in manufacturing showed a large falling off, particularly in the iron and steel, food and textile divisions; trade, construction and transportation also registered declines. An aggregate payroll of 88,665 persons was employed by the 776 reporting firms, as compared with 94,311 in the preceding month. This shrinkage was rather greater than that indicated on January 1, 1924.

Ottawa.—Returns received from 126 employers showed that they reduced their staffs from 9,710 persons on December 1 to 9,194, at the beginning of January. The most pronounced losses were in the lumber industry, but construction was also seasonably slacker.

Hamilton.—Considerable improvement was shown in textiles, and rubber factories were

busier. Food, iron and steel plants, on the other hand, afforded less employment, as did also transportation and trade. Reports were tabulated from 199 firms, whose payrolls stood at 22,911, or 146 less than on December 1. Very much more extensive reductions in personnel were made by the employers reporting for January 1, 1924, but the index number then was about two points above its present level.

Winnipeg.—There were moderate declines in a number of industries in Winnipeg; those in food, textile, iron and steel works and construction were most pronounced. The reporting employers had 23,052 workers, as compared with 23,748 in the preceding month.

Vancouver.—Lumber, textile, food, iron and steel plants registered curtailment of operations, as did also construction work. Additions to staffs were, however, recorded in shipping. A combined working force of 21,333 was employed by the 220 firms whose returns were received; on December 1 they had 22,454 persons on payroll. This contraction is smaller than that indicated on January 1, 1924, when the situation was less favourable than at the present time.

The following table shows the index number of employment in these cities:—

(Number employed in January, 1920 = 100)

City	Relative weight	Jan. 1, 1925	Dec. 1, 1924	Jan. 1, 1924	Jan. 1, 1923	Jan. 1, 1922
Montreal.....	13.6	82.5	93.1	86.3	79.8	73.2
Quebec.....	1.2	93.1	98.5
Toronto.....	12.8	82.2	87.4	85.6	84.7	85.1
Ottawa.....	1.3	87.1	92.3	91.0	94.4
Hamilton.....	3.3	77.0	77.3	79.0	81.5
Winnipeg.....	3.3	81.4	83.5	85.3	92.6	85.2
Vancouver.....	3.1	98.3	104.0	91.1	87.7	79.9

The Manufacturing Industries

The iron and steel, lumber, food and tobacco divisions reported very pronounced contractions; those in the last named were partly due to a temporary shutdown for repairs, while in all cases they largely indicated cessation or curtailment of operations over the holidays and for inventories. Reductions in personnel on a smaller scale than in the industries mentioned above were noted in leather, pulp and paper, knitting, garment, clay, stone, non-metallic mineral product and chemical factories. In addition, fur, musical instrument, rubber, electric current, electrical appliance, lead, tin, zinc and copper plants afforded less employment. Cotton factories, on the other hand, were a great deal busier. Reports were compiled from 3,765 manufacturers, employ-

ing 371,409 operatives as compared with 403,059 at the beginning of December. The shrinkage indicated on January 1, 1925, affected several thousand more workers than that recorded on the date under review.

Animal Products—Edible—Meat packing and slaughtering and fish preserving plants were slacker than at the beginning of December, 694 persons being released from the payrolls of the 146 firms making returns in this industry. They employed 13,462 persons. Ontario and British Columbia reported the bulk of the decline. Very much more pronounced curtailment was indicated on January 1, 1924, when the index number was nearly 8 points lower than at the present time.

Fur Products.—The production of fur goods in Quebec and Ontario afforded rather less employment than in the preceding month. The payrolls of the 22 reporting employers declined from 1,167 persons on December 1 to 1,058 at the beginning of January.

Leather and Products.—Boot, shoe and other leather works were slacker in Ontario and Quebec. According to statements from 193 manufacturers of leather products, they reduced their working forces by 892 workers to 15,444 on January 1. The contractions indicated on the same date of last year were a good deal larger, although the index number then was slightly higher.

Lumber and Products.—There were further pronounced declines in this division; lumber, furniture and other wood-using factories reported curtailment of operations which, however, was less extensive than in the preceding month and also than on January 1, 1924. Reports were tabulated from 689 manufacturers, employing 35,133 workers as compared with 40,855 in the preceding month. All except the Prairie Provinces shared in the losses, which were most marked in Ontario.

Musical Instruments.—Activity in this division in Ontario showed a falling off of approximately the same size as that indicated at the beginning of January a year ago. An aggregate working force 2,602 persons was employed by the 40 firms making returns, who reported 2,980 employees on December 1.

Plant Products—Edible.—Flour and other cereal mills, canneries, biscuit, chocolate and confectionery factories afforded much less employment than in the preceding month, while the sugar and syrup division was slightly more active. The losses were widely distributed, those in Ontario being the most extensive. Statements were received from 315 employers, whose staffs declined from 28,157 persons on December 1 to 24,138 at the

beginning of January. This contraction was rather smaller than that registered on January 1, 1924, and the index number then was slightly below its present level.

Pulp and Paper Products.—Pulp and paper mills were decidedly slacker, and paper product plants also afforded less employment. The largest reductions were in Quebec, but there was shrinkage in all provinces except British Columbia. The decreases recorded on January 1 of last year were somewhat larger than those on the date under review, but the level of employment then was higher. The 454 employers reporting had a combined working force of 48,968 persons or 1,623 less than on December 1.

Rubber Products.—Rubber factories in Quebec showed a falling off in the employment they afforded, while moderate improvement was indicated in Ontario. Statements were received from 31 manufacturers, whose staffs aggregated 10,121 as against 10,416 in their last report. This contraction of 2.8 per cent compares with a decline of 16.3 per cent on January 1, 1924, when the index number was nearly 13 points lower.

Textile Products.—Hosiery, knitting, garment and personal furnishing factories reported substantial losses in employment, and headwear, lace, embroidery and narrow fabric and bedding works also showed curtailment. Cotton mills, on the other hand, reported decided improvement. Firms in Quebec registered additions to staffs, while elsewhere there were decreases. A combined working force of 61,795 persons was employed by the 537 manufacturers making returns, who employed 63,663 on December 1. The index number is practically the same as at the beginning of January, 1924, although the contractions recorded then affected between three and four times as many workers.

Tobacco, Distilled and Malt Liquors.—A pronounced falling off in employment was indicated in tobacco factories, following the usual trend at the end of the year. The declines, however, are a good deal larger than those registered on January 1 of last year. They were reported very largely in Quebec. The staffs of the 103 reporting firms in this division aggregated 8,847, or 3,019 less than in the preceding month.

Chemical and Allied Products.—The production of chemicals and related goods declined throughout the country, the reductions in Quebec and Ontario being the most extensive. Statements were tabulated from 117 firms, employing 5,985 workers as against 6,305 in their last report. These losses were

somewhat heavier than those indicated on January 1, 1924.

Clay, Glass and Stone Products.—Brick and other clay and stone works reported a reduction in employment on a slightly smaller scale than at the beginning of January of last year. The firms making returns employed 6,809 workers as compared with 8,157 in the preceding month. All provinces shared to some extent in the curtailment.

Electric Current.—Electric current plants in Quebec and Ontario showed further, though not particularly pronounced declines, affecting 341 workers. As they employed 11,852 workers, as compared with 12,193 on December 1, this was a shrinkage of 2.8 per cent. The index number was higher than on January 1, 1924, although the drop in employment then was slightly less marked.

Electrical Apparatus.—After four months of uninterrupted improvements there was a decrease in the employment afforded in this industry, at the beginning of January. An aggregate working force of 9,524 persons was reported by the 34 firms making returns; on December 1 they had 9,729 employees. This was a contraction of 2.1 per cent, which was the same as that indicated on January 1, 1924 when the situation was not so favourable.

Iron and Steel Products.—Rolling mills and railway car shops reported heavy losses, while there were also reductions on a large scale in heating appliance, shipbuilding, structural iron and steel, pipe, agricultural implement, machinery and sheet metal works. Foundries, on the other hand, were slightly more fully engaged. Returns were tabulated from 638 iron and steel firms, whose payrolls declined from 102,190 on December 1 to 92,443 at the beginning of January. All provinces reported reductions in employment, those in Ontario being much larger than elsewhere. The contractions reported on the same date of last year affected approximately the same number of workers, but employment then was in greater volume.

Non-Ferrous Metal Products.—Lead, tin, zinc, copper and other non-ferrous metal factories showed curtailment, mainly in Ontario. According to reports from 103 manufacturers, they employed 9,915 workers, or 389 less than on December 1. This reduction was very much smaller than that registered on January 1, 1924, when the index number was several points higher.

Non-Metallic Mineral Products.—Petroleum refineries, gas and other non-metallic mineral works reported smaller payrolls than on December 1. Seventy-three firms employed 8,953

workers as compared with 9,575 in the preceding month. The losses were largely recorded in Ontario and were somewhat larger than those indicated on January 1, 1924. The situation then, however, was very slightly less favourable than at the present time.

Logging

Employment in logging camps in British Columbia and Quebec declined, while elsewhere there was further expansion. The working forces of the 231 reporting firms totalled 33,250, or 917 less than in the preceding month. Improvement was shown on January 1 of last year and the index number then was a good deal higher.

Mining

Coal Mining.—Varying conditions were indicated in coal mining; reductions in the Maritime Provinces and British Columbia were more than offset by gains in the Prairie Provinces. The result was an increase of 307 in the staffs of the 91 operators making returns who employed 27,345 workers on January 1. On the same date of last year, large decreases had been indicated, but employment then was in rather greater volume.

Metallic Ores.—Further shrinkage in the employment afforded in metallic ore mining was recorded in British Columbia and Ontario. Statements were tabulated from 46 firms, whose staffs declined from 13,343 on December 1 to 12,984 in the period under review. This decline of 2.7 per cent exceeded that registered on January 1, 1924, but the index number then was over 8 points lower than at the present time.

Non-Metallic Minerals (Other than Coal).—Employment in this division declined in Quebec and Ontario, 387 persons being released from the payrolls of the 69 firms making returns. They employed 4,677 workers at the beginning of January, 1925. Activity on the same date of last year was greater and the decreases registered then affected a smaller number of workers.

Communication

Telephone and telegraph operation employed slightly smaller working forces. The declines were fairly generally distributed over the country. Reports were received from 165 employers in this division, whose staffs aggregated 22,445 persons as compared with 22,696 in the preceding month. Larger contractions were recorded at the beginning of last year and employment in this division at that time was on a lower level.

Transportation

Street Railways and Cartage.—There was a 5 per cent drop in employment on street rail-

ways and in cartage, most of which occurred in Quebec and Ontario. The working forces of the 114 firms making returns decreased from 19,364 on December 1 to 18,320 at the beginning of January. This reduction was larger than that reported on January 1 of last year and the index number then was above its present level.

Steam Railway Operation.—In spite of improvement in this division in the Maritime Provinces, there was a shrinkage of 3 per cent in the payrolls of the 103 concerns and divisional superintendents making returns; 72,711 persons were in their employ on January 1 as compared with 75,000 at the beginning of December. The seasonal curtailment indicated at the beginning of January, 1924, affected a larger number of workers but the situation then was more favourable.

Shipping and Stevedoring.—The opening of the winter ports caused very large additions to staffs in this division in the Maritime Provinces, but the closing of the summer ports

affected employment adversely in Quebec and, to a less extent, in Ontario. There was a net decrease of 5,860 persons in the staffs of the 62 firms reporting, who employed 9,354 workers at the beginning of January. The index number of employment on that date practically coincided with that for January 1 of last year, although the reductions then were much less extensive.

Construction and Maintenance

Building Construction.—Continued pronounced contractions were noted in the employment afforded in this group, from which 5,446 persons were released by the 301 reporting contractors. As they employed 17,231 persons on January 1 as compared with 22,677 at the beginning of December, this was a reduction of 24 per cent; the decrease reported at the first of January, 1924, was somewhat greater. All provinces shared in the losses, those in Ontario and Quebec being most noteworthy.

INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES, JANUARY 1, 1925, ETC.
(January 1, 1920=100)

Industry	*Relative weight	Jan. 1, 1925	Dec. 1, 1924	Jan. 1, 1924	Jan. 1, 1923	Jan. 1, 1922

* The term "Relative Weight" is explained in the concluding paragraph of the accompanying text.

Highway Construction.—Employment on highways continued to show further seasonal losses, but the declines were smaller than in the preceding month, and very much less extensive than on January 1, 1924. Firms in the Maritime Provinces reported the largest contractions. Statements were tabulated from 91 employers, whose staffs, standing at 5,871, were smaller by 2,942 than on December 1.

Railway Construction and Maintenance.—There were further marked losses in employment on railway construction and maintenance, according to statistics from 36 concerns and divisional superintendents. They employed 24,621 workers, as compared with 28,895 on December 1. All provinces shared to some extent in the shrinkage, which, however, was most pronounced in the Prairie Provinces and Quebec. The seasonal curtailment noted on January 1, 1924, was on a rather larger scale, although the index number then was slightly above its present level.

Trade

Following the peak of activity in trade just before Christmas, there was a decided falling off in employment in retail establishments. Wholesale trade was also considerably less active. The sales force of the 577 retail and wholesale firms making returns aggregated 57,377, or 1,503 less than at the beginning of December. The reductions in Ontario were most pronounced, although there were declines everywhere. On the first of January of last year, activity had been greater than in the preceding month, and the index number then was higher than on January 1, 1925.

The accompanying table gives index numbers of employment by industries as at the first of January, 1925, December, 1924, and January, 1924, 1923, and 1922. The columns headed "Relative Weight" in the tables in this article show the proportion that the number of employees reported in the indicated district or industry bears to the total number of employees reported in Canada by the firms making returns on January 1, 1925.

UNEMPLOYMENT IN TRADE UNIONS DURING THE QUARTER ENDING DECEMBER 31, 1924, AS REPORTED BY UNIONS MAKING RETURNS

UNEMPLOYMENT as used in the following report has reference to involuntary idleness, due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month, with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The present article on unemployment among the members of trade unions deals with the situation reported during the quarter ending December 31, 1924, and is based on returns from 1,529 locals with a total membership of 158,367 persons. At the end of October the percentage of idleness stood at 6.8 or nearly one per cent more than in September. During the following two months further reductions occurred and at the end of December 11.6 per cent of the members were reported out of work. As in previous years seasonal inactivity in the building trades was mainly responsible for the increase in unemployment from month to month during the quarter, but

the percentage of unemployed was greater each month than during the corresponding period of 1923.

The accompanying chart shows the curve of unemployment as reported by trade unions by quarters for 1916-17-18-19 and by months for 1920-21-22-23-24. It will be noted that considerable fluctuations occurred during the past year, the months of March, April, June, July and September showing improvement over the preceding months and the remaining months reductions. Since the end of September the situation had been growing steadily worse until the end of the year when 11.6 per cent of the members were idle.

During October more employment than in September was afforded in Nova Scotia, Ontario, Manitoba and Saskatchewan, but this was more than offset by the declines in the remaining provinces. The reductions were rather general throughout the different industries with the exception of transportation, which recorded slight gains.

In November all provinces except Manitoba and Alberta registered declines in comparison with October, the largest percentage reductions being shown in Nova Scotia and Quebec. The manufacturing industry reported a substantial

decline, garment workers, particularly, being slack. The situation for lumber workers was quite unfavourable and building and transportation workers also reported small adverse changes.

During December employment in New Brunswick, Quebec, Ontario and Manitoba was on a lower level than in November; in Saskatchewan the situation was unchanged and the remaining provinces recorded gains. Coal miners were more active. Building tradesmen and lumber workers reported considerable slackness and employees in the manufacturing and transportation industries, also, registered greater unemployment.

Table (I) on this page summarizes the returns by provinces by months from January, 1921, and Table III on page 200, shows the percentages of unemployment reported in the different groups of industries also by months from January, 1921.

The situation in the manufacturing division was slightly less favourable in October than in the same month of 1923, printing tradesmen, textile, iron and steel and glass workers and metal polishers all being less fully engaged. Less activity was registered in the mining industry and declines were also reported in the building trades and transportation industries.

During November employment in the manufacturing group was less favourable than in the same month of last year, there being slightly over 7 per cent more idleness at that date. Textile and glass workers were considerably slacker and paper makers, printing tradesmen, garment and iron and steel work-

EMPLOYMENT SERVICE OF CANADA

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADE UNIONS QUARTERLY 1916-17-18-19 MONTHLY 1920-21-22-23-24

ers also were not so active. In the building trades and transportation industry slightly more unemployment was reported. Fishermen, however, showed improvement.

Unemployment in the manufacturing industries increased during December and was con-

siderably greater than in the same month of 1923. Employment for garment workers was on a much lower level and textile workers, cigar makers and glass workers were also less fully engaged. Lumber workers reported much slackness. A lower level of employment

EMPLOYMENT OFFICE REPORTS FOR DECEMBER, 1924

THE low level of employment indicated during November continued throughout the month of December, 1924, as shown by the reports of the offices of the Employment Service of Canada during this period. The decline was very marked, the positions offered and the placements made being considerably less than during the same period of last year, and the registration of applicants slightly greater. As shown by the accompanying chart, which presents the returns from the offices on the basis of daily averages over half-month periods, the curve of vacancies extended upward during the period, this being due in part to the increase in the casual work available at the holiday season. The placement curve continued the downward trend until the latter part of the month when a slight recovery was shown. The curve of applications declined steadily throughout the month, though registrations were greater than in the preceding year.

During December, 1924, applications for employment were registered at the offices on an average of 1,452 daily during the first half and 1,408 daily during the latter half of the period. This may be compared with an average of 1,619 during the latter half of the preceding month and with 1,572 and 1,259 daily during the corresponding period of December, 1923. Employers notified the Service of an average of 883 vacancies daily during the first half of December, 1924, as compared with 869 daily during the preceding period, and in contrast with 936 during the corresponding period a year ago. During the latter half of the month under review vacancies averaged 903 daily, as against 972 during the same period of 1923. Placements effected by the Employment Service during the month under review averaged 803 daily during the first half and 829 daily during the latter half of the period. A comparison with the preceding period shows an average of 820 placements effected daily, while during December, 1923, for the corresponding periods the average daily placement was 860 and 914. During December, 1924, the placements in regular employment averaged 546 daily during the first half, and 440 daily during the latter half of the month, while the assignments in casual work for the same periods were 257 daily and 389 daily.

During the period under review, the offices referred 22,433 persons to employment, and effected a total of 21,219 placements, of which 12,814 were in regular employment and 8,405 in casual work. Of the placements in regular employment, 10,435 were of men and 2,379 of

women. Applications for work numbered 29,523 from men and 7,664 from women, a total of 37,187. The number of vacancies reported by employers totalled 23,233, of which 16,416 were for men and 6,817 for women.

Placements in regular employment were distributed by provinces as follows:—Nova Scotia, 148 men, 77 women; New Brunswick, 305 men, 76 women; Quebec, 580 men, 337 women; Ontario, 5,051 men, 814 women; Manitoba, 1,296 men, 320 women; Saskatchewan, 897 men, 267 women; Alberta, 1,188 men, 318 women; British Columbia, 970 men, 170 women.

The following table gives the placements effected by the offices of the Employment Service of Canada to the close of the year 1924:—

Year	Placements		
	Regular	Casual	Total
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132

MARITIME PROVINCES

There were lessened activities in the building and construction groups reported from the offices in the Maritime Provinces. Some reconstruction and repair work was shown in a few districts, while sewer and street work afforded employment to numbers of those who were out of work. The logging industry showed a slight decline, due to the fact that the holiday season was approaching, and until the New Year employers would not be certain of their requirements. An increase was noted in the orders for women workers for regular and casual employment.

QUEBEC

The logging industry continued to show great activity in the province, teamsters and camp workers being required from Hull, Montreal and Quebec offices. In some districts, construction work continued to occupy a large part of the business of the offices, the demand being mainly for inside workers. Some relief and sewer work, however, was underway. Inactivity was reported generally in the manufacturing industries. There was a decline shown in the demand for women workers for permanent work, while casual positions increased slightly in number.

ONTARIO

The number of unemployed registered at the offices increased considerably during the month, due to the cessation of outdoor work in many sections. There was a considerable falling-off in the demand for all classes of labour, and in the farm group experienced helpers were greatly in excess of the work available. The decline in the construction groups involved both skilled mechanics and unskilled labourers, although reports from some parts of the province showed that building workers were still comparatively well employed. Relief work had been started on streets and sewers by several municipalities, but the majority of work available in the

MANITOBA

A surplus of workers for farming was registered at the offices at Brandon and Winnipeg with the demand declining rapidly towards the end of the month. Quietness characterized the construction group, the municipalities endeavouring to meet the increased unemployment with special sewer and street improvements. Ice-cutting had not yet started, but a demand for teamsters was anticipated for early in January. Marked gains were recorded in the orders for loggers and bushmen, the office at Winnipeg placing a large number of men in the northern sections of the province and in Ontario. Latterly, however, the calls were not met so readily, due to the disinclina-

cities was of a casual nature and unemployment increased perceptibly. Snow shovelling and clearance work for the road between North Bay and Cobalt alleviated unemployment considerably in these localities. An improved demand for bushmen, tiemakers and pulpwood cutters was shown during the early part of the month but with the approach of the holiday season men were leaving the camps. The manufacturing industries were inactive, although from London hosiery and knitting workers were well employed, and at Chatham extra workers were needed to complete the beet canning. Women workers were in demand in the usual numbers, experienced household domestics being at a premium, while sufficient casual work was not available to give employment to all those registering.

tion of workers to leave town until after the holiday. A slight increase, chiefly for farm domestics and housekeepers, was recorded in the women's sections.

SASKATCHEWAN

While a few offices reported an improved call for farm hands, an augmented registration of applicants was shown in the larger sections. The slackness in the building industry continued, the only work available being in casual jobs such as unloading, teaming, and snow shovelling. The vacancies available for inside builders and finishers were readily filled. Ice-cutting had started in the vicinity of Swift Current, Saskatoon, etc., and teamsters were more fully occupied. Men required at Prince Albert and the northern sections for the lum-

ber camps were readily supplied during the early part of the month, but on the whole little work was transacted in this group. There was a fair demand for housekeepers and domestic servants, with a sufficient supply of experienced workers available.

ALBERTA

A marked decline in the demand in the agricultural group was recorded in all sections, a slight call for winter work being met satisfactorily. Very little construction work was available, general quietness prevailing throughout the province. Some work was in progress at Lake Louise and in the vicinity of Medicine Hat, but more workers were available than were required. The calls in the logging group were consistent, with little sign of improvement until after the New Year. A slight improvement was shown in the mining group.

BRITISH COLUMBIA

The decline in construction and building work offered in British Columbia created a considerably enlarged registration of unplaced applicants, especially in the larger offices. Some municipalities had started relief works, such as sewer construction and street repairs, to relieve the unemployment among local residents, and in other localities inside finishers and building mechanics were comparatively well employed. The farming group was at a standstill, the weather conditions in the Okanagan Valley being unfavourable for pruning operations. The demand in the logging group remained about as formerly reported, tiemakers, cordwood cutters and bushmen, being required in small numbers at the various camps. The outlook in the mining group, especially at Prince Rupert, was greatly improved. Quietness prevailed in the Women's Department, an increased demand for day workers and casual help being reported, with retardation in the demand for cook generals and institutional workers.

Movement of Labour

During December, 1924, the offices of the Employment Service of Canada made 12,814 placements in regular employment, of which 7,153 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 1,430 were granted the Employment Service reduced transportation rate, 788 going to points within the same

province as the despatching office and 642 to other provinces.

The Quebec office issued 123 transportation certificates to bushmen going from Montreal and Hull to the vicinity of Sault Ste. Marie, North Bay and Cobalt. From Ontario 369 workers were placed in employment at a distance. From the office at Sudbury 4 diamond drillers were sent to Winnipeg, Man. Of the 365 provincial transfers, more than 330 were bushmen, 18 were miners, 2 were farm hands, the remainder including stonecutters, plasterers, rockmen, cooks, etc. Manitoba offices issued 622 reduced rate certificates, 134 to workers going to points within the province and 488 to other provinces. From Winnipeg 1 cement finisher went to employment at Calgary, Alta., 9 farm hands, and 5 domestic workers to points near Regina and Estevan, Sask., and 473 workers, including bushmen, pulpwood cutters, tiemakers, blacksmiths and teamsters, to the lumber camps in the vicinity of Port Arthur, Ont. Within the province, 115 farm hands received reduced transportation, the remainder including 9 farm domestic workers; several waitresses, and a few bushmen going to the vicinity of Dauphin. The Saskatchewan offices despatched 230 workers at the reduced rate, 1 of whom was a domestic worker going to Calgary, Alta., 19 were bushmen going to Dauphin, Man., and 3 were farm hands bound for Brandon, Man. Provincially, the transfers included 138 bushmen, chiefly to the Prince Albert district, 34 farm hands, 17 miners and 18 houseworkers and domestic servants. From the Alberta offices 8 farm hands, 4 bushmen, 6 miners, 7 cooks, 9 labourers and 3 housekeepers were sent at special fare to employment in the various parts of the province. From Calgary 1 domestic worker travelled to Cranbrook, B.C. From Medicine Hat, a bushman went to employment at Fernie, B.C., and from Edmonton 2 farm hands were transferred to Saskatoon. In British Columbia the transportation certificates issued numbered 45, of which 25 were to bushmen and tiemakers, 6 to carpenters, 4 to bricklayers, 2 to miners, the remainder being granted to cooks, teamsters, labourers and book-keepers, going to various sections of the province.

Of the 1,430 workers, who benefited by the Employment Service reduced transportation rate, 1,075 were transported by the Canadian National Railways, and 355 by the Canadian Pacific Railway.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD OCTOBER-DECEMBER, 1924

A depression in employment during the period October to December, 1924, was shown by the reports from the offices of the Employment Service of Canada, the usual seasonal decline in business being greater than during the corresponding period of 1923. The decrease over last year in registrations of applicants was approximately 14 per cent, while in the number of opportunities for employment there was a falling off of over 27 per cent. The contraction in placements was more than 26 per cent, the declines being principally in employment of a permanent nature, while an increase of 5.24 per cent was recorded in the placements made in casual and temporary work. An analysis of the casual work shows a decrease from the last quarter of 1923, in all industries with the exception of retail and wholesale trades, where a gain of 35 per cent was shown, and of construction and maintenance with an increase in casual placements of 88 per cent. The curtailment in opportunities offered and in placements in regular employment in the manufacturing industries was about 27 per cent and 38 per cent, notably in leather, lumber, iron and steel, chemical and electric current groups. Marked declines, varying between 33 per cent and 45 per cent, were recorded also in the logging, farming, mining, transportation and construction groups.

A comparison with the third quarter of 1924 shows a very considerable seasonal decline in the farm construction and maintenance groups. These two large decreases, together with less noticeable changes in manufacturing, services, and transportation groups, were responsible for the decline of 31.8 per cent in vacancies offering and of 36 per cent in placements in regular employment. Placements in casual work increased 16.5 per cent over the period July-September, 1924.

From the chart on page 202, which accompanies the article on work of the employment offices for the month of December, 1924, it

will be noted that the trend of the curves has been consistently downward since the end of September. The decline was very precipitous during the first half of September and was followed by a slight recovery at the close of the month. The curves of vacancies and placements declined steadily until reaching a point, in December, lower than in previous years, rising slightly toward the latter part of the month due to the holiday expansion in casual trade. The curve of applications, though declining, was on a higher level than during the preceding year.

During the three months, October-December, 1924, the offices of the Service reported that they had made 84,883 references to positions and had effected a total of 80,231 placements, of which 55,930 were in regular employment and 24,301 in casual work. Of the placements in regular employment 47,411 were of men and 8,519 of women, while casual work was supplied to 13,957 men and 10,344 women. A comparison with the same period of 1923 shows that a total of 109,377 placements were made, of which 86,286 were in regular employment and 23,091 in casual work. Applications for employment during the period under review were received from 99,274 men and 28,973 women, a total of 128,247, in contrast with a registration during the same period of 1923 of 148,240. Employers notified the Service during the last three months of 1924 of 86,981 positions, of which 65,017 were for men and 21,964 for women, as compared with 120,299 opportunities for work offered during the same period of 1923.

The accompanying table gives the vacancies and placements by industrial groups of the offices of the Employment Service of Canada in the various provinces during the period October-December, 1924. In another section of this issue will be found a report in detail of the transactions of the employment offices for the month of December.

BUILDING PERMITS ISSUED IN DECEMBER, 1924

THE value of the building permits issued during December declined by 34.5 per cent as compared with the preceding month; there was also a reduction of 9.4 per cent as compared with December, 1923—a more significant comparison. The Dominion Bureau of Statistics tabulated returns from 56 cities which authorized building to the value of \$6,259,942. In November, 1924, the total was \$9,555,472 and in December, 1923, it was \$6,912,400.

Reports in some detail were furnished by 34 municipalities, showing that they had issued some 400 permits for dwellings estimated to cost approximately \$1,900,000, and for nearly 800 other buildings also valued at almost \$1,900,000.

All provinces reported decreases in the value of the building permits issued as compared with November, 1924; those of \$2,245,531, or 51.8 per cent in Quebec, and \$59,260, or 86.8 per cent in Nova Scotia, were the largest actual and proportionate losses, respectively.

As compared with December, 1923, Quebec, Manitoba, Saskatchewan and Alberta showed increases. Quebec registered the most pronounced actual increase, of \$95,375, or 4.8 per cent, while the gain of \$24,565, or 88.1 per cent in Alberta was proportionally largest. Of the declines in the remaining provinces, that in Ontario of \$448,577, or 11 per cent, was the most marked.

The permits issued in Toronto had a slightly higher valuation in December 1924 than in either November 1924 or December, 1923; in Montreal and Vancouver there were reductions in both comparisons, while the total for Winnipeg was smaller than in the preceding month but larger than in December, 1923. Three Rivers, Belleville, Kitchener, Niagara Falls, St. Thomas, Moose Jaw, New Westminster and South Vancouver registered improvement in both comparisons.

The building permits issued during 1924 were 7.3 per cent lower in value than in 1923, and 17.0 per cent lower than in 1922, but the total exceeded that for 1921 by 5.2 per cent. The aggregate for 1924 (based upon unrevised figures) was \$120,365,956; for 1923, \$129,906,946, for 1922, \$144,980,388 and for 1921, \$114,423,974. The last three totals are based upon revised figures furnished by city officials.

The accompanying table shows the value of the building permits issued during December and November, 1924 and December, 1923. The

35 cities for which records are available since 1910 are marked with asterisks.

REVIEW OF BUILDING PERMITS ISSUED IN CANADA DURING 1924

ACCORDING to revised statistics of building permits furnished the Dominion Bureau of Statistics by 60 cities, construction work was slightly less active in 1924 than in 1923 or 1922, but the situation was better than in 1921 or 1920. The building authorized in these cities during 1924 was valued at \$123,731,196, in 1923 at \$133,201,347, in 1922 at \$147,962,173, in 1921 at \$116,361,720 and in 1920 at \$116,779,628. There were, therefore, decreases of 7.1 and 16.4 per cent in 1924 as compared with the preceding year and 1922, and increases of 6.3 per cent and 6.0 per cent over 1921 and 1920, respectively. These changes should be considered with the index number of wholesale prices of building materials compiled by this Bureau, which averaged 159.1 in 1924, as compared with 167.0 in 1923, 162.2 in 1922, 183.2 in 1921 and 214.9 in 1920, based on prices in 1913 as 100. On the other hand, the Department of Labour's index number of wages in building trades increased from 166.4 in 1923, to 169.9 in 1924. In 1922 this stood at 162.5, in 1921 at 170.5 and in 1920 at 180.9.

Table 1 is a statement of building permits issued in 60 leading cities during the last three years; the 35 cities for which records are available since 1910 are marked by asterisks. The number of cities has been increased by the addition of the Border Cities—Ford, Riverside, Sandwich and Walkerville, which are practically suburbs of Windsor. Table II gives the value of building permits issued since 1910, in the original 35 cities by provinces, as well as the yearly average of index numbers of prices of building materials and of wages in the building trades.

Building Activities by Provinces.—The value of building permits issued during 1924 in Nova Scotia, New Brunswick, Quebec, Saskatchewan, Alberta and British Columbia was higher than in 1923, while in Prince Edward Island, Ontario and Manitoba there were declines.

The increase in Quebec of \$7,078,483 or 19.9 per cent was most pronounced; the proportion of the permits issued in that province rose from 26.6 per cent of the 1923 total to 34.4 per cent of the aggregate for 1924. In the seven British Columbian cities represented, the gain was \$1,535,326, or 13.9 per cent. The largest proportional increase of 42.2 per cent, was in Alberta, whose total of \$3,695,604 showed the third greatest actual gain of \$1,097,617, as compared with the previous year. Nova Scotia, New Brunswick and Saskatchewan registered percentage increases of 21.9, 42.1 and 18.7, respectively, in this comparison.

In Ontario there was a falling off in the value of the building authorized of \$18,907,589 or 25.3 per cent as compared with 1923. The 30 cities reporting in that province issued permits to the value of \$55,765,491, or 45.1 per cent of the total for Canada. Manitoba recorded a reduction of 25.3 per cent, or an actual loss of \$1,310,385, as compared with 1923. In Prince Edward Island, there was a decrease of \$18,300, or 36.5 per cent.

Building by Cities.—Montreal, with permits valued at \$31,013,419, reported the highest aggregate in any one city, (25 per cent of the total for the 60 centres) and showed an increase of 12.5 per cent over 1923. The total for 1924 is the largest for Montreal since the record commenced in 1910, exceeding the previous high mark of 1913 by \$1,289,967. Some 19 per cent of the aggregate for last year was to be expended on residential building. In Toronto, where the value of permits issued declined from 1923 by \$6,683,199 or 21.8 per cent, the proportion of permits issued for dwellings was greater; 48.4 per cent of the total was designed for that purpose. If York Township, which is practically a suburb of Toronto, is included, the percentage that permits for residential buildings in that area bear to the total is 53.2. Winnipeg showed a falling off in building authorized of \$1,306,200 or 29.1 per cent; nearly 60 per cent of the total value for 1924 was issued for dwellings. In Vancouver the estimated building was valued at \$6,230,774; this was \$46,800, or less than 1 per cent, lower than in 1923. The permits for dwellings issued in Vancouver formed 29.7 per cent of the total for that city.

Quebec reported the third largest aggregate for a single city, with permits valued at \$7,331,846 or 34.7 per cent more than in 1923. The total for Windsor, \$4,429,308, came next in order, or, if this is combined with the total for the adjacent border cities, Ford, Riverside, Sandwich, and Walkerville—comes in third place. The combined figure is \$8,222,219, or 2.5 per cent higher than in 1923. Point Grey, practically a suburb of Vancouver, issued permits valued at \$4,251,300; this exceeded the 1923 aggregate by \$1,853,550 or 77.3 per cent.

In addition to the cities mentioned above, the following issued permits valued at over a million; St. John, Three Rivers, Westmount, Fort William, Hamilton, Kingston, Kitchener, London, Ottawa, Port Arthur, Saskatoon, Calgary and Edmonton.

The following cities reported increases in the value of building authorized as compared with 1923; Halifax, St. John, Shawinigan Falls, Three Rivers, Westmount, Belleville, Chatham, Kingston, Niagara Falls, Peterborough, Stratford, Sarnia, Sault Ste. Marie, Brandon, Moose Jaw, Saskatoon, Calgary, Edmonton, Medicine Hat and Prince Rupert.

Building by Months.—During 1924, the permits issued in September and May, valued at \$14,883,323, and \$14,621,100, respectively, were higher than in any other month; 23.8 per cent of the total value for the year was granted in those two months. In 1923, April had the greatest amount of estimated building, but, on the average, the permits issued in May exceed those for any other month.

Building by Types of Buildings.—Reports as to the number and value of permits for dwellings, other buildings and engineering projects were furnished by some 45 of the 60 cities. Forty-two centres issued nearly 16,200 permits for dwellings, estimated to cost approximately \$39,000,000, and some 26,000 permits for other buildings valued at about \$57,000,000. Four cities authorized the construction of dwellings valued at \$683,000 and of other buildings at a proposed cost of \$518,000, but omitted to give the number of permits. Five municipalities reported 15 permits for engineering projects at a valuation of \$2,337,000.

Building since 1910.—The value of the building permits issued in 35 cities (\$105,070,284) was smaller by \$6,104,041 or 5.5 per cent than in 1923, and by \$17,585,297 or 14.3 per cent than in 1922, but it was larger than in other years since 1913. As was pointed out in former annual reviews, building during the years 1910-1913 was on an extremely high level. As prices then were much lower than at any time since the war, the volume of building represented by the permits granted was very great. There was, however, a large influx of immigrants in 1911, 1912 and 1913, and an enormous building programme was necessary to meet the requirements of the rapidly growing population.

In Nova Scotia there was a gain of 26.5 per cent over 1923, the permits issued in 1924 being valued at \$883,116. Building in this province has been on a very low level since the period of great activity that followed the Halifax explosion of 1918; the 1923 and 1924 totals were smaller than in any year since 1910. New Brunswick registered an increase of 66 per cent as compared with the preceding year, but the total was below those for the years 1919-1922.

The 1924 aggregate for the six cities in Quebec was greater than in any other year of the

record. Since 1918, the permits issued have steadily increased; the value of last year exceeded that for 1923, the previous high level, by 19.7 per cent. In Ontario the reporting cities issued permits valued at \$43,587,431; compared with the 1923 total of \$57,311,438,

NOTE.—York Township is practically a suburb of Toronto, while the four Border Cities, Ford, Riverside, Sandwich and Walkerville bear very much the same relation to Windsor.

this was a falling off of 23.9 per cent. The total for 1924 was the smallest since 1919, but was greater than in any preceding year back to 1913.

Building in Manitoba in recent years has not been active. The 1924 aggregate of permits was 26.1 per cent lower than in 1923, and 84.2 per cent less than in 1912, the year in which building was greatest. The total was, however, 85.2 per cent larger than in 1915, when building reached its lowest level. The permits granted in Saskatchewan during 1924 were valued at \$2,856,190, or 18.7 per cent more than in 1923, but the total was

smaller than in the years 1919-1922. Alberta also showed improvement with the preceding year, mainly owing to the construction of a grain elevator in Edmonton. Building to the value of \$3,336,515 was authorized in the province during 1924; this was \$1,026,005, or 44.4 per cent more than in 1923.

The value of the building permits issued in British Columbia was slightly less (3.8 per cent) than in the preceding year, standing at \$7,390,309, as compared with \$7,678,582 in 1923. In the last two years, this province has had the third largest total of building authorized in Canada.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreement and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Printing and Publishing

EDMONTON, ALBERTA.—JOB OFFICES AND INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 604.

Agreement in effect from November 1, 1923, to November 1, 1924, at which time the part of agreement relating to wages was extended to May 1, 1925, and that relating to working conditions to October 31, 1925.

Only union members are to be employed. The employers shall not require employees to execute struck work from or for unfair printers.

The officers of the union will preserve discipline among the members while on duty.

A joint standing committee of two from each side shall be appointed to whom shall be referred questions as to scale of prices and construction to be put on any clause of the agreement, or alleged violation thereof. Committee shall meet once a month or when any question of difference shall have been referred to it by executive officers of either party to the agreement, decision of board being final and binding. Local union laws not affecting wages, hours or working conditions, and the laws of the International Typographical Union shall not be subject to arbitration.

In shifts where no regular machinist is employed there shall be at least one machinist-operator. Offices working machines on each of two shifts shall employ a machinist.

Hours, eight per day for five days and four on Saturday. Hours, 7 a.m. to 6 p.m., time and one-half for first three hours overtime; thereafter, double time. Holiday rate, Dominion Day, Labour Day, and Christmas Day, double time; other holidays, time and one-half. Sunday work, double time except work by a night staff in job offices on a regular night shift.

Any journeyman working in more than one department shall be paid at the rate of the highest paid department in which he works.

A shift worked part day and part night shall be paid on night scale.

The foreman shall have control of employment and discharge of journeymen for cause.

Apprentices: Youths who handle type in the composing room and no others shall be considered as

apprentices. Number to be employed in job offices: one for 2 to 7 men; two for 8 to 15 men; three for 16 to 25 men; four for 26 to 35 men; five for 36 or over.

Apprentices when entering shall be not less than sixteen years of age; they shall be examined by the foremen, the chairman of the chapel and a journeyman printer as to mental and physical fitness for the trade. Apprentices shall be registered and shall serve five years. During the last three years they shall enrol as students in the course of lessons in printing of the International Typographical Union.

Scale of wages for apprentices, per month: start, \$10; after 6 months, \$11.50; after one year, \$13; after one year and 6 months, \$14.50; after 2 years, \$16; after 2 years and 6 months, \$17.50; after 3 years, half journeymen's scale; last year, two-thirds journeymen's scale.

Apprenticeship schedule is to be followed as drawn up in the agreement, foremen being responsible for carrying out of the same, complaints for failure of foremen to comply being made in writing to the joint standing committee.

Apprentices are to be allowed time off during first two years for attendance at continuation classes of the Edmonton School Board.

Apprentices are to be examined yearly that it may be determined whether they are entitled to the increase in wages.

No apprentice shall work overtime unless two or more journeymen are employed on the same shift.

The chairman of each office must make a quarterly report to the "local committee on apprentices." This committee shall be appointed by the union and shall take up matters referred to it by local shop apprentice committees regarding yearly examinations; and shall be responsible for attendance at schools.

Machine apprentices: no more than one learner shall be employed in any office at one time, no regular being laid off while a learner is working. Learners may work overtime if no journeymen are available.

Wages for beginners on machines, first five weeks, two-fifths of journeymen's scale; next five weeks, three-fifths; next five weeks, four-fifths. Extension of time may be granted not exceeding three months.

Wages per hour—from November 1, 1923, to April 30, 1924, journeymen compositors, linotype operators, monotype operators, stonemen and proofreaders, 85 cents; foremen, machinist-operators, caster men, 90 cents.

From May 1, 1924, to October 31, 1924, with extension to May 1, 1925, journeymen compositors, linotype operators, monotype operators, stonemen and proofreaders, 90 cents; foremen, machinist-operators, caster men, 95 cents. Night work, 5 cents per hour in excess of day scale. Split shift: Night scale and same number of hours as for night work.

Construction: Building and Structures

TORONTO, ONTARIO.—THE MASONS' AND GENERAL CONTRACTORS' AND THE GENERAL CONTRACTORS', ALSO THE CUT STONE CONTRACTORS' SECTIONS OF THE BUILDERS' EXCHANGE OF THE CITY OF TORONTO AND BRICKLAYERS' UNION No. 2 AND STONEMASONS' UNION No. 26, AFFILIATED WITH THE BRICKLAYERS', MASONS' AND PLASTERERS' INTERNATIONAL UNION OF AMERICA.

Agreement to be in effect from January 1, 1925, until December 31, 1925. Three months' notice of

change must be given prior to expiration, and if new agreement is not arranged by December 1, 1925, a representative of the International Executive Board shall be sent for to try to effect a settlement. If such is not done by December 31, 1925, the agreement shall be null and void.

Wages per hour, bricklayers and stone masons, \$1.12½.

Hours per day or night, eight. Overtime, time and one-half; Sundays, certain holidays and Saturday afternoons, double time.

Books are to be closed weekly, two days prior to pay day, and wages to be paid at quitting time.

Toronto jurisdiction is to extend half-way to Hamilton and half-way to Oshawa, and 25 miles north of the Toronto City Hall.

The union is to be strictly a practical journeymen's union. Any member wishing to contract or sub-contract must resign from the union and may not rejoin for 12 months.

Union members may not work on a piece work basis except where work is done on a percentage or cost plus, or on alterations where a portion of the materials are on the ground. No member of the bricklayers' union may lay brick for employers of non-union stonemasons; and no member of the stonemasons' union may cut or lay stone for employers of non-union bricklayers.

Strikes shall not be ordered and members shall not leave work in consequence of disputes until same have been brought before the joint arbitration committee. No sympathetic strikes except under direct authority of the executive committee of the International Union.

Where a firm or company consists of over two members, only two may lay brick.

Violations of the agreement are to be reported to the joint arbitration committee.

Men out of work shall report to the Union. Members of the Builders' Exchange shall have a preference where supply of bricklayers and stonemasons is concerned.

The agreement defines the work of bricklaying and stonemasonry.

The joint arbitration committee shall consist of three members from the two unions combined and three from the Builders' Exchange to be appointed forthwith and to meet upon request.

Minimum wages per hour, bricklayers' and stonemasons' apprentices: 1st year, 25 cents; 2nd year, 35 cents; 3rd year, 45 cents; 4th year, 60 cents.

EDMONTON, ALBERTA.—EDMONTON ASSOCIATION OF BUILDING INDUSTRIES, AND EDMONTON DISTRICT COUNCIL OF CARPENTERS.

Agreement to be in effect from May 1, 1925, until April 30, 1926, and for another year unless notice of amendment or alteration be given before January 31, 1926.

Hours per day, eight for five days; four on Saturdays.

Minimum wage, per hour, 80 cents.

Work on Dominion Day, Christmas Day and New Year's Day, double time. No work on Labour Day. Other overtime, time and one-half.

Union carpenters are to be given preference of employment.

Labourers employed about buildings to assist carpenters must do work that requires no carpenter's tools.

One hour's notice of dismissal or leaving work is to be given.

Transportation: Water

ST. JOHN, N.B.—CERTAIN STEAMSHIP LINES AND THE STEAMSHIP HORSE AND CATTLE FITTERS', SEALERS', LINERS', AND CLEANERS' UNION, LOCAL 1039, INTERNATIONAL LONGSHOREMEN'S ASSOCIATION.

Agreement in effect from December 1, 1923, to November 30, 1924, and renewed to December 1, 1925.

Hours per day or night, nine—from 7 a.m. to noon and from 1 p.m. to 5 p.m. Night work, from 7 p.m. to midnight and from 1 p.m. to 5 a.m.

Wages per hour, day, 60 cents; night, 90 cents. Sundays and holidays, double time. Night work on Sundays and holidays, double time and one-half. No work on Labour Day.

Double time to be paid for work at repairing oil or water tanks on vessels which have no hatch and must be entered by way of a manhole.

When men are ordered for work during day or night a minimum of two hours' pay shall be allowed excepting when weather conditions prevent working. Double time for work during any meal hour, and thereafter until relieved.

Full time to be allowed men at work on a ship in the stream until they are put ashore again.

Time and expenses are to be paid men when transferred from one job to another during working hours.

In case of controversy arising over interpretation of any clause in the agreement men shall continue at work, the controversy being adjusted if possible between a representative from the union and one from the company, or, if this fails, by arbitration, by a board consisting of three persons—one appointed by the companies, one by the union and one selected by them, or by a judge of the Superior Court. This Board shall meet within three days of the request being made. In the case of dispute, no stoppage of work shall occur under any circumstances.

The union will not try to uphold incompetency, shirking or of absence from work, pilfering or broaching of cargo.

Service: Public and Municipal

MOOSE JAW, SASKATCHEWAN.—SCHEDULE OF WAGES AND WORKING CONDITIONS FOR CIVIC EMPLOYEES IN CERTAIN DEPARTMENTS.

Schedule in effect from April 1, 1924, to March 31, 1925, and for an additional year unless notice of change is given not later than January 25, 1925.

Sewer and water department: hours per day, 9 for 5 days, from 7 a.m. to 12 noon and from 1 p.m. to 5 p.m., and from 7 a.m. to 12 noon on Saturdays. City reserves right to divide the day into two or more shifts with a separate gang of employees in each shift, or to alter the hours without notice, regular rate of wages to apply for 9 hours. Sunday and holiday rates, double time. Overtime after 9 hours, time and one-half; after 16 hours, double time; on Saturdays, time and one-half half after 5 hours and double time after 17 hours. The limitations "after 9 hours' work" and "after 16 hours' work" shall apply only when work is on shifts; when not on shifts, overtime shall be anytime outside of regular working hours.

Emergency men (being paid a higher base rate) will be expected or required to act as sub-foremen, tappers, caulkers, and hydrantmen, but when not doing so will work as helpers.

The city is to carry out the terms of the Building Trades Protection Act, 1912, and shall, when it is

deemed necessary, see that, when men are employed on excavation work, there shall be a man on the surface to assist. Minimum wages, per hour—tappers and and caulkers, 56½ cents; hydrant men and emergency men, 55½ cents; helpers, motor truck drivers, 52 cents.

Sewage disposal works: Hours—pump house, three shifts of eight hours each for seven days a week; distributor and sedimentation, one shift of 9 hours per day for 6 days a week; sludge beds, one shift of 10 hours per day for 6 days a week.

Wages, per week, chief operator, \$33; assistant, \$29. To compensate for Sunday work two weeks' holidays with pay per year shall be granted during summer; as well as legal holidays in rotation without loss of pay and as convenient with shift duties.

Water Meter Department: Hours, nine per day, from 8 a.m. to 12 noon; and from 1 p.m. to 6 p.m. From October until March employees shall have alternate Saturday afternoons off. Meter foremen, two weeks' vacation with pay; others, one week. All employees shall be paid for legal holidays. Overtime, when required, at regular rate.

Wages, per week—Meter foreman, \$32; metermen, \$27.50; meter readers, \$26.

Board of Works Department: Hours per day, 9, as in sewer and water department. Wages: per week—general foreman, \$33; sub-foreman, \$28; per hour—master mechanic, 66 cents; helpers, 49 cents.

Teamsters: Hours per day, 9—6.30 a.m. to 12 noon; 1 p.m. to 5.15 p.m.; Saturdays, 6.30 a.m. to 12.15 p.m. Time before 7 a.m. and after 5 p.m. and after 12 noon on Saturdays shall be devoted to stable duties without pay. Wages per hour, teamsters, 49 cents.

Street Cleaning: Hours per day, nine in winter, eight and one-half in summer. Wages—per hour, street cleaners, 42 cents.

General Conditions: Wages in this schedule are minimum rates. The minimum weekly wage of all hourly workers classed as helpers or higher shall be based on a minimum 50-hour week in each week in which a statutory holiday occurs, and on a 45-hour week during other weeks.

Grievances reported to the foreman shall be investigated and, if not adjusted, finally taken before the Commissioners. Employees who have been unjustly dealt with shall be paid for time lost.

Promotions shall be made from the staff if possible.

Easter Monday, Labour Day and the King's Birthday shall be deemed legal holidays.

Sick leave up to three weeks in a year is to be granted to employees who have been in the city's service for at least a year, provided a medical certificate is produced when required.

One week's vacation per annum with pay is to be granted to employees on a weekly salary basis whose services are required the year round, after six months' service.

A helper laid off in any department through slackness of work shall be taken on in any other department having a vacancy, provided his work is considered satisfactory. There shall be no compulsory promotion of labourers to the class of helpers.

No holidays other than statutory shall be granted to employees who are paid for overtime work.

**LETHBRIDGE, ALBERTA.—CITY OF LETHBRIDGE
AND THE LETHBRIDGE CIVIC EMPLOYEES'
UNION No. 70.**

Agreement to be in effect from January 1, 1925, until December 31, 1925.

The parties to the agreement failing to settle disputes agree to a conciliation board.

Group sickness and accident policy is to be continued.

Leave of absence without pay may be granted to delegates or committees.

The city commissioners shall at all times receive a grievance committee. There shall be no discrimination against employees for connection with a trade organization. Heads of departments are not to use their position to solicit donations from employees. Hourly employees are to be paid twice monthly. Check-off system as in force to be maintained. Seniority and efficiency are to be generally recognized.

Hours per day, eight, except where otherwise specified. Time and one-half overtime for men on hourly basis.

"It is agreed that future wage adjustments shall be based on the cost of living as indicated by the LABOUR GAZETTE of the just past October in each year, Dominion figures to be taken, and that parties hereto shall meet on the thirtieth day of November, 1925, or as soon thereafter as possible, to discuss and arrive at a basis for a future agreement in order that this agreement may be continued or a new agreement put in force on the first day of January, 1926, or as soon thereafter as possible."

The question whether further adjustments shall be made a flat percentage basis or in the ratio of increases between 1914 and 1920 shall be open for discussion.

Fair wages clause: prevailing wages on the same kind of work shall be paid on all the city's contract work.

Where the cost of living adjustment indicates an increase or decrease which does not amount to ½ cents on rate of wages, the increase or decrease shall be cumulative and considered as part of the increase or decrease, as may be the case, at the next wage conference under the terms of the clause. This shall date from 1923, and a record of the said increase or decrease shall be kept as a matter of record.

Power House Employees: Men working six days shall be paid time and one-half for all overtime. Wages per hour for conveyormen and oilers, 58.7 cents per hour. The total coal value is to be divided by total hours worked and divided proportionately as an hourly increase.

Waterworks Employees: wages to be adjusted by cost of living. Men are to be paid one hour's pay if requested to report for duty and services for that day not required. Overtime, time and one-half. Felt lined boots are to be furnished to men working in water.

Street Railway Department: wages to be adjusted by cost of living. Overtime after midnight and on Sundays, time and one-half, senior men having first choice of overtime.

Uniforms will be provided at rate of one suit per man per annum. Senior spare men will be guaranteed fifty-four hours per week either running a car or in car barns.

In all remaining departments, wages are to be governed by the cost of living adjustment. In the parks and boulevards, garages, stables and streets department, men are to be paid one hour's pay if requested to report when services for day are not required. Blacksmiths are to receive time and one-half for overtime. Hours for teamsters, eight on the street with half an hour additional night and morning to groom team, provided teamsters are required to do this work.

In all departments double time is to be paid for overtime on Sunday.

FAIR WAGE CONTRACTS, JANUARY, 1925

DURING January, the Department of Labour received for insertion in the **LABOUR GAZETTE** the following information relative to six fair wage contracts awarded by the Department of Public Works. All of these contracts contain the usual fair wage clause as follows:—

All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rate so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

A statement was also received as to supplies ordered by the Post Office Department, subject to the regulation for the suppression of the sweating system and the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS

Alterations to detention building, Park Savard, Quebec. Name of contractor, C. Jobin, Limitée, Quebec City, Quebec. Date of contract, December 24, 1924. Amount of contract, \$3,599.

Repairs to wharf, Port Alberni, British Columbia. Name of contractor, George Forrest, Alberni, British Columbia. Date of contract, January 14, 1925. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$1,312.05.

Partial reconstruction of lock gates, cribs and construction of booms at Poupore (Rivière du Lièvre), Quebec. Name of contractors, Farley and Grant, Ottawa, Ontario. Date of contract, January 9, 1925. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$6,985.13.

Construction of laboratory building, Fuel Testing Plant, Ottawa, Ontario. Name of contractor, A. I. Garvoek, Ottawa, Ontario. Date of contract, December 1, 1924. Amount of contract, \$15,990.

Construction of public building at Edmundston, New Brunswick. Name of contractors, John Flood and Sons, Limited, St. John, New Brunswick. Date of contract, December 22, 1924. Amount of contract, \$55,112.

Construction of public building at Loretteville, Quebec. Name of contractors, J. B. Jinchereau and Fils, Quebec City, Quebec. Date of contract, January 19, 1925. Amount of contract, \$22,000.

POST OFFICE DEPARTMENT

The following is a statement of payments made in January, 1925, for supplies ordered by the Post Office Department, subject to the regulation for the suppression of the Sweating System, the securing of payment to working men and women of fair wages, and the performance of work under proper sanitary conditions:—

Nature of Orders	Amount of Orders
Making metal dating stamps and type, also other hand stamps and brass crown seals.....	885 06
Making and repairing rubber stamps, daters, etc.....	224 23
Making up and supplying letter carriers' uniforms, etc.....	15,594 32
Stamping pads, ink, etc.....	498 18
Mail bag fittings.....	297 74
Scales repaired.....	376 00
Satchels supplied.....	550 37

PRICES, RETAIL AND WHOLESALE, IN CANADA, JANUARY, 1925

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices was again upward. Index numbers of wholesale prices calculated by various authorities were substantially higher while the family budget in terms of retail prices also reached somewhat higher levels due mostly to seasonal influences.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.77 at the beginning of January as compared with \$10.58 for December, 1924; \$10.78 for January, 1924; \$10.52 for January, 1923; \$11.03 for January, 1922; \$14.48 for January, 1921; \$15.30 for January, 1920; \$16.92 for June, 1920 (the peak); \$12.42 for January, 1918; and \$7.73 for January, 1914. The most important advances occurred in the prices of beef, eggs, butter, bread, flour, and potatoes while there were less important advances in pork, mutton, veal, rolled oats and cheese. The prices of beans and sugar were slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$21.09 at the beginning of January as compared with \$20.90 for December, 1924; \$21.23 for January, 1924; \$21.13 for January, 1923; \$21.52 for January, 1922; \$25.30 for January, 1921; \$24.15 for January, 1920; \$26.92 for July, 1920 (the peak); \$19.80 for January, 1918; and \$14.49 for January, 1914. Fuel showed little change while rent was slightly lower.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the importance of the commodities, advanced to 165.2 for January as compared with 160.9 for December, 1924; 156.7 for January, 1924; 151.4 for January, 1923; 151.7 for January, 1922; 200.6 for January, 1921; 233.4 for January, 1920; 256.7 for May, 1920 (the peak); and 206.1 for January, 1919. Eighty price quotations were higher, sixteen were lower, and one hundred and forty were unchanged. This index is now at the highest point reached since August, 1921, when it stood at 165.5. The low point in the interval was 147.4 reached in September, 1922. Since then an advance of 12.1 per cent has occurred.

In the grouping according to chief component material seven out of the eight main groups advanced and one was unchanged. The vegetables and their products group showed the most important advance due mainly to higher prices for grains, flour, bread and fruits. The other groups which advanced

were: animals and their products due to higher prices for hogs, meat, hides, leather and cheese; textile products mainly because of higher wool prices; iron and its products due to increased pig iron prices; non-ferrous metals and their products because of higher prices for most of these metals; wood, wood products and paper; and chemicals and allied products.

In the grouping according to purpose both consumers' goods and producers' goods advanced, the former mainly because of higher prices for flour, bread, tea, coffee, fruits, meats, lard and cheese and the latter because of higher prices for white lead and linseed oil, and for materials for the fur, the leather, the meat packing and the milling industries as well as miscellaneous producers' materials.

In the grouping according to origin articles of farm origin advanced substantially. Canadian farm products, both animal and field, were higher. Articles of forest origin and of mineral origin also advanced somewhat while articles of marine origin declined slightly. Both raw or partly manufactured goods and fully or chiefly manufactured goods were higher.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number published by the Department since 1910 has been reconstructed back to 1913, by the Dominion Bureau of Statistics, the new index being weighted and based upon the prices of 236 commodities in 1913.* The reconstructed index has now been carried back to 1913 by months. From June, 1923, to the present month the Department has continued to calculate and publish the old series in summary form in the LABOUR GAZETTE in order to afford comparisons with price levels back to 1913. For the detailed analysis from month to month, however, the new index number of the Bureau of Statistics has been used.

As the Bureau's index number has now been constructed back to 1913 by months and is available back to 1890 by years, the index number of the Labour Department is being discontinued. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail.

The special index number of wholesale prices of fifty commodities is also being discontinued. As this gives monthly figures prior to 1913 back to 1901 based on prices in 1913 as 100, it may be used to indicate the general movement of prices by months for that period, the index number of the Bureau of Statistics being available by months since 1913.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board, including thirty-three raw materials, twenty-eight semi-manufac-

* LABOUR GAZETTE, June, 1923, and September, 1924.

tured or producers' goods and thirty-eight finished or consumers' goods based upon price levels in 1913 as 100 advanced to 149 for December, 1924, as compared with 148 for November and 144 for December, 1923. Raw materials and consumers' goods advanced but producers' goods were lower. In the grouping by origin domestic goods advanced while imported goods declined. Export goods were higher.

Professor Michell's index number of forty articles with prices during 1900 to 1909 as 100 advanced to 182.3 for January as compared with 177.2 for December, 1924; 178.3 for January, 1924; 265.1 for January, 1920; and 117.3 for January, 1914. Both foodstuffs and manufacturers' goods were higher.

The Canadian Bank of Commerce index of exports advanced to 160.85 for January as compared with 155.89 for December, 1924; that for imports rose from 164.20 in December to 169.37 in January. The combined index of both exports and imports advanced from 160.04 in December to 165.11 in January.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of January of seventy-one staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity, in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses

in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current for Householders*

With rates in 1913 at 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

Retail Prices

Beef prices which had declined for several months showed a general advance in January. Sirloin steak averaged 27.1c. per pound as compared with 26.2c. in December. Round steak averaged 21.8c. per pound in January as compared with 21c. in December. Shoulder roast was 14.2c. per pound as compared with 13.8c. in December. Veal also showed a

* LABOUR GAZETTE, December, 1923, page 1442.

general advance, averaging 17.8c. per pound in January and 17.2c. in December. Mutton averaged higher at 27.6c. per pound as compared with 26.7c. in December. Fresh pork advanced from an average of 23.8c. per pound in December to 24.1c. in January and salt pork from 22.9c. per pound in December to 23.4c. in January. Bacon was up from 37.7c. per pound to 38.5c. In fresh fish, cod and whitefish advanced slightly while halibut declined. Finnan haddie and salt herrings showed little change.

Eggs again showed a general advance, fresh, averaging 66.7c. per dozen in January as compared with 63.8c. in December and 54.1c. in November and cooking averaging 51.9c. in January, 50c. in December and 45.6c. in November. In milk a lower price was reported from St. John, N.B., but advances were reported from Toronto, Guelph, Cobalt and Brandon. Dairy butter averaged slightly higher at 39.7c. per pound as compared with 39c. in December. Creamery butter also advanced, averaging 43.9c.

Higher prices on bread were reported from Amherst, St. John, P.Q., Orillia, Sudbury, Nelson, Vancouver and Victoria. Soda biscuits were unchanged in the average. Flour advanced in most localities, averaging 5.5c. per pound as compared with 5.2c. in December. Rolled oats showed little change at 6.2c. per pound. Rice and tapioca were steady. Beans were down from an average of 8.4c. per pound in December to 8.2c. in January. Onions advanced somewhat, averaging 5c. per pound. Potatoes were up from an average of \$1.33 in December to \$1.39 in January. Prunes were slightly lower, averaging 15.3c. per pound as compared with 14.4c. Raisins and currants showed little change. Raspberry jam was slightly higher, averaging 92.1c. per 4 pound tin. Canned peaches and marmalade were steady. Corn syrup advanced from an average of 49.2c. per 5 pound tin in December to 50c. in January. Both granulated and yellow sugar averaged slightly lower, the former at 9.4c. per pound and the latter at 9c. per pound. Coffee rose from 57.1c. per pound to 57.9c. Tea also was slightly higher at 70.4c. per pound.

Anthracite coal averaged \$16.82 per ton as compared with \$16.71 in December. Higher prices were reported from Charlottetown, Thetford Mines, Montreal, Cobalt and Timmins. Bituminous coal was up from \$10.34 per ton in the average to \$10.40. Advances were reported from Brantford and Cobalt. Wood showed little change, hard wood averaging \$12.55 per cord and soft wood \$9.19 per cord. Coal oil was practically unchanged in the average. A decline in rent was reported from New Glasgow and Regina.

Wholesale Prices

The following is a summary of a statement on prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices continued to move upward, No. 1 Manitoba Northern wheat at Winnipeg averaged \$1.96 per bushel in January as compared with \$1.72½ in December. The low price of \$1.82½ was reached near the beginning of the month since when prices advanced until the 28th when \$2.17½ per bushel was reached. The world shortage of supplies, competition of European buyers, together with improved economic conditions were said to be the causes of the higher prices. Coarse grains moved in sympathy with wheat. American corn at Toronto rose from \$1.40 per bushel to \$1.43; western oats from 62½c. per bushel to 67½c.; western barley from 88c. per bushel to 94c. and flax seed from \$2.49 per bushel to \$2.68½. High prices for grains were reflected in those of flour and other milled products, flour at Toronto being \$10.60 per barrel as compared with \$9.50 in December and shorts at Toronto being \$38 per ton as compared with \$36.75 in December. Rolled oats advanced 25c. per hundred to \$4.25. Bread at Winnipeg was up from 6c. per pound to 7c. Raw sugar at Montreal declined from \$4.70 per hundred to \$4.32 and granulated from \$7.12½ to \$6.65. Oranges at Montreal advanced from \$5-\$5.50 per case to \$5.50-\$6.50. Rio coffee rose from 28c. per pound to 29c. and Ceylon tea from 53c. per pound to 54c. Potatoes at Toronto advanced 10c. per 90-pound bag reaching \$1-\$1.10. Canned corn at Toronto was up from \$1.78 per dozen tins to \$1.87½. Turpentine was up from \$1.44 per gallon to \$1.50. Choice steers at Toronto declined from \$6.65 per hundred to \$6.50, while hogs rose from \$10.12 per hundred to \$11.17. Salt codfish declined from \$10.75 per quintal to \$10 and salted herrings from \$7 per hundred to \$6.50. Dressed beef at Toronto advanced, forequarters being up from \$7 per hundred to \$8.60 and hindquarters from \$12.50 per hundred to \$14.10. Beef hides at Montreal advanced from 13c.-13½c. per pound to 14c.-14½c. and calf skins from 20c.-21c. per pound to 22c.-23c. Prices of leather moved in sympathy with hides, advancing 1c. to 2c. per pound. Cheese at Montreal advanced 2c. per pound to 25c. Lard also advanced slightly, being 18½c.-19c. per pound. Fresh eggs declined from 70c.-75c. per dozen to 67c.-70c. while storage eggs advanced from 44c. per dozen to 52c. Raw cotton at New York was slightly higher, averaging 24c. per pound. Wool continued to advance, an increase of from 3c. to 4c. per

pound being reported for some grades. Raw silk advanced 30c. per pound to \$6.40. Spruce lumber rose from \$18 per M to \$19. Ground wood pulp was slightly higher at \$29-\$30 per ton. Basic pig iron rose from \$23 per ton to \$24. Non-ferrous metals continued to advance copper at Montreal being up from \$16.30 per hundred to \$16.85; copper sheets from 20c.

per pound to 21½c.; lead from \$9.95 per hundred pounds to \$10.25; tin from 57½c. per pound to 61c.; spelter from \$9.10 per hundred pounds to \$9.45 and zinc sheets from 9½c. per pound to 10c. White lead rose from \$13.45 per hundred in December to \$16.55 in January. Prices of gasoline were somewhat higher.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. Reports received during the month indicated that the trend of wholesale prices and the cost of living continued upward.

Great Britain

WHOLESALE PRICES.—The *Statist* index number (in continuation of Sauerbeck's figures, base period 1867-77=100) was 147.7 at the end of December, an increase of 1.5 per cent over the previous month's level. Foodstuffs rose 2.8 per cent and materials rose 0.8 per cent. The principal increase by groups was one of 8 per cent in animal food. All other groups showed slight advances except sugar, coffee and tea, which declined 6.2 per cent, and textiles, which declined 0.8 per cent.

The *Times* index number, on the base 1913=100, was 179.3 for December, 1.2 per cent above the November level. For the year 1924 as compared with 1923, foods rose 4.0 per cent and materials 7.1 per cent. Cotton rose 10.6 per cent and other textiles 34.8 per cent. Cereals rose 16.2 per cent.

The *Economist* index number for January, on the base 1901-05=100, declined sharply at the end of the month in comparison with the figure for the end of December, falling 1.8 per cent to 216.7, which was the lowest figure since that for September last. The only group to advance was cereals and meat, which rose 2.8 per cent; other foods declined in price 3.3 per cent; textiles declined 3.3 per cent; minerals declined 4.0 per cent; and the miscellaneous group (rubber, timber, oils) declined 0.9 per cent.

COST OF LIVING.—The index number of the Ministry of Labour declined one point at the beginning of January, to 180 on the base 100 in July, 1914. Foods declined 2 points to 178 and other groups showed no change from the previous month, the index numbers being as follows: rent, 147; clothing, 225-230; fuel and light, 185; sundries, 180. There was a further decline on February 1 of one point to 179. Foods were 176; rent, 147; clothing, 230; fuel and light, 185; sundries, 170.

Austria

WHOLESALE PRICES.—The index number of the Federal Statistical Office rose 2 per cent

in January to 21,181, on the base 1st 6 months of 1914=1. The index for foods was 20,346 and that for industrial materials was 22,850. The levels of the two groups tended to come together during the year, as, in January, 1924, foods stood at 16,792 and industrial materials at 23,130.

COST OF LIVING.—The index number compiled by the Commission on the Cost of Living rose 0.82 per cent to 13,762 in January, on the base July, 1914=1. Foods rose one per cent, and other groups showed no appreciable change.

Belgium

WHOLESALE PRICES.—The index number of the Ministry of Industry and Labour, on the base April, 1914=100, was 569 in November as against 555 in October, thus showing a rise of 2.5 per cent. Textiles rose 3.1 per cent, and tar and its products rose 22.1 per cent. The other changes by groups were slight.

RETAIL PRICES AND COST OF LIVING.—The official index number of retail prices of 56 articles at Brussels, on the base April, 1914=100, was 556 for December as against 553 for November. The index for the Kingdom was 521 for December as against 520 for November.

The official index number of cost of living of a middle class family, on the base 1921=100, was 137.34 in December against 137.65 in November. All groups remained almost stationary during the month. This was the case also with the budget for a working class family, the index of which was, for December, 137.77 as against 137.11 for November.

Bulgaria

RETAIL PRICES.—The official index number of retail prices of foods, on the base 1901-10=1000, rose from 3719 in August to 3831 in September and 4026 in October, a total increase of 8.3 per cent. Heat, light and sundries increased 2.1 per cent during the same period.

France

WHOLESALE PRICES.—The index number compiled by *Statistique Générale* on the base July, 1914=100, rose 0.8 per cent in December to 518. Foods on the whole declined slightly, vegetable foods and sugar, coffee and cocoa declining while animal foods rose. Minerals and metals rose 5 per cent.

RETAIL PRICES AND COST OF LIVING.—The official index number of cost of living at Paris rose 2.7 per cent in the 4th quarter of 1924,

reaching 377 on the base 1914=100. Foods rose 4 per cent; heat and light rose 2 per cent and rent, clothing and sundries showed no change.

The index number of retail prices of 13 articles at Paris, on the base 1910=1000, rose from 4254 in November to 4346 in December and 4390 in January, a total increase for the two months of 3.2 per cent.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, for gold prices, on the base 1913=100, rose about 2.2 per cent in December above the November average. Foods rose 2.7 per cent to 127.2; industrial materials rose 1.3 per cent to 138.9. Goods produced rose 2.2 per cent to 123.4 and goods imported rose 2.3 per cent to 170.9. All groups advanced, the most notable being cereals and potatoes, textiles and metals.

COST OF LIVING.—The official index number, on the base 1913-14=100, was practically unchanged in December, in relation to the November level. Only fractional changes were displayed by the groups. In the official account of the course of this index number during the year 1924 it is pointed out that the spread between the levels of the highest and lowest groups was reduced from 115 per cent in the first quarter of the year to 61 per cent in the fourth quarter. This movement started with reductions in the especially high groups heating and lighting, and clothing, and by increases in food costs, and in house rent. House rent showed the most extreme movement during the year. Having been kept low by government control, it was only from one-quarter to one-third of its pre-war figure at the beginning of the year. During the year substantial increases in rents were allowed. These increases occurred generally at the first of each month, and during the year rents rose 150 per cent and reached about 75 per cent of pre-war cost.

Italy

WHOLESALE PRICES.—The index number of the Chamber of Commerce, Milan (base period, 1913=100), for December was 593.39, or 2.61 per cent above the November level. Foods rose 3.38 per cent and materials rose 2.29 per cent. All groups showed increases.

COST OF LIVING.—The index number for Milan, compiled by the City of Milan on the base July, 1920=100, rose 5.1 per cent from the September level to 123.37 in October. Foods rose 4.1 per cent and clothing rose 5.7 per cent, but the most important variation was an increase of 27.9 per cent in the cost

of rentals or an advance in the index number of from 283.30 to 362.47 in October. Heat and light declined slightly and sundries showed no change.

Sweden

WHOLESALE PRICES.—The index number of the Department of Commerce, on the base "respective months of 1913=100" showed little change in the last quarter of 1924, standing at 167 in October and November and 168 in December. Raw materials rose 3 points for the period from October to December and manufactured goods were down one point.

South Africa

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base 1910=1000, rose in October 6.2 per cent over the July level, reaching 1491. Advances in price were shown by jute, leather and hides, grains and meal, groceries and meat. All other groups showed slight declines.

China

WHOLESALE PRICES.—The index number of the Ministry of Finance, Bureau of Markets, Shanghai, on the base February, 1913=100 rose 1.6 per cent to 157.4 in December. Cereals and miscellaneous goods showed marked declines, while other foods, textiles and metals advanced. The rise in metals was particularly high owing to price increases in pure antimony and tin in slabs.

United States

WHOLESALE PRICES.—The *Annalist* index number of wholesale prices of 25 foods (prices in 1890-1899 as 100) was 211.051 at the middle of January as compared with 205.330 at the middle of December, thus showing a rise of 2.8 per cent for the month.

Bradstreet's index number (which shows the cost of a list of articles) for February 1 showed a slight fractional decline reaching \$13.8852 as against \$13.9347 at January 1, a decline of 0.3 per cent. Seven groups advanced namely, breadstuffs, live stock, hides and leather, oils, naval stores, building materials and chemicals, while six, provisions, fruits, textiles, metals, coal and coke and miscellaneous products, declined.

Dun's index number (which shows the cost of a list of articles) for February 1 showed an upward trend for the eighth consecutive month, rising 1.0 per cent in the month, to \$204.592. This was an advance of 69.4 per cent over the pre-war basis. During the

month under review the breadstuffs group rose in price 5.4 per cent. Dairy and garden products declined 4.2 per cent and meats 0.6 per cent. There were slight increases in the miscellaneous group and in "other food," clothing and metals. All foods together rose 1.1 per cent.

COST OF LIVING.—The index number of the Special Commission on the Necessaries of Life, Massachusetts, rose 0.9 per cent over the November level to 161.2 in December, on the base 1913=100. Foods, clothing and sundries all rose slightly. Shelter and fuel and light showed no change.

Central and District Heating

The Dominion Fuel Board, in co-operation with the Mines Branch of the Department of Mines, has published the results of a study of central and district heating and of the possibilities of its application under the conditions prevailing in Canada. The Fuel Board believes that central and district heating can be profitably employed to a considerable extent in Canada, and that the supply of heat as a public utility in the denser sections of cities and towns may be looked for as a general service of the future. Central heating of groups of institutional buildings and community heating of residential properties have shown the economies and benefits to be de-

rived, and such systems undoubtedly will be adopted to an increasing extent. In many parts of Canada, conditions are particularly favourable to district heating: climate; high differential between the prices of coal commonly used for domestic heating and cost of low-grade fuels; and possible combination with electric power supply, both from steam and hydro plants. Application of methods of centralized heating and steam service will assist in the solution of the fuel problem in the provinces of Ontario and Quebec by making possible a reduction in high-priced coal importation from the United States and the greater utilization of Canada's own resources.

IMMIGRATION INTO CANADA DURING FOURTH QUARTER of 1924

THE following statement has been issued by the Department of Immigration and Colonization: Immigration to Canada for the calendar year 1924 totalled 124,450. This total is made up of 57,612 from Great Britain and Ireland, 16,328 from the United States and 50,510 from other countries. In the calendar year 1923 the total immigration to Canada was 137,320, so that in 1924 there was a decrease of 12,870 or nine per cent. But this total does not take into consideration the 37,317 Canadians who have returned home since April 1st last, from the United States after having lived there for six months or longer. It was not till then that the Department began to keep a record of these returning Canadians. With these included the total immigration therefore in 1924 is 161,767, an increase over 1923 of 24,447.

Immigration from the United States in 1924 was 16,328 compared with 20,307 in 1923, a decrease of 3,979. Here again, however, these figures make no allowance for the movement of 37,317 Canadians returning to Canada since April 1st, 1924, from the United States.

During last December immigration totalled 2,765. In the same month 3,165 Canadians returned from the United States.

The accompanying table, compiled from information furnished by the Department of Immigration and Colonization, gives some details respecting the total number of immigrants into Canada during the fourth quarter of 1924. For purposes of comparison the figures for the previous quarter and for the corresponding quarter of 1923 are also given.

The table on page 230 gives the nationality, sex, occupation and destination of all immigrants, who entered Canada during the quarter under review.

IMMIGRATION TO CANADA DURING THE FOURTH QUARTER OF 1924

Period	From Great Britain and Ireland	From U.S.A.	From other countries	Totals
October, 1924.....	3,340	1,274	2,311	6,925
November, 1924.....	2,005	939	2,724	5,668
December, 1924.....	687	743	1,335	2,765
Fourth Quarter, 1924.....	6,032	2,956	6,370	15,358
Third Quarter, 1924.....	14,329	4,753	12,885	31,967
Fourth Quarter, 1923.....	12,166	4,266	13,915	30,347

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE LAST QUARTER OF 1924

REPORTS received by the Department of Labour during the last quarter of 1924 show 312 fatalities occurring in the industries and trades of Canada during that period, as compared with 343 in the previous quarter and with 374 in the corresponding period of 1923. There were also 21 fatalities reported during the quarter which occurred earlier in the year. Of the 312 fatalities during the quarter 121 occurred in October, 102 in November and 89 in December. There were also reported during the quarter two deaths from accidents which occurred in the early part of 1923, and one from an accident which occurred in August, 1920. In addition to the fatalities resulting from accidents there was reported the death of a labourer at Amherst, Nova Scotia, from lead poisoning. A few deaths due to heart failure while on duty were also reported, but to what extent these were caused by the occupation of the deceased workers it is impossible to say. Seven deaths were reported during the quarter as due to infection resulting from injuries

and 13 were caused by electricity. No great disaster occurred during the quarter but three lives were lost on one occasion through a premature explosion at a quarry, and three deaths also occurred at one time when seamen were drowned in Lake Ontario.

As in the previous quarter, the highest number of accidents occurred in the transportation and public utilities group, there being 86 in this group of which 43 occurred in the steam railway service and 14 in water transportation. The logging industry showed the next highest number of fatalities with 59 reported, this being the highest accident record for any single industry during the quarter. In the construction industry there were 45 deaths reported, in mining 40, in manufacturing 30, and in agriculture 22. Fuller particulars regarding these fatalities will be found in the following table which has been prepared from information received from all sources available. It does not necessarily include all the industrial accidents that may have occurred.

FATAL INDUSTRIAL ACCIDENTS DURING LAST QUARTER OF 1924

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE—				
Thresherman.....	Roston, Man.....	Oct. 1	Caught in fly wheel.
Employee at prison farm.....	Sudbury, Ont.....	" 11	30	Struck by falling smokestack.
Farmer.....	Sturgeon Falls, Ont.....	" 13	Car collided with hay rack.
Thresher.....	Coronation, Alta.....	" 25	(No particulars).
Farmer.....	Near Hamilton, Ont.....	" 27	75	Wagon upset on slope—crushed.
Farmer.....	Antigonish, N.S.....	" 22	45	Gored by bull.
Farmer.....	Estevan, Sask.....	" 24	82	Fell into water trough—drowned.
Labourer.....	Summerland, B.C.....	" 27	32	Struck by falling tree.
Thresher.....	Hamiota, Man.....	Nov. 1	Crushed between engine and separator.
Farmer.....	Tweed, Ont.....	" 1	Thrown from wagon when horse ran away.
Farm boy.....	Longueuil, Que.....	" 14	Caught in wheels of gasoline engine.
Thresher.....	Cobourg, Ont.....	" 19	over 21	Crushed beneath separator and engine.
Farmer.....	Moose Jaw, Sask.....	" 24	Gored by bull.
Farmer.....	Temiscouata, Que.....	" 29	27	Burned while attempting to save cattle from burning barn.
Farmer.....	St. Catharines, Ont.....	" 29	43	Struck by falling tree.
Thresher.....	Weyburn, Sask.....	Dec. 3	23	Caught in threshing machine.
Stock breeder.....	Highgate, Ont.....	" 5	Thrown from railway car while loading cattle.
Farmer.....	Charlottetown, P.E.I.....	" 11	Kicked by horse.
Poultrykeeper.....	Moose Jaw, Sask.....	" 17	Blood poisoning following hen peck.
Farmer.....	near Maple Creek, Sask.....	" 23	Thrown from runaway horse.
Farmer.....	Centreville, N.B.....	" 26	Fell from load of pressed hay.
Ploughman.....	near Rednersville, Ont.....	" 30	Thrown against plough when it hit a stone.
FISHING AND TRAPPING—				
Hunter's guide.....	St. Raymond, Que.....	Oct. 3	over 21	Drowned. Boat capsized in rapid.
Trappers (2).....	Longlac, Ont.....	" 13	Drowned when canoe capsized.
Fisherman.....	The Banks, Nfld.....	Nov. 11	Dory swamped by heavy sea.
Trapper.....	Strachan, Que.....	" 27	29	Fell through ice—drowned.
Trapper.....	Parent, Que.....	" 24	29	Drowned. Went through ice.
Trapper.....	St. Zacharie, Que.....	Dec. 1	28	Accidental discharge of gun.
Fisherman.....	Barkley Sound, B.C.....	" 13	Lost balance and fell overboard.
LOGGING—				
Head loader.....	Campbell River, B.C.....	Oct. 1	28	Fell from height while loading.
Labourer.....	Vancouver, B.C.....	" 3	43	Struck by falling tree.
Logger.....	Bidwell Bay, B.C.....	" 4	44	Crushed by rolling log.
Logger.....	Campbell River, B.C.....	" 4	Fell from guy wire.

FATAL INDUSTRIAL ACCIDENTS DURING THE LAST QUARTER OF 1924 (Continued)

Trade or Industry	Locality	Date	Age	Cause of Fatality
LOGGING—(Con.)—				
Employee at mill.....	Echo Bay, B.C.....	" 13	67	Caught in circular saw.
Teamster.....	Bidwell Bay, B.C.....	" 17	40	Crushed by log—peavey caught in clothes.
River driver.....	Waneta, B.C.....	" 20	Drowned when breaking log jam.
Employee.....	Montmagny Co., Que.....	" 18	Caught in belt.
Employee.....	Sudbury, Ont.....	" 24	46	Struck by tree.
Labourer.....	Dean Lake, Ont.....	" 25	69	Fell on ground—hernia.
Labourer.....	Connaught, Ont.....	" 27	Struck by tree.
Labourer.....	Port Alice, B.C.....	" 29	32	Struck by falling bale.
Labourer.....	Elk Lake, Ont.....	Nov. 1	23	Drowned.
Labourer.....	Deux Rivières, Que.....	" 1	50	Fell off scaffold.
Employee at mill.....	Parent, Que.....	" 6	Caught in belt.
Logger.....	Squirrel Cove, B.C.....	" 6	16	Struck by lead which broke.
Woodsmen.....	New Westminster, B.C.....	" 6	Drowned.
Woodsmen.....	Lac Frontier, Que.....	" 6	40	Struck by falling tree.
Woodsmen.....	Morley, Alta.....	" 11	over 27	Struck by falling tree.
Woodsmen.....	Farrington, Ont.....	" 12	Struck on head by tree.
Logger.....	North Vancouver, B.C.....	" 13	35	Knocked off top of piling.
Watchman.....	Windsor, Ont.....	" 16	65	Burned.
Woodsmen.....	Calgary, Alta.....	" 17	Struck by falling tree.
Logger.....	New Westminster, B.C.....	" 18	Struck by tree which rebounded when hit by another.
Cutter.....	Nicholson, Ont.....	" 17	27	Feet frozen—infection.
Logger.....	Strawberry Hill, B.C.....	" 18	50	Struck by falling tree.
Bushman.....	Calgary, Alta.....	" 18	27	Struck by tree which fell while burning brush.
Woodsmen.....	Northfield, N.S.....	" 18	Struck by falling limb.
Woodsmen.....	Egan Estate, Ont.....	" 18	54	Struck by skid.
Labourer.....	Eganville, Ont.....	" 20	19	Struck by tree.
Labourer.....	Wasing, Ont.....	" 21	Struck by tree.
Chokerman.....	Sechelt, B.C.....	" 22	40	Struck by swinging log.
Woodsmen.....	Woman River, Ont.....	" 24	45	Struck by falling tree.
Sawyer.....	Horburg, Alta.....	" 25	25	Struck by falling tree.
Labourer.....	Laforest, Ont.....	" 26	25	Struck by tree.
Logger.....	Rock Bay, B.C.....	" 26	52	Struck by log while building skid road.
Woodsmen.....	Whitney, Ont.....	" 27	Struck by falling tree.
Woodsmen.....	Red Deer, Alta.....	" 27	over 21	Struck by falling tree.
Logger.....	Port Simpson, B.C.....	" 28	Drowned while handling boom of logs.
Labourer.....	Bruce Mines, Ont.....	" 28	33	Fell on sleigh stake.
Labourer.....	Dean Lake, Ont.....	Dec. 1	27	Struck by falling tree.
Woodsmen.....	Eldon, Alta.....	" 4	Struck by falling timber.
Woodsmen.....	Montmagny, Que.....	" 6	51	Struck by falling tree.
Chokerman.....	Extension, B.C.....	" 8	38	Foot crushed by log—gas gangrene followed amputation.
Wood splitter.....	Knox Bay, B.C.....	" 8	Crushed by water tank which upset when workman was moving donkey engine.
Labourer.....	Dean Lake, Ont.....	" 10	27	Crushed by log.
Roustabout.....	Harrison's Mills, B.C.....	" 12	68	Struck by train on bridge when returning with mail.
Woodsmen.....	St. Ferdinand, Que.....	" 13	57	Struck by falling tree.
Brakeman.....	North Vancouver, B.C.....	" 15	31	Run over by logging train.
Watchman.....	Vancouver, B.C.....	" 15	45	Crushed by tree which fell through bunkhouse in high wind.
Feller.....	North Bay, Ont.....	" 16	Struck by falling tree.
Woodsmen.....	Port Arthur, Ont.....	" 16	Struck by falling tree.
Feller.....	Horning's Mills, Ont.....	" 16	Struck by limb.
Woodsmen.....	St. Rose du Degele, Que.....	" 17	38	Struck by falling tree.
Woodsmen.....	Wooler, Ont.....	" 17	70	Crushed by log which rolled from pile.
Labourer.....	Gull Bay, Ont.....	" 18	Struck by tree.
Swamper.....	Kelowna, B.C.....	" 30	36	Struck by falling tree.
Woodsmen.....	Searchmont, Ont.....	" 30	50	Struck by falling tree.
Sawyer.....	Flanders, Ont.....	" 30	24	Crushed by tree.
MINES, SMELTERS AND QUARRIES—				
<i>Metaliferous Mining:</i>				
Oiler.....	Rossland, B.C.....	Oct. 8	24	Arm caught in belt.
Labourer.....	Timmins, Ont.....	" 11	32	Explosion. Drilled into hole which had missed firing.
Clarifier.....	Timmins, Ont.....	" 17	Caught by belt.
Mill worker.....	Rossland, B.C.....	" 22	Caught in pulley.
Labourer.....	Schumacher, Ont.....	Nov. 7	52	Struck on head by rock.
Miner.....	Kimberley, B.C.....	" 19	34	Explosion. Drilled into hole which had missed firing.
Drill runner.....	Kirkland Lake, Ont.....	" 16	27	Struck by steel bar coming down chute.
Shaftman.....	Kirkland Lake, Ont.....	" 22	41	Struck by falling rock.
Miner.....	Porcupine, Ont.....	Dec. 13	40	Struck by material from blast.
Labourer.....	Silver Centre, Ont.....	" 15	18	Fell down shaft.
Miner.....	Premier, B.C.....	" 29	over 21	Premature explosion.
<i>Coal Mining:</i>				
Miner.....	Stellarton, N.S.....	Oct. 14	26	Struck by runaway cars. Rope broke.
Miner.....	Stellarton, N.S.....	" 15	Fall of coal.
Miner.....	Glace Bay, N.S.....	" 16	Fall of coal.
Miner.....	Lantzville, B.C.....	" 29	49	Electrocuted when head touched wire.
Miner.....	Three Hills, Alta.....	" 30	26	Explosion, while lighting a shot that had been lit by another.

FATAL INDUSTRIAL ACCIDENTS DURING THE LAST QUARTER OF 1924 (*Continued*)

Trade or Industry	Locality	Date	Age	Cause of Fatality
MINES, SMELTERS AND QUARRIES—Con.				
<i>Coal Mining—Concluded</i>				
Loader.....	Drumheller, Alta.....	Nov. 7	over 21	Heart failure while on duty.
Miner.....	Florence, N.S.....	" 12	Fall of stone.
Miner.....	Taber, Alta.....	" 19	42	Struck by descending cage.
Miner.....	Florence, N.S.....	" 26	34	Run over by loaded box.
Chain runner.....	Stellarton, N.S.....	Dec. 2	21	Struck by runaway box which uncoupled on trip.
Machine runner.....	Rosedale, Alta.....	" 5	38	Struck by falling rock.
Miner.....	Wayne, Alta.....	" 6	42	Struck by falling rock.
Miner.....	Springhill, N.S.....	" 6	Fall of coal during "bump."
Switch boy.....	Coal Creek, B.C.....	" 8	17	Crushed between cars while at work on tippie.
Miner.....	Springhill, N.S.....	" 12	38	Crushed by cave-in of rock following a "bump."
Miner.....	Sydney Mines, N.S.....	" 16	Died of heart failure, believed due to shock of concussion during shot firing.
Miner.....	Coal Creek, B.C.....	" 19	17	Crushed between cars.
Loader.....	Stellarton, N.S.....	" 23	Fall of coal—crushed.
Miner.....	Sydney Mines, N.S.....	" 31	Fall of coal.
<i>Non-metallic mineral mining and quarrying, n.e.s.:</i>				
Labourer.....	Thetford Mines, Que.....	Oct. 14	38	Fall of rock due to explosion of missed charge.
Employees at stone quarry (3).....	Owen Sound, Ont.....	" 29	Premature explosion of blast.
Driller.....	Black Lake, Que.....	Nov. 25	40	Fall of rock from side of open cast pit.
Quarry worker.....	Granite Falls, B.C.....	" 26	67	Fell from platform and crushed under falling debris.
Labourer at salt works	Windsor, Ont.....	Dec. 8	Drowned in brine.
Employee at quarry...	Port Coquitlam, B.C.....	" 9	Crushed by rock in rockslide.
Workman at quarry...	Beachville, Ont.....	" 13	30	Struck by falling rock.
<i>Clay products and structural materials:</i>				
Labourer at stone works.....	Preston, Ont.....	Dec. 5	38	Cut arm—infection.
MANUFACTURING—				
<i>Vegetable foods, drink and tobacco:</i>				
Employee at flour mills	Calgary, Alta.....	Oct. 7	over 21	Caught in belt.
Engineer at distillery..	Waterloo, Ont.....	" 16	60	Thrown off running board of automobile.
Foreman at tobacco factory.....	Leamington, Ont.....	Dec. 22	35	Caught in elevator.
Employee at brewery..	Lachine, Que.....	" 26	57	Crushed beneath truck.
<i>Animal edible products:</i>				
Butcher.....	Vancouver, B.C.....	Dec. 4	16	Cut hand with boning knife; developed pneumonia
<i>Textiles:</i>				
Labourer at woollen mill.....	Peterboro, Ont.....	Oct. 8	55	Crushed in ascending elevator.
Employee at blanket factory.....	Dundas, Ont.....	" 14	30	Electrocuted.
Employee at felt factory.....	Waterloo, Ont.....	" 14	28	Caught in shafting.
<i>Pulp, paper and paper goods:</i>				
Employee at pulp mill..	Sault Ste. Marie, Ont.....	Nov. 6	43	Canoe capsized while crossing harbour.
Employee at paper mill	Kenogami, Que.....	Dec. 5	26	Burned when steam pipe broke.
<i>Saw and planing mills:</i>				
Mill worker.....	Victoria Co., N.B.....	Oct. 1	27	Drowned when "dam" gave way.
Employee.....	Toronto, Ont.....	" 2	69	Fell off wagon.
Employee.....	Echo Bay, B.C.....	" 16	67	Caught in saw.
Employee.....	Haney, B.C.....	" 18	30	Struck by slab thrown from saw.
Employee.....	Muskoka, Ont.....	" 20	Fell against saw while trying carriage.
Employee.....	Limoulu, Que.....	" 23	50	Caught in saw.
Employee.....	Bracebridge, Ont.....	" 24	29	Fell on saw.
<i>Wood products:</i>				
Woodworker at furniture factory.....	Elora, Ont.....	Oct. 3	42	Struck in abdomen by machine.
Employee at picture frame factory.....	Toronto, Ont.....	" 20	22	Crushed by elevator.
Employee at piano factory.....	Toronto, Ont.....	Nov. 30	56	Fell down elevator shaft.
Employee at furniture factory.....	Kincardine, Ont.....	Dec. 6	Cut hand—infection.
Employee at casket works.....	Guelph, Ont.....	" 8	49	Crushed under falling lumber.
Watchman.....	Kentville, N.S.....	" 25	Burned in fire.
<i>Iron, steel and products:</i>				
Traveller.....	Ottawa, Ont.....	Oct. 24	50	Struck by auto.
Helper at metal factory.....	Ford, Ont.....	" 28	22	Crushed by falling crate.
Machinist.....	Edmonton, Ont.....	Dec. 18	over 21	Fell into lignite pit.
Tool maker.....	Roxton Pond, Que.....	" 19	42	Crushed—caught in belt.
Banking fireman at shops.....	Sherbrooke, Que.....	Nov. 15	45	Run over by engine.

FATAL INDUSTRIAL ACCIDENTS DURING THE LAST QUARTER OF 1924 (*Continued*)

Trade or Industry	Locality	Date	Ag?	Cause of Fatality
MANUFACTURING—Con.				
<i>Miscellaneous industries:</i>				
Cutter at glass works.....	Toronto, Ont.....	Nov. 11	58	Fell on floor—cut wrist and injured internally.
Labourer.....	Toronto, Ont.....	Dec. 11	32	Struck by employee.
CONSTRUCTION—				
<i>Building and Structures:</i>				
Employee.....	Vancouver, B.C.....	Oct. 3	Cement buggy fell over edge of elevator dragging man from scaffold.
Handyman.....	Calgary, Alta.....	" 3	42	Fell off ladder while kalsomining ceiling.
Plumber.....	Midland, Ont.....	" 9	Gasoline welder exploded.
Contractor.....	Edmonton Alta.....	" 12	over 21	Crushed when roof of building collapsed.
Mortar man.....	Todmorden, Ont.....	" 16	23	Fell down shaft.*
Painter.....	St. Casimir, Que.....	" 17	60	Fell from scaffold.
Labourer.....	Hull, Que.....	" 18	over 21	Collapse of building.
Repairman.....	Edmonton, Alta.....	" 20	51	Collapse of roof.
Carpenter.....	Anyox, B.C.....	" 24	45	Jumped from scaffold and fell—enveloped in flue dust.
Labourer.....	Timmins, Ont.....	" 28	20	Crushed by wall.
Labourer.....	Burford, Ont.....	" 30	Fell off building.
Machinist's helper.....	Victoria, B.C.....	" 31	25	Fell from dock—drowned.
Employee.....	North Vancouver, B.C.....	Nov. 10	Fell off scaffold.
Employee.....	Montreal, Que.....	" 11	34	Fell from roof.
Erector.....	Powell River, B.C.....	" 17	44	Crushed. While raising steel apron clasp slipped, letting it fall back.
Employee.....	Ste. Anne de Bellevue, Que.....	" 25	20	Electrocuted. Touched electrified metal.
Employees (2).....	Quebec, Que.....	" 25	40	Cable of carrier snapped releasing counterweight.
Labourers (2).....	Montreal, Que.....	Dec. 2	42 30 65	Wall collapsed.
Employee.....	Prince Rupert, B.C.....	" 2	Fell from building.
Carpenter.....	Vancouver, B.C.....	" 21	49	Caught foot in steam valve breaking connection and releasing steam.
Plumber's helper.....	Victoria, B.C.....	" 22	43	Explosion of coal oil while thawing pipes.
<i>Railway Construction:</i>				
Labourer.....	Port Arthur, Ont.....	Oct. 16	56	Fell from height.
<i>Miscellaneous Construction:</i>				
Ironworkers at bridge construction (2).....	Kamloops, B.C.....	Oct. 6	45 60	Scaffold collapsed, fell into river.
Labourer at road work.....	Ingersoll, Ont.....	" 7	Struck by automobile.
Labourer.....	Kenora, Ont.....	" 8	Crushed by cave-in.
Labourer.....	Simcoe, Ont.....	" 8	60	Arm crushed—infection.
Mechanic.....	Fort William, Ont.....	" 13	50	Drowned.
Storekeeper (canal construction).....	Port Weller, Ont.....	53	Run over by train when crossing track near harbour.
Labourer.....	Quebec, Que.....	" 22	42	While working in cut in street, horse and cart fell in on workman.
Labourer.....	Wellesley, Ont.....	" 31	50	Electrocuted. Crowbar hit crane which in turn hit wire.
Carpenter.....	North Vancouver, B.C.....	Nov. 3	43	Knocked against edge of scow by lowering timber.
Hoisting engineer.....	Quebec, Que.....	" 4	55	Crushed when crane toppled over.
Foreman and labourer (2).....	Thorold, Ont.....	" 8	Crushed under steel tunnel when chain block gave way.
Employee.....	Glacier, B.C.....	" 12	58	Struck by falling rock from roof of tunnel.
Superintendent.....	near Mount Forest, Ont.....	" 20	Struck by automobile.
Labourer.....	Grande Decharge, Que.....	" 25	43	Crushed between transfer cars.
Employee.....	St. Joseph d'Alma, Que.....	" 25	Struck by counter-weight when cable snapped.
Employee at bridge construction.....	Ste. Anne de Bellevue, Que.....	" 25	20	Electrocuted when cable touched live wire.
Employee on dredge.....	Windsor, Ont.....	" 27	40	Fell down companion way.
Employee.....	Montreal, Que.....	Dec. 8	27	Struck by stone from bridge.
Sewer construction.....	Toronto, Ont.....	" 18	Cave-in of sewer.
TRANSPORTATION AND PUBLIC UTILITIES—				
<i>Steam Railways:</i>				
Brakeman.....	Brantford, Ont.....	Oct. 2	40	Struck by signal light.
Brakeman.....	Montreal, Que.....	" 3	45	Rollled beneath wheels of car.
Lineman.....	Hamilton, Ont.....	" 4	22	Electrocuted.
Brakeman.....	Frankford, Ont.....	" 9	Fell from side ladder under cars.
Yardman.....	Winnipeg, Man.....	" 12	40	Struck and run down by car.
Labourer.....	Dane, Ont.....	" 12	19	Engine struck speeder.
Section hand.....	Cobalt, Ont.....	" 14	19	Struck by train.

*Jury recommended that all works elevators must be fitted with automatic gates, and that construction work should be supervised day and night.

FATAL INDUSTRIAL ACCIDENTS DURING THE LAST QUARTER OF 1924 (Continued)

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION AND PUBLIC UTILITIES—Con.				
<i>Steam Railways—Con.</i>				
Signalman.....	Headingley, Man.....	" 15	65	Struck by train.
Labourer.....	Port Arthur, Ont.....	" 16	56	Fell from elevation.
Trainman.....	St. Polycarpe, Que.....	" 17	38	Crushed between freight cars.
Brakeman.....	Island Falls, Ont.....	" 21	Struck by engine.
Brakeman.....	Huronian, Ont.....	" 25	35	Fell between cars.
Brakeman.....	Port Arthur, Ont.....	" 27	35	Fell from top of train.
Trainman.....	Prince Albert, Sask.....	" 23	21	Fell under moving train.
Fireman.....	Kamloops, B.C.....	" 29	Collision in yard.
News agent.....	Farron, B.C.....	" 29	47	Explosion on train.
Fireman.....	Kamloops, B.C.....	" 30	32	Collision of train and yard engine.
Engineer.....	Levis, Que.....	Nov. 3	55	Crushed when steamer crane upset.
Helper.....	Stratford, Ont.....	" 4	56	Foot crushed—infection.
Brakeman.....	Joffre, Que.....	" 10	37	Caught between cars while shunting.
Yard helper.....	Kitchener, Ont.....	" 13	25	Fell between cars.
Brakeman.....	Levis, Que.....	" 11	37	Foot caught in frog and engine over turned.
Section foreman.....	Guelph, Ont.....	" 13	over 21	Struck by auto.
Engine cleaner.....	Theodore, Que.....	" 15	54	Run over.
Brakeman.....	Theodosia Arm, B.C.....	" 15	25	Fell off car and run over.
Labourer.....	Paddington, Man.....	" 16	56	Fell between cars.
Conductor.....	Ocean Falls, B.C.....	" 18	Run over by train.
Yardman.....	Don, Ont.....	" 20	32	Run over by shunting engine.
Brakeman.....	Port Colborne, Ont.....	" 22	29	Collision in yard.
Trainman.....	Barnwell, Alta.....	" 24	30	Slipped and fell off running board of engine.
Engineer.....	Penticton, B.C.....	" 26	41	Deraiment; scalded.
Brakeman.....	Taber, Alta.....	" 25	over 21	Fell from cow-catcher of engine under wheels.
Brakeman.....	Lethbridge, Alta.....	" 25	Run over by engine.
Cook.....	Moose Jaw, Sask.....	" 27	Fell between cars.
Brakeman.....	Port Colborne, Ont.....	" 28	Crushed by car.
Switchman.....	Port Arthur, Ont.....	Dec. 3	35	Run over by engine.
Sectionman.....	East of Blythe, Ont.....	" 13	60	Struck by engine on train.
Brakeman.....	Spy Hill, Sask.....	" 13	Fell from top of car.
Watchman.....	Coleman, Alta.....	" 22	Blown in front of train during gale.
Seaman.....	St. John, N.B.....	" 29	Fell into hold of steamer.
Constable.....	Toronto, Ont.....	" 23	62	Fell under car.
Dining car waiter.....	Toronto, Ont.....	" 30	Struck by car.
Conductor.....	Port Colborne, Ont.....	" 28	Crushed by flat car.
<i>Water transportation:</i>				
Seaman.....	At Sea, Pacific.....	Oct. 1	24	Fell overboard, drowned.
Deckhand.....	Fort William, Ont.....	" 1	22	Drowned.
Launch engineer.....	Stave Falls, B.C.....	" 4	28	Fell overboard when iron broke.
Mechanic.....	Fort William, Ont.....	" 12	50	Drowned. Slipped from dredge.
Employee at coal dock.....	Toronto, Ont.....	" 16	72	Fell from trestle.
Deckhand.....	Port Arthur, Ont.....	" 22	Fell into hold of vessel.
Labourer.....	Vancouver, B.C.....	" 31	48	Fell from scow—drowned.
Seamen (3).....	Lake Ontario.....	Nov. 6	23, 22, —	Drowned.
Longshoreman.....	Montreal, Que.....	" 18	32	Struck by falling barrel.
Stevedore.....	Fort William, Ont.....	" 15	38	Fell into hold of steamer.
Watchman.....	Midland, Ont.....	" 23	63	Found unconscious in office.
Cook.....	Nicomen Island, B.C.....	Dec. 16	49	Exposure while rowing from scow to dredge.
<i>Storage and local transportation:</i>				
Chauffeur.....	Montreal, Que.....	Oct. 7	21	Auto struck by train.
Mail contractor.....	Sudbury, Ont.....	" 14	While cranking car in gear was crushed against truck.
Teamster.....	Luseland, Sask.....	" 15	15	Fell from wagon—run over.
Employee.....	Port Arthur, Ont.....	" 16	56	Fell over trestle.
Messenger boy.....	Vancouver, B.C.....	" 22	14	Struck by automobile.
Teamster.....	Kitchener, Ont.....	" 15	22	Kicked by horse.
Employee of imports company.....	Levis, Que.....	Nov. 3	Steam crane upset while transferring coal to company's yard.
Teamster.....	St. John, N.B.....	" 4	Crushed under engine.
Truck driver.....	Niagara Falls, Ont.....	" 12	Struck by train.
Truck driver.....	Midnapore, Alta.....	" 27	21	Burned when truck caught on fire.
Employee at elevator.....	Montreal, Que.....	Dec. 2	over 21	Burned. Explosion and fire at grain elevator.
Driver.....	St. John, N.B.....	" 3	Crushed under engine when horses ran away.
Driver.....	Rand, B.C.....	" 9	Crushed under load which slid when horses bolted.
Teamster.....	Edmonton, Alta.....	" 20	over 21	Crushed by steam shovel.
<i>Telegraph and telephones:</i>				
Lineman.....	Hamilton, Ont.....	Oct. 4	Electrocuted.
Employee.....	Quebec, Que.....	" 21	Crushed under runaway horse.
<i>Public utilities, n.e.s.:</i>				
Employee of power company.....	Wolfville, N.S.....	Oct. 3	Electrocuted—Caught hold of live wire while repairing ladder.
Electrician.....	Montreal, Que.....	" 7	31	Electrocuted, touched live wire.
Lineman.....	Vancouver, B.C.....	" 8	31	Electrocuted while changing wires.
Lineman.....	Toronto, Ont.....	" 5	22	Electrocuted. Touched live wire while descending pole.
Mechanic.....	Toronto, Ont.....	" 9	43	Electrocuted. Touched live wire while removing a current transformer on emergency brake.
Employee of power commission.....	Midland, Ont.....	" 15	60	Electrocuted. While cleaning up power house clothing ignited.

FATAL INDUSTRIAL ACCIDENTS DURING THE LAST QUARTER OF 1924 (*Concluded*)

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION AND PUBLIC UTILITIES—Con.				
<i>Public utilities, n.e.s.—Con.</i>				
Employee of power commission.....	Toronto, Ont.....	Nov. 6	21	Electrocuted. Touched high voltage wire.
Foreman with power commission.....	Guelph, Ont.....	" 13	61	Struck by auto.
Employee of power commission.....	Montrose, Ont.....	" 20	Struck by falling beam.
Mechanic.....	Queenston, Ont.....	" 22	Fell. Fractured knee cap.
Lineman.....	Dundas, Ont.....	" 28	24	Electrocuted.
Employee.....	Bryson, Que.....	Dec. 4	Fell from scaffold.
Lineman.....	Montreal, Que.....	" 30	40	Fell from pole.

Teamster.....	Ottawa, Ont.....	Oct. 10	Crushed by wagon.
Carter.....	Montreal, Que.....	Nov. 3	67	Buried under coal pile.
Labourer.....	Galt, Ont.....	Dec. 12	Struck by train.
MISCELLANEOUS—				
Pedlar.....	Quebec, Que.....	Oct. 3	73	Crushed by tram car
Groundman.....	Burnaby, B.C.....	" 8	62	Fell from load under truck.
Diver.....	Potsdam, Ont.....	" 15	45	Drowned. Signal rope broke.
Mill hand.....	Quebec, Que.....	" 22	Caught in belt and thrown against wall.
Labourer.....	Vancouver, B.C.....	" 29	49	Infection. Fingers crushed when door of cattle car slipped.
Labourer.....	Winnipeg, Man.....	Dec. 5	50	Peritonitis following injuries received while lifting bale of hay.
Assistant watermaster.....	Between Gem and Brooks, Alta.....	" 9	50	Automobile overturned.
Boiler cleaner.....	Edmonton, Alta.....	" 15	58	Heart failure.
Labourer.....	Penticton, B.C.....	" 16	34	Crushed between floor and door of air dump car.
Loader.....	Kings, B.C.....	" 17	35	While thawing pipe flame exploded can of gasoline
Foreman.....	Cardston, Alta.....	" 17	36	Struck by stake which broke.
Stationary engineer.....	Montreal, Que.....	" 30	40	Fell from movable coke bridge.

SUPPLEMENTARY LIST OF FATALITIES OCCURRING PREVIOUS TO THE LAST QUARTER OF 1924

Trade or Industry	Locality	Date	Age	Cause of Fatality
Carpenter.....	North Vancouver, B.C.....	Feb. 8	40	Staging gave way in hold of vessel. (Died Jan. 8, 1925.)
Labourer.....	Leamington, Ont.....	" 18	Crushed by frozen gravel.
Miner.....	Middlesboro, B.C.....	Mar. 1	Fall of rock from face. (Died Oct. 6, 1924.)
Shipyard worker.....	Halifax, N.S.....	April	Struck by timber falling from sling.
Cook.....	Vernon, B.C.....	May 28	58	Snagged on branch while pulling limbs and brush
Foreman.....	Matheson, Ont.....	June 10	62	Crushed by car.
Labourer.....	Premier, B.C.....	" 25	28	Struck by wooden bar which broke while splicing rope.
Conductor.....	Hawkesbury, Ont.....	July 5	30	Fell off car.
Electric railway employee.....	Vancouver, B.C.....	" 25	Run over by automobile.
Woodsmen.....	Dean Lake, Ont.....	" 26	57	Struck by falling tree.
River driver.....	Jasper, Alta.....	Aug. 1	19	Fell in trying to reach ties from shore.
Labourer.....	Westmoreland Co., N.B.....	Sept. 3	Struck by train.
Sectionman.....	Penticton, B.C.....	" 5	62	Strain while lifting broken rail.
Logger.....	Nitmat Lake, B.C.....	" 6	46	Struck by falling tree.
Timberman.....	Coal Creek, B.C.....	" 12	70	Stepped on by horse which became frightened by falling rock.
Logger.....	Bowser, B.C.....	" 17	45	Struck by snag which rebounded when hit by falling tree.
Employee of lumber company.....	Bay Firm, Ont.....	" 18	55	Cut wrist—infection.
Chokerman.....	Duncan Bay, B.C.....	" 25	31	Struck by sapling which caught in main line while hauling back.
Bucker.....	Forward Harbour, B.C.....	" 27	45	Crushed by rolling log.
Workman.....	False Creek, B.C.....	" 28	Fell from deck of gas boat.
Woodsmen.....	Northumberland Co., N.B.....	" 28	31	Struck by falling tree.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Compensation not due if Workman Assumed Unnecessary Risk

THE case of *Mackenzie versus Grand Trunk Pacific Railway Company* was reported in the issue of the LABOUR GAZETTE for July, 1924 (page 624). This was an action under the Workmen's Compensation Act of Saskatchewan, in which the Court of King's Bench refused to award compensation to a mechanic employed in the company's roundhouse on the ground that he had made an "unreasonable use" of the privilege of crossing the company's track on the way home from work. The workman appealed against this decision in the Court of Appeal of the Province. The circumstances in the case may be recalled, as follows: The mechanic, having finished his shift, was proceeding to his home by a route which led across the railway tracks belonging to and controlled by his employer, the railway company. This was the customary route followed by himself and his fellow-workers and there was no prohibition against its use. On one of the tracks, the lead track, which he had to cross in following this route, a freight train was standing, and he endeavoured to climb and pass through between two adjoining cars. As he was about to do so the train moved, presumably without any signal, and he was permanently injured in one of his feet. There was another route by which he could have gone home but it was much longer and also necessitated the crossing of the lead track, and there was no evidence of a workman ever going that way.

Accidents are compensable under the Saskatchewan Act if they arise "out of and in the course of, employment." The Appeal Court held that while the injury in this case occurred in the course of employment it could not be said to have arisen out of such employment unless evidence should be submitted showing that the employees of the railway company were in the habit of climbing over or under cars found standing on the tracks on their way home by the path on which the accident occurred, and that they did so with the authority of the company, or under such circumstances that it could be held that the defendant acquiesced in this procedure. No evidence having been submitted on this point, the Court granted to both parties permission to submit such evidence by affidavit, with the privilege to the opposite party to cross-examine thereon, and the appeal was in the meantime allowed to stand adjourned.

On the question whether or not the plaintiff's disability arose "in the course of his employment", one of the judges of the Court of Appeal stated that when the plaintiff was employed, it was within the contemplation of both parties that he should live in town, and that he should reach the roundhouse by crossing the defendant's lead track, and that when his day's work was done he should leave the premises by again crossing this lead track, the particular point at which he should cross it being left to his own discretion. The defendant alone had control of the yards, and the plaintiff had a right to be there only by virtue of his employment. "Under these circumstances," the judge continued, "he was, in my opinion, 'in the course of his employment' when he attempted to cross the lead track. The argument that the moment he 'clocked out' his employment ceased, and that it was no concern of the defendants how he left their premises, seems to me to be contrary to the implied terms of the employment. The further objection that the plaintiff was not justified in attempting to cross at the point he did was, I think, met by the argument of counsel for the plaintiff that, where an employer leaves the point of crossing to the discretion of the employee, the employer cannot afterwards question the exercise of that discretion."

The Chief Justice of the Province, however, in his judgment, pointed out that "there is no evidence of a usual or established practice of climbing over or between cars known to, or tacitly authorized by the defendant, and I would hold that in doing what he did the plaintiff exposed himself to a voluntary risk which was not incidental to his employment. The accident did not arise out of circumstances encountered because to encounter them fell within the scope of his employment."

The appeal was allowed to stand as stated above.

(Saskatchewan — *Mackenzie versus Grand Trunk Pacific Railway Co.*)

Employee may be Dismissed for Misconduct after Fair Inquiry

A switchman employed by the Canadian National Railways was dismissed in February 1919 on the charge of having appropriated to his own use material belonging to the Company. In October, 1923, he brought action claiming damages for wrongful dismissal. The

case was tried before a jury, who returned the verdict that the accused was not guilty of theft, and awarded him damages against the Company at \$3,500. The defendant Company appealed from that judgment in the Alberta Supreme Court.

The employment of the switchman was governed by article 9 of the agreement between the Company and its yardmen, which contains the following clauses:—

"Clause (a).—All accidents shall be investigated and yardmen may be held off not exceeding three (3) days for this purpose. Evidence of all parties concerned shall be taken and no yardman shall be disciplined until his case has been investigated, and if not satisfied with decision rendered, he will be given an opportunity to review the evidence, and may appeal to the superintendent and through his representative to the higher official.

"Notice of appeal to be served in writing on the superintendent within twelve (12) days.

"Yardmen charged with offences involving discipline or dismissal will be advised the nature of such offences, and may have the assistance of a fellow employee at any and all investigations; when found blameless, will be paid for time lost at schedule rates. When a charge is laid against yardman, said yardman may have the privilege, if desired, of meeting party or parties making the charge face to face in the presence of an officer of the Company. It is understood that the investigation will be held as quickly as possible and men will not be held off unnecessarily. Yardmen will be furnished with copies of their statements at the time of signing same.

"Clause (b).—When a yardman is discharged or resigns, he will, as soon as possible be paid and given a certificate on request, stating time of service, and in what capacities he was employed.

"Clause (c).—No fines will be imposed on yardmen."

The plaintiff claimed that this article gave the same protection to the employee as was afforded by a similar provision in the agreement of the Contractor union in the case of *Caven versus the Canadian Pacific Railway Company*. (LABOUR GAZETTE, December 1924, page 1108; September, 1924, page 813). The trial judge had held, and directed the jury, that the defendant Company was required under the terms of the agreement, not only to hold an investigation, but also to justify dismissal, and that in the absence of evidence from which they could reasonably find the plaintiff guilty of theft he was entitled to a verdict. On behalf of the plaintiff it was claimed that the investigation held by the Company failed to comply with the requirements of the agreement in that he had not been advised of the nature of the offence he was charged with, was not allowed to have the assistance of a fellow employee, and was not given the privilege of meeting his accuser face to face. The appeal court found that there was evidence that the investigation had been held in accordance with article 9, and that according to the decision in the *Caven* case

the plaintiff should therefore fail in his action. The plaintiff moreover had signed a statement as required by article 9, but later claimed that this was signed under pressure from his superior officers. This statement, it was found by the court, contained the admission that the accused had appropriated the Company's property, as charged. On this point the Chief Justice said: "If the document does contain such an admission it would I think alone constitute ground and justification for dismissal and would remove all question about an investigation, the need for which implies that there is something to be inquired into which the admission shows there is not."

The appeal was allowed with costs, one of the five judges holding that a new trial should be ordered directed solely to the question of the amount of damages as dependent upon the terms of the plaintiff's hiring.

(*Alberta—Connolly versus Canadian National Railways*)

Compensation for Industrial Accident under Insurance Policy

The driver of a motor truck was killed in May, 1924, at Toronto, when his truck collided with a street car. The accident occurred as he was returning to his home after delivering a load of brick he was hauling for his brother, a cartage agent. He had been working for his brother for several months under an oral agreement for an undetermined period, at a fixed rate per load, the truck being his own. At the time the collision occurred, he had delivered his last load for the day and was on his way home. The driving of a vehicle was incidental to the work in which he was engaged. His insurance policy provided insurance "against loss of life or bodily injury effected during the term of this policy, by external force or agency, such loss of life or injury happening without the direct intent of the assured, or as the indirect result of his intentional act, such act not amounting to voluntary or negligent exposure to unnecessary danger, and sustained within" (certain territorial limits), "but not otherwise: provided always that such loss of life or bodily injury is not sustained by the insured in the course of his employment, or does not arise out of his employment, it being understood that this policy is not intended to cover and does not cover any of the hazards of the insured's occupation." The wife of the deceased driver claimed for insurance under this contract.

The defence to the action was that the bodily injuries which, it was alleged, resulted in the loss of life of the plaintiff's husband

were sustained in the course of his employment, arose out of his employment and were hazards of his occupation.

The court held that the case was governed by the principle that "in law it is not the remote but the immediate cause that is to be considered," and that although the manner in which he was earning his living had something to do with the accident, it was rather a remote than the immediate cause. The judge made the following comments upon the vague character of many insurance contracts, and of the uncertainty of the protection they afford. "When an insurance company," he said, "issues an accident policy to a man whose living depends upon his daily activity, and who follows a practically non-hazardous calling, if it is intended to confine the insurance to the hours he is sleeping, to exclude from the hazards they insure against the common hazards incidental to everybody—in short, if the insurers intend to reduce the indemnity to the hazards of the fireside and the bedchamber—it must be so stated in the policy, and stated in unambiguous terms. There are many cases in which the exemption from liability touching occupational hazards, as set out in the policy, is meaningless owing to the fact that there is nothing to which it can be applied, there being no specific or peculiar hazards of the insured's occupation—and of this the exempting provision in this policy, as attempted to be applied in the present case was an example. In the policy his occupation was not mentioned. The driver of a heavy vehicle in streets crowded with vehicles has usually the advantage as regards personal injury. Here the collision with a street car going at a rapid pace was an exceptional circumstance."

Judgment was given for the plaintiff for \$1,000 and costs.

(Ontario—Graham versus London Guarantee and Accident Company.)

Privy Council Decision regarding Employers' Responsibility for Industrial Disease

The Judicial Committee of the Privy Council gave judgment in December in a case involving the liability of an employer in regard to industrial disease contracted by workmen, appeal having been made from a judgment of the Supreme Court of New South Wales. The Workmen's Compensation Act, 1916, of New South Wales, provides that in a case of industrial disease covered by the act, "the disablement or suspension shall be treated as the happening of the accident." The appellants were an insurance office, and the respondents were employers insured by

the appellants. Seven employees of the employing company received from the official surgeon certificates of disablement through lead poisoning, the dates of disablement being given as ranging from July 1921 to December, 1921. The workmen had been employed by the insured within a prior period, namely from July 1920 to June 1921. It was not disputed that the men contracted nystagmus during their employment, and they received payment from the employers, who claimed indemnification by the insurance office. The Supreme Court in New South Wales upheld this claim. The insurance office in appealing to the Privy Council, contended that the "accident" which gave rise to the employers' liability in this case, must be taken to have happened after July 1, 1921, and that therefore there was no liability upon them under the policy. The Privy Council dismissed the appeal with costs. Lord Wrenbury, in delivering judgment, referred to the provision of the act above quoted (referred to as section 12) that "disablement or suspension shall be treated as the happening of the accident." These words did not refer to the date of the happening of the accident, as was claimed by the appellants. The disablement or suspension establishes the happening of the accident, but not the date at which it happened. It fixes the date as from which compensation begins, and with reference to which the twelve months mentioned in section 12 are to be ascertained. The disease which their Lordships call a "statutory accident" has peculiar features, which are provided for by the act. The workman is entitled to compensation as if the disease were an accident in the course of his employment subject to the modification that so far as compensation is concerned the disablement or suspension is to be treated as the happening of the accident. Sub-clause (a) of section 12 is a modification of the rights as regards compensation, and has no bearing upon liability. If this be not the right view of the Act it would result that if the workman were out of employment at the date of disablement or suspension he would be without remedy. Their Lordships were of opinion that the appeal failed, and they advised His Majesty that it should be dismissed with costs.

(Privy Council—Junction North Broken Hill Mine v. Victoria Insurance Company, Limited.)

Dismissal of Workman at Union's Request Held Lawful

The constitution of the United Mine Workers of America contains an article prohibiting

its members from becoming members of the I.W.W., W.C.U. or the Ku Klux Klan. A member who was employed by a coal company in Arkansas joined the latter organization, and was expelled from the union. As a contract was in force between the union and the company, requiring that only members of the union should be employed at the company's mines, the union wrote to the company demanding the dismissal of the expelled member. The Supreme Court of Arkansas held that there could be no damages resulting to an employee on account of a discharge from an employment at will. "The motive of the employer in discharging him is immaterial, and cannot be questioned," the judgment stated, "the discharge may have been inspired by a bad motive, for the legal right to determine an employment at will is absolute in either the employer or the employee." In this decision the court followed a previous decision in a case where the plaintiff was held to have no cause of action against a union under similar circumstances. In this previous case the employer was a member of a cloak and suit makers' association, which had agreed with defendant union that only members of the union should be employed by the association; the plaintiff was discharged at the instigation of delegates of the Association and of the defendant union, on the ground that he was not a member of the union.

Indiana Anti-picketing Decision

The City of Indianapolis in 1919 passed an ordinance enjoining picketing. A temporary injunction against its enforcement was obtained on the ground that it was unconstitutional, but this latter injunction was later vacated upon trial and the plaintiff appealed in the Supreme Court of Indiana, whose judgment was in part as follows:—

Although the decisions of the courts of this country are not in accord on the question, the majority hold that, in the absence of any legislation upon the subject, so-called 'peaceful picketing' is not unlawful, but that where it is accompanied by force, intimidation or coercion it is unlawful and will be enjoined by a court in the exercise of its equitable powers. As to those sections of this ordinance which prohibit the resort to compulsion, threats, coercion, intimidation, or any act of violence, attention is called to the fact that the courts have unanimously recognized that picketing, where such means are used, is wrong *per se* and will be enjoined. . . . Under the authority to pass ordinances to preserve peace and good order, etc., a city council would certainly possess the power to pass an ordinance the effect of which would be to prevent the commission of acts which are universally condemned as wrong and which inevitably lead to disorder and a disturbance of the peace of the public. . . . The word 'picketing', as used in this ordinance, has a well defined meaning. It has been defined

as the maintenance of an organized espionage upon the works or places of business of an employer and those going to and from them, and it has been remarked that the word 'picket' is borrowed from the nomenclature of warfare, and is strongly suggestive of a hostile attitude toward the individual or corporation against whom a labour organization has a grievance. . . . If we consider the results that generally follow the placing of pickets near to the premises of one against whom a strike or boycott is being conducted, it cannot be said that such an ordinance is unreasonable. Although the person or persons on picket duty may not by word or gesture make any threat or use any force, we all know that in most of such cases the very presence of the picket is apt to give rise to contentions and arguments that often result in bloodshed and riots. It is not unreasonable exercise of the power to preserve peace and good order, for the council to prevent that which so often disturbs the peace and destroys good order.

Shipmasters and Forfeiture of Wages

The recent case of *Gordon vs. United States*, decided in the Western District of Washington, D.C., was concerned with the rights of seamen whose wages are forfeited for offences, as provided in the United States law relating to seamen. The court refused to uphold a forfeiture of wages where the offences and forfeiture were entered in the logbook, but where it did not appear that a copy of the entry had been given or read to the seaman, or that his reply had also been entered. The court said: "Shipowners who would invoke the statute to their gain at seamen's expense, who would be court, plaintiff, prosecutor, witness, judge, jury and marshal, must pursue strictly the statute and its four corners turn square and precise."

Sunday Law in Minnesota

A case involving the validity of the One Day Rest in Seven law, enacted by the State of Minnesota in 1923, was decided recently by the Fourth Judicial District Court. A Minneapolis gas company was prosecuted under the act for requiring one of its employees to work seven days a week. The court held that the defendants should be acquitted on two grounds: first, that the business was one of necessity and so within the general exception of the statute, and second that the statute was so arbitrary in its classification as to be a denial of equal protection of the laws and hence unconstitutional. Commenting on this decision the American Labour Legislation Review says it is "a sharp reminder that the preparation of a statute to carry into effect even so simple a policy as one day rest in seven is a task requiring some degree of care in draftsmanship."

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907

Text of Judgment of Judicial Committee of Privy Council in reference to Validity of this Statute

PRIVY COUNCIL APPEAL NO. 99 OF 1924

The Toronto Electric Commissioners, Appellants, v. Colin G. Snider and others, Respondents, and The Attorney-General of Canada and the Attorney-General of Ontario, Interveners, from The Appellate Division of the Supreme Court of Ontario.*

Judgment of the Lords of the Judicial Committee of the Privy Council, delivered the 20th January, 1925.

Present at the Hearing: Viscount Haldane, Lord Dunedin, Lord Atkinson, Lord Wrenbury, Lord Salvesen.

(Delivered by Viscount Haldane.)

It is always with reluctance that their Lordships come to a conclusion adverse to the constitutional validity of any Canadian statute that has been before the public for years as having been validly enacted, but the duty incumbent on the Judicial Committee, now as always, is simply to interpret the British North America Act and to decide whether the statute in question has been within the competence of the Dominion Parliament under the terms of section 91 of that Act. In this case the Judicial Committee have come to the conclusion that it was not. To that conclusion they find themselves compelled, alike by the structure of section 91 and by the interpretation of its terms that has now been established by a series of authorities. They have had the advantage not only of hearing full arguments on the question, but of having before them judgments in the Courts of Ontario, from which this appeal to the Sovereign in Council came directly. Some of these judgments are against the view which they themselves take, others are in favour of it, but all of them are of a high degree of thoroughness and ability.

The particular exercise of legislative power with which their Lordships are concerned is contained in a well-known Act, passed by the Dominion Parliament in 1907 and known as The Industrial Disputes Investigation Act. As it now stands it has been amended by subsequent Acts, but nothing turns, for the purposes of the question now raised, on any of the amendments that have been introduced.

The primary object of the Act was to enable industrial disputes between any employer in Canada and any one or more of his employees, as to "matters or things affecting or relating to work done or to be done by him or them, or as to the privileges, rights and duties of employers or employees (not involving any such violation thereof as constitutes an indictable offence)", relating to wages or remuneration, or hours of employment; sex, age or qualifications of employees, and the mode, terms and conditions of employment; the employment of children or any person, or classes of persons; claims as to whether preference of employment should be given to members of labour or other organizations; materials supplied or damage done to work; customs or usages, either general or in particular districts; and the interpretation of agreements. Either of the parties to any such dispute was empowered by the Act to apply to the Minister of Labour for the Dominion for the appointment of a Board of Conciliation and Investigation, to which Board the dispute might be referred. The Act enabled the Governor in Council to appoint a Registrar of such Boards, with the duty of dealing with all applications for reference, bringing them to the notice of the Minister, and conducting the correspondence necessary for the constitution of the Boards. The Minister was empowered to establish a Board when he thought fit, and no question was to be raised in any Court interfering with his decision. Each Board was to consist of three members to be appointed by the Minister, one on the recommendation of the employer, one on that of the employees, and the third, who was to be Chairman, on the recommendation of the members so chosen. If any of them failed in this duty the Minister was to make the appointment. The department of the Minister of Labour was to provide

* The decisions of the Ontario Courts in this case have been published in previous issues of the *LABOUR GAZETTE*, as follows: judgment of Mr. Justice Orde, in issue of October, 1923, page 1126; judgment of Mr. Justice Mowat, in issue of December, 1923, page 1452; judgment of Mr. Justice Ferguson, in issue of May, 1924, page 384.

the staffs required. The application for a Board was to be accompanied by a statutory declaration showing that, failing adjustment, a lockout or strike would probably occur.

The Board so constituted was to make inquiry and to endeavour to effect a settlement. If the parties came to a settlement the Board was to embody it in a memorandum of recommendation, which, if the parties had agreed to it in writing, was to have the effect of an award on a reference to arbitration or one made under the order of a court of record. In such a case the recommendation could be constituted a rule of Court and enforced accordingly. If no such settlement was arrived at, then the Board was to make a full report and a recommendation for settlement to the Minister, who was to make it public.

The Boards set up were given powers to summon and to enforce the attendance of witnesses, to administer oaths and to call for business books and other documents, and also to order into custody or subject to fine, in case of disobedience or contempt. The Board was also empowered to enter any premises where anything was taking place which was the subject of the reference and to inspect. This power was also enforceable by penalty. The parties were to be represented before the Board, but no counsel or solicitors were to appear excepting by consent and subject to the sanction of the Board itself. The proceedings were normally to take place in public.

By section 56 of the Act, in the event of a reference to a Board, it was made unlawful for the employer to lock out or for the employees to strike on account of any dispute prior to or pending the reference, and any breach of this provision was made punishable by fine. By section 57, employers and employed were both bound to give at least thirty days' notice of an intended change affecting conditions of employment with respect to wages or hours. In the event of a dispute arising over the intended change, until the dispute had been finally dealt with by a Board and a report had been made, neither employers nor employed were to alter the conditions, or lock out or strike, or suspend employment or work, and the relationship of employer and employee was to continue uninterrupted. If, in the opinion of the Board, either party were to use this or any other provision of the Act for the purpose of unjustly maintaining a given condition of affairs through delay, and the Board were so to report to the Minister, such party was to be guilty of an offence and liable to penalties.

By section 63 (a), where a strike or lockout had occurred or was threatened, the Minister was empowered, although neither of the parties to the dispute had applied for one, to set up a Board. He might also, under the next section, without any application, institute an inquiry.

Whatever else may be the effect of this enactment, it is clear that it is one which could have been passed, so far as any Province was concerned, by the provincial legislature under the powers conferred by section 92 of the British North America Act. For its provisions were concerned directly with the civil rights of both employers and employed in the Province. It set up a Board of Inquiry which could summon them before it, administer to them oaths, call for their papers and enter their premises. It did no more than what a provincial legislature could have done under head 15 of section 92, when it imposed punishment by way of penalty in order to enforce the new restrictions on civil rights. It interfered further with civil rights when, by section 56, it suspended liberty to lock out or strike during a reference to a Board. It does not appear that there is anything in the Dominion Act which could not have been enacted by the Legislature of Ontario, excepting one provision. The field for the operation of the Act was made the whole of Canada.

In 1914 the Legislature of the Province of Ontario passed a Trade Disputes Act which substantially covered the whole of these matters, so far as Ontario was concerned, excepting in certain minor particulars. One of these was the interference in the Dominion Act with the right to lock out or strike during an inquiry. This was not reproduced in the Ontario Act. Another difference was the necessary one that the operation of the Ontario Act was confined to that Province, instead of extending to other parts of Canada. It was, of course, open to the legislatures of the other provinces to enact similar provisions, and some of them appear to have done so.

Subject to variations such as these there is, in the Ontario Act, little alteration in substance of the provisions of the Dominion statute. The Lieutenant-Governor of the Provincial Council, instead of the Minister of Labour, appoints the Registrar. There are to be set up two different kinds of statutory Council, one of Conciliation, the four members of which are to be nominated by the parties, the other a Council of Arbitration, consisting of three members, two of whom are to be appointed by the Lieutenant-Governor of the Province on

the recommendation of the parties, and the third, the Chairman, to be nominated by the Lieutenant-Governor on failure of the parties to agree and name. The Mayor of any city or town in the province, on being notified that a strike or lockout is impending, may inform the Registrar of the fact, and a Council of Arbitration may then be empowered to inquire and to mediate. Unless there is an agreement by one or both of the parties, in which case the award of the Council may be enforced as on an arbitration, there is no power given to suspend the right to strike or lock out.

It is clear that this enactment was one which was competent to the Legislature of a Province under section 92. In the present case the substance of it was possibly competent, not merely under the head of property and civil rights in the Province, but also under that of municipal institutions in the Province. For the appellants are incorporated, by the Province, a public utility commission within the definition in chapter 204 of the Revised Statutes of Ontario, 1914, relating to the constitution and operation of works for supplying public utilities by municipal corporations and companies, and are employers within the meaning of the Ontario Trade Disputes Act already referred to. Their function is to manage the municipal electric light, heat and power works of the City of Toronto.

The primary respondents in this appeal are the Members of a Board of Conciliation appointed by the Dominion Minister of Labour under the Act first referred to. There was a dispute in 1923 between the appellants and a number of the men whom they employed, which dispute was referred to the first respondents, who proceeded to exercise the powers given by the Dominion Act. The appellants then commenced an action in the Supreme Court of Ontario for an injunction to restrain these proceedings, on the allegation that the Dominion Act was *ultra vires*. The Attorneys-General of Canada and of Ontario were notified and made parties as intervenants.

There was a motion for an interim injunction, which was heard by Orde, J., who, after argument, granted an injunction till the trial. The action was tried by Mowat, J., who intimated his dissent from the view of the British North America Act taken by Orde, J., who was co-ordinate in authority with him, according to which view the Dominion Act was *ultra vires*. He, therefore, as he had power by the Provincial Judicature Act to do, directed the action to be heard by a Divisional Court, and it was ultimately heard by the Appellate Division of the Supreme Court of Ontario (Mulock, C. J., Magee, Hodgins, Ferguson and Smith, J.J.A.). The result was that by the majority (Hodgins, J. A., dissenting) the action of the appellants was dismissed.

The broad grounds of the judgment of the majority, which will be referred to later on, was that the Dominion Act was not a law relating to matters as to which section 92 conferred exclusive jurisdiction, but was a law within the competence of the Dominion Parliament, inasmuch as it was directed to the regulation of trade and commerce throughout Canada, and to the protection of the national peace, order and good government, by reason of (a) confining, within limits, a dispute which might spread over all the Provinces; (b) informing the general public in Canada of the nature of the dispute, and (c) bringing public opinion to bear on it. The power of the Dominion Parliament to legislate in relation to criminal law, under head 27 of section 91, was also considered to apply.

Before referring to these grounds of judgment their Lordships, without repeating at length what has been laid down by them in earlier cases, desire to refer briefly to the construction which, in their opinion, has been authoritatively put on sections 91 and 92 by the more recent decisions of the Judicial Committee. The Dominion Parliament has, under the initial words of section 91, a general power to make laws for Canada. But these laws are not to relate to the classes of subjects assigned to the Provinces by section 92, unless their enactment falls under heads specifically assigned to the Dominion Parliament by the enumeration in section 91. When there is a question as to which legislative authority has the power to pass an Act, the first question must therefore be whether the subject falls within section 92. Even if it does, the further question must be answered, whether it falls also under an enumerated head in section 91. If so, the Dominion has the paramount power of legislating in relation to it. If the subject falls within neither of the sets of enumerated heads, then the Dominion may have power to legislate under the general words at the beginning of section 91.

Applying this principle, does the subject of the legislation in controversy fall fully within section 92? For the reasons already given their Lordships think that it clearly does. If so, is the exclusive power *prima facie* conferred on the Province trenchoned on by any of the overriding powers set out specifically in section 91? It was, among other things, contended in the argument that the Dominion Act now challenged was authorized under head 27, "the

Criminal Law except the Constitution of Courts of Criminal Jurisdiction, but including the Procedure in Criminal Matters." It was further suggested in the argument that the power so conferred is aided by the power conferred on the Parliament of Canada to establish additional Courts for the better administration of the laws of Canada.

But their Lordships are unable to accede to these contentions. They think that they cannot now be maintained successfully, in view of a series of decisions in which this Board has laid down the interpretation of section 91 (27) in the British North America Act on the point. In the most recent of these cases, that of the Reciprocal Insurers (1924) A. C. 328, at p. 342, Mr. Justice Duff stated definitely the true interpretation, in delivering the judgment of the Judicial Committee. Summing up the effect of the series of previous decisions relating to the point, he said:—

"In accordance with the principle inherent in these decisions their Lordships think it is no longer open to dispute that the Parliament of Canada cannot, by purporting to create penal sanctions under section 91, head 27, appropriate to itself exclusively a field of jurisdiction in which, apart from such a procedure, it could exert no legal authority, and that if, when examined as a whole, legislation in form criminal is found, in aspects and for purposes exclusively within the provincial sphere, to deal with matters committed to the Provinces, it cannot be upheld as valid."

In the earlier Board of Commerce case (1922) A. C. 191 the principle to be applied was laid down in the same way. It was pointed out that the Dominion had exclusive legislative power to create new crimes "where the subject-matter is one which, by its very nature, belongs to the domain of criminal jurisprudence." But "it is quite another thing, first to attempt to interfere with a class of subject committed exclusively to the provincial legislature, and then to justify this by enacting ancillary provisions designated as new phases of Dominion criminal law, which require a title to so interfere as the basis of their application."

Their Lordships are of opinion that, on authority as well as on principle, they are to-day precluded from accepting the arguments that the Dominion Act in controversy can be justified as being an exercise of the Dominion power under section 91 in relation to criminal law. What the Industrial Disputes Investigation Act, which the Dominion Parliament passed in 1907, aimed at accomplishing was to enable the Dominion Government to appoint anywhere in Canada a Board of Conciliation and Investigation to which the dispute between an employer and his employees might be referred. The Board was to have power to enforce the attendance of witnesses and to compel the production of documents. It could under the Act enter premises, interrogate the persons there, and inspect the work. It rendered it unlawful for an employer to lockout or for a workman to strike, on account of the dispute, prior to or during the reference, and imposed an obligation on employees and employers to give thirty days' notice of any intended change affecting wages or hours. Until the reference was concluded neither were to alter the conditions with respect to these. It is obvious that these provisions dealt with civil rights, and it was not within the power of the Dominion Parliament to make this otherwise by imposing merely ancillary penalties. The penalties for breach of the restrictions did not render the statute the less an interference with civil rights in its pith and substance. The Act is not one which aims at making striking generally a new crime. Moreover, the employer retains under the general common law a right to lockout, only slightly interfered with by the penalty. In this connection their Lordships are therefore of opinion that the validity of the Act cannot be sustained.

The point was also put in a somewhat different form. It was said that the criminal law of Canada was in its foundation the criminal law of England as at 17th September, 1792; that, according to the criminal law of England as at that date, a strike was indictable as a conspiracy; that, consequently, strikes were within the ambit of the criminal law; and that, as a law either declaring strikes illegal as at common law, or making them illegal, would be a proper enactment of the criminal law, so, though this is rather a *non-sequitur*, it was only a branch of that law to enact provisions which should have the effect of preventing strikes coming into existence.

It is not necessary to investigate or determine whether a strike is *per se* a crime according to the law of England in 1792. A great deal has been said on the subject and contrary opinions expressed. Let it be assumed that it was. It certainly was so only on the ground of conspiracy. But there is no conspiracy involved in a lockout; and the statute under discussion deals with lockouts *pari ratione* as with strikes. It would be impossible, even if it were desirable, to separate the provisions as to strikes from those as to lockouts so as to make the one fall under the criminal law while the other remained outside it; and, therefore, in their Lordships' opinion this argument also fails.

Nor does the invocation of the specific power in section 91 to regulate trade and commerce assist the Dominion contention. In *Citizens Insurance Company v. Parsons* (7 A.C. at p. 112) it was laid down that the collocation of this head (No. 2 of section 91), with classes of subjects enumerated of national and general concern, indicates that what was in the mind of the Imperial Legislature when this power was conferred in 1867 was regulation relating to general trade and commerce. Any other construction would, it was pointed out, have rendered unnecessary the specific mention of certain other heads dealing with banking, bills of exchange and promissory notes, as to which it had been significantly deemed necessary to insert a specific mention. The contracts of a particular trade or business could not, therefore, be dealt with by Dominion legislation so as to conflict with the powers assigned to the Provinces over property and civil rights relating to the regulation of trade and commerce. The Dominion power has a really definite effect when applied in aid of what the Dominion Government are specifically enabled to do independently of the general regulation of trade and commerce, for instance, in the creation of Dominion companies with power to trade throughout the whole of Canada. This was shown in the decision in *John Deere Plow Company v. Wharton* (1915) A.C., at p. 340. The same thing is true of the exercise of an emergency power required as on the occasion of war, in the interest of Canada as a whole, a power which may operate outside the specific enumerations in both section 91 and 92. And it was observed in the *Alberta* case, in reference to attempted Dominion legislation about insurance, that it must now be taken that the authority to legislate for the regulation of trade and commerce does not extend to the regulation, for instance, by a licensing system, of a particular trade in which Canadians would otherwise be free to engage in the Provinces (see (1916) 1 A.C. at p. 596). It is, in their Lordships' opinion, now clear that, excepting so far as the power can be invoked in aid of capacity conferred independently under other words in section 91, the power to regulate trade and commerce cannot be relied on as enabling the Dominion Parliament to regulate civil rights in the Provinces.

A more difficult question arises with reference to the initial words of section 91, which enable the Parliament of Canada to make laws for the peace, order and good government of Canada in matters falling outside the provincial powers specifically conferred by section 92. For *Russell v. The Queen* (7 A.C., 829) was a decision in which the Judicial Committee said that it was within the competency of the Dominion Parliament to establish a uniform system for prohibiting the liquor traffic throughout Canada excepting under restrictive conditions. It has been observed subsequently by this Committee that it is now clear that it was on the ground that subject-matter lay outside provincial powers, and not on the ground that it was authorized as legislation for the regulation of trade and commerce, that the *Canada Temperance Act* was sustained (see the *Alberta* case (1916) 1 A.C., at p. 595). But even on this footing it is not easy to reconcile the decision in *Russell v. The Queen* with the subsequent decision in *Hodge v. The Queen* (9 A.C. 117) that the *Ontario Liquor Licence Act*, with the powers of regulation which it entrusted to local authorities in the Province, was *intra vires* of the *Ontario Legislature*. Still more difficult is it to reconcile *Russell v. The Queen* with the decision given later by the Judicial Committee that the Dominion licensing statute, known as the *McCarthy Act*, which sought to establish a local licensing system for the liquor traffic throughout the Dominion, was *ultra vires* of the Dominion Parliament. As to this last decision it is not without significance that the strong Board which delivered it abstained from giving any reasons for their conclusion. They did not in terms dissent from the reasons given in *Russell v. The Queen*. They may have thought that the case was binding on them as deciding that the particular *Canada Temperance Act* of 1886 had been conclusively held valid, on the ground of fact that at the period of the passing of the Act the circumstances of the time required it in an emergency affecting Canada as a whole. The *McCarthy Act*, already referred to, which was decided to have been *ultra vires* of the Dominion Parliament, was dealt with in the end of 1885. Ten years subsequently another powerful Board decided the case of the *Attorney-General for Ontario v. Attorney-General for the Dominion and the Distillers' and Brewers' Association* (1896) A.C. 348. Lord Herschell and Lord Davey, who had been the leading counsel in the *McCarthy* case, sat on that Board, along with Lord Halsbury, who had presided at it. In delivering the judgment, Lord Watson used in the latter case significant language:—

"The judgment of this Board in *Russell v. Regina*, has relieved their Lordships from the difficult duty of considering whether the *Canada Temperance Act* of 1886 relates to the peace, order and good government of Canada in such a sense as to bring its provisions within the competency of the Canadian Parliament."

That decision, he said, must be accepted as an authority to the extent to which it goes, namely, that

"the restrictive provisions of the Act of 1886, when they have been duly brought into operation in any provincial area within the Dominion, must receive effect as valid enactments relating to the peace, order and good government of Canada."

The Board held that, on that occasion, they could, not inconsistently with *Russell v. The Queen*, declare a statute of the Ontario Legislature establishing provincial liquor prohibitions to be within the competence of a provincial legislature, provided that the locality had not already adopted the provisions of the Dominion Act of 1886.

It appears to their Lordships that it is not now open to them to treat *Russell v. The Queen* as having established the general principle that the mere fact that Dominion legislation is for the general advantage of Canada or is such that it will meet a mere want which is felt throughout the Dominion, renders it competent if it cannot be brought within the heads enumerated specifically in section 91. Unless this is so, if the subject-matter falls within any of the enumerated heads in section 92, such legislation belongs exclusively to provincial competency. No doubt there may be cases arising out of some extraordinary peril to the national life of Canada, as a whole, such as the cases arising out of a war, where legislation is required of an order that passes beyond the heads of exclusive provincial competency. Such cases may be dealt with under the words at the commencement of section 91, conferring general powers in relation to peace, order and good government, simply because such cases are not otherwise provided for. But instances of this, as was pointed out in the judgment in the *Fort Frances Pulp case* (1923) A.C. 695, are highly exceptional. Their Lordships think that the decision in *Russell v. The Queen* can only be supported to-day, not on the footing of having laid down an interpretation, such as has sometimes been invoked of the general words at the beginning of section 91, but on the assumption of the Board, apparently made at the time of deciding the case of *Russell v. The Queen*, that the evil of intemperance at that time amounted in Canada to one so great and so general that at least for the period it was a menace to the national life of Canada so serious and pressing that the National Parliament was called on to intervene to protect the nation from disaster. An epidemic of pestilence might conceivably have been regarded as analogous. It is plain from the decision in the Board of Commerce case that the evil of profiteering could not have been so invoked; for provincial powers, if exercised, were adequate to it. Their Lordships find it difficult to explain the decision in *Russell v. The Queen* as more than a decision of this order upon facts, considered to have been established at its date rather than upon general law.

The judgments in the Court below express differing views. Orde, J., granted an interim injunction, restraining the first respondents from interfering with the business of the appellants and from entering on their premises, or examining their works or employees, and from exercising their compulsory powers as a Board of Conciliation and Investigation under the Dominion Act, and from interfering with the property and civil or municipal rights of the appellants. He held that the Dominion legislation interfered with provincial rights under section 92 in a fashion which could not be supported under any of the enumerated heads in section 91, and therefore could not be sustained by invoking the general words with which that section commences. The decision in the *Fort Frances Pulp case* (*ubi supra*) afforded no analogy on which such a contention as this last could be based.

Mowat, J., dissenting from this reasoning, referred the trial of the action to a Divisional Court. He thought that the legislation in question was a matter of national importance, dealing with a subject which affected the body politic of the Dominion, as in *Russell v. The Queen* (*ubi supra*).

In the Appellate Division, Mulock, C. J., Smith, J. A., and Magee, J. A., concurred in the judgment delivered by Ferguson, J. A. That learned Judge held that the Act in question was not, "in its pith and substance," an Act relating to merely provincial matters falling within section 92, but related to industrial disputes which might develop into disputes affecting, not only the immediate parties, but the national welfare, peace, order and safety. He cited the analogy of the Australian Constitution Act, which, by section 51, placed such disputes within the competence of the Australian Parliament when they extended beyond the limits of any single state. He was of opinion that, even if the Dominion legislation actually interfered with provincial powers, it might be supported if necessary as dealing with the interest of the peace, order and good government of Canada, but he thought that it was not necessary to go further in point of principle than to treat *Russell v. The Queen* (*ubi supra*) as showing that, where an abnormal condition in a great emergency demanded it, the

Parliament of Canada might legislate for such a case without even trenching on the powers allocated to the Provinces under section 92. He also thought that the Act was not one to control or regulate contractual or civil rights, but that its object was to authorize inquiry into conditions or disputes, and that the prevention of crimes, the protection of public safety, peace and order, and the protection of trade and commerce, were of its pith and substance and paramount purpose. The Act could also be supported as Dominion legislation under the overriding enumerated heads of section 91, as being legislation in relation to the regulation of trade and commerce, and also to the criminal law.

Hodgins, J. A., dissented. In his view industrial strife was nothing more than the result of an undesirable use of the civil right to cease work in the operation of various businesses. The argument in support of the Act was practically an endeavour to invent a new field, which was only a department or development of one of those exclusively possessed by provincial legislatures. Nor was the matter made better by the contention that the Act, when examined in the light of evidence adduced, dealt with a subject which transcended provincial limits and was of Dominion importance. It was, no doubt, true that, owing to the highly organized methods of modern labour, strikes might spread and extend to other businesses. This might happen, and the state of things might conceivably reach a height in which it became comparable to war, famine, or rebellion, and justify Dominion action. But on the only facts proved, in the learned Judge's view, this Act could not be supported as dealing with a case of (1) emergency, or (2) general Canadian interest and importance, or (3) with a power conferred under any of the enumerated heads in section 91. No great national emergency was shown to have existed when the statute was enacted in 1907, or to have occurred since, and the statute was not framed so as to come into operation only when such emergency arose. The statute was further not framed so as to confer the drastic powers that would be necessary in such a case, but was based on the normal working of industrial relations, which often required time and patience and some restraint if dislocation was to be avoided. It was essentially a relative measure. The special and exceptional conditions of emergency required by the judgments in the Board of Commerce and Fort Frances Pulp cases (*ubi supra*) did not appear to him to have existed in point of fact. So far as anticipations of changes in the future were concerned, Hodgins, J. A., thought that the question was whether regulation of civil rights or invasion of property rights in the fashion provided by the Act, in order to bring about a uniform and desirable method of dealing with industrial disputes, admirable as its purpose might be, could be valid in view of the exercise of the powers given to the Provinces. That the Provinces had such powers, as complete as those in this Act given to the Dominion, he entertained no doubt. Several Provinces had on their statute books legislation of much the same kind. Even granting the national importance of the question, the whole success of this method of dealing with it depended on the capacity to seize on local disputes and their conditions, and to manage the exercise of civil rights in relation to them. The circumstance that the dispute might spread to other Provinces was not enough in itself to justify Dominion interference, if such interference affected property and civil rights. The Province in the present case was simply the scene of municipal action. As the result of his consideration of the principles laid down for the interpretation of the British North America Act, the learned Judge was of opinion that the Act could not stand.

Their Lordships have examined the evidence produced at the trial. They concur in the view taken of it by Hodgins, J. A. They are of opinion that it does not prove any emergency putting the national life of Canada in unanticipated peril such as the Board which decided *Russell v. The Queen* may be considered to have had before their minds.

As the result of consideration, their Lordships have come to the conclusion that they ought humbly to advise the Sovereign that the appeal should be allowed, and that judgment should be entered for the appellants for the declaration and injunction claimed. There should be no costs, either of this appeal or in the Courts below, and any costs paid under the judgment of the Appellate Division of the Supreme Court ought to be repaid.

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 25]

MARCH, 1925

[NUMBER 3

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

THIS issue of the LABOUR GAZETTE contains the regular monthly articles on the industrial and labour situation in Canada, including reviews of the recent movement of prices, particulars of recent disputes and agreements, as well as the usual monthly notes on vocational training and apprenticeship, labour union activities, and recent legal decisions affecting labour. A report on fatal industrial accidents during 1924, and the text of a bill to amend the Industrial Disputes Investigation Act that was introduced in Parliament on March 12 by the Minister of Labour, are also included; and, as a supplement, an outline of the various acts, Dominion and Provincial, which provide for Government intervention in labour disputes in Canada.

Monthly summary

Reports from the Employment Service of Canada for the month of January show an increase in the volume of business transacted over the preceding month, but less activity than during January, 1924. At the beginning of February the percentage of unemployment among members of local unions was 10.2, as compared with percentages of 11.6 at the beginning of January and 7.5 at the beginning of February 1924. Reports from 5,832 employers of labour indicated a partial recovery from the depressed condition of employment reported in the previous month, these firms reporting 709,878 persons employed by them, or 16,821 more than on January 1. The employment index number stood at 86.1 on February 1, as compared with 83.9 on January 1 and with 90.6 on February 1, 1924.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.93 at the beginning of February as compared with \$10.77 for January; \$10.75 for February, 1924; \$10.53 for February, 1923; \$10.61 for February, 1922; \$14.08 for February, 1921; \$15.77 for February, 1920; \$16.92 for June, 1920 (the peak); \$12.54 for February, 1918; and \$7.75 for February, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1913 as 100 declined slightly to 164.5 as compared with 165.2

for January; 156.6 for February, 1924; 153.6 for February, 1923; 153.5 for February, 1922; 191.1 for February, 1921; 256.7 for May, 1920 (the peak); 238.8 for February, 1920; and 200.5 for February, 1919.

The time loss caused by industrial disputes in February was greater than in January, but less than in January, 1924, when a strike of coal miners was in progress in Nova Scotia. Thirteen disputes were in existence at some time in February, 1925, involving 3,030 employees and resulting in a loss in working time of 26,334 working days. Six of these disputes terminated during the month, leaving seven disputes on record as the month closed. In January, 1925, there were ten disputes affecting 694 workpeople and resulting in a time loss of 4,882 working days. Corresponding figures for February, 1924, were as follows: 16 disputes, 11,518 employees, and 101,968 working days.

Industrial Disputes Investigation Act

The application received by the Department in January from the wireless telegraphers of the Marconi Wireless Telegraph Company of Canada, Limited, was withdrawn by the employees in February, after a representative of the Department had visited the locality and investigated the situation in connection with the dispute. The employees concerned were members of the Canadian Marconi Wireless System Division, Number 59, Commercial Telegraphers' Union of America.

Alberta Coal Commission

In the speech from the Throne at the opening of the Legislature of Alberta on February 19 it was stated that "owing to the unsettled conditions in the mining industry the appointment of the Alberta Coal Commission was delayed. The terms of reference call for a thorough and searching inquiry; and, while considerable preliminary work has been done, it is not anticipated that the work of the Commission will be completed in time to permit of a report being submitted to the Legislature at this session." A resolution to appoint a provincial

commission was moved by Mr. P. M. Christopher, the Labour member for Rocky Mountain House, and adopted unanimously by the Legislature on March 13. The commission was to investigate the coal mining industry in its various aspects, as follows: Coal mining titles, capitalization, financial arrangements and cost of production, transportation of products, marketing, uses of by-products, selling prices, coal reserves, conservation and waste of coal; mine workmen, their earnings, living costs and conditions, housing conditions and educational facilities, mining conditions, mining methods, use of labour saving devices and provision for the safety of workmen. The commission was further to study conditions outside Alberta, and particularly in competitive fields, as well as legislation affecting the industry in Alberta and elsewhere. Owing however to a break-down in the negotiations that had been in progress between the miners and operators in "District 18" of the United Mine Workers, a strike began shortly after the date of the resolution, and the Provincial Government decided to defer the appointment of the commission until a settlement should have been reached. The strike was settled by means of a compromise on October 20, and ten days later an order in council was issued appointing a commission to consist of the following members:—Mr. M. E. Evans, recently a member of the Municipal Finances Committee, to act as chairman; Mr. R. G. Drinnan of Edmonton, to represent the operators; and Mr. Frank Wheatley, president of the Alberta Federation of Labour, to represent the miners.

Agreement in District 18 to terminate

The Western Canada Coal Operators Association, the members of which operate the principal mines in Alberta, announced early in the present month that they would give the required six months notice to the United Mine Workers of America on March 31 to terminate on September 30 their existing agreement with District 18. The text of this agreement was given in the *LABOUR GAZETTE* for November, 1924, in an article describing the course of recent events in this District, culminating in the strike of the miners last summer and the agreement concluded in October. This agreement provided for wages and working conditions that had been in force since 1920, the agreement then entered into having been renewed from time to time.

Mr. R. M. Young, commissioner of the Association, stated the reasons for the action of the Association as follows:—"The operation of the mines since October last has been any-

thing but satisfactory. Many of the mines have operated only one or two days a week, and other mines, after remaining closed for more than two months after the October settlement, resumed work on a part time basis, and are now running on that basis with crews reduced far below normal. The domestic mines produced little more than half the tonnage of the preceding year notwithstanding a depleted market when work was resumed in October, and they are again practically idle. Taking the District as a whole, conditions are probably worse than at any previous period in its history."

Information reaching the Department indicated that an effort would be made by the operators to establish a new scale on the same basis as that which exists under the separate contract entered into by the miners and operators at Fernie and Coal Creek. (The Fernie agreement will be published in a future issue of the *LABOUR GAZETTE*.) Under the latter agreement the mines of the Fernie Company have been running regularly, in contrast with the lack of work in the Crow's Nest Pass area in Alberta. The principal operators in the Crows' Nest Pass area in British Columbia withdrew from the Association towards the end of 1924, and entered into a contract with the employees providing for a wage scale lower than that in Alberta, but approximately equal to the wages in Vancouver Island and in the interior of British Columbia.

Manitoba Joint Council of Industry

The Hon. John Bracken, Premier of Manitoba, stated in the Legislature on February 17 that while the Government asked for no appropriation in the current year for the Joint Council of Industry, they had no intention of discontinuing it, but rather desired to retain the machinery of the Council for service in future cases of emergency. The Manitoba Joint Council has been described in previous issues of the *LABOUR GAZETTE* (March, 1922; December, 1921, etc.) It was first established in 1920 under the provisions of the Industrial Conditions Act of 1919 (*LABOUR GAZETTE*, April, 1919). This Act provided for the appointment of a Council of five members, two selected as representing employers, and two as representing employees, with an impartial chairman. The Council was given wide powers of intervening in industrial disputes, either actual or threatened, investigating conditions of employment, cost of living and other matters. A year later the Act was amended in order to bring it more into harmony with the views of organized labour. By these amendments the right of

employers and employees to organize for any lawful purpose and the right of individual or collective bargaining were recognized, and any dispute as to the method or conditions of such bargaining had to be submitted to the Joint Council for determination; the Council was instructed to investigate any agreement alleged to affect the public injuriously; the power originally vested in the Council to declare in force certain rules in regard to industrial disputes, was withdrawn.

The yearly appropriation for the expenses of the Joint Council was reduced in 1922, and still further reduced in the following year, so that it has not been in active operation during the past two years. In its first year the Council was successful in effecting settlements acceptable to both parties in eighteen out of twenty cases of differences between employers and employees. A statement by the chairman, the Rev. C. W. Gordon (Ralph Connor), of the principles that were followed by the Council in dealing with cases coming before them at that time, was given in the issue of the GAZETTE for December, 1921.

Proposed Elections Act amendment

A list of amendments to Dominion acts that are desired by the railway employees of Canada is given elsewhere in this issue.

Among these acts is the Dominion Elections Act, which it is proposed to amend by a provision that would permit a labour organization, as such, to contribute to election funds. Such an amendment would affect section 10 of the act, which provides that no unincorporated company or association, and incorporated bodies only when organized for political purposes, shall make contributions to election funds, infractions of this law constituting an indictable offence. Section 10 appeared in the Elections Act of 1908, but some unimportant changes were made later and the penalty was increased.

It may be noted that a bill was introduced in the House of Commons on February 19 by Mr. William Irvine, the member for Calgary East, its purpose being to repeal sections 10 and 11 of the Elections Act. In introducing the bill Mr. Irvine stated that clause 10 was evidently intended to prevent large corporations from making donations to political parties. He claimed however that the best that the section could possibly do would be to effect an alteration in the manner in which the companies contribute to such funds. "Large amounts," he said, "could now be contributed under clause 10 by individuals for corporations and the penalties of the law be very easily evaded, but this is not so in con-

nection with labour unions. This cannot happen in the case of labour because we have no very wealthy labour men who are prepared to donate five or ten or one hundred thousand dollars to an election fund. Election funds in the case of labour have to be collected in twenty-five or fifty cent pieces from individuals." Mr. Irvine further argued that clause 10 stood in the way of any political action that labour might desire to take by constitutional means, and pointed out that the Elections Act of Great Britain permitted organized labour to contribute to election funds.

The Solicitor General replied that section 10 was not aimed at labour, but involved all corporations. It prohibits the application of their funds to politics for the reason that these funds are held by them for a specific purpose, and cannot therefore be used for another purpose. In regard to section 11, which prohibits persons from places outside Canada, from coming to this country during an election to canvass for votes, the Solicitor General said that this section was not aimed at labour, but rather at foreign corporations, and he deprecated the proposal to remove this safeguard against tampering with elections. Mr. Irvine's bill was negatived on the second reading.

Pensions for school teachers.

A bill has passed the Manitoba Legislature to provide pensions for public school teachers on the basis of joint contributions by the

province and the beneficiaries. The provisions of this Act which had been approved by the Manitoba Educational Association, will be noted in connection with the proceedings of the Legislature when the present session ends. In British Columbia provision was made by a statute of 1922, (chapter 64) enabling school boards to provide retiring allowances for their teachers but it is understood that the Provincial Teachers' Federation has prepared the outline of a contributory provincial scheme, which may be considered at a future session of the Legislature. Similarly, the Alberta School Teachers' Alliance is seeking to secure the adoption of a teachers' pension system. Under an amending Act of New Brunswick, also passed in 1922, a contributory pension fund was instituted for teachers on reaching the age of 60 (for men) or 55 (for women) after 35 years service. A teachers' pension act was passed by the Legislature of Ontario in 1917 (chapter 58) and amended in 1922. The Toronto School Teachers' Association have protested against the regulation adopted by the Board of Education on February 19 fixing

the retiring age for men at 65 and for women at 62 years, on the ground that as the fund has been in existence for so short a time it could not provide adequate allowances. Under the act the number of years of service allowed in computing the allowance is less than the number of years of actual service. Those years before April 1917 (when the fund started), count as half years, while only those since April, 1917 count as full years. This provision would substantially reduce the pension that would be payable, for example, to a teacher who began in January, 1886, and who would retire in December, 1925, after having given forty years of service, of which approximately 31 years were before 1917, and nine years since 1917.

The Association states that "to the public, salaries in Toronto appear to be handsome sums out of which men and women should have sufficient to supplement their small retirement allowance, but it must be remembered that it is only during the last five years that salaries in Toronto have provided for more than a bare subsistence. If no teacher were compelled to retire until December, 1929, it would allow all teachers in Toronto a good ten years' average upon which to calculate a superannuation allowance that might provide something approaching an adequate living."

It is pointed out that the regulation fixing the age limit in Toronto of 65 for male and 62 for female teachers does not preclude the re-engagement of teachers who are considered fit to continue at work.

Manitoba asks revaluation of soldiers' lands

The Manitoba Legislature has requested the Federal Government to put into effect at the earliest opportunity a revaluation policy in connection with the land, stock and equipment of the soldier settlers in order to place the investment of these settlers on a basis which will enable them to remain on the land. The Federal Government in 1918 entered upon a policy of settling returned soldiers upon the land as a means whereby they could enter civil life. The resolution of the Legislature points out that many returned soldiers took advantage of this opportunity and acquired land, stock and equipment for which they were obliged to pay prices that were considerably enhanced owing to the abnormal conditions existing at the time. The values of farm products declined rapidly in 1920-1921, the soldiers' property declining sharply in value, and as a result of these adverse conditions many of the men are stated to have abandoned their farms, thus defeating the pur-

pose for which the soldiers' settlement scheme was organized.

Supply of school teachers in Saskatchewan

The Prairie Provinces formerly experienced difficulty in securing qualified teachers in sufficient numbers to carry on the work of public education in the outlying regions, and the efforts of the Provincial Governments were directed to increase the supply by means of loans to students at normal schools, by a system of teachers' permits, and otherwise. The effect of these measures is shown in a speech by the Minister of Education of Saskatchewan at the recent session of the Provincial Legislature. "It is only during the past year" he said, "that the department was able to report that the supply of regularly qualified teachers was equal to the demand, and I am now pleased to say that only a few schools in the outlying districts are taught by teachers with a permit or extension of certificate. In 1906 out of 391 teachers certificated, 183 were trained in the province. In 1918, out of 1,564 certificated, 923 were trained in the province. During 1923 the proportion of home material grew to 1,793 teachers trained in Saskatchewan out of a total of 2,355 certificated. About 30 per cent of the students admitted to the Normal School during the past four or five years were admitted with incomplete academic standing. In 1923, students who were down on two subjects were admitted to the Normal School. In 1924, in view of the fact that the supply of teachers was becoming adequate, no students who had failed in two subjects in the June examinations were admitted. The Normal Schools, however, were filled to capacity. Notice has been given that this year no students will be admitted who have failed in any subject."

"Save the Forest Week" in Canada

A proclamation published in the *Canada Gazette* of February 28 directs public attention to the enormous losses sustained by Canada through forest fires, and requests that the week commencing April 19, and ending April 25 be observed throughout the country as "Save the Forest Week." It pointed out that "the protection and perpetuation of our forests are vital to the continued industrial welfare and national strength of Canada and to the health, comfort and prosperity of our people"; that the forest industries in Canada, next to agriculture, constitute the most important source of the national income, and that the prosperity of the country is dependent on a stable supply of raw materials from these industries, which are now threatened

with extinction unless the appalling wastage through forest fires can be curtailed. Forest authorities are agreed that the fire problem can only be solved through the active support of all concerned. They believe that the fires are largely caused by neglect and ignorance, and are therefore preventable. The proclamation appeals to settlers and others engaged in land clearing to observe the Dominion and provincial fire laws which have been enacted for their protection as well as for the preservation of the timber resources of Canada. It is further suggested "that loggers, saw-mill operators and others interested in timber operations should see that all equipment and appliances designed to prevent the origin or spread of fires shall be overhauled and placed in a state of thorough repair; that such persons should review with care the fire protection requirements of the legislation under which they operate; and that they should see that all employees working under their direction are properly instructed as to the danger of fire."

Ontario government and unemployment

The Speech from the Throne at the opening of the Legislature of Ontario on February 10 contained the following paragraph: "In consequence of the condition of unemployment, my ministers propose that the province shall pay a proportion of the cost undertaken by municipalities for relief purposes. Moreover, they have deemed it advisable to carry on, as far as possible, public undertakings which might otherwise have been suspended during the winter season. The occasion was considered opportune for commencing the erection of a department building, which, for a considerable time, has been much needed. It is intended that this structure will group together, in the vicinity of the legislative buildings, various services which are now scattered throughout the Capital city, and are therefore more or less inconveniently situated for the transaction of public business."

Further particulars on the provincial Government's policy in regard to unemployment were given in reply to questions on February 20. The Government, it was stated, recognizing the serious extent of unemployment, had already begun the erection of new government buildings in Toronto. The province operated 25 employment offices, which as far as possible, provided for unemployed women and girls as well as for men. Necessary public works had also been undertaken, including the maintenance and repair work on buildings, etc., "hydro" development and highway maintenance. Moreover, the Government was prepared to make payment of

one-third of the excess cost of useful public work undertaken by municipal corporations for the alleviation of unemployment.

Technical correspondence courses in Nova Scotia

The Speech from the Throne at the opening of the Legislature of Nova Scotia on February 27 referred to the progress of technical education in the province as follows: "In technical education continued interest is shown by the attendance at the short courses for industrial workers, and by a material increase in the number of students who take advantage of the correspondence study courses. The Technical College at the close of the past session graduated the second largest class of engineering in its history, and the standard of technical education generally was maintained at the same high level of efficiency, with an appreciably reduced expenditure."

Correspondence courses are among the provincial activities in the sphere of technical education for which assistance is given by the Dominion under the terms of the Technical Education Act. This Act is administered by the Technical Education Branch of the Federal Department of Labour. The Annual Report of this branch for 1923 referred to the work of the Correspondence Study Division of Nova Scotia in the following terms:—

"The obvious function of the division is to bring education to those who live in isolated districts or who, for any reason, do not care to attend classes, but an encouraging result has been that several of the students have, through the formation of the "study habit," been enabled to enter evening classes, the short courses, or continue their education in the high schools. That the opportunity for study is appreciated by the mechanic is shown by the enrolment in drafting and mathematics, which may be called the 'key studies' for all mechanical trades. In trades like plumbing, where there is a form of apprenticeship, the division is doing good work in giving such theoretical instruction, together with practice in drawing, as will enable men to obtain the plumber's license, and, out of an enrolment of eight, five have completed the course and obtained the master plumber's certificate. The most notable feature of the year has been the interest shown in the work by large employers of labour in the province. The Maritime Telegraph and Telephone Company, Limited, has approved the telephony courses and offered inducement to its employees to study the subject, and seventy men have been enrolled. The instructor, who is a graduate of the Nova Scotia Technical College, is the chief engineer of the company,

and the executive heads of the various departments not only take a keen interest in the progress of their men, but also give them advice and assistance in their studies. When a man completes a course a copy of his record card and reports by the instructor and superintendent of the division are sent to the company."

Joint

management in railway shops

The arrangement entered into last November, following negotiations between the Canadian National Railways and its shop craft employees, for the establishment of a form of joint control in the railway shops of the system, was noted in the December issue of the *LABOUR GAZETTE*. The arrangement was that a joint committee was to be established in January in the shops at Moncton for the purpose of promoting closer co-operation between the management and the employees in regard to matters not involving wage rates. Referring to the Moncton experiment the *Canadian Railway and Marine World*, in its February issue, said: "It has not been tried at any other shops on the system. Employees at each individual shop are to vote to determine whether they want to try the plan. Developments to date indicate that no particular haste is being displayed in getting the vote recorded and the plan applied at those shops favouring it. A recent London, Ontario, despatch, dealing with a shopmen's meeting there, said: 'Reports of the working out of the Baltimore and Ohio plan* were read and a discussion of its application to the London shops was taken up. No date was set for the vote of the trade unionists of the Federation on this question, as the discussion will be carried on for several months before any decision is made. The use of this plan here will depend to a certain extent on whether it proves to be a success in Moncton shops.'"

Licensing of plumbers in New Brunswick

The examining board of plumbers in New Brunswick stated that at the end of February 238 plumbers in the province were qualified for registration under the Public Health Act of 1918, and would be granted certificates. Regulations have been issued under the provisions of this Act which state that no person unless holding a plumbers license shall work as a plumber or engage in plumbing within the province of New Brunswick except under direct and immediate supervision by a plumber duly licensed according to the regulations. The regulations further

provide that plumbers who, at the time of the approval of the regulations by the executive council, have been working at the trade for a period of five years prior to such approval, upon giving proof thereof to the examining board, and upon application for a license and payment of fee, shall be entitled to receive and be granted such license without further examination on condition however that the application and payment are made within six months after such approval. Any person who can satisfy the examining board that he has worked at plumbing for a period of five years as a learner or assistant under direct and immediate supervision of one or more plumbers entitled to a license under the regulations, is also entitled to a license under the regulations on paying the fee and passing the required examinations.

Farmers' organizations in Canada

In the Manitoba Legislature on February 10, Mr. John Queen, M.L.A., commended the Manitoba Farmers' Union "for making the protection of human life its first consideration by adopting a rule that no farmer make payment on a mortgage or debt by depriving his family of necessities." The organization here referred to is the Farmers' Union of Canada, which held its first convention in Saskatoon in 1922, and which aims among other things through legislation to obtain control by the farmers of the main Canadian produce. The preamble to the constitution of the Farmers' Union is similar in its phraseology to that which emanated from the One Big Union, a labour organization on the North American continent.

An account of the various farmers' organizations in Canada is given in the Report on "Organization in Industry, Commerce and the Professions in Canada," published yearly by the Federal Department of Labour. The report states that the chief farmers' organization for the purpose of promoting legislation in the interests of farm workers, is the Canadian Council of Agriculture with which most of the organizations operating under the name of United Farmers, as well as other important bodies, are in affiliation, giving the council a membership of 150,000. The strongest numerically of the United Farmers is the Ontario association, which reported a membership of 35,000 for 1923. The United Farmers of Alberta is the second strongest of these bodies with 14,790 members in the same year. Provision is made by the United Farmers for the organization of the members' wives and daughters with the view to propagating their principles and of elevating the standard of living.

* *LABOUR GAZETTE*, May, 1924, page 400; December 1924, page 1060.

in rural communities. In 1922 the United Farmers of Nova Scotia, New Brunswick and Prince Edward Island were amalgamated under the title of Maritime United Farmers. After a trial of one year, the plan of amalgamation proving unsatisfactory, the provincial associations reverted to their former status.

I.F.T.U. and all-Russian council

In a note in the January issue on the relations of the All-Russian Trade Union Council of Trade Unions and the International Federation of Trade Unions it was stated that a special meeting of the General Council of the latter organization was to be held at Amsterdam on February 5 to consider the Russian proposal for a united front on the basis of "class war." The General Council met at Amsterdam on the date announced and considered the social proposals of the All-Russian Council, including one to call a world congress to which all trade union organizations would be invited, provided that they adopted the principle of the "class war." The General Council stated its readiness to hold a conference at Amsterdam with the All-Russian Council as soon as this organization should intimate its desire to be admitted to the International Federation of Trade Unions.

Major C. K. Newcombe has been appointed to the position of chairman of the Manitoba Workmen's Compensation Board.

The City Council of Montreal adopted, in January, a by-law concerning the erection and establishment of public laundries. Companies or persons wishing to open such businesses are required to submit plans of the buildings to be used for the purpose, and must secure a permit from the city after inspection of the premises by the superintendent of buildings. No laundry may be opened if two-thirds of the number of municipal electors in the electoral district make objection in writing.

Under authority of amendments passed at the last session of the Legislature of British Columbia (LABOUR GAZETTE, January, 1925, page 24), the administration of the offices of the inspector of boilers and machinery and the inspector of electrical energy has been taken over by the Workmen's Compensation Board, to whom reports are in future to be made direct. Mr. Hugh S. Gilmour, a member of the Compensation Board, who is in charge of its accident prevention work, will have direct supervision over the new departments. The office of the chief inspector of electrical energy is in Vancouver, and that of the boiler inspector is at New Westminster.

The principal recommendations contained in the report made by the Quebec commission to investigate the subject of workmen's compensation, were outlined in the last issue of the LABOUR GAZETTE. In reply to a question in the Provincial Legislature on March 4, as to the intention of the Government in regard to the report, it was stated that "the Government is considering the various submissions of the report, which suggests that the Government wait until after the labour conference at Geneva in May and June next before modifying the present legislation if it is expedient to do so."

The matter of voluntary arbitration in the settlement of trade disputes was among the subjects discussed at the seventeenth annual convention of the Canadian Lumbermen's Association which met in Quebec on February 4 and 5. The association recorded itself as being in favour of the principle of arbitration and the board of directors was asked to prepare a plan of voluntary arbitration and put it into operation.

The Vancouver city council decided on February 25 to defer until the next municipal election a decision on the proposal to provide superannuation allowances for the policemen and firemen. Under the proposed scheme the employees, in addition to turning over \$10,000 from the funds of their organizations, would contribute four per cent of their salaries to a pension fund, the city contributing an amount equal to four per cent of the salaries. The proposal was opposed on the ground of economy, and it was resolved to examine other municipal pension arrangements, in order to prepare a scheme that would be actuarially sound, this scheme to be submitted to a vote of the ratepayers at the elections in December.

The Alberta Government, in co-operation with the Imperial Government, has re-opened the Vermilion School of Agriculture, where fifty-seven young men from Great Britain are now receiving elementary agricultural instruction.

The Department of Immigration has reached an agreement with the Overseas Settlement Committee in regard to grants for children from the poor law and charitable institutions migrating from Great Britain to the Dominion. Heretofore the grants have been allowed to all children under 17 years of age, but this will not apply, with possibly occasional exceptions, only to children between 14 and 17. The new rule will affect only institutional children; not those emigrating with their parents.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

The Labour Situation

EMPLOYMENT at the beginning of February showed customary recovery from the heavy losses recorded at the beginning of January, but the situation continued to be less favourable than on the same date of last year. The following is a summary of employment conditions at the end of February, 1925, as reported by superintendents of the Employment Service of Canada.

In the Maritime Provinces logging, which had been held up by weather conditions for some little time, was drawing to a close, and the hauling of the logs had begun. The fishing industry showed considerable activity and continued to engage most of the persons of that calling. Building and construction were inactive and only such work of this nature as might be required indoors or such as was being carried out by municipalities as measures of relieving unemployment, was being done. In the coal mining districts of Nova Scotia reports indicate that the mines were fairly busy.

In Quebec some general improvement in industrial conditions was discernible, though it was not marked in any considerable degree. As would be expected at this season of the year under any circumstances and particularly in view of the lack of snow this year, the logging industry showed decreased activity as the bush operations were drawing to a close. River driving and sawmill operations had not yet started, though favourable weather, it was anticipated, should open up this work within a reasonable time. The different classes of manufacturing all appeared to be fairly busy, and in some cases showed an improvement. The construction of public works afforded considerable employment at different points, notably the City of Quebec, and while private construction was none too brisk, prospects were reported as good.

In Ontario the situation was much as would be expected at this time of year. In the northern part of the province the logging industry was suffering its annual curtailments, while in those districts where manufacturing predominates, factories showed quite important improvements. These latter improvements appear to be fairly general throughout all industries and throughout nearly all districts, and while the individual improvement in each plant might not be so important, yet the general tendency to increase staffs would appear to be an indication that manufacturing industries in general were in receipt of, or anti-

cipating, further orders for their products. Demands for farm hands were general throughout the province, and were somewhat substantial as is customary at this season. Construction had not yet opened up to any very great extent, and, while in some cases, municipalities were continuing public works as relief measures, in others such work was being completed. Of the women seeking work at the employment offices, only those could be placed who were desirous of securing housework and had a knowledge of cooking.

Manitoba reports indicate that the demands for farm hands were generally increasing as was also the supply of experienced applicants. The demand for bush workers was only nominal as the bulk of this work for the present season has been completed. Construction remained dormant. More vacancies and applications for city and other domestic work were received by the employment offices than had been the case for some little time.

Prevalent throughout the whole of Saskatchewan was a demand for farm hands, and while in some cases a shortage of experienced workers was reported, in most cases sufficient suitable applicants were available. This was the predominant note in the condition in this province, as the construction industry remained in the depressed condition in which it had been since the beginning of the winter, and the demand for general labour was of a very minor nature. Co-incident with the demand for farm hands was the demand for domestic workers, chiefly for the country, but a shortage of workers of this class was reported from different centres.

The demand for farm hands in Alberta was also reported as increasing, but in this province sufficient applicants were available at all points to fill the requirements. Except for relief work being carried out by municipalities in the larger centres, construction was in a very inactive condition. At Lethbridge a sugar beet factory is in prospect, and while it may be some little time before work is under way a considerable amount of employment will be afforded locally on this structure. The coal mines worked broken time around the end of the month. Though a number of workers were seeking general labour, very little work of such a nature was offering. Women applicants at the employment offices were reported as being in excess of the orders.

In British Columbia in the logging industry not much immediate improvement is reported,

although there are indications that an improvement might not be far distant. The metal mining industry is fairly quiet, while coal mining in the Nanaimo and Fernie districts is reported as improving. Apart from municipal and governmental relief work being carried out for the purpose of relieving unemployment, construction work was very quiet. Manufacturing showed no improvement, practically all firms appearing to have sufficient workers, and quite a number of persons were seeking work in the different classes of factories. There was practically no demand for the services of women, who were looking for work in fair numbers, particularly at the larger centres, in other than domestic positions, where ability to cook was required.

EMPLOYERS' REPORTS Considerable improvement in employment was indicated in reports from employers to the Dominion Bureau of Statistics at the beginning of February; this largely represented recovery from the pronounced declines recorded on January 1. Employment continued, however, to be in less volume than on the same date of last year. The gains in manufacturing were largest, but logging and construction also showed improvement while mining and trade reported curtailment.

Activity in all except the Prairie Provinces increased considerably, the revival in Quebec being most marked. In the Maritime Provinces, manufacturing and transportation recorded increases; logging, mining, construction and trade, however, registered declines. In Quebec, manufacturing, logging, mining and construction showed increased activity, but trade and transportation afforded less employment. In Ontario, manufacturing generally, logging, mining, railroad construction and wholesale trade reported improvement, but there were losses in transportation, highway and building construction and trade. In the Prairie Provinces, there were gains in manufacturing, logging, railway operation and construction, with more pronounced reductions in coal mining and trade. In British Columbia, manufacturing, logging, mining and highway construction registered increased activity, while transportation and trade were slacker.

Recovery was indicated in Montreal, Quebec, Toronto and Hamilton, while in Ottawa, Winnipeg and Vancouver there were contractions in employment. In Montreal, activity increased in manufacturing, while trade, construction and electric current plants showed declines. In Quebec, boot and shoe factories and construction reported increased activity. In Toronto, manufacturing generally showed

improvement, but curtailment was recorded in trade and construction. In Ottawa, pulp and paper works made considerable gains; reductions in trade, iron and steel and some other divisions, however, resulted in a net loss in employment. In Hamilton, manufacturing showed moderate recovery, especially in the iron and steel and clay, glass and stone divisions. In Winnipeg, activity in printing and publishing and trade declined, while improvement was indicated in textiles and local transportation. In Vancouver, there were gains in manufacturing and road construction, but employment in shipping and stevedoring and trade showed a falling off.

Within the manufacturing division, the resumption of operations in iron and steel, textile, lumber and tobacco works caused the largest gains, while there were also increases on a somewhat smaller scale in leather, rubber, pulp and paper, non-ferrous metal and chemical factories. On the other hand, food, fur, electric current, electrical apparatus, stone and cement plants showed further, though moderate curtailment. Continued expansion was noted in logging. In mining, there were declines in the Eastern and Alberta coal fields, and non-metallic mineral mines were also slacker; metallic ore mining, however, showed improvement. Telegraph and telephone companies recorded decreases in their operating departments. Steam railway operation employed a slightly larger number of workers, but reductions were noted in local and water transportation. Construction on highways and railroads increased, while building construction showed further seasonal contractions. Employment in trade also declined, following the activity of the holiday season.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of February, 1925.

TRADE UNION REPORTS The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based it should be understood that such figures have reference only to the organizations reporting.

The situation at the end of January as shown by reports received from 1,606 trade union locals with 160,365 members was more favourable than in December, 10.2 per cent

of the members being out of work on January 31 as compared with 11.6 per cent at the close of the preceding month. The level of employment, however, was lower than in January of last year when 7.5 per cent of the members were idle. New Brunswick, Quebec and British Columbia locals registered improvement over December, due in Quebec, to greater employment for garment workers. In the remaining provinces declines occurred, the most noteworthy being in Nova Scotia owing to reduced employment for coal miners, and in Manitoba where less work was afforded in the manufacturing division. In comparison with January, 1924, Nova Scotia and Saskatchewan unions alone reported gains. The manufacturing industries showed considerable improvement as compared with December, 14.3 per cent of the members being idle as compared with 20.9 per cent at the end of December. Garment workers were considerably busier and accounted for the greater part of the increase, though bakers, cigar and tobacco, wood, textile, hat, cap and glove, leather and jewelry workers, and metal polishers also were more fully engaged. Employment for paper makers, printing tradesmen, iron and steel and glass workers, however, was on a lower level. More unemployment was registered in the manufacturing division than in January, 1924, when 6.7 per cent of the members were idle owing to inactivity among garment workers who have reported exceptional unemployment for the past two months. More unemployment than in December was reported from Nova Scotia and Alberta coal fields but in British Columbia locals no members were registered as out of work. Considerable short time was reported in the Nova Scotia and Alberta mines. Asbestos miners in Quebec were fully employed. Reports received from 175 unions in the building trades comprising 17,703 members showed that 27.5 per cent of the members were out of work at the end of January as compared with 24.9 per cent on December 31, 1924. Bricklayers, masons and plasterers, steam shovel and dredgemen, carpenters and joiners, electrical workers, plumbers and steamfitters, tile layers, lathers and roofers and hod carriers all reported larger percentages of idleness than in December and in the other trades there were small gains. The situation in the building trades, however, was slightly less favourable than in January, 1924, when 26.3 per cent of the members were idle. A slight change for the better was reported in the transportation industry, 5.1 per cent of the members being out of work as compared with 5.5 per cent in December. Navigation workers and street and electric railway em-

ploees were more fully engaged. Teamsters and chauffeurs reported a nominal change only and steam railway employees were slightly less active. Lumber workers and loggers reported no unemployment. Fishermen were not so active as in December. Barbers, hotel and restaurant and theatre and stage employees registered slightly more unemployment. Stationary engineers and firemen were somewhat busier.

EMPLOYMENT OFFICE REPORTS

During the month of January, 1925, the offices of the Employment Service of Canada made 26,199 references to positions, and effected a total of 24,908 placements in comparison with 21,219 placements during the preceding month and 29,868 during January, 1924. The placements in regular employment during the month numbered 11,438 of men and 2,591 of women—a total of 14,029—as against 15,237 during the same month of last year. The placements in casual work in January numbered 10,879. The offices of the Employment Service were notified of 26,807 vacancies during the month under review, of which 20,481 were for men and 6,326 for women, as compared with 33,571 vacancies offered during January, 1924. Applications for employment were registered from 32,934 men and 9,125 women, a total of 42,059, while during the same month of the preceding year registrations totalled 44,613. During January, 1925, there was an increase over the preceding month in the volume of business transacted, but as will be noted from the above figures a decline in comparison with January, 1924. The percentage of gain in January, 1925, over December, 1924, was, however, larger than between January, 1924, and December, 1923. A report in detail of the work of the offices for the month of January, 1925, will be found elsewhere in this issue.

PRODUCTION REPORT

The Dominion Bureau of Statistics reports that the January production of pig iron in Canada rose 25 per cent to 28,302 long tons as compared with 22,544 tons in December. The increased production was due largely to the output of foundry iron, which amounted to 11,290 tons, none of this grade having been made in December. The amount produced included 13,133 tons of basic iron for remelting into steel, and 3,879 tons malleable iron for sale. Of the foundry iron only six tons was intended for sale. Blast furnace charges in January consisted of 52,047 long tons of foreign ore, 33,667 short tons of coke, and 14,067 short tons of limestone. At the end of January there were three furnaces in blast, one at Sydney, Nova Scotia, one at Hamilton, Ontario, and

one at Sault Ste. Marie, Ontario. The daily capacity of the active furnaces was 1,075 tons or about 21 per cent of the total daily capacity of the 15 furnaces which were being carried on the active list as being furnaces that are likely to or can be blown in at any time. Ferro-alloys at 1,691 tons marked a slight increase over the December output of 1,619 tons, and consisted mainly of the grade composed of about 80 per cent manganese; a small quantity of ferro-silicon also was produced.

The production of steel ingots and castings in Canada in January reached a total of 27,126 long tons, an increase of 3 per cent over the 26,239 tons produced in December. Steel ingots advanced by 603 tons to a total of 26,187 tons and steel castings rose to 939 tons or an increase of 284.

A report from the Department's correspondent at Cobalt shows that eight cars containing approximately 618,043 pounds of silver ore were shipped from the Cobalt camp during the month of February, as compared with 10 cars of silver ore containing 776,091 pounds in January. The Nipissing Mine shipped 194 bars, containing 222,569.51 ounces of silver, and The Mining Corporation of Canada shipped 141 bars, containing 141,215.28 ounces of silver, making a total of 335 bars, containing 363,784.79 ounces of silver shipped during the month of February, as compared with 511 bars containing 573,394.83 ounces shipped in the previous month.

A report from the Department's correspondent at New Glasgow, Nova Scotia, gives the following figures showing the production of coal in Pictou County, Nova Scotia, for the month of January, 1925: Acadia Coal Company, Limited, 43,503 tons; Greenwood Coal Company, Limited, 5,018 tons; and Intercolonial Coal Mining Company, Limited, 13,528 tons.

As complete figures for the coal production in Canada for January are not available, statistics for the previous month are given at the end of this section.

The report of the British Columbia Forestry Branch shows that 127,310,581 feet of timber, board measure, was scaled in the province during January, 1925. The total includes fir, 56,998,447 feet; cedar, 30,833,927; spruce, 9,600,992 feet; hemlock, 19,676,684 feet; balsam, 2,830,254 feet; yellow pine, 1,343,440 feet; white pine, 1,241,031 feet; jack pine, 825,075 feet; larch, 3,641,860 feet; and miscellaneous species, 263,343 feet.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, according to a preliminary statement amounted to \$16,716,468 during

January, 1925, as compared with \$18,328,491 in January, 1924, a decrease of \$1,612,023.

The gross earnings of the Canadian Pacific Railway were given in a preliminary statement as \$11,896,513 for January, 1925, as compared with \$13,392,432 for January, 1924, a decrease of \$1,495,919.

Coal Statistics for December, 1924.—The output of coal from Canadian mines during December dropped 4 per cent below the production for the preceding month and 3 per cent below the average for December in the past five years. The figures were 1,505,519 tons in December as against 1,569,483 tons in November, while compared with the average for the month during the five preceding years, the decrease was 345,982. Production by provinces in December showed increases in Alberta and British Columbia and decreases in Nova Scotia and Saskatchewan.

The total production of coal in Canada during 1924 was 13,617,000 tons, a decrease of 3,373,000 tons from 1923. Decreases occurred in the provinces of Nova Scotia and New Brunswick, Alberta and British Columbia, while Saskatchewan and the Yukon Territory showed slight gains over the preceding year. In Nova Scotia, the decrease amounted to 1,040,000 tons; in New Brunswick, 61,000 tons; in Alberta, 1,679,000 tons; in British Columbia, 633,000 tons. Saskatchewan showed a gain of 39,000 tons and the Yukon Territory a gain of about 800 tons.

The total number of men employed in the coal mines of Canada during December was 30,959 of whom 23,966 worked underground and 6,993 on surface, as compared with a total of 28,904 in November, of whom 22,411 worked underground, and 6,493 on surface. Production per man was 48.6 tons for December, as against 53.4 tons per man for November; during December the production per man-day was 2.6 tons, being the same as in the previous month. Lack of orders is given as a cause for part of the tonnage lost in December.

BUILDING PERMITS AND CONTRACTS AWARDED

According to a report from the Dominion Bureau of Statistics, the value of building permits issued in January was less than in December, but greater than in the corresponding month of last year. The figure for January, 1925, was \$5,433,204; for December, 1924, \$6,333,619, and for January, 1924, \$4,454,119.

According to the *MacLean Building Review* issued by MacLean Building Reports, Limited, the value of contracts awarded in Canada during February was \$11,047,600 compared with \$8,934,700 in January. Residential building accounted for 22.1 per cent of the Febru-

ary total amounting to \$2,442,200; business building amounted to \$3,771,200 or 34.1 per cent; industrial building to \$3,608,600 or 32.7 per cent; and public works and utilities to \$1,225,600 or 11.1 per cent. The activity was distributed among the provinces as follows: Ontario, 31 per cent; Quebec, 43.4 per cent; British Columbia, 12.9 per cent; Prairie Provinces, 5.9 per cent; and the Maritime Provinces, 6.8 per cent.

FOREIGN TRADE The summary of Canadian trade prepared by the Department of Customs and Excise shows that in January, 1925, the merchandise entered for consumption amounted to \$58,375,502 as against \$66,568,060 in January, 1924. The domestic merchandise exported amounted to \$75,347,012 in January, 1925, as compared with \$124,429,462 in December, 1924, and \$69,575,167 in January, 1924. Foreign merchandise exported amounted to \$652,263 in January, 1925, and \$779,565 in January, 1924.

The chief imports in January, 1925, were: fibres, textiles and textile products, \$14,542,022; iron and its products, \$8,224,742; non-metallic minerals and products, \$8,224,742; non-metallic minerals and products, \$9,511,018; and agricultural and vegetable products, mainly foods, \$7,068,536.

The chief exports in the same month were: in the groups of agricultural and vegetable products, mainly foods, \$20,932,600; wood, wood products and paper, \$18,600,250; animals and animal products, \$14,683,841; and non-ferrous metals and their products, \$8,633,471. During the ten months ending January, 1925, exports of agricultural and vegetable products, mainly foods, were valued at \$355,200,679; wood, wood products and paper, \$208,544,863; animals and animal products \$139,137,069, and non-ferrous metals their products, \$71,080,795.

Strikes and Lockouts

The time loss due to industrial disputes was greater in February than in January, 1925, but less than during February, 1924. There were in existence during the month 13 disputes, involving 3,030 employes, and resulting in a time loss of 26,334 working days, as compared with 10 disputes in January, 1925, involving 694 workpeople and resulting in a time loss of 4,882 working days. In February, 1924, there were recorded 17 disputes, involving 12,933 workpeople and resulting in a time loss of 197,083 working days. Ten new strikes and lockouts commenced during February, with a time loss of 24,414 working days. One of the strikes and lockouts commencing prior to February, and five of the strikes and lockouts commencing during February terminated during the month. At the end of the

month, therefore, there were seven strikes and lockouts on record affecting 2,618 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

Retail food prices continued to advance. The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.93 at the beginning of February as compared with \$10.77 for January; \$10.75 for February, 1924; \$10.53 for February, 1923; \$10.61 for February, 1922; \$14.08 for February, 1921; \$16.92 for June, 1920 (the peak); \$15.77 for February, 1920; \$12.54 for February, 1918, and \$7.75 for February, 1914. Flour and bread showed the most important advances while there were smaller increases in the prices of potatoes, meats, cooking eggs, cheese, tea and coffee. Butter, fresh eggs, sugar and rice were lower. Including the cost of fuel and rent with that of foods the total budget averaged \$21.19 for February, as compared with \$21.09 for January; \$21.18 for February, 1924; \$21.17 for February, 1923; \$21.07 for February, 1922; \$24.85 for February, 1921; \$26.92 for July, 1920 (the peak); \$24.71 for February, 1920; \$19.80 for February, 1918, and \$14.54 for February, 1914. Fuel was slightly lower but no changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics declined slightly to 164.5 for February as compared with 165.2 for January; 156.6 for February, 1924; 153.6 for February, 1923; 153.5 for February, 1922; 191.1 for February, 1921; 256.7 for May, 1920 (the peak); 238.8 for February, 1920, and 200.5 for February, 1919. In the grouping according to chief component material four of the eight main groups advanced and four were lower. Vegetables and their products were higher due to increases in the prices of grain, flour, and other milled products. Increases in the prices for silk and cotton caused an advance in the fibres, textiles and textile products group. The wood and wood products group and the iron and its products group both advanced, the former because of higher prices for lumber and the latter because of higher prices for some lines of pig iron. Animals and their products declined substantially, increases in cattle, hogs, sheep and meats being more than offset by declines in butter, eggs and hides. Non-ferrous metals declined because of lower prices for copper, lead, tin and spelter. Non-metallic minerals and chemicals and allied products were also lower.

COMBINES INVESTIGATION ACT, 1923

Report of Commission appointed to Investigate Alleged Combine in Fruit and Vegetable Industry

AN interim report was issued during February by Mr. Lewis Duncan, of Toronto, who was appointed last July as Commissioner under the Combines Investigation Act, 1923, to investigate a combine alleged to exist among the jobbers, brokers and other dealers in fruit and vegetables in British Columbia and elsewhere, resulting in the control of prices to the detriment of the producers and consumers (LABOUR GAZETTE, December, 1924, page 1019). The report refers to conditions as found in the provinces of British Columbia, Alberta, Saskatchewan and Manitoba.

A formal complaint, signed by six residents of British Columbia, led to the appointment of the Commissioner by an Order in Council, which named numerous parties to the alleged combine, these parties being for the most part members of the Nash organization in Canada, or shareholders in the Growers' Sales Agency Limited.

The report is a volume of 184 pages, containing details of the evidence collected in the course of the investigation, followed by a summary of the conclusions reached by the commissioner, and by a number of recommendations, which are given below. Appendices to the report show: (1) the companies in the Nash organization; (2) a chronological table showing growth of the Nash organization; (3) the duties of an agent; (4) table showing certain apparently undisclosed tomato profits for 1924; (5) statement showing certain moneys to be repaid to growers; (6) statement showing certain other merchandising profits; (7) correspondence showing attitude of Nash organization to growers and growers' organizations; (8) copies of contracts for sale of growers' products, and other documents; (9) auditors' reports, Calgary, Regina, Winnipeg.

The conclusions and recommendations of the Commissioner are as follows:—

Conclusions

The conclusions of your commissioner are that the Nash combination of jobbing and brokerage houses is a combine which is operating and has operated detrimentally to the interests of the Canadian public, including in that term producer, consumer and trade opposition. Your commissioner is also of the conclusion that while other combines within the meaning of the statute exist, such as the

self-defensive combine of the members of the Growers' Sales Agency Limited, and the local associations of jobbers who meet to discuss prices and supply, still the Growers' Sales combine would dissolve into its constituent competitive elements if the jobber-broker connection were made unlawful; and that the price fixing arrangements of the local associations of jobbers are made more permanent than would ordinarily be the case by the threats of the Nash brokers and supervisors to discipline any price cutter by depriving him of his supply.

The Nash combine is a double combine. It consists first of a combination of a large number of jobbing houses; which has already been referred to as the jobber-jobber combine; and secondly of an association in the one organization of brokerage and jobbing houses, referred to as the jobber-broker combine.

A jobber-broker combine is not a "natural" combine; for it is an attempt to join in the one organization two opposing factors; the broker, whose interest should be solely that of the grower; and the jobber, whose interest is opposed to that of the grower. Such a combination is wrong in principle and dangerous, and your commissioner recommends that it be declared unlawful. There is a mass of testimony in favour of such action, including testimony already quoted from jobbers.

The following resolution passed at a meeting of the Directors of the Berry Growers Co-operative Union of B.C., held on January 30, 1925, may be here quoted as showing the feeling of the growers:—

That whereas the fruit and vegetable selling at prairie points is now performed by brokers who are paid for their services by the shippers of British Columbia, and at the same time these brokers are appointed and controlled by jobbers at prairie points who buy British Columbia produce from the brokers, be it resolved that this Union goes on record as opposing this principle, and that the Dominion Government be petitioned to pass legislation making jobber owned brokerages in Canada illegal; and that a copy of this resolution be sent to the Premier, the Ministers of Agriculture and Labour, the Canadian Horticultural Council, and to Mr. Munro, M.P. for the Fraser Valley.

If legislative action is taken to sever the jobber-broker connection of the Nash and Growers Sales organization, the latter organization will dissolve into its constituent and independent jobber elements. But in the case of the Nash organization there will remain the jobber-jobber combine.

Such an organization has the power by collective action to operate prejudicially to the

interests of the public. If there were no collective action, but if each jobber member traded in competition with fellow members and the opposition, no exception could be taken; and the Nash group though much larger would be in the same position as other groups of jobbing houses, conducted under one management, such as the Scott Fruit Co. Limited, P. Burns & Co. Limited, and Macdonald's Consolidated, Limited.

The insistence however of the Nash and in a more limited way of the Growers Sales houses on sales to them being made through their brokerage offices (which for this purpose are only brokerage agencies levying a toll on each transaction), in effect denies a great part of the market in western Canada to products handled by other brokers. Western Canada has been divided by these organizations into brokerage areas, and the policy has been laid down that brokers selling produce direct to jobbing houses must pay brokerage to the brokerage office within whose area the sale has been made. This toll amounts in some cases to \$90 a car; and is exacted for the privilege of being allowed to sell to the jobbing house. The charge is made even when the brokerage company has had nothing to do with effecting the sale. This practice restricts distribution, assists the creation of monopoly and injures the producer, consumer and broker. Your commissioner recommends that it be declared unlawful.

The phenomenal advance of the Nash interests at the expense of the independent broker and jobber is bringing Western Canada face to face with the possibility of a monopoly in the distribution of fruits and vegetables. Once monopoly or effective monopolistic control is reached the regulating factor of competition disappears. The only alternative to monopoly is to make possible the continuation of effective competition both of brokers and jobbers.

In the United States of America the courts have been given power to order the dissolution of certain combines on the application of the Federal Trade Commission. Your commissioner suggests the advisability of considering the enactment of similar legislation applicable to persons engaged in the distribution of the products of the soil.

While your commissioner feels that legislative action along the lines indicated is necessary, he is also of the opinion that many of the existing evils could be removed by the establishment of a nation-wide grower-owned selling agency. It would lie with such an agency, while obtaining the best prices for the growers, to give a maximum distribution without wasteful overlapping, and to develop

a rational and unified export policy. Provided four tests are met, no merchandizing, no favouritism, the strictest accounting, and the employment of men of probity, that way lies success.

Recommendations

(1) That it be made unlawful for any combine (as defined in the Combines Investigation Act, 1923), operating or controlling a chain of jobbing houses dealing in the products of the soil to operate or in any way control the operation of the business of broker or factor handling the products of the soil.

(2) That it be made unlawful for any combine (as defined in the Combines Investigation Act, 1923), operating or controlling a chain of jobbing houses dealing in the products of the soil to require as a condition of the purchase or handling of goods by any of its jobbing houses the payment to itself or any of its companies or any other person of a commission or purchasing fee or similar charge; provided that nothing shall prevent the payment to jobbers of the customary jobber's commission for handling goods on consignment.

(3) That the rendering of false or deceptive account sales be made a criminal offence; and that false or deceptive account sales be defined as account sales which do not truly and precisely set out the transaction in question.

(4) That it be made a criminal offence for any broker or factor handling, dealing in or disposing of the products of the soil, to make an undisclosed "overage" or merchandising profit on consignment shipments.

(5) That brokers, factors, jobbers and others handling, dealing in or disposing of the products of the soil, be required to maintain for a period of three years complete lot records of goods handled on consignment.

(6) That a minister of the Crown be empowered to cause to be examined relative to any transaction complained of, the books, papers and records of any broker, factor, jobber, or other person handling the products of the soil.

(7) That consideration be given to the desirability of passing legislation similar in principle to the anti-trust legislation of the United States of America.

The question of rates of pay and working conditions for women employees at the British Empire Exhibition at Wembley last year was raised in the British House of Commons on February 12, by Miss Ellen Wilkinson, the Labour member for Middlesbrough East, during the debate on the supplementary estimates.

INDUSTRIAL DISPUTE INVESTIGATION ACT, 1907

Amending Bill Introduced in Parliament

A BILL to amend the Industrial Disputes Investigation Act was introduced in the House of Commons on March 12, by the Minister of Labour. The necessity for such legislation arose out of the recent judgment of the Privy Council declaring the act of 1907 to be *ultra vires* of the Parliament of Canada. The text of this judgment was given in the last issue of THE LABOUR GAZETTE. (A general account of the Industrial Disputes Investigation Act, and of the various Provincial Acts which make provision for the settlement of industrial disputes, is given as a supplement to the present issue.) The Privy Council found the act invalid on the ground that it contained provisions authorizing action by the Federal authorities in regard to matters which, under the terms of the British North America Act, were within the legislative competence of the several provinces and were therefore not under the control of the Dominion Parliament. The purpose of the amending Act, as stated by the Minister of Labour, is to limit the application of the act in terms to matters not within the legislative jurisdiction of any province. It is recognized, of course, that the enumerative provisions of the amendment are not technically necessary for this purpose, but it is thought advisable, nevertheless, to insert them for purposes of convenience and to make the act more intelligible to the body of employees and employers whose interests the legislation is designed to serve. These remarks apply as well to any overlapping which may be found to exist in the amendment as drawn. It is hoped the enactment of the section in this form will tend to prevent misunderstandings and differences regarding the application of the act to particular disputes and create greater certainty in the administration of the act than would be possible if the provisions were couched in more general terms. The purpose of the proposed paragraph IV is to enable any province to take advantage of the Dominion act should it so desire.

Text of the Bill

The text of the Bill is as follows:—

1. *The Industrial Disputes Investigation Act, 1907*, is amended by inserting after section two thereof the following:—

APPLICATION OF ACT

2A. (1) This Act shall apply to the following disputes only:—

(i) Any dispute in relation to employment upon or in connection with any work,

undertaking or business which is within the legislative authority of the Parliament of Canada, including but not so as to restrict the generality of the foregoing:

- (a) works, undertakings or business operated or carried on for or in connection with navigation and shipping, whether inland or maritime;
 - (b) lines of steam or other ships, railways, canals, telegraphs and other works and undertakings connecting any province with any other or others of the provinces, or extending beyond the limits of the province;
 - (c) lines of steamships between a province and any British or foreign country;
 - (d) ferries between any province and any British or foreign country, or between two provinces;
 - (e) works, undertakings or businesses belonging to, carried on or operated by aliens, including foreign corporations immigrating into Canada to carry on business;
 - (f) such works as, although wholly situate within the province, have been or may be declared by the Parliament of Canada, or for the advantage of two or more of the provinces;
 - (g) works, undertakings or business of any company or corporation incorporated by or under the authority of the Parliament of Canada.
- (ii) Any dispute which is not within the exclusive legislative authority of any provincial legislature to regulate in the manner provided by this Act.
- (iii) Any dispute which the Governor in Council may by reason of any real or apprehended national emergency declare to be subject to the provisions of this Act.

(iv) Any dispute which is within the exclusive legislative jurisdiction of any province and which by the legislation of the province is made subject to the provisions of this Act.

(2) The provisions of this Act shall be construed as relating only to the application of *The Industrial Disputes Investigation Act, 1907*, and not so as to extend the meaning of the word "employer" as defined by section two, paragraph (c), of the said Act."

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1925

THE number of strikes and lockouts in Canada in existence at some time or other during the month of February was 12, as compared with 10 in January. The time loss for the month was less than in January, 1924, being 26,334 working days, as compared with 197,083 working days in February, 1924. The considerable time loss and number of employees in February, 1924, was chiefly due to a strike of coal miners in Nova Scotia.

Date	Number of disputes	Number of employees involved	Time loss in working days
February, 1925.....	12	3,026	26,334
January, 1925.....	10	694	4,882
February, 1924.....	17	12,933	197,083

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees, and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all strikes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received till some time after its commencement.

Three disputes, involving 230 workpeople, were carried over from January. One of the strikes beginning prior to February, and four of the strikes commencing during February, terminated during the month. At the end of February, therefore, there were on record seven disputes—two strikes of clothing workers at Montreal, clothing workers at Toronto, boot factory employees at Montreal, fur workers at Toronto, moulders at Hamilton, and bakers at Winnipeg.

Information was received in the Department too late for insertion in the February issue of the LABOUR GAZETTE of a strike of six bricklayers at Toronto on January 2, against a reduction in wages. The bricklayers' agreement for the rate of \$1.25 per hour expired at the end of December, and the contractors proposed a new rate of \$1.12½ which the men objected to. Negotiations were carried on, and work was resumed on January 19 at the new rate, an agreement between the union and the contractors having been reached in the interval.

Of the disputes which commenced during February, one was for increased wages, another for increased wages and other changes, six were against reductions in wages, three were for recognition of the union, and one was

against discharge of employees. Of the strikes and lockouts which terminated during the month, three resulted in favour of employees, one in favour of employers, and one resulted in a compromise being effected.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement.

BOOT FACTORY EMPLOYEES, MONTREAL, QUE.—On January 26, a strike of 200 boot factory employees occurred at Montreal against changes in piece rates, which, the employees stated, would cause a reduction in wages of between 50 and 75 per cent. Negotiations were carried on and the men resumed work on February 9 under the same conditions as existed prior to the strike.

COAL MINERS, EDMONTON, ALTA.—Forty-five coal miners at Edmonton went on strike on February 17, against a change in working conditions affecting piece work prices. After being on strike five days, the men decided to resume work on the employers' terms.

CLOTHING WORKERS, MONTREAL, QUE.—A strike of clothing workers in the ladies' garment industry involving about 1,350 was called on February 3, in order to establish the 44 hour week and to secure collective bargaining. About 115 establishments were affected at the beginning of the strike, but by the end of February most of the firms had agreed to the terms of the union and there were only about four still affected, involving about 50 workpeople, the strike being therefore recorded as unternminated.

CLOTHING WORKERS, TORONTO, ONT.—On February 5, some 1,200 clothing workers in the ladies' garment industry, employed by about 60 firms, went on strike for increased wages, recognition of union and changes in working conditions. Early in the month settlements were effected in many of the shops by the employers agreeing to the union's terms and conditions. At the end of the month, about 175 strikers were still involved.

CLOTHING WORKERS, TORONTO, ONT.—A strike of 32 clothing workers in the mens' clothing industry occurred at Toronto, owing to the union objecting to the firm sending out work to non-union shops. After the first day, the firm notified the union that work would be done in their own factory. Work was resumed February 13.

BOOT FACTORY EMPLOYEES, MONTREAL, QUE.—On February 26, a strike of 12 boot factory employees occurred against a reduction in wages. At the end of the month this strike remained unternminated.

FUR WORKERS, TORONTO, ONT.—Sixteen fur workers went on strike for recognition of the union, negotiations were carried on, but the strike remained unternminated at the end of February.

MOULDERS, WINGHAM, ONT.—A strike of 26 moulders occurred at Wingham, Ontario, on February 9, against a reduction in wages on piece work. Negotiations were carried on which resulted in a compromise being effected, and settlement took place on February 27.

TRUNK, VALISE AND SUITCASE WORKERS, ST. HENRI, MONTREAL, QUE.—On February 13,

notice was given to 115 employees in a trunk, valise and suitcase factory of a proposed decrease in wages, ranging from 10 to 15 per cent. The employees called a strike on February 19. After negotiations, work was resumed on February 26, under the conditions existing prior to the strike.

BAKERS, WINNIPEG, MANITOBA.—During February information was received of a cessation of work involving about ten bakers in Winnipeg against a reduction in wages. No details were received, but the dispute was reported as unternminated at the end of February.

STRIKES AND LOCKOUTS DURING FEBRUARY, 1925.

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to February, 1925.			
MANUFACTURING—			
<i>Clothing, including knitted goods:</i>			
Clothing workers, Montreal, Que.	8	192	Commenced December 2, against discharge of employees. Unterminated.
<i>Boots and shoes (other than rubber and felt):</i>			
Boot factory employees, Montreal, Que.	200	1,200	Commenced January 26, against a reduction in wages. Settled by negotiations; work resumed under same conditions as existed prior to the strike.
<i>Iron, steel and products:</i>			
Moulders, Hamilton, Ont....	22	528	Commenced January 30, against a reduction in wages. Unterminated.
(b) Strikes and lockouts commencing during February, 1925.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Edmonton, Alta...	45	225	Commenced February 17, for a change in working conditions affecting piece work earnings. Settled by negotiations and work resumed February 23. In favour of employers.
MANUFACTURING—			
<i>Clothing, including knitted goods:</i>			
Clothing workers, Montreal, Que.	1,350	11,850	Commenced February 3, to establish a 44-hour week and collective bargaining. Unterminated.
Clothing workers, Toronto, Ont.	1,200	11,100	Commenced February 5, for recognition of the union, increased wages and changes in working conditions. Unterminated.
Clothing workers, Toronto, Ont.	32	32	Commenced February 12, against work being sent to non-union shops. Settled by negotiations in favour of employees and work resumed February 13.
<i>Boot and shoes (other than rubber and felt):</i>			
Boot factory employees, Montreal, Que.	12	36	Commenced February 26, for increased wages. Unterminated.
<i>Fur and leather products:</i>			
Fur workers, Toronto, Ont....	16	128	Commenced February 20, for recognition of the union. Unterminated.
<i>Iron, steel and products:</i>			
Moulders, Wingham, Ont....	26	468	Commenced February 9, against a reduction in wages. Settled by negotiations and work resumed February 28; compromise.
<i>Miscellaneous:</i>			
Trunk, valise and suit case workers, St. Henri, Montreal, Que.	115	575	Commenced February 19, against a reduction in wages. Settled by negotiations and work resumed February 26, under same conditions as existed prior to the strike.
SERVICE—			
<i>Personal—Domestic:</i>			
Bakers, Winnipeg, Man.....			Commenced during February against a reduction in wages. Unterminated.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING JANUARY

THE British *Ministry of Labour Gazette* for February contains the following table which analyses the disputes in progress in January, 1925, in Great Britain and Northern Ireland by groups of industries, and indicates the number of workpeople involved at the establishments concerned and the approximate time lost during the month in all disputes in progress:—

Groups of industries	Number of disputes in progress in January			Number of workpeople involved in all disputes in progress in January	Aggregate duration in working days of all disputes in progress in January
	Started before January 1	Started in January	Total		
Mining and quarrying.....	4	7	11	4,300	25,000
Metal, engineering and shipbuilding.....	10	8	18	2,900	21,000
Textile.....	2	3	5	500	7,000
Transport.....	4	4	1,600	2,000
Other.....	7	13	20	3,100	12,000
Total, January 1925	23	35	58	12,400	67,000
Total, Dec. 1924...	24	41	65	16,000	92,000
Total, January 1924	11	37	48	83,000*	629,000*

*A dispute involving about 60,000 locomotive engine drivers, firemen and cleaners in Great Britain accounted for most of the loss of time in January, 1924.

Of the 35 disputes beginning in January, 12, directly involving 1,400 workpeople, arose out of demands for advances in wages or other wages questions; 13, directly involving 2,900 workpeople, on questions respecting the employment of particular classes of persons; 6, directly involving 1,600 workpeople, on details of working arrangements; and 4, directly involving 1,200 workpeople on other questions. In addition about 2,000 workpeople were involved, either directly or indirectly, in 23 disputes which began before January and were still in progress at the beginning of that month. The number of new and old disputes was thus 58, involving about 12,400 workpeople, and resulting in a loss during January of about 67,000 working days.

Settlements were effected in the case of 21 new disputes, directly involving 3,600 workpeople, and 9 old disputes, directly involving 700 workpeople. Of these new and old disputes, 11, directly involving 1,400 workpeople, were settled in favour of the workpeople; 9 directly involving 1,100 workpeople, in favour of the employers; and 10, directly involving 1,800 workpeople, were compromised. In the case of 5 disputes, directly involving 700 workpeople, work was resumed pending negotiations.

Wage Negotiations in Four British Industries

Wage negotiations involving over two million men engaged in the four vital industries of mining, railways, engineering and shipbuilding are now in progress in Great Britain. The end of the negotiations in connection with the miners' and railwaymen's claims may come about the same time, but unless the discussions in the engineering and shipbuilding trade are protracted much more than seems likely these disputes should have reached a decisive stage long before the miners' agreement terminates. This, assuming that due notice is given, will be at the end of June.

Discussing the prospects of a peaceful settlement the *Co-operative News* says:—"The men of South Yorkshire and North-East Nottingham, for instance, are working good time and many are earning relatively good wages, because production costs are low and the coal from these districts can therefore be sold at a good profit. Their view-point must inevitably be somewhat different from that of the

South Wales or Lancashire men, who are working in old and costly pits, and who see hardly any hope, under the profit-sharing agreement, that their lot can be substantially improved. The problem of the miners' federation is to found a national policy on these divergent conditions and interests."

The railwaymen have put forward a national "all-grades" programme, which, however, is unlikely to prove acceptable to the managers. The engineering unions are now acting together in demanding higher rates of pay. The shipbuilding workers are less favourably situated at the moment for pressing their case. The industry has been on the up grade, but the improvement is not so marked as in engineering. It is also curious that unions which are acting together in the engineering dispute are presenting different claims to the shipbuilding employers. If this policy is continued the position of all the unions will be weakened at a later stage in the negotiations.

DISPUTE IN THE COAL MINES IN NOVA SCOTIA

IN the February issue of the LABOUR GAZETTE there appeared the Report of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907, in the matter of a dispute between certain coal mining companies operating in Nova Scotia, subsidiaries of the British Empire Steel Corporation, namely the Dominion Coal Company, Glace Bay, the Nova Scotia Steel and Coal Company, Sydney Mines, the Acadia Coal Company, Stellarton, and the Cumberland Railway and Coal Company, Springhill, and the coal miners their employees, members of the United Mine Workers of America, resulting from a failure to negotiate a new agreement. A settlement not being reached a cessation of work occurred on March 6, involving some 14,000 miners.

The Board reported that it had been unable to bring about a settlement of the dispute and that a permanent improvement in industrial relations could not be expected until complete confidence between the operators and the employees should be established, possibly as the result of an inquiry into the cost of mining, transporting and selling coal, wages profits, markets, etc. As the Industrial Disputes Investigation Act had just been declared *ultra vires* by a judgment of the Judicial Committee of the Privy Council, the Board found itself without powers to make such an investigation.

The company had proposed a wage reduction of 10 per cent on the ground that at the 1924 wage scale the costs of mining prevented the sale of an output of coal sufficient to keep the mines in steady operation and that the operation of the mines was not profitable. The miners objected to a decrease and demanded an increase on the ground that the wages scale was already so low that the annual receipts in miners' wages were materially below the amount necessary for a worker to maintain a decent standard of living for himself and his family in Canada.

During the sittings of the Board of Conciliation and Investigation a District Convention of the miners' union was called at Sydney on February 4 and continued until February 6. A proposal was handed to Dr. J. W. Robertson of Ottawa who had been appointed by the Minister of Labour to represent the miners on the Board in the absence of a recommendation, and who had addressed the Convention. This proposal, published in the February issue of the LABOUR GAZETTE as Appendix B of the Board's report, was that the miners would work under the terms of the

expired agreement for four months if four day's work per week were guaranteed all the members at their usual working places, or wages in lieu of employment, while a fair and impartial inquiry were made into the affairs of the employing corporation. This proposition was refused by the corporation which proposed that an investigation should be made by a joint committee representing both parties. The proposal was contained in the following letter addressed to the Union officials by the Vice-president of the Corporation:—

9th February, 1925.

J. W. McLEOD, President,
ALEXANDER A. MCKAY, Sec.-Treas.,
District No. 26, U. M. W. of A.,
Glace Bay, N.S.

DEAR SIRS,—In our letter of even date we have explained our objections to the proposition involved in the resolution therein referred to and why we think an attempt to work out your suggestion in any concrete form would not result in a satisfactory settlement.

We now submit the following proposition, namely:

That the company and the U.M.W. of A. enter forthwith into a contract to continue until the 30th of November, 1926, providing that,

(1) An impartial committee of investigation be constituted by either one or two members being appointed by the representatives of the employees and the same number by the company. These representatives to appoint a chairman and if they fail to agree on such appointment such chairman to be appointed by either the Chief Justice of the Supreme Court of Canada, the Chief Justice of Nova Scotia, or the Acting Chief Justice of the Superior Court of Quebec, at the option of the representatives of the employees.

(2) Such committee so constituted to have power to investigate

(a) all matters in respect to the company relevant to the question of what rates of wages the company can reasonably be expected to pay under existing conditions.

(a) all matters relating to the United Mine Workers of America, District 26, in so far as such matters may affect the present situation.

(3) Such committee to have power, after such investigation, by its report to establish a scale of wages to be effective from the date of the acceptance of this proposal, until November thirtieth, 1926, and the company and the employees to respectively obligate themselves to accept such scale of wages.

(4) Pending the report of the committee and from the date of the acceptance of their proposal the company to pay the 1924 scale of wages less ten per cent. After such report such wages to be readjusted to conform to the rates thereby established.

(5) All evidence given before the committee shall be treated as confidential and the committee shall make public its findings only.

6. If the committee deems it desirable that evidence be taken under oath it may apply to the Governor in Council to be constituted a commission under the Public Inquiries Act of the Province of Nova Scotia.

(7) The report and recommendations of a majority of such committee shall for the purpose of this agreement be deemed the report of such committee.

Yours very truly,
J. E. McLURG,
Vice-President.

The Union refused this proposal. On February 23 the Government of Nova Scotia transmitted to the two parties to the dispute a proposal that a commission should be appointed by the Government of Nova Scotia to make an inquiry and recommend a wage scale, both parties to agree to the scale so established, the mines in the meantime to be operated at the 1924 wage rates as completely as there should be sale for the coal. The Government's proposals were conveyed by the Provincial Premier in the following letter addressed to the Corporation and to the Union:—

PROVINCE OF NOVA SCOTIA
OFFICE OF PREMIER

Halifax, 23rd February, 1925.

To

J. E. McLURG, Esq., Vice-President, British Empire Steel Corporation, Ltd., Sydney, N.S., and
JOHN W. McLEOD, Esq., President, District No. 26, U.M.W. of A., Glace Bay, N.S.

DEAR SIRS,—As the result of recent conferences with you individually, we had an opportunity of quite fully considering the difficult, and in many respects delicate situation with which you are now confronted. Permit me to express my personal appreciation as well as that of the Government to you both for your very frank presentation of the respective attitudes. In view of the public importance of the issues involved, and with the earnest hope that the present involved situation may be more satisfactorily solved, I beg to submit for your respective and joint careful and early consideration the following:—

1. I am advised and convinced that the British Empire Steel Corporation is about to take such immediate action as will put into effect a decision of that corporation to reduce the present or 1924 miners' wage scale by at least 10 per cent. It would further appear that the method of giving effect to the above decision on the part of the corporation will be the posting of a notice to that effect at the various collieries affected.

2. It is quite apparent from the correspondence exchanged between you (a) that the miners under circumstances as now existing will positively not accept any reduction in present wage scale; (b) that if such a notice is posted it will result in cessation of work on the part of the workmen.

The situation would then resolve itself into a contest of endurance, involving loss and privations to both parties, and great injury to the public interests. It might, and probably will further estrange the parties directly interested, the corporation and the employees. This is a plain statement of a situation which I am convinced both sides to the dispute wish, if possible, to avoid.

3. Having given the best possible consideration I can to what has been stated by you and to what has been made public to date by way of correspondence between your respective selves and those you represent, and with a view to using our good offices to bring about some means whereby

(a) cessation of work may be averted,

(b) the future may be regarded with more hope.

I am, therefore, submitting herewith to the British Empire Steel Corporation and the constituent companies interested, viz., The Dominion Coal Co., Ltd., the Nova Scotia Steel and Coal Co., Ltd., and the Acadia Coal Co., and urge and recommend its acceptance, that they agree with their employees, being members of District No. 26, U.M.W. of A., to continue the present rate of wages during the inquiry to which I shall hereafter make reference, and for such time thereafter as shall be necessary for the finding of such an

inquiry to be made public or as such an inquiry may direct. I make this recommendation because I am satisfied that the proposed reduction in wages is the outstanding impediment at present to be removed.

4. That the company will agree to work the mines to the limit of their demand for coal and otherwise continue the work at the mines as if no investigation was being had. In other words, that the corporation will not deliberately reduce the quantity of coal raised from day to day pending a final settlement of the dispute.

5. On the understanding that the foregoing suggestions are mutually acceptable and agreed to, I beg to respectfully recommend and urge upon the workmen and their representatives that the workmen agree to work at their regular occupations at the present rate of wages during the time intervening between this proposed agreement being entered into and the report and findings shall have been rendered.

6. In view of the fact that both parties to the present differences apparently agree upon the common ground that an inquiry is desirable, and in view of the fact that the Winfield conciliation board, so called, has unanimously expressed the opinion that a fair and impartial inquiry by a competent authority "with a view to ascertaining the actual necessary cost of mining, transporting and selling coal, the ability of the companies to pay a rate of wages satisfactory to the employees, to earn a fair return on capital invested, and the bearing which the attitude and action of the employees have in relation to the efficient and profitable carrying on of operation," and without which "no permanent improvement in industrial relations can be expected until complete confidence is established between operators and employees," and that such a result may possibly be brought about by such an inquiry, on behalf of the government, if the above proposals are agreed to or, as an alternative unless you in the meantime intimate to me that you have mutually agreed upon another method. I propose at the earliest possible date to recommend to His Honour the Lieutenant-Governor to cause such an inquiry to be made under the provisions of the Nova Scotia Act "of inquiries concerning public matters", chapter 13, Revised Statutes, 1923. It seems scarcely necessary to point out to either of you that the person or persons so commissioned or appointed by the Lieutenant-Governor have the same power to summon and call for witnesses, to enforce attendance of witnesses, to compel the giving of evidence on oaths, etc., and generally to do all things that the person or persons so appointed deem requisite "to the full investigation of the matters into which he or they are appointed to examine." I need not intimate that inquiry under such a commission must be undertaken, conducted and concluded without delay.

7. It is confidently anticipated that as you have each respectively intimated your desire to the public for an inquiry, that you will each facilitate in every reasonable manner the work of such an inquiry and furnish such witnesses, documents, etc., as may be essential to make it full and complete.

8. It must be further agreed that the rate of wages determined by the person or persons so appointed shall be paid by the corporation from and after such date as shall be fixed after all the evidence shall have been heard and considered. And the corporation will be requested and required to give assurances that the findings of the inquiry in the above respects will be accepted and the wages paid in accordance with the terms of such findings.

9. Further, it must also be agreed, in order that such an inquiry be not made abortive, that the employees will agree to accept its findings as regards the rates of wages to be paid.

10. Should the parties fail to mutually agree as to the period of time the rate of wages fixed and determined by the inquiry are to prevail, the government

or myself would be pleased if necessary to use our good offices in discussing them with you.

This letter is going forward to you both by the same mail, and is respectfully submitted for your careful and, let me hope, favourable consideration. Both the government and myself will hold ourselves in readiness at any time to render any assistance we reasonably can. I must, however, impress upon you both that in the public interests, as well, I trust, in your own, that you advise me without delay of your respective decisions.

I have the honour to be,

Yours very truly,

(Sgd.) E. H. ARMSTRONG,

Premier.

The union refused this proposal objecting to the acceptance beforehand of a wage scale to be determined by a commission. The operating companies had given credit at its stores to miners employed in the mines working only part time but about the end of February gave notices that such credit would no longer be given. The union demanded that credit be restored and that at least four days work per week should be given or it would be held that a lockout of the miners in certain mines was in effect and a complete cessation of work would occur on March 6.

The matter was brought up in Parliament on March 5 when the Minister of Labour stated:—

The information before the government in regard to the general situation in Cape Breton, both as to a dispute between employers and miners in the matter of a new wage scale and as to the distress which is the result of some of the mines not working, is, I think practically the same as the public generally has through press reports. Yesterday, we received a telegram of almost six hundred words, which was a copy of a statement that had been made by representatives of the miners to the Nova Scotia government. Our understanding is that the Nova Scotia legislature is now in session; that it is taking cognizance of the situation and the claims in regard to both the distress which is the result of unemployment and the dispute which is and has been for some months in evidence between the mine operators and the miners. Our understanding is that the Nova Scotia government is taking all such steps as to it appear proper to bring about a settlement of the existing dispute, and, we assume, taking such steps as may be necessary to assist in relieving distress, if any is in evidence.

I can add nothing further to what has been previously stated as this government's position, except I might say that it is not regarded as good form to step into another man's house to assist in settling a dispute which is under careful discussion between those who are directly concerned and responsible. That is all I could say for the federal government.

Workers' Savings and Investment

In 1919 the General Motors Corporation, of Detroit, Michigan, desiring to encourage and assist its employees in the saving and investment of money and to afford them the opportunity of becoming shareholders in the business, adopted a plan whereby any worker who had been in the employment of the corporation or its subsidiaries for three months or more was eligible to pay into an "Employees' Savings Fund" each year an amount not to exceed ten per cent of his wage or salary, up to a maximum of 300 dollars per annum, the company paying interest of six per cent a year as against a normal savings bank rate of three per cent.

Alongside this fund the Corporation established an "Employees' Investment Fund" into which it pays an amount equal to one-half of the net payments into the Employees' Savings Fund in any given year. This amount which matches the savings of the employee, is not credited to the employee at once, but is distributed over a period of five years, one-fifth being credited at the end of each year. Interest on these credits to the employee, as in the case of the employees' own savings, is allotted at the rate of six per cent a year.

A new stock subscription plan has just been put into effect, whereby employees may buy General Motors Corporation 7 per cent

preferred stock. Between December 1, 1924 and February 28, 1925, employees who had been in the employment of the Corporation since August 1, 1924, could subscribe for the stock, the stock being sold to employees at 99 dollars per share. They were permitted to subscribe for an amount not to exceed one-third of their year's wages, but in no case for more than ten shares. Payments may be made in eleven monthly instalments. As an incentive to the employees to retain such investments as they may make, the Corporation will pay to the employees holding this stock, in addition to the 7 per cent regular dividend, 7 dollars per share per year over a period of five years, provided the employee remains the owner of the stock and remain in the service of the Corporation.

An Emergency Powers Bill was recently introduced in the Parliament of South Africa conferring exceptional powers on the government in cases where essential public services would be stopped by strike. The bill would enable the Government, by declaring a state of emergency, to prevent action being taken or threatened, affecting food supplies, water, fuel, light or the means of locomotion, and to facilitate conciliation with a view to a speedy settlement of the dispute, and a general resumption of work.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Summary of Recent Proceedings

NINETEEN new decisions of the Canadian Railway Board of Adjustment No. 1 have been received by the Department. This Board was established under an Order in Council dated July 11, 1918, the war still being in progress, its purpose being to secure uninterrupted service on the railways. The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the railway brotherhoods. A summary of the recent decisions of the Board is given in the following paragraphs. Summaries of earlier decisions appeared in the issue for January, 1925, and in previous issues.

Case No. 225—The Canadian National Railways (Central Region) and the Order of Railroad Telegraphers.

A train despatcher on receiving notice that the despatching office where he worked was to be closed, sold his house and moved to the point where he would exercise his seniority in accordance with the terms of the schedule. As however his former office continued open he could not be taken on the staff at the latter point, and he therefore returned and resumed work at the despatching office he had left, which finally closed about six months after the date originally announced for its closing. The despatcher claimed payment of expenses in connection with his double transportation of his effects between the two points.

The Board sustained the employee's claim, fixing the amount that should be allowed at \$125.

Case No. 226—The Canadian Pacific Railway (Western Lines) and The Order of Railroad Telegraphers.

The telegraph operators covering "swing" assignments were taken off at certain points, owing to shortage of operators, leaving the regular telegraphers without their day off in seven. Two of these regular operators, in accordance with their schedule, claimed overtime in each week for the seventh day worked, and in addition overtime at *pro rata* rate for service rendered on a statutory holiday. The company disputed the claim on the ground that if it were granted these operators would receive two and one-half days' pay for one day's work.

The Board was of the opinion that in this case, while swing telegraphers were assigned, they had been temporarily withdrawn, and

that general practice conditions were therefore practically restored. The claim of the employees was sustained.

Case No. 227—The Canadian Pacific Railway (Western Lines) and the Order of Railroad Telegraphers.

This was a controversy as to the proper wage rate to be applied to certain assistant agents' positions in Alberta and British Columbia. These employees received the minimum rate provided by Article 28 clause (k) of the telegraphers' schedule, which reads: "The minimum rate for assistant agents will be \$70 per month." The telegraphers claimed that the rate for the positions held by the employees should be \$92.50. The question whether these positions were really "minimum positions" was referred last October to the Honourable G. D. Robertson and Mr. J. G. Sutherland, the company's inspector of transportation. The arbitrators agreed that the positions in question were minimum positions, but they were unable to agree as to the application of the schedule rates, the schedule minimum rates being at variance with the minimum rate established at the points concerned.

The matter was referred to the Board, which sustained the contention of the company to the extent that the minimum rate of \$70 per month may be paid to positions properly classed as minimum positions. They pointed out that they were not asked to decide if a rate in excess of the schedule minimum should be awarded to the position in question.

Case No. 228—The Canadian Pacific Railway (Western Lines) and the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

This case concerned a dispute regarding the rental charged on section houses on three divisions of the British Columbia District, the company having given notice to section foremen that a charge of \$5 per month would be assessed for rental of standard section houses occupied by them, and deducted each month on the pay roll. The company stated that the option of charging rentals had remained with them after the schedule negotiations in 1919, and that charges were not made on buildings other than standard section houses or their equivalent or in cases where section foremen were required to board the men or

share the dwelling with others. The employees contended that the charging of rent was not justified by the negotiations of 1919, and that it was in effect a reduction in wages.

The claim of the employees was denied by the Board.

Case No. 229—The Canadian National Railways (Western Region) and the Brotherhood of Railroad Trainmen.

A switch foreman was dismissed for submitting a wage ticket and claiming payment for work on a day, on which, as alleged by the company, he had booked off duty. The employees explained that the foreman's failure to appear for duty on a train to which he had been assigned arose out of confusion as to duties that had resulted from his recent absence on sick leave.

In the opinion of the Board the foreman's actions did not justify dismissal, and the employees' contention was sustained to the extent of reinstatement. On account of contradictory evidence, however, the Board could not decide the question of payment for time lost, but intimated that they would consider it if necessary when more conclusive evidence had been produced.

Case No. 230—The Canadian National Railways (Western Region) and the Order of Railway Conductors, the Brotherhood of Railroad Trainmen, the Brotherhood of Locomotive Engineers, and the Brotherhood of Locomotive Firemen and Enginemen.

A new yard was opened in 1923 at Neebing, about eight miles from Port Arthur. The employees claimed payment for transportation and for time spent in going to and from Port Arthur, where the men had homes on which they had invested their savings in order to be near their work. The company contended that it provided the work, and that the employees should report for duty whenever required, and further that it had at considerable expense, arranged for an extension of the street car service to Neebing Yard solely for the accommodation of employees.

The Board decided that the company should provide more adequate transportation to the new yard.

Case No. 231—The Canadian National Railways (Atlantic Region) and the Brotherhood of Locomotive Engineers, and the Brotherhood of Locomotive Firemen and Enginemen.

Article 15 of the Engineers' and Firemen's schedule provides that "actual mileage made

doubling or assisting other trains en route will be allowed in addition to trip." The company claimed this provision to mean that the time of the trip is extended by the number of miles made while doubling, and that such doubling is considered part of the road trip. The employees contended that when they are required to double grades en route, the doubling time or mileage (whichever is the greater) is to be allowed in addition to the payment allowed for the trip.

The Board sustained the contention of the railways.

Case No. 232—The Canadian National Railways (Atlantic Region) and the Brotherhood of Locomotive Engineers, and the Brotherhood of Locomotive Firemen and Enginemen.

An engineer and fireman, regularly in "pool" service, were required for work-train service and sent to a distant point where they had to wait for about a day before going to work. They claimed payment for time of waiting under Article 29 of their schedule relating to payment for time while "held away from home terminal." The company held that article 29 did not apply to work train service and that as this crew was ordered for work train service they were under work train service rules, which guarantee 100 miles per day for each day so assigned.

The Board sustained the claim of the employees, considering all the circumstances in the case.

Case No. 233—The Canadian National Railways (Atlantic Region) and the Brotherhood of Locomotive Engineers, and the Brotherhood of Locomotive Firemen and Enginemen.

The engineers and firemen claimed a minimum allowance of ten minutes for preparatory time, and the same for final time on all single crew switch engines; and in regard to double crew switch engines working sixteen hours continuous service, they claimed a minimum allowance of ten minutes preparatory time to crew holding first assignment, and the same for final time to engine crew holding second assignment. The employees claimed that these allowances should be in addition to the minimum day regardless of hours worked. The railways contended that article 7, clause E, of the employees' schedule provided that enginemen in yard service should be paid for actual time worked from start to finish.

The Board denied the employees' claim.

Case No. 235—The Canadian National Railways (Atlantic Region) and the Brotherhood of Locomotive Engineers, and the Brotherhood of Locomotive Firemen and Enginemen.

Article 2, clause (a), of the employees' schedule provides that "100 miles or less (straight away or turn around), 5 hours or less, except as provided in clause (c) of this article, shall constitute a day's work; miles in excess of 100 will be paid for at the mileage rate provided according to class of engine." A dispute arose over payment of a crew that made two "turn-arounds" on one trip and was paid by the company on continuous time basis. The employees contended that the railways have not the right to use more than one turn around to make up a day's work or trip on a long mileage run.

The Board denied the contention of the employees, noting the fact that the service in question was paid on a 20-mile speed basis as provided by article 2 (c) of schedule.

Case No. 236—The Canadian National Railways (Atlantic Region) and the Brotherhood of Locomotive Engineers, and the Brotherhood of Locomotive Firemen and Enginemen.

This, like the previous case, related to the interpretation of article 2 clause (a), and the method of payment of engine crews. A crew was paid, for each leg of their run, 10 miles preparatory time, 93 road miles, and 40 miles for switching and terminal delay, making a total of 143 miles, the railways considering it permissible to use switching and terminal time to make up a short day. In support of their view they cited the Board's decision in Case No. 189 (LABOUR GAZETTE, March, 1924, page 216). The employees considered that the article quoted above entitled the crew to 100 miles of pay regardless of any initial or final delay time, claiming that this was the established method of payment.

The Board decided that the compensation of 143 miles under the conditions stated was in accordance with schedule.

Case No. 238—The Canadian National Railways (Western Region) and the Order of Railway Conductors.

The engine on a way freight train was taken off to assist another train on which the engine was disabled. The conductor on the way freight was instructed to pilot the disabled engine to a point where he would meet a relief engine that was being dispatched. When the engines met, the conductor piloted the relief engine to the train where it was re-

quired. The conductor claimed that this service was apart from his assignment and claimed 100 miles for the trip, which was 98 miles (including return), and was made in 3 hours and 35 minutes. The railways contended that all the service performed by the conductor was in connection with getting his own train forward, and that he was not entitled to the "arbitrariness" claimed.

The Board sustained the employees' claim, holding that the time claimed was separate and apart from the conductor's regular assignment.

Case No. 239—The Canadian National Railways (Western Region) and the Order of Railway Conductors, and the Brotherhood of Railroad Trainmen.

Rule 1 of the conductors' schedule and Rule 2 of the trainmen's schedule provide that when a crew is called out a full crew will be used. In May, 1924, the railways issued instructions that conductors should be considered off duty as soon as they book-in and deliver bills, and trainmen after throwing last switch leading to roundhouse. The employees contended that the rules referred to meant that crews should go on and off duty as a unit, as had been the practice until the new instructions were issued, and that the company should not change the established method without negotiation with the men's committees. The railways denied that crews should be paid as a unit and claimed that each member of a crew might be paid for time employed.

The Board ruled that the minimum time for relieving any member of a train crew at the objective terminal should be the time at which the conductor registers his train, delivers his bills and is relieved from duty.

Case No. 241—The Canadian National Railways (Western Region) and the Brotherhood of Railroad Trainmen.

Rule 14, clause A, of the trainmen's schedule provides that trainmen switching or delayed at terminals or turn around points will be paid for actual time so occupied at through-freight rates, except that trainmen required to perform yardmen's work beyond 5 hours will be paid at yardmen's rates per hour, this time to be in addition to mileage or hours on trip. The employees claimed the yardmen's rate for certain yardmen's work in excess of 5 hours, while the railways contended that the point at which this work was done was not one at which this rate would apply.

The Board sustained the employees' claim.

Case No. 242—The Canadian National Railways (Western Region) and the Brotherhood of Railroad Trainmen.

A yard engine de-railed after the crew had been on duty for six hours, and was not re-railed until they had earned two hours and ten minutes overtime. Soon after the derailment the yardmaster intimated to the crew that two of the crew should go home, not however naming which members should go off duty. The two released members were allowed pay for their 8-hour shift, but demanded the same overtime as the rest of the crew on the ground that a yard crew was a unit and could not be split. The railways contended that they were at liberty to release some members of a crew at the end of their regular duty, and to require others to remain for extra work, to be paid as overtime.

The Board denied the employees' claim.

Case No. 243—The Canadian National Railways (Western Region) and the Order of Railway Conductors, and the Brotherhood of Railroad Trainmen.

Article 3, clause (d) of both the conductors' and the trainmen's schedule provide that these employees "will not be paid for performing work train service en route unless time so occupied aggregates one hour, in which case they will be paid at work train rates for the whole time so occupied, such time not to be included in counting overtime." The conductor and brakemen on a way freight were required to unload some cars of cinders *en route*, this work taking one hour and 55 minutes. They claimed payment under the foregoing rule, but the railways contended that the rule applied to through freight trains and not to way-freight trains.

The Board sustained the employees' claim.

Case No. 244—The Canadian National Railways (Western Region) and the Order of Railway Conductors, and the Brotherhood of Railroad Trainmen.

Owing to conditions in the district five passenger crews were "bunched-up" at the west limit of a run, and as there were no regular crews left at the eastern limit a freight crew was used on a westbound passenger train. This freight crew was afterwards used to take back a train going east, going ahead of the regularly assigned passenger crew. The latter crew claimed for 100 miles for run around, but the railways declined payment, contending that it being necessary to call the freight crew for the westward trip it was proper to use them on the return in order of their arrival at the western limit.

The Board sustained the employees' claim, holding that as a regular passenger crew was available there was no necessity to use a freight crew on the run.

Case No. 245—The Canadian National Railways (Western Region) and the Order of Railway Conductors and the Brotherhood of Railroad Trainmen.

This case arose out of the same incident as in the preceding case. When the freight crew mentioned above was returning eastward, the train ran through an intermediate terminal where there was another freight crew available for service. The latter crew submitted a claim for 100 miles on account of being run around.

The Board denied the employees' claim.

Case No. 246—The Canadian National Railways (Western Region) and the Brotherhood of Railroad Trainmen.

Two senior spare brakemen were passed over when a new caboose was being set up, and a conductor and two spare brakemen who held no rights in the subdivision were called to take out the new car. The two former brakemen claimed for the mileage made by the car on the ground that their seniority entitled them to the run. The railways contended that the claimants in the case had just completed a round trip and that special circumstances had required the employment of the other men.

The Board sustained the employees' claim.

By an Order in Council issued under the authority of the Dominion Fisheries Act, the smelt fishing season in the Maritime Provinces and Quebec was extended from February 15 to February 28 in order to compensate the fishermen for the losses they had sustained owing to boisterous weather and the light runs of fish.

In the Supplement of the January issue of the LABOUR GAZETTE, "Wages and Hours of Labour in Canada, 1920 to 1924," on page 6, the rate of wages of plumbers in Toronto was erroneously given as 90 cents per hour, as in the four previous years. The correct figure for 1924 was \$1 per hour for this class of labour.

An increase of slightly over three million pounds in the creamery butter production of the year 1924 over 1923 is announced by the Dairy Commissioner for Saskatchewan. The total production for 1924, is estimated at 13,494,170 pounds as against 10,473,769 pounds in the year 1923, an aggregate increase of 28.8 per cent.

BRITISH COLUMBIA HOURS OF WORK ACT, 1923

THE Board of Adjustment under the British Columbia Hours of Work Act, 1923, issued an order dated February 17, 1925, rescinding two of the regulations previously issued, namely, Regulation 14, requiring employers to post notices in conspicuous places in the works or elsewhere, information as to the hours of shifts, duration of working time, etc., and Regulation 15, which provided that "overtime" should only be used under conditions named by the Board, and should not be regarded as part of the normal working day.

Further Exemptions

Another order bearing the same date exempts to the extent stated the workers engaged in the following industries:—

16. All workers engaged in the manufacture of furniture, beds and mattresses, as operators of picking and garnetting machines, may be permitted to work overtime to the extent of four (4) hours per man per week during the following months: February, March, April, May, September, October.

17. All workers employed on night shifts in saw-mills, planing-mills and shingle-mills, west of the Cascade Mountains, may work a total of forty-eight hours each week in five nights, in lieu of forty-eight hours each week in six nights; Provided, however, that no night shift shall exceed ten hours; Provided further that the entire staff engaged in the operations of the employer shall be limited to the hours herein set forth.

1A. In the industries referred to in the preceding regulation, the hours of labour thereby fixed may be exceeded by one hour on five days of each week for the purpose of making a shorter work-day on one day of the week, provided that the total hours for each week shall not exceed fifty-four.

Exemptions Explained

Mr. J. D. McNiven, Deputy Minister of Labour of the Province, addressed the Trades

and Labour Council, Victoria, last month on the Hours of Work Act. He denied that the exemptions made by the Board had in any way weakened the operation of the Act, explaining that they were for elasticity, without which quality the Act would be ineffective. In regard to the exempted industries he pointed out that though the workers could be employed over eight hours, all the time over that period constituted overtime, and would be paid on that basis. It was up to the men to establish that fact with their employers, he said.

Mr. McNiven further explained that Regulation 1A (printed above) must be read in conjunction with Regulation 1 (LABOUR GAZETTE, February, 1925, page 145). The effect of Regulation 1 was to permit of extra time being worked in various branches of the lumber industry in the interior country. The wording of the regulation was as follows:—

1. "All workers employed in saw-mills, planing-mills and shingle-mills in the district east of the Cascade Mountains shall be permitted to work one hour per day in excess of the limit prescribed by section 3 of the Act; the total hours worked not to exceed 54 per week."

This regulation, the Deputy Minister explained, permits of a fifty-four-hour working week, the hours being spread evenly over six days. The new regulation 1A however makes it possible to work the same number of hours weekly, but to distribute the time in such a way that the workers may have a half-holiday each week, for which arrangement a preference is shown in some localities.

Employees' Relief Fund of Nova Scotia Companies

The thirty-sixth annual report of the Employees, Relief Fund Society of the Nova Scotia Steel and Coal Company and the Eastern Car Company shows that during the year 1924, 264 members received aid from the society as indemnity on account of sickness to the extent of \$10,207.38; eight members were paid \$210.80 on account of contagious diseases, 21 members were paid \$571.32 as special indemnity; 12 death claims totalling \$1,200; insurance claims totalling \$3,207.60, and benefits amounting to \$1,270.80 were paid to 17 widows and 7 orphans, making a total of \$17,660.80. The total expenses only amounted to \$812.90.

The receipts amounted to \$12,135.65, leaving a deficit for the year of \$5,525.15.

Thirteen members died during the year, two of whom were among the first members when the society was organized thirty-six years ago. Mr. H. C. Dunlap, representing the Steel Works and Mr. George Watt, for the Eastern Car workers, were elected to the Board of Directors. One of the serious matters confronting the society is the heavy deficit of last year, and which may also fall this year. Either an increase in dues or a reduction in indemnities or both face the organization. During the past thirty-six years this society has done a great deal of good work.

REPORT OF SPECIAL COMMITTEE ON WORKMEN'S COMPENSATION IN MANITOBA

THE appointment by the Manitoba Legislature at its session in 1924 of a special committee to study the workmen's compensation act during the recess, with a view to placing the act on a basis that would be permanent and satisfactory to all parties concerned, was noted in the *LABOUR GAZETTE* for May, 1924. The subsequent proceedings of this committee were outlined in the December issue (page 1037). The Hon. R. W. Craig, K.C., attorney general of the province, presented the report of this committee to the Legislature on February 10, in the course of the present session. This report was as follows:—

Report of Special Committee

To the Honourable the Legislative Assembly of Manitoba—

Your Special Committee to which was referred the whole subject of Workmen's Compensation being leave to present the following report:

Your Committee was appointed pursuant to an Order of the Legislative Assembly made during the 1924 session of the Legislature based upon a recommendation previously made by the Law Amendments Committee to which had been referred during that session two Bills (Nos. 30 and 140) respectively amending "The Workmen's Compensation Act."

The Order of the House reads as follows:—

"On motion of Hon. Mr. Craig, seconded by Hon. Mr. McLeod: Ordered, That the whole subject of Workmen's Compensation be referred to a Special Committee during the recess with a view to making recommendations at the next session of the Legislature on this subject, said Committee to be appointed by the Government and to consist of five representatives of employers; five representatives of employees, and five members of the Legislative Assembly."

Your Committee in its composition was representative of the various interests of employees, and also of the general public represented by the Members of the Legislative Assembly, the latter including nominees of the several political parties with the exception of the Conservative group which preferred not to nominate anybody to act on the Committee.

The Committee consisted of the following members:—

Representatives of Employers.—H. B. Lyall, Charles F. Roland, L. J. Reyecraft, K.C., G. H. Elliott, Fred. Beale.

Representatives of Employees.—James Leslie, C. A. Tanner, M.L.A., Thomas J. Murray, K.C., James Addison, F. W. Nicks.

Members of the Legislative Assembly.—Hon. R. W. Craig, K.C., Mrs. Edith Rogers, George Compton, W. J. Short, John Queen.

In addition to the above members, Mr. H. R. Boyle acted at times in the absence of and as a substitute for Mr. G. H. Elliott, and Mr. T. French similarly for Mr. Beale.

Hon. Mr. Craig was chosen as Chairman of the Committee and Mr. N. Fletcher, Secretary of the Workmen's Compensation Board, acted as secretary.

Your Committee had sixteen sittings and a sub-committee consisting of Messrs. Craig (Chairman), Nicks, Leslie, Lyall and Elliott, held three meetings in addition to those of the general committee.

At the outset of its deliberations, your Committee decided that as the various interests affected by the Act were well represented on the committee, it would be unnecessary to hear delegations except at the request of the Committee, and that all those desiring to make representations to the Committee should be invited to make their submissions in writing.

Your Committee heard Mr. H. G. Wilson, Commissioner of the Workmen's Compensation Board, on the history and development of Workmen's Compensation in the Province; Mr. E. McGrath, Secretary of the Bureau of Labour, on Accident Prevention, and a deputation from the Manitoba Medical Association on the relation of the medical profession to the working of the Act.

Written communications were read and considered as follows:—

From the Manitoba Branch of the Canadian Manufacturers' Association urging:—

1. Reduction in compensation to 55 per cent of average earnings.

2. Limitation of benefits to \$5,000.

3. Provision of a contribution of one cent per day by workmen coming under the Act.

From the Winnipeg Electric Company and its associated companies asking for a restricted definition of workmen, and for a limitation on the amount payable to beneficiaries.

From the City of Winnipeg requesting that the setting up of reserves by the city be dispensed with.

From the City of Brandon asking for re-classification and rate revision.

From the Street Railway employees' Unit, O.B.U., protesting against any levy on employees to defray any portion of the cost of operation of the Act.

These communications are attached hereto as schedule "A"* to this report.

Your Committee considered the present Act clause by clause, and also considered in detail the various amendments to the Act, respectively set out in Bill No. 30 (1924), Bill No. 140 (1924), Bill No. 28 (1922) and a large number of other amendments suggested by the Workmen's Compensation Board together with various amendments suggested by members of the Committee.

Your Committee was impressed with the desirability from every point of view of the utmost effort being directed to accident prevention and passed unanimously the following motion:—

"The Committee respectfully submits that Accident Prevention Measures should be encouraged. That the subject is a general one covering all classes of employees, whether or not, same come under the Workmen's Compensation Act. That Accident Prevention work of an educational nature or along any other lines is for the public good. This Committee therefore suggests and recommends that the Government should carefully consider the advisability of increasing the annual appropriation to the Bureau of Labour to assist said Bureau to carry on in larger measure the work of Accident Prevention and education of those engaged in industrial pursuits with a view to lessening the number of accidents."

After very careful and full consideration your Committee recommends that the Workmen's Compensation Act be amended during this Session of the Legislature as set out in the schedule hereto attached marked "B"*. The more important of these amendments might be summarized as follows:—

1. Notice of an accident is to be given to the employer not later than within 30 days.
2. Provision is made for vocational training of injured workman for another occupation.
3. The benefits provided for a widow are extended to a foster mother who keeps up an existing household for the children of a workman whose death results from an injury.
4. The minimum allowance for temporary total disability is reduced from \$15 per week to \$12.50 per week, or when the average

earnings are less than this amount, the amount of such earnings. In cases of permanent total disability it is provided that where the average earnings of the workman are less than \$15 per week, the compensation shall be the amount of such earnings.

5. Allowances under section 24 to children of a workman whose death results from injury are increased from \$7.50 monthly for each child to \$12 monthly for the first child; \$10 for the second; \$9 for the third and \$8 each monthly for the fourth and other children.

Your Committee was unable to agree on certain contentious issues including rate of compensation, allowance to dependents, contribution of employees to medical aid, and the fixing of a maximum allowance under the Act, and recommends that the Act be allowed to stand as it is in respect of these matters for the present.

The Committee is hopeful that this would ensure a period of tranquility in the operation of the Act and bring about on the part of those affected thereby a better appreciation of the conflicting points of view both of employers and employees.

In conclusion your Committee wishes to place on record the spirit of fairness and goodwill which prevailed throughout its sittings. This experience impels your Committee to emphasize the value of the deliberations of such joint committees in settling differences in which employers, employees and the general public are involved.

All of which is respectfully submitted.

French miners, through their federation, have asked the government for a readjustment of wages in various categories, and that all miners above eighteen years shall be considered as adults and paid according to the adult scale. The federation aims at a unified wage scale for all mining districts in France.

At a recent meeting of employees of the London Hydro Commission, a committee was appointed to make further inquiries into the question of the formation of a sick benefit fund. Two schemes are under consideration by the committee. Under the first contributions will be made by both the employees and the Commission on the basis of so much per week per employee. It would provide for a sick benefit of \$10 per week but not for a doctor for the employees. The second plan is to be contributed to by the employees only and would provide a doctor for the employees whose services would be at the command of the employees when ill, and in addition, a small sum would be allowed the employees each week for the time off duty.

* Schedule "A" not printed.

* Schedule "B" not printed.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the LABOUR GAZETTE relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act. Other activities are also noted which have a direct bearing on the training of apprentices and industrial workers. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

Social Workers' Courses at McGill University

A letter from Dr. C. A. Dawson, Director of the School for Social Workers, McGill University, Montreal, draws attention to an incorrect statement which appeared in this section of the January issue of the LABOUR GAZETTE on page 35 under the heading of "Social Workers' Courses at McGill University," that the McGill school was "the only university school of its kind in Canada." Dr. Dawson points out that the Social Service Department of the University of Toronto, which is a similar institution, has been in existence for ten and a half years, and that there is also a school for training social workers in Montreal, under the direction of Miss L. M. Barry, known as the Loyola School of Sociology and Social Service. The distinction between the work in McGill University and that in any other institution in Canada is that McGill has the only honour course in sociology.

Vocational Training for Adults in Ontario

The following paragraphs are taken from an article appearing in the *Ontario Library Review* for November, 1924, written by Mr. F. P. Gavin, Director of Technical Education for Ontario.

One of the most important, if not perhaps the most important, of the agencies for adult education in Ontario is the system of evening classes carried on by local school authorities. While evening classes may be organized under the legislative provisions for elementary and high schools, most of them are organized under the provisions of the Vocational Education Act, and it is with evening vocational classes that this article deals. Under this Act evening classes are open to employed persons, or those temporarily unemployed, without regard to their previous school training, pro-

vided the principal of the school is satisfied that they are competent to take up the subject desired. The school attendance laws of Ontario provide that adolescents must attend school full-time until they are sixteen years of age, or part-time until they are eighteen. The practical effect of these laws is that children stay at school until they are sixteen. If they leave school at sixteen to enter employment, they may be admitted to the evening classes. In this connection, therefore, adults mean employed persons over sixteen years of age. By far the greater proportion of evening class students are, however, between twenty and thirty years of age.

Evening classes have been established by the local school authorities in every city in the province but one, and in twenty-eight towns or smaller communities. The aggregate population of the places with evening vocational classes is approximately 1,300,000. It has been stated by school administrators that an evening class programme that enrolls twenty per thousand of the population of the community is rendering a satisfactory service. That the evening class programme in Ontario is meeting to a considerable extent the needs of its constituency is shown by the fact that the aggregate enrolment for the population given above is approximately 33,500. This works out at twenty-six per thousand of population. In some places this enrolment runs as high as forty-five and fifty.

An interesting phase of the development of the evening class programme in Ontario is the steadily increasing response of native-born Canadians to the opportunities offered by these classes. Some ten or twelve years ago, when these classes were first established in any numbers, the proportion of students whose birth place was the British Isles was very much greater than the proportion of the population of the community whose birth-place was the British Isles. The explanation of this surprising and at first sight inexplicable relation is in reality quite simple. Night schools for adults are an old and established institution in the motherland and people are quite used to the notion of improving themselves by attending such schools, whereas in Ontario, evening classes were relatively new and unfamiliar, and native-born Canadians did not appreciate the opportunities offered. In the years of development since 1913, the situation has been steadily improving and the proportion of native-born in attendance has been increasing. It is doubtful, however, whether the native-born yet respond to the

appeal of evening classes in the same relative numbers as do those born in the British Isles.

The courses of study that may be offered in evening vocational classes may include any academic or practical subject that will increase the vocational efficiency or develop the civic intelligence of those attending the classes. This liberal specification of the purpose of the classes has enabled local school authorities to establish classes in a wide range of subjects. The subjects taken up as a rule have a vocational bias, and are related to the industrial, commercial, agricultural, or home-making activities of the community concerned. For example, classes in mechanical drawing, mathematics, machine shop work, stenography, dress-making, and cookery are quite commonly found. Classes in stationary engineering, navigation, telegraphy, plumbing, economics, art, salesmanship, and other similar classes are found where the community needs justify their establishment. The number of male students is approximately 15,200 and female 18,300.

The scheme for the management and control of these classes is worthy of notice, as it has perhaps something to do with their success. Evening classes under the Vocational Education Act can be established only under the authority of the local school Board. When such Board desires to establish an evening class programme, it appoints an Advisory Vocational Committee. This Committee is composed of a number (either four or six) of members selected from the School Board, and of an equal number of members not from the Board. Those non-Board members are selected in equal numbers from employers and from employees representing the characteristic and important vocational activities of the community. In this way the Board is able to draft into service desirable citizens who may be interested in adult education, and on the other hand to gain the sympathetic support of what, for want of a better term, may be called capital and labour. To this Advisory Committee is entrusted, with the approval of the Board, the management and control of the classes. This includes the selection of the courses to be offered, the appointment of teachers, the fixing of their salaries, the provision of accommodation and equipment, and, in general, all other needful activities.

The method of financial support is worthy of notice also. The Provincial Government pays to the local school authorities liberal grants in aid of the classes. A grant equal to fifty per cent of the cost of equipment is allowed. A grant on expenditures for teachers' salaries running from seventy-five per cent of the expenditures in small places down to

twenty-five per cent in large places is paid. Approximately one-half of the money paid out by the Provincial Government is contributed by the Dominion Government. A rough approximation of the sources of support of evening classes for adults would be fifty per cent from the local school authority, twenty-five per cent from the Provincial Government, and twenty-five per cent from the Dominion Government.

Apprenticeship in Building Trades of Washington, D.C.

A study of apprenticeship in the building trades of Washington, D.C., was undertaken by the United States Bureau of Labour Statistics during the past summer. The following extracts from a report of the study by Miss Mary Conyington in the *Monthly Labour Review* for January indicate the conditions existing throughout the United States and Canada.

In some trades the nature of the work makes the question of apprenticeship of little importance. In some the work is too heavy for a youth and not too complex for the adults who enter the trades to learn by doing. In others each worker needs an individual helper, and the latter, if he has any knack for the work at all, picks it up in the course of his duties. In some of these trades the unions impose conditions as to the length of time a man must serve before he can be admitted as a craftsman in full standing, and sometimes requirements as to race or citizenship or other qualifications may be made, but there is nothing which can be considered an apprenticeship system. The majority of the trades, however, maintain such a system, at least in name. In some the national or international organizations lay down general rules, and within their limits the local bodies make their own regulations; in others the whole matter is left to the local unions. The commonest restrictions deal with age at entrance, the number to be admitted, and the length of the apprenticeship to be served; beyond these points there is no uniformity as to what may or may not be required.

The lower age limit for entrance is usually fixed at or near 16, and the unions justify this on the ground that a boy under that age has not the judgment nor the steadiness nor, in some cases, the physical development required for learning the trades. In general, employers who were questioned agreed with the unions on this point, but in regard to the upper limit many of them thought that the dead line was set at too early an age. The unions themselves differ as to this limit and as to the reasons for enforcing it. In some of the trades the upper limit is justified on the ground that

the work requires a manual dexterity and knack which can be acquired only in youth. The business agent of one union assigned a reason which may perhaps be operative in other trades as well—the intractability of older learners.

The time an apprentice must serve varies from three to five years. To an outsider it looks as if the length of the period is based on tradition rather than on a study of the time needed, but the unions hold that it is impossible for a beginner to learn his trade fully and to acquire the facility he ought to have in any shorter period.

Probably the restrictions on the number of apprentices have provoked more criticism than any others. The unions say that were beginners allowed to enter at pleasure the trades would be flooded with half-trained boys who, having acquired a smattering of their craft, would desert their apprenticeship and pass themselves off for journeymen. To some extent this difficulty exists now, but by limiting the number who enter, the unions believe they can exercise some selection among the candidates and keep out those who are least likely to go through with their training. Also, the restrictions tend to regularize the supply of workers, preventing a perpetual swing from too many to too few and back again. There are two methods of fixing the number allowed, one using the shop or contractor as the basis of calculation, while the other uses the number of journeymen in the union. Where the first method is used, it seems customary in Washington to set two as the maximum for a shop, allowing only one if the number of journeymen regularly employed falls below a certain figure. The sheet-metal workers allowed a maximum of four at the time of this inquiry, but they were about to alter their rules so as to reduce this number. The bricklayers have the customary maximum of two, but provisionally allow a third, the provision being utilized when it is necessary to find a place for an apprentice who has been thrown out of training by the death or withdrawal from business of his employer. Where the basis of apportionment is the number of journeymen in the union, there is a good deal of variation in the ratio permitted. The wood, wire, and metal lathers, for instance, allow only one apprentice to every ten journeymen, while the steamfitters permit one helper for each journeyman and allow any helper who has served five years and can pass the required tests to become a journeyman. Whether or not these ratios are sufficient to keep the supply of skilled workers up to its present level cannot be determined from the data available. Whether or not, however, the ratios permitted are suffi-

ciently large does not seem a question of much practical importance, since in most of the trades they are far from being utilized. In not a single trade were employers training as many apprentices as the unions were willing to permit. Neither employers nor unions are making any organized efforts to secure apprentices. Ordinarily the unions intrust the supervision of the apprentices either to their business agent or to their secretary. The plumbers and the sheet-metal workers give the supervision to a committee composed of equal numbers of representatives of the employers' associations and the unions. The electrical workers and the wood, wire and metal lathers vest this control in an executive committee, and the carpenters have an apprentice committee, but even in these cases the committees act through the business agent or secretary. The amount of supervision varies, but is usually rather slight. For the most part there seems an honest desire on the part of the unions to keep both sides to their bargain, to see that the boy has a fair chance to learn his trade, and that he gives fair service in return, but the machinery for doing this is inadequate.

The unions differ in their requirements concerning technical and scientific training. As far as union requirements go, any school work must be taken in the apprentice's own time, and in general night work seems to be the only form in which it can be secured.

There is considerable diversity of opinion among employers in the building industry as to why the custom of apprenticeship has fallen into such disuse, just as there is variety in the reasons given to account for the individual employer's having no apprentices, but in the main they may be grouped under three general heads: the contract system of building is not adapted to the old-time apprenticeship system; the fact that an employer has no effective way of controlling a boy or even of holding him to his bargain discourages the practice of taking apprentices; and modern developments within the building industry have made it difficult and expensive for the average contractor to train apprentices. Moreover, modern building methods demand a considerable amount of technical training which can not be given on the job, and it is difficult for an employer to keep sufficient supervision over the boy outside of work hours to see that he does the necessary studying and that he makes the progress required. Also employees on the job often do not care to diminish their own output by giving the time necessary to instruct the boy, and there is a constant tendency to utilize an apprentice as a general helper, keeping him at odd jobs, without giving him a chance

to acquire thorough training. In effect, their reasons all point to the need for some supervisor, or supervisory body, to whom the apprentice should be accountable, whose duty it should be to make sure not only that he has a chance to learn but that he is taking advantage of that chance, and who should be definitely responsible for him from beginning

to end of his apprenticeship. Without such a body or some effective substitute for it, cordially supported by both workers and employers, it seems doubtful whether much improvement in the general situation can be hoped for, even though individual employers may be successfully training individual apprentices.

NOTES ON LABOUR UNION ACTIVITIES

Railwaymen's Legislative Demands

THE following memorandum of proposed legislation was submitted to the Dominion Government during February on behalf of the Order of Railway Conductors, Brotherhood of Locomotive Engineers, Brotherhood of Railroad Trainmen and the Brotherhood of Locomotive Firemen and Enginemen.

1. *An Act to provide compensation where Employees of His Majesty are killed or suffer injuries while performing their duties.*

Amend Chapter 15, 1918, as amended by Chapter 14, 1919, by eliminating Section 4.

Section 4 makes the application of the Act and the payment of compensation thereunder conditional upon the injured employee or the dependents of a deceased workman electing as to whether or not they will accept compensation under the Workmen's Compensation Act of the Province in lieu of the payments under the Provident Fund Act.

As previously expressed, in our opinion, the compensation payable under the provincial Workmen's Compensation Acts should be paid to injured employees of the Government Railways, in the same manner as is paid to injured employees of other railways, without respect to their privileges under the Provident Fund Act.

2. *Bank Act.*

For the purpose of meeting losses to depositors occasioned by bank failures or suspension of payment, the Act be amended to provide for the creation and maintenance of a fund, similar to the Bank Circulation Redemption Fund under Section 64, Chapter 32, 1923; this fund to be made retroactive to cover losses to depositors by the failure of the Home Bank.

3. *British North America Act Amendment.*

We suggest that, pending the necessary legislation for an elective Senate, the British North America Act be amended by eliminating the property qualification of Four Thousand Dollars.

We are heartily in accord with and commend the declaration made by the Prime Minister just before adjournment of the last Session of Parliament with respect to restricting the powers of the Senate to veto bills passed by the Commons.

4. *Canadian National Railways Act, Chapter 13, 1919.*

Amend Section 14 of this Act by eliminating that portion of the Section which excludes "maintenance" from the application of the Railway Act. The purpose of this proposal is to bring the maintenance of a railway, as well as operation and equipment, under the jurisdiction of the Board of Railway Commissioners for Canada.

5. *Dominion Elections Act.*

(a) Amend Section 10 to provide that nothing therein shall prohibit a labour organization, as such, from contributing to an election fund, or collecting from its membership voluntary subscriptions for such purposes and for defraying legitimate election expenses; also, that all sources of, and amounts subscribed to election funds be certified under oath, and published with other official returns of the election.

(b) Amend Section 40, subsection (8), by eliminating paragraph (b), regarding "deposit by candidates" of two hundred dollars.

We respectfully suggest that this part of the Act be eliminated or so amended that the said deposits shall be returned to all the candidates within ten days after the successful candidate is declared elected, regardless of the number of ballots cast for said candidates. With this proposed amendment to subsection (8), other subsections should be amended accordingly.

(c) Amend section 100, subsection (3) paragraph (a) and (b) by substituting in the first line of each paragraph the word fifteen for the word "fifty."

The purpose of this proposed amendment is to insure advance polls being established wherever it seems probable that fifteen votes of the persons within the scope of this section

will be polled, and also that no name shall be struck from Schedule Two, unless a total of less than fifteen such votes is polled at the preceding general election.

(d) Amend Form 54 ("Statement of Identification and Declaration," required under Subsection (9), paragraph (c), to be made by a person applying to vote at an advance poll), by substituting the word *possible* for "necessary" in the seventh line and the word *may* for "will" at the beginning of the ninth line. The declaration would then read:

"I declare that my employment or calling is that of a railway employee, sailor or commercial traveller and necessitates from time to time my absence from my ordinary place of residence and that I have reason to believe that because of *possible* absence from my ordinary place of residence in the pursuit of my employment or calling I *may* be unable to vote at the pending Dominion election on polling day."

6. *Immigration Act.*

(a) Amend by repealing Section 41 as enacted by Chapter 26 of the Statutes of 1919 (First Session).

We respectfully submit that this legislation is an attack upon the liberty of British subjects and an uncalled for curtailment of the rights to due process of law as hitherto practiced in Canada and the British Empire.

We appreciate the action of the Government in passing the necessary legislation at previous sessions, pursuant to our request for the above amendment, but regret and strongly resent the action of the Senate in vetoing the Bills passed by the Commons.

(b) Amend act, or regulations, to provide desirable restrictions against the indiscriminate methods of transporting companies in advertising for and bringing in immigrants, regardless of Canadian requirements and prevailing industrial conditions; also for more strict medical examination of immigrants before entering Canada, thus preventing the necessity of turning them back.

(c) Further restriction and supervision of Asiatic immigration.

7. *Criminal Code.*

Amend by repealing sections 97a and 97b as enacted by chapter 46, 1919 (first session).

This legislation, enacted concurrently with section 41 of chapter 26, 1919, is, in our opinion, equally unjustifiable and is unduly drastic and is capable of being interpreted to the curtailment and abridgment of British liberty.

We desire to express our appreciation of the action taken by the Government on this subject at previous sessions pursuant to our request, but we again deplore the action of the Senate in vetoing the Commons Bill.

8. *Industrial Disputes Investigation Act, 1907.*

Amend section 58 by adding the following subsection (2):—

"58. (2) Any employer who alters conditions of employment with respect to wages or hours contrary to the provisions of section fifty-seven of this Act and amendments thereto shall be liable to a fine of not less than one hundred dollars or more than one thousand dollars for each day or part of a day that conditions of employment with respect to the wages or hours of any employee had been altered."

This proposal, we believe, if enacted, will tend to prevent a recurrence of conditions which obtained between the Canadian railways and their employees during July and August, 1921 and 1922.

We desire to express our strong disapproval of the action of the Senate at the last sessions in opposing the provisions of bills passed by the House of Commons in accord with our proposals.

9. *Proposed Uniform Pension Plan for Employees of Canadian National Railways.*

Appreciating the information from the Minister of Railways, under date of June 2, 1923, that the officials of the Canadian National Railways are preparing a Uniform Pension Scheme, we respectfully urge that, if possible, the new pension scheme may be submitted to the employees concerned through their representatives in sufficient time to insure bringing down the necessary legislation during the coming session of Parliament.

10. *Protection at Highway Crossings of Railways at Rail Level.*

That, with a view to greater protection and safety to the public and the employees in respect of highway crossings of railways at rail level, the work of eliminating such crossings under the provisions of section 262 of the Railway Act, chapter 68, 1919, be undertaken with due expediency. This proposal, if carried out, will undoubtedly reduce the appalling number of accidents at highway crossings, and the work undertaken would thus provide employment for numbers of citizens and materially relieve the present unemployment situation.

While we appreciate the value of improving highways throughout the country, we respectfully submit that, if the Federal and Provincial Governments continue the reconstruction of highways, a sufficient amount be appropriated annually for their diversion under or over the railway.

We further suggest the Act be amended to require all pedestrians and vehicles to stop before crossing the railway at rail level.

11. *Prevent Duplication of Taxation.*

We desire to express our appreciation of the action taken by the Government last autumn in calling a Federal-Provincial conference on this subject, and we respectfully urge such further conferences, as may be necessary to effect the desired relief to the Canadian taxpayer, as early as possible.

12. *Old Age Pensions.*

We desire to express our appreciation of the Government's action in appointing a Special Committee at the last session and the report made, on this subject.

13. *Unemployment Insurance.*

With a view to the enactment of unemployment insurance legislation, we suggest that an investigation be undertaken by a Committee of the House and a report of such investigation submitted to the coming session of Parliament.

14. *Taxation on Government Railway Property.*

That Government railways and property used in connection with the operation thereof, be not exempt from municipal taxation without the consent of the municipality wherein they operate.

This proposal, in addition to several of the items enumerated above, has been submitted to the former Government. In reply to this proposal, Sir Robert Borden wrote to us under date of July 2, 1920, as follows:—

"The question of exemption from taxation is an important one and probably the difficulties will be removed when all the railways owned by the country are operated under the system."

Replying to our inquiry on this subject, the Minister of Railways, under date June 2 last, wrote as follows:—

"With reference to municipal taxation on railway property will be glad to discuss this question with you at any time but really it is a matter between the Government and the municipalities through which the roads run, as well as the provinces, several of which tax railways. It is a question of great magnitude. I might say that any land that was taxable heretofore is not relieved from taxation by the amalgamation, except property directly purchased by the Government. The settlement of this question involves an enormous sum of money, and, if dealt with at all, it will have to be in a very large way, as between federal, provincial and municipal authorities."

While appreciating the foregoing, we would like to have a clearer interpretation of same and of the powers of the Canadian National Railways management with respect to this matter.

Dates of Coming Conventions

The Order of Sleeping Car Conductors to meet at Kansas City, Missouri, on March 9.

International Brotherhood of Papermakers to meet on March 10 to 16.

Amalgamated Association of Iron, Steel and Tin Workers of North America to meet at Pittsburg, Pennsylvania, on April 7 to 19.

Labour Women's Social and Economic Conference

The Labour Women's Social and Economic Conference, in session at Winnipeg on February 17, passed resolutions condemning the immigration policy of Canada, urging the adoption of a scheme of adequate old age pensions, and instructing the executive to appoint a committee to give particular attention to the enforcement of laws governing the work of women and girls. Regarding unemployment, a resolution was passed to the effect, that in view of the fact that production and distribution had proved inadequate to properly provide for the working man, it was the duty of the Dominion government to institute some form of state unemployment insurance. Approximately forty-five delegates, representing the Women's Labour league, One Big Union auxiliaries, Forum organizations, and other groups, from points between Fort William, Ont., and Medicine Hat, Alta., were in attendance.

The election of officers resulted as follows: President, Mrs. F. M. Eddy, Regina; first vice-president, Mrs. F. Rowe, Winnipeg; second vice-president, Mrs. T. V. Hanway, Regina; third vice-president, Mrs. E. Cove, Brandon; recording secretary-treasurer, Mrs. T. T. McArthur, Medicine Hat; general secretary, Miss Beatrice Bridgen, Brandon; three advisory members, Mrs. J. S. Woodsworth, Ottawa; Mrs. W. Irvine, Calgary; Mrs. John Queen, Winnipeg.

Next year the conference will be held in Regina.

The executive committee of the Ontario and Quebec Conference of Typographical Unions held a meeting in January at which with the knowledge and consent of President James M. Lynch and other members of the Executive Council of the International Typographical Union, they endorsed a proposal that the Dominion Government should place a ten cent per pound import duty on all magazines and other printed matter entering Canada from the United States. It was their belief that if this duty were placed on all American magazines some of them having large circulations in Canada would open Canadian branch offices, and that opportunity would be afforded for the employment of Canadian printers and mechanics.

ALBERTA MANUFACTURERS' VIEWS ON LABOUR LEGISLATION

A DELEGATION from the Alberta branch of the Canadian Manufacturers' Association waited upon Premier H. H. Greenfield, the Honourable Alex. Ross, minister of labour, and the Honourable R. G. Reid, provincial treasurer, at Edmonton, and expressed their opinion with regard to the legislative proposals of the Alberta Federation of Labour. These were outlined in the last issue of the *LABOUR GAZETTE*. The matters raised by the labour representatives and referred to by the manufacturers affected the Factories Act, the Minimum Wage Act, the Workmen's Compensation Act, health insurance, old age pensions, the Industrial Disputes Investigation Act, fair wages, motion picture films, and the printing of school books.

With regard to the Factories Act, the manufacturers expressed the opinion that its present provisions conferred on inspectors all necessary powers in connection with sanitation of premises if they carry out their duties.

They objected to any increase in the minimum wage rates for female employees and suggested that the orders of the Minimum Wage Board could be enforced without further legislation. They opposed the proposals for the payment of overtime at a higher rate than straight time, and for the provision of a minimum penalty under the Minimum Wage Act whereby magistrates would be compelled to impose a fine which would make violation a more serious offence. They also disapproved any proposed extension of minimum wage legislation to male employees.

The association did not deem it necessary to regulate the hours of work of night watchmen, and strongly opposed the enactment of any general Hours of Work Act. In this connection it was alleged that the Eight-Hour Day Act had proved to be unworkable in British Columbia, many industries having been exempted. Agreement was expressed with the suggestions of labour that legislation should be enacted for the inspection of all elevators in the province with the object of eliminating accidents.

In regard to workmen's compensation, the request of the Federation of Labour that frost bites incurred in the course of employment should be considered as accidents within the meaning of the Compensation Act, was declared by the manufacturers to be unnecessary in view of a definition already given to the Act. They alleged that the increases in compensation rates made last year had resulted in raising the assessment upon nearly all in-

dustries, and they suggested a reduction of present rates in order to encourage the establishment of industries in the province.

They opposed the proposal to provide medical and hospital attention as part of a health scheme, as previously suggested by the labour delegates.

The association was not opposed to an old age pension, but considered it a matter for co-operation between all the provinces and the federal government.

In regard to the proposal to enact provincial legislation as a substitute for the federal Industrial Disputes Investigation Act, the delegation thought that the suggestion was premature and that it would be better to wait until it was known what the Dominion Government intended to do with regard to the recent decision of the privy council.

The delegates opposed labour's request that a fair wage clause, stipulating a minimum wage of 50 cents an hour for all workmen be inserted in all contracts. They pointed out that in a recent dispute the representatives of labour were prepared to accept 40 cents an hour for labourers. It was agreed that legislation to prevent the use of damaged motion picture films was desirable to prevent accidents and it was also thought that school books should be printed in Alberta as far as practicable.

Premier Greenfield promised to give full consideration to the representations made, declaring that the matters would receive the careful attention of the government.

Mr. A. F. Andrews, of the Ogilvie Flour Mills Company, Limited, Medicine Hat, was elected chairman of the Alberta branch of the association at a meeting held on the same day.

The quantity of pulpwood exported from the province of Quebec to the United States during the past five years was stated in reply to a question in the Provincial Legislature on February 5 as follows: 1920—827,892 cords; 1921—601,846 cords; 1922—553,836 cords; 1923—760,238 cords; 1924—636,072 cords.

A bill providing for the establishment of a national wage board with exceptional autocratic powers, upon whom the responsibility will rest for advising the Minister in charge as to the rate of wages and condition of service which shall operate throughout the Union in every phase of employment, has recently been introduced in the Parliament of South Africa.

LEAGUE OF NATIONS INTERNATIONAL LABOUR CONFERENCE

Proposed Draft Conventions and Recommendations on Workmen's Compensation to be Submitted at the Seventh Session on May 19

REPLIES to the "questionnaire" on workmen's compensation that was sent out last year by the International Labour Office have been received at Geneva from Argentina, Australia (Commonwealth, and States of New South Wales, Queensland, Tasmania, Victoria, Western Australia), Belgium, Canada (Provinces of Alberta, British Columbia, Manitoba, Ontario, Saskatchewan), Chile, Czechoslovakia, Denmark, Esthonia, Finland, France, Germany, Great Britain, India, Irish Free State, Italy, Japan, Latvia, Netherlands, Norway, Poland, Roumania, Kingdom of the

Serbs, Croats and Slovenes, South Africa, Sweden, Switzerland.

The questionnaire, which was printed in the November issue of this Gazette, invited the state members of the Organization to express their views on certain aspects of workmen's compensation, the intention of the office being to use the replies as a guide in framing proposed Draft Conventions and Recommendations to be submitted at the Seventh Session of the Conference on May 19. Accordingly Draft Conventions and Recommendations will be submitted at that session in form as follows:—

Proposed Draft Convention on Workmen's Compensation for Accidents

Article 1.—Each member of the International Labour Organization which ratifies this Convention undertakes to ensure that workmen who suffer personal injury by an industrial accident, or their dependents, shall be compensated on terms not less favourable than those hereinafter laid down.

Article 2.—The laws or regulations as to workmen's compensation shall apply to every workman, employee or apprentice employed by any public or private enterprise, undertaking or establishment whatsoever, except home workers, and shall provide for compensating every such person for injury caused by any accident occurring in connection with his employment.

Article 3.—The compensation payable to the injured person or his dependents where serious and permanent incapacity or death results from the injury shall be paid in the form of an annual pension: provided that it may be wholly or partially paid in a lump sum, if the competent authority is satisfied that guarantees are forthcoming for its proper utilization.

Article 4.—Where incapacity results from the injury of such a kind that the injured person must have the constant help of another person, additional compensation shall be provided.

Proposed Draft Convention on Workmen's Compensation for Occupational Diseases

Article 1.—Each member of the International Labour Organization which ratifies this Convention undertakes that compensation shall be afforded for injury resulting from occupational diseases under the same conditions as for injury caused by industrial accidents.

Article 5.—The compensation to which an injured person shall be entitled shall include medical aid, whether such aid is provided by the employer or by accident, sickness or invalidity insurance institutions.

Medical aid shall include the services of medical or surgical specialists, wherever the need for such services is established.

Article 6.—An injured person shall be entitled to be furnished with, and to have renewed at regular intervals, any artificial limb or surgical appliance, the need for which has been established; provided that, in exceptional cases where such renewal is specially difficult, additional compensation may be paid in lieu thereof to cover the probable cost of repairing or renewing such limb or appliance.

Article 7.—In order to obviate default of payment in consequence of the employer's or insurer's insolvency,

- (a) a security fund shall be established to ensure the continuation of payments in case of such insolvency; or
- (b) employers shall be bound to cover their risk by insurance with one or more institutions which shall be subject to State supervision.

Article 2.—The list of diseases considered as occupational shall comprise at least those mentioned in the Schedule to this Convention. The Schedule shall be subject to revision every five years by the International Labour Conference.

SCHEDULE

Description of disease

1. Lead poisoning or its sequelae.
2. Mercury poisoning or its sequelae.
3. Arsenic poisoning or its sequelae.
4. Poisoning by benzene or its homologues, by nitroamido-derivatives of benzene and its homologues, or their sequelae.
5. Poisoning by nitrous fumes.
6. Anthrax.
7. Ankylostomiasis.
8. Compressed air illnesses and their sequelae.

Description of process

1. Any process exposing workers to the action of lead and its compounds or alloys. Handling of minerals containing lead.
2. Any process exposing workers to the action of mercury, its compounds or amalgams. Handling of minerals containing mercury.
3. Any process exposing workers to the action of arsenic or its compounds.
4. Any process exposing workers to the action of any of these products.
5. Any process in which nitrous fumes are evolved.
6. Handling of products which may cause infection.
7. Mining and work in brick and tile works.
8. Any work carried on in compressed air.

Draft Recommendation Concerning the Minimum Scale of Compensation

Whereas it is important to seek to ensure that the financial burdens involved by the application of labour legislation, and notably in regard to workmen's compensation, should as far as possible be equivalent for the different Members of the International Labour Organization; and

Whereas the scale of payments is the essential factor in workmen's compensation both for the employer and the workman, whose obligations and financial charges in the one case and rights in the other are determined thereby;

The General Conference recommends that each Member of the International Labour Organization should take the following principles and rules into consideration in fixing the minimum scale of compensation payable to workmen who suffer personal injury by an industrial accident or to their dependants:

I. Where incapacity for work results from the injury, the national laws or regulations should provide for the payment of compensation at rates not lower than those herein-after indicated;

(1) In case of permanent total incapacity, a pension equivalent to two-thirds of the workman's annual earnings;

(2) In case of permanent partial incapacity, a proportion of the pension payable in the event of permanent total incapacity calculated in reference to the reduction of earning power caused by the injury;

(3) In case of temporary total incapacity, a daily or weekly payment equivalent to two-thirds of the workman's basic earnings as calculated for purposes of compensation;

(4) In case of temporary partial incapacity, a pro portion of the daily or weekly payment

payable in the case of temporary total incapacity calculated in reference to the reduction of earning power caused by the injury.

Where compensation is paid in a lump sum, the sum should not be less than the capitalized value of the pension which would be payable under the foregoing paragraphs.

II. Where the injury is such that the workman requires the help of another person, additional compensation should be paid to the workman which should not be less than half the amount payable in the case of permanent total incapacity.

III. Where death results from the injury, those entitled to be regarded as dependants for purposes of compensation should include at least the following:

(1) deceased's husband or wife;

(2) deceased's children under 18 years of age, or above that age if by reason of physical or mental infirmity they are incapable of earning;

(3) deceased's ascendants (parents or grandparents), provided that they are without means of subsistence and were dependent on the deceased or the deceased was under an obligation to contribute towards their maintenance;

(4) deceased's grandchildren and brothers and sisters;

(a) if below 18 years of age, or above that age if by reason of physical or mental infirmity they are incapable of earning, and

(b) if they are orphans, or if their parents, though still living, are incapable of providing for them.

Where compensation is paid as an annual pension, the maximum total of the pensions payable to all the dependants should not be less than two-thirds of the deceased's annual earnings.

Proposed Recommendation as to Jurisdiction in Disputes on Workmen's Compensation

Whereas disputes on workmen's compensation turn not only on the interpretation of laws or regulations but generally on questions of an occupational character requiring a thorough knowledge of working conditions, *e.g.* questions as to the nature of the undertaking, the kind of risk inherent in it, the relation between the workman's employment and the accident, the method of computing earnings, the degree of incapacity for work, the possibility of the workman's adapting himself to some other occupation, etc.; and

Whereas workmen and employers alone have the necessary knowledge and experience on these questions, and disputes on compensation matters might be more equitably settled if they were associated with the courts which have to decide such disputes; and

Whereas it is possible in each country to secure the association of employers and workmen with such courts without departing radically from the existing judicial system:

Where compensation is paid in a lump sum, the maximum sum payable to all the dependants should not be less than the capitalized value of a pension equivalent to two-thirds of the deceased's annual earnings.

The General Conference makes the following recommendations to each Member of the International Labour Organization:

I. That every dispute relating to workmen's compensation should preferably be dealt with by a special court or board of arbitration, including in addition to regular judges, an equal number of employers' and workmen's representatives appointed to act as adjudicators by their respective organizations or on the nomination of such organizations.

II. That, where disputes relating to workmen's compensation are dealt with by the ordinary courts of law, such courts shall be required to take the evidence of employers' and workmen's representatives as expert witnesses in any case where the dispute involves a question of an occupational character, and in particular the question of the degree of incapacity for work.

International Labour Directory

The International Labour Office has just published a list of co-operative organizations throughout the world, constituting a new edition, in a modified and enlarged form, of Part VI of the International Labour Directory, a publication of the Organization. The first division of the new publication consists of a list of international co-operative organizations, followed by lists, arranged according to countries, of the national organizations; the second division enumerates the organizations (federations and other bodies) representing the various forms of the movement in each country. Canadian readers will be interested in the Canadian section of the report, which gives the names of seventeen co-operative societies in the Dominion, as follows:—

Canada—

1. Canadian Co-operative Wool Growers, Ltd., Toronto, Ontario.
2. Co-operative Union of Canada, Brantford, Ontario.
3. United Grain Growers, Ltd., Winnipeg, Manitoba.

Alberta—

4. Alberta Co-operative League, Bentley, Alberta.

5. Alberta Co-operative Wheat Producers, Ltd., Calgary, Alberta.

6. The Alberta Farmers' Co-operative Co., Ltd., Calgary, Alberta.

British Columbia—

7. The British Columbian Fruit Growers Association, Vancouver, B.C.
8. Peachland Fruit Growers Union, Peachland, B.C.

Manitoba—

9. Farmers Co-operative Packing Co., St. Boniface, Man.

Nova Scotia—

10. The United Fruit Companies of Nova Scotia, Ltd., Kentville, N.S.

Ontario—

11. The Niagara Peninsula Growers, Ltd., Grimsby, Ont.
12. United Farmers Co-operative Co., Ltd., Toronto, Ont.
13. The Ontario Co-operative Dairy Products, Ltd.

Quebec—

14. La Caisse Populaire, Quebec City, P.Q.
15. Co-opérative Centrale des Agriculteurs de Québec, Montréal, P.Q.

Saskatchewan—

16. Saskatchewan Co-operative Elevator Co., Ltd., Regina, Sask.
17. Saskatchewan Co-operative Creameries Ltd., Regina, Sask.

The International Labour Directory, 1925, of which Part VI is the first to appear, is intended to enable those who are desirous of keeping themselves informed on the problems of labour and industry to place themselves easily in touch with official institutions and international or national organizations dealing with these problems throughout the world.

The first part of the Directory contains a statement on the constitution and functions of the International Labour Organization and the League of Nations, together with a guide

to the various government services, commissions and official advisory bodies concerned with industrial and labour questions in the various countries. The second and third parts contain lists of the most important international and national organizations of employers and workers respectively, with their addresses, officers, etc. The fourth and fifth parts contain similar information relating to national and international organizations of intellectual workers and ex-service men respectively. The sixth part contains a list of the principal co-operative organizations of various kinds, together with valuable data concerning each organization. Finally, the seventh part gives a list of various international organizations concerned with questions or more or less direct interest to the industrial and labour world.

Imperial Service Medals for Canadian Employees

HIS Majesty the King has been pleased to award the Imperial Service Medal to the following officers:—

Daniel James Buchanan, lockmaster, Department of Railways and Canals, Smiths Falls, Ontario.

Christopher Columbus, lightkeeper, Department of Marine and Fisheries, Penetanguishene, Ontario.

Theophile Genest, mechanic, Department of National Defence, Quebec.

Thomas Glover, lockman, Department of Railways and Canals, Jones' Falls, Ontario.

Glenon Frederick Gordon, mail porter, Post Office Department, Ottawa, Ontario.

Francois Hale, foreman, Department of National Defence, Filling Factory, Quebec.

Arthur Henderson, lightkeeper, Department of Marine and Fisheries, Bliss Island, New Brunswick.

Hugh Kealey, lockman, Department of Railways and Canals, Merivale, Ontario.

Joseph Kurs, mail porter, Post Office Department, Ottawa, Ontario.

Joseph Laprise, machinist, Department of National Defence, Quebec.

Jean Baptiste Lavallee, captain of quarantine boat *Alice*, Grosse Isle, Department of Health, Quebec.

Severin LeBlanc, lightkeeper, Department of Marine and Fisheries, Tusket River, Nova Scotia.

Patrick LeClair, mail porter, Post Office Department, Ottawa, Ontario.

Peter Morrison, junior lightkeeper, Department of Marine and Fisheries, Portage Island, New Brunswick.

Michael Murphy, lightkeeper, Department of Marine and Fisheries, Pomquet Island, Nova Scotia.

Wendlin Schuler, Senior letter carrier, Post Office Department, Brantford, Ontario.

George Springate, letter carrier, Post Office Department, Hamilton, Ontario.

Coal Mine Disaster in Germany

At least 135 miners were killed in an explosion of firedamp on February 11 at a coal mine at Dortmund in the Ruhr coal field in Germany. The explosion appears to have begun near the shaft so that its full force was felt in all three levels, the lowest of which is 1,650 feet deep. Miners near the shaft were blown many feet and mangled beyond recognition, but the dead elsewhere died of suffocation. The Stein mine, which

belongs to the Stinnes group, was equipped with the most modern devices. It had had no other accident since 1901. The rescued men believe a spark from the machinery ignited the firedamp, but only a formal investigation will be able to determine the truth. The accident is the second greatest in the history of German mining. It was surpassed only by a disaster at the Radbon mine in 1909, where 341 men perished.

NATIONAL ECONOMIC COUNCIL IN FRANCE

IN the LABOUR GAZETTE for September, 1924 (page 737), it was stated that a committee had been appointed by the French Government to draw up a programme for a National Economic Council, and "to consider in what way labour, with all its organizations and aspirations, and in what way also the interests of public health, can be represented on such a council." The proposals of this committee have been used as a basis for the constitution of the Council which was sanctioned by a decree of January 16, 1925. Provision will be made for the Council in the budget of the Ministry of Labour. It will hold each year four sessions of ten days each, a permanent committee of ten members dealing with current matters arising between its sessions; this committee will also execute the decisions taken by the Council and prepare the agendas for the sessions. The following are some of the provisions contained in the text of the constitution of the new Council:—

The object of the National Economic Council is to consider questions concerned with the economic life of the country, to find solutions for such questions, and to propose to the Government the adoption of these solutions. The functions of the Council, autonomous in its composition, are of an advisory nature.

The Council is composed of 47 members representing the various social and economic forces of the nation, in the proportions shown below:—

I. Consuming Public.—(a) Consumers' co-operative societies and purchasers' unions, 3 members; (b) Association of mayors and unions of towns, 2 members; (c) Users of public services, 2 members; (d) Fathers and mothers of families and mutual benefit societies, 2 members.

II. Labour.—A. Intellectual labour and education, 3 members; B. Direction of Labour: (a) Industry, 3 members; (b) Agriculture, 3 members; (c) Commerce, 2 members; (d) Transport, 1 member; (e) Co-operation, 1 member; (f) Public services, 1 member. C. Salaried work: (a) Civil servants, 2 members; (b) Technical experts, 2 members; (c) Labour: (1) Industry, 5 members; (2) Commerce, 2 members; (3) Agriculture, 1 member; (4) Transport, 2 members. D. Urban and Rural Crafts (Artisans), 2 members.

III. Capital.—A. Industrial and commercial capital, 3 members; B. Immovable capital (rural and urban property), 2 members; C. Bank, stock exchange, insurance funds and savings banks, 3 members.

Members of the Council will be chosen in each category as above by the most representative organization or organizations. Such organizations will be nominated by the Government on the proposal of the Ministry of Labour after the ministers interested have been consulted. The Prime Minister will inform the organizations of the number of re-

presentatives which they must send to the Council. The Council will have the right to decide in cases where the choice of the most representative organization or organizations is disputed.

Members of the Council will hold office for two years. Substitute members will be elected by the same procedure as regular members. Deceased members or members resigning office will be replaced by the procedure regulating the original elections and for the remaining period of the original appointments.

Members of the Council must be of French nationality, of at least 25 years of age, and in possession of full civil and political rights. Women are admissible as members on the same conditions regarding age and nationality.

The Council will hold each year four ordinary sessions of ten days each. If extraordinary sessions are necessary, it may be convened by the Prime Minister on its own proposal.

The Prime Minister is, in virtue of his office, President of the Council, which elects its vice-president and secretariat by a majority vote. The Council will draw up its own regulations.

Members of the Council or, in their absence, substitute members, and experts will be present together at the sessions of the Council, but only the members or their substitutes have the right to vote.

The Council will elect from among its members a Permanent Committee of ten members. It will lay down the functions and powers delegated to this committee, which will elect its own secretariat and which will be presided over by the vice-president of the Council. The Permanent Committee will deal with current matters arising between two sessions of the Council, will see to the execution of decisions taken by the Council and the preparation of the agenda of the sessions of the Council.

The Council will have a permanent General Secretariat. The General Secretariat will be appointed by decree on the proposal of the Prime Minister after the Minister of Labour and the Secretariat of the Council have been consulted.

The Council will draw up the list of experts whom it thinks necessary to associate permanently with its work.

The Ministers of Labour, Public Health, Commerce, Agriculture, Finance, Public Works, and the Colonies, will each appoint two experts to sit on the Council. The Director of Services of the General Secretariat of the Superior Council of National

Defence, the President of the Permanent Committee of the Superior Council of National Defence, and the French Government representative on the Governing Body of the International Labour Office will have the right to participate in the work of the Council, and will have the same privileges as those granted to experts.

When a question concerns a particular economic or occupational category, which is not represented permanently on the Council, the Council may, for the consideration of such questions, admit representatives of the category in question, who will take part in the work and will be nominated in accordance with the provisions laid down in section 14 hereunder.

Ministers, Under-Secretaries of State, High Commissioners and competent Committees of the Chamber and Senate may be represented at the discussions of the Council or of its Permanent Committee.

The Council may demand to be heard by the competent Committees of one or other of the Chambers, or by ministers and members of the Government, and may require them to be represented at its meetings or at the meetings of its Permanent Committee in cases where they have not already officially delegated their departments to do so.

The Council may set up permanent bodies necessary for its documentation and publications.

The Council is consulted directly by the Prime Minister. By a majority of two-thirds of the votes of the members present it may request its secretariat to include on the agenda of the next session all questions which

it thinks are of importance either from a national or an international standpoint, and all recommendations must be adopted by a two-third vote of the members present.

The Government will submit to the Council, for information, all bills or private bills deposited with the Chamber which are of economic interest. Any law of economic interest may require the compulsory consultation of the Council, which will draft the administrative measures necessary for its application.

The Prime Minister, in a report to the President of the Republic on the subject of the new Council, says:—

The creation of this institution is justified by the complexity of our economic and social life, which is such that the different Government departments whose duty it is to develop and direct the economic activities of the nation have no adequate link one with another. Moreover, economic interests are so vitally important that the Government and the public authorities must at all times be in a position to take advantage of the advice of persons who, in addition to possessing special and technical experience, can be regarded as representing the opinions of the big organizations, as will be those who are nominated to the Council.

The existence of this advisory body will enable the Government to pursue a constructive policy and to avoid the ever present danger of detached and uncoordinated decisions, having regard to the fact that the various economic forces of the country are mutually dependent and complementary.

The proposed new organization is of an experimental nature. It will in no sense be a Parliament or even an Industrial Chamber, such as has been tried in certain neighbouring countries. It leaves intact the sovereignty of Parliament and the authority of Government. At the same time, it differs from administrative or inter-departmental councils, in that it is composed of persons freely nominated by the most representative industrial and social organizations, and will look for general solutions of the problems it considers.

The Purpose of Wage Boards

Miss M. Cecile Matheson, convener of the standing committee on "Employment for Women" in the National Council of Great Britain, is now in Canada to make a survey of prevailing conditions in industries. In an interview given to the press she said in regard to the movement she represents: "Our chief concern is not for the women as women, but to get the employees acting together rather than going to war for wage adjustments and so forth. Our trade boards, made up of 50 per cent employees and 50 per cent employers, all duly appointed by the government, each board acting for some phase of industry, decide on the wages to be paid for specified kind of work, and whatever they agree on becomes the law of the country, in which way we have a minimum wage law, below which they can't go. We have no set

eight-hour law for women. As far as our statutes are concerned we can work on a 54-hour basis in England, but the agreement reached by our various industrial boards have set a 48-hour or 50-hour week. Our leaders believe that industrial war can only be averted through the organizing of labour on a sane basis."

The Canadian Pacific Railway Company is offering two scholarships for 1925, covering four years' free tuition in architecture, chemical, civil, mechanical or electrical engineering at McGill University, to apprentices and other employees on the company's permanent staff, and to sons of employees. All competitors must be under twenty-one years of age.

EMPLOYMENT AND WAGES IN VARIOUS INDUSTRIES IN CANADA

THE Dominion Bureau of Statistics has recently issued reports on the biscuit, confectionery and chewing gum industry; the cocoa and chocolate industry; the men's furnishing goods industry; and on central electric stations, electric railways, steam railways and telephone and telegraph operations in Canada during 1923. Previous reports in this series relating to other industries were outlined in the *LABOUR GAZETTE* for February, 1925, and previous issues.

Biscuit, Confectionery and Chewing Gum Industry, 1923

The number of individual plants reporting to the Bureau in 1923 was 361, a decrease from the previous year of 11. The distribution of plants by provinces in numerical order was as follows—Ontario, 190; British Columbia, 51; Quebec, 45; Manitoba, 21; Alberta, 18; Nova Scotia, 12; New Brunswick, 11; Saskatchewan, 10; and Prince Edward Island, 3. Of the total number of factories reporting 15 were engaged in making biscuits only, 25 making both biscuits and confectionery and 323 making confectionery only.

The capital invested in the industry during 1923 was \$36,827,117, an increase of \$1,038,282 over the previous year. In Ontario alone the capital invested amounted to \$22,217,908, and in Quebec it totalled \$7,521,468.

The total value of the products of the industry was \$48,394,175, which was an increase of \$4,644,913 over the previous year. Biscuits showed an increase of 3,575 tons in quantity, and of \$1,006,171 in value. Confectionery, although showing a reduction in the quantity manufactured of 4,937,487 pounds, still yielded an increase in value amounting to \$1,999,713, this being accounted for by the increased cost of the principal materials entering into its manufacture, which is reflected in the sale price of the products. Ice cream, the remaining principal item of production, showed an increase of 860,198 gallons in quantity and \$1,004,473 in value.

The total employees of all classes numbered 12,724 in 1923 as compared with 12,269 in the preceding year. Male employees increased by 248 and females by 135, whilst the salary and wage payments increased by \$340,941. Salaried employees totalled 1,592 males and 496 females, these receiving \$3,742,906 in salaries, whilst wage earners, on the other hand, comprised 4,658 males and 5,978 females, their wages amounting to \$7,382,265. Ontario furnished 52.5 per cent of the total employees engaged and who received 57.4 per cent of

the total payments for salaries and wages. Quebec had 24.4 per cent of the total employees, but only 20 per cent of the total payments for salaries and wages. The average salaries paid to officers of corporations was \$4,534, superintendents and managers \$2,950, technical experts \$1,550, and clerks and stenographers \$1,366. The average wages paid to workers was \$694 in 1923, as against \$703 in 1922, being a decrease of 1.5 per cent. The average number of employees for the year was respectively 4,658 males and 5,978 females. The month of highest employment for males was September, when 4,884 persons were entered on the pay-roll, and for females the month of October was highest with an individual pay-roll number of 6,883. The month of minimum employment for males and females was January, when 4,385 males and 5,499 females were employed.

The average number of days in operation throughout the whole of Canada was 260.90, the lowest average being in Alberta where 213.89 days were worked, and the highest in New Brunswick was 292.67 days. The hours worked per day averaged 8.26 ranging from 7 in Saskatchewan to 9.08 in Nova Scotia. The average hours worked per week was 48.25, the hours worked in Saskatchewan averaging 40.80 this being the lowest average for any of the provinces; in New Brunswick the average was 44.27; in Alberta, 44.89; in Manitoba, 45.38; in British Columbia and Yukon, 47.50; in Ontario, 48.47; in Prince Edward Island, 50; in Nova Scotia, 53.67; and in Quebec, 61.27.

The Cocoa and Chocolate Industry, 1923

Five establishments reported operations in the cocoa and chocolate industry during 1923, of which 2 were in Ontario, 2 in Quebec and 1 in Nova Scotia. Whilst the number of active establishments was the same in 1923 as in 1922, the value of the output increased slightly from \$3,982,145 in 1922 to \$4,042,106 in 1923. The total capital invested in the industry in 1923 was \$3,986,501, this being a net decrease of \$259,415 from the previous year.

The total number of employees of all classes rose from 630 in 1922 to 640 in the following year, an increase of 10. On the other hand, the total amount paid for salaries and wages fell from \$633,790 in 1922 to \$621,308 in 1923, a net decrease of \$12,482. Of the total number of employees engaged in the industry 8 were salaried officers of corporations, their salaries totalling \$41,057; 3 were general superintendents, managers, etc., with salaries amounting to \$14,140; 5 were technical ex-

perts, engineers, accountants, etc., who received for their services \$9,820; 75 (58 males and 17 females) were clerks, stenographers, salesmen, etc., their salaries amounting to \$109,919, and 549 (290 males and 259 females) were wage-earners who received for their services \$446,372. The average number of employees engaged during the year by months was 290 males and 259 females, November being the month of greatest employment with 313 male and 286 female employees engaged.

The number of days in operation on full time was 1,145 and the average number of days in operation was 229.0. The number of hours worked by wage-earners per day or shift was 45 and per week 252, and the average number of hours worked per day or shift was 9.0 and per week, 50.4.

Central Electric Stations, 1923

The report on the Central Electric Stations in Canada in 1923 also contains information regarding Canadian water-powers up to December 16, 1924, showing a growth of 300,000 horse-power in the hydraulic installation of Canada, 90 per cent of which was in central electric stations. Construction was most active in the province of Quebec. The province of Ontario, however, showed quite a considerable amount of power installed and new stations and considerable equipment are being provided to supply the growing demand for power in the mining fields of Northern Ontario. In the Maritime Provinces some 15,000 horse-power was added to the central electric station installation during 1924. While only one installation was completed in the Western provinces during 1924, it is stated that preliminary work under way indicates considerable activity for 1925.

The total number of electric power plants in operation in 1923 was 532, of which 269 were hydraulic plants and 263 were fuel plants; 335 were commercial stations and 197 were municipal. The capital invested was \$581,472,583 as compared with \$568,068,752 in 1922. The number of employees in 1923 was 11,094 as compared with 10,684 in the previous year, the salaries and wages for these two years being \$14,784,038 for 1923 and \$14,495,250 for 1922. Of the total number of employees 5,049 were employed in commercial stations, 6,045 in municipal stations, 4,549 in non-generating stations, and 6,545 in generating stations.

Men's Furnishing Goods, 1923

Reports were received from 135 establishments engaged in the manufacture of men's furnishing goods of which 61 were in Ontario, 54 in Quebec, 10 in Manitoba, 6 in British Columbia, 2 in Alberta, 1 in New Brunswick,

and 1 in Nova Scotia. The total value of production rose from \$23,292,716 in 1922 to \$25,502,111 in 1923, an increase of \$2,209,395. The total capital employed in the industry was \$10,588,895, which was an increase of \$869,350 over the previous year.

The total number of persons employed rose from 7,226 in 1922 to 7,833 in 1923, an increase of 607. There was a corresponding expansion in the payroll over the same period, the amount reported for 1922 being \$5,561,252, and for 1923 \$6,034,631, an increase of \$473,379. Salaried officers of corporations numbered 106 (100 males and 6 females), their salaries amounting to \$393,965; general superintendents and managers numbered 136 (129 male and 7 female), who received for their services \$408,326; technical experts, engineers and accountants numbered 35 (31 male and 4 female), with salaries amounting to \$68,869; clerks, stenographers and salesmen numbered 609, their salaries and wages amounting to \$862,543; employees on wages averaged 6,697, their wages amounting to \$4,250,648; and outside piece workers numbered 250 (2 male and 248 female), their wages totalling \$50,280.

The average number of days in operation on full or part time was 282.2; the hours worked per day or shift was 8.2, and per week 46.1.

Electric Railways of Canada, 1923

Electric railways in Canada as a whole showed a slight improvement in operation in 1923 over the previous year, net operating revenues increasing by \$345,851. The companies operating at a loss, however, showed in the latter year a deficit that was heavier by \$106,964. After providing for dividends, reserves, etc., the aggregate revenue of all railways showed a deficit of \$545,637, as against a surplus of \$89,557 in the previous year, due mainly to increases in taxes of \$227,326, in interest charges on funded debt of \$219,253, in interest on floating debt of \$278,416, and in other deductions from income of \$308,925. Of sixty-four railways operating, fifteen showed operating deficits, and after paying all income charges, forty showed corporate deficits for the year. Four of these latter, however, paid dividends and twenty of them paid certain amounts into reserves and special charges.

There were employed by the railways during the year a total of 17,779 persons as compared with 18,099 in the previous year. Of these 195 were general officers, 1,108 were general office clerks, 108 were superintendents in the maintenance department, 4,907 were other employees in the maintenance department, 115 were superintendents in the transportation section, and 11,346 were other

employees in this section. The total amount paid in salaries and wages in 1923 was \$25,039,286, and in 1922, \$24,988,119. One-man cars, which are operated by one man performing the duties of both conductor and motorman, caused a reduction in the number of employees. There were 563 of these cars in operation during the year.

Steam Railways of Canada, 1923

The freight traffic during 1923 was the heaviest ever handled by the railways in Canada. It aggregated 102,258,933 tons of revenue freight and 34,067,658,527 ton miles, making the average distance each ton was carried 333 miles. The previous high record was made in 1920 with 31,894,411,479 revenue ton miles. Passenger traffic was 9 per cent heavier than in 1922 but was below the records made in 1919 and 1920. The large harvest of 1922 and 1923 greatly increased the grain traffic of the railways. The reduction in grain rates July 6, 1922, and on rates on basic commodities August 1, 1922, however, affected the revenues throughout the entire year 1923, so that the increased traffic as compared with 1922 traffic did not produce a corresponding increase in revenues. The only general change in rates during 1923 were equalization of rates in the Maritime Provinces, and on October 22 a reduction of 10 per cent on grain and grain products in Vancouver for export. There was an increase of 321 miles of track operated at the close of the year, compared with the previous year, and there was in addition 35.68 miles completed but not opened to traffic. Railway construction during the year was fairly active, especially in the western provinces.

The average number of employees engaged in the steam railway service in 1923 was 178,052, as compared with 165,635 in the previous year. The total hours on duty was 442,051,515 in 1923, and 401,995,411 in 1922, and the amounts paid in salaries for these two years was \$253,320,005 and \$233,294,040 respectively. A table showing the number of employees by classes and the amounts paid to each class is contained in the report.

Telephone Statistics

The report on telephone statistics states that the number of telephones in Canada has been steadily increasing and at a faster rate than the population. In 1922 they aggregated 944,029, or an average of 10.53 per 100 population; in 1923 the number increased to 1,009,203, or 11.03 per 100 population based on the estimated population. The average number per 100 population for each province for 1923 was: British Columbia, 15.57; Ontario, 14.53;

Saskatchewan, 12.02; Alberta, 10.58; Manitoba, 10.36; Quebec, 7.39; New Brunswick, 7.11; Nova Scotia, 7.05; Prince Edward Island, 6.08. The number of telephone companies in Canada in 1923 was 2,387 as compared with 2,459 in the previous year. The total capital invested in 1923 was \$73,222,339 as compared with \$48,968,198 in the previous year. The total revenues of all systems showed an increase over 1922 of \$2,573,810, or 6.5 per cent for an increase of 7 per cent in the number of telephones, and expenses increased \$2,424,189.

There were 19,321 persons employed in the industry in 1922, as compared with 21,002 in 1923. Salaries and wages increased from \$17,305,759 in 1922 to \$19,742,589 in 1923.

Telegraph Statistics

The report for 1923 on the several telegraph and cable companies operating in Canada states that the gross revenues were increased by \$398,522 and operating expenses by \$58,420 over the previous year. Pole line mileage showed an increase of 287 miles and wire mileage an increase of 8,439 miles, multiple systems increasing by 879 miles. The number of land messages increased from 15,271,410 in 1922 to 16,150,106 in 1923. There was also an increase in the number of cablegrams from 1,182,053 to 1,302,224.

The number of employees showed a decrease from 8,500 in 1922 to 7,565 in 1923, although there was an increase in the number of operators and also in the number of telegraph offices, there being 4,762 of the latter in 1922 and 4,930 in 1923. The number of operators employed in 1922 was 4,332 as compared with 4,493 in 1923. Other officers and employees numbered 4,160 in 1922, and 4,072 in 1923. Salaries and wages totalled \$6,307,838 in 1922, and \$6,092,413 in 1923.

A by-law recently passed by the city council of Fort William, Ontario, provides that the closing time of barber shops shall be the hour decided by 75 per cent of the master barbers of the city.

The *Ontario Gazette* contains in its issue of February 28 a notice on behalf of the Journeymen Barbers Federation of Ontario that an application would be made to the Provincial Legislature at its present session for an act (1) to incorporate the association known as The Barbers' Association of Ontario; (2) to confer upon such association the necessary powers to determine the fitness of any person practising the trade or calling of barbering.

UNEMPLOYMENT AND CREDIT POLICY

The League of Nations International Labour Organization has been engaged for the past four years in a study of unemployment in its various phases. A pamphlet issued at Geneva last year on the relation of unemployment and prices was reviewed in the August, 1924, issue of this GAZETTE (page 674). This pamphlet was one of several reports published by the organization, all pointing out the close connection between the successive crises of unemployment and fluctuations in price levels, and suggesting, as questions for further examination, the causes of trade fluctuations, the possibility of predicting such fluctuations by the use of "economic barometers," the feasibility of mitigating or preventing such fluctuations and, finally, the part which might be played in that direction by banks or other credit-governing institutions.

The International Labour Conference, at its last session, requested the Geneva office to continue its investigations into unemployment considered as a product of financial instability, the following resolution being passed:—

The conference invites the Director of the International Labour Office to submit to the mixed committee of the League of Nations and the International Labour Office the investigation of the factors which may interfere with the regular and coincident expansion of consuming power and of production, and thus affect the stability of employment, such as the operation of credit, the general instability of prices, and the dislocation of the exchanges.

In conformity with this resolution, a Joint Committee met in January this year, the members including representatives of the Economic Committee of the League of Nations, and experts nominated by the International Labour Office. This Joint Committee adopted resolutions, which, as the Office points out, "should have considerable weight in strengthening the tendency for credit policy to be directed more particularly toward the maintenance of stability of industry and the

labour market." The first group of these resolutions relates to the need for regular information as to economic conditions, to be derived from scientific indices or "economic barometers." The second group is as follows:—

B. (1) The Joint Committee has given consideration to certain matters submitted to it by the Director of the International Labour Office under the terms of the resolution of the Conference of 1924.

(2) The Committee considers that it is proved beyond doubt that excessive fluctuations in trade activity as manifested in recent cyclical movements are highly prejudicial to stability of employment, and that it would be very desirable, if possible, to diminish the intensity of such fluctuations.

(3) The Committee also considers that, especially in certain phases of the upward movement of the cycle of trade, the principle on which credit facilities are accorded to industry and trade may be an important factor in accentuating or checking the fluctuation.

(4) The Committee is consequently of opinion that the evils caused to unemployment by excessive trade fluctuations might to some extent be mitigated if, in arriving at decisions governing credit policy, especially in the circumstances above alluded to, due regard were invariably paid to all data as to relevant economic conditions, including the tendencies of employment and prices.

(5) The Committee therefore attaches great importance both to the improvement and extension of the data available, including various indices of economic conditions, and also to their wider diffusion and more general use by financial and other institutions determining or influencing credit policy. In this connection it refers to the resolutions already arrived at with regard to economic barometers.

(6) The Joint Committee considers that the solution of the financial and monetary questions involved in the memorandum submitted to it is outside the competence of either of the bodies at present represented on the Joint Committee. It therefore decides to request the Economic Committee to transmit the memoranda, together with these resolutions and the minutes of the discussions, to the Finance Committee of the League of Nations, with a request that they will favour the Committee with their observations thereon, and at the same time extend to the Finance Committee a cordial invitation to nominate some of their members to take part in subsequent discussions of these questions by the Mixed Committee.

(7) The above resolutions are without prejudice to the further consideration by the Joint Committee of other causes and aspects of economic crises.

Conditions of Domestic Service

The question of standardization of hours for domestic workers was discussed at a recent conference convened by the local Council of Women at Edmonton, Alberta. It was the opinion of a representative of the provincial employment bureau that if the girls could have two hours free each day, except perhaps on two days in the week, such a privilege would induce girls to go into housework. It was stated that wages for household workers was considerably lower this winter than before, but with the commencement of spring work on the farms there would be improve-

ment. One speaker, referring to minimum wage rates, claimed that a girl living in the home and getting the average wage as a domestic was better off than a girl working in a hotel and getting the minimum rate of \$16.50 for a 7-day week without board and lodging, or than one in a factory getting the minimum rate of \$12.50. It was explained that in arriving at a basis of minimum wage where the woman "lived-in" the Minimum Wage Board allowed a dollar a day for board and lodging.

THE EMPLOYMENT SITUATION AT THE BEGINNING OF FEBRUARY, 1925, AS REPORTED BY EMPLOYERS

CONSIDERABLE recovery from the losses at the beginning of January was indicated by employers of labour on February 1, the additions to staffs slightly exceeding those registered on the same date in 1924. The Dominion Bureau of Statistics tabulated reports from 5,832 firms employing 709,878 persons, or 16,821 more than on January 1, 1925. This increase, which practically coincides with the average gain at the beginning of February in the past four years, caused the index number of employment to stand at 86.1 as compared with 83.9 on January 1, 1925, and with 90.6, 89.5, 78.9 and 90.1 on February 1, 1924, 1923, 1922 and 1921 respectively. The accompanying chart reflects the changes in employment during 1923, 1924 and to date in 1925.

The improvement in manufacturing was the most pronounced, while logging and construction also afforded greatly increased employment. Mining and trade, however, showed contractions. In other industries the changes were comparatively slight.

Employment by Provinces

Activity in all except the Prairie Provinces increased considerably, the revival in Quebec being the most extensive.

Maritime Provinces.—Statements were tabulated from 502 firms in the Maritime Provinces, whose staffs increased from 58,838 persons on January 1 to 58,997 on the date under review. Manufacturing, especially of iron and steel, textile and lumber products, showed improvement and transportation also recorded further seasonal gains. Offsetting losses were, however, indicated in logging, mining, construction and trade, those in mining being large. Pronounced shrinkage was noted on February 1, 1924.

Quebec.—Manufacturing, logging, mining and construction registered increased activity; within these divisions, textile, tobacco, iron and steel works and railway construction registered the greatest gains. Trade and transportation, on the other hand, employed smaller working forces. An aggregate payroll of 195,318 persons or 9,022 more than on January 1, was reported by the 1,248 firms whose returns were tabulated.

Ontario.—Iron and steel, textiles, lumber, rubber, leather, pulp and paper recorded large gains, while edible plant products, clay, glass and stone and electric appliance factories showed decreases. Logging, mining, railway

construction and wholesale trade also reported improvement, but reductions took place in transportation, highway and building construction and trade. Returns were received from 2,705 firms, whose payrolls stood at 297,368, as compared with 290,186 on January 1.

Prairie Provinces.—Employment declined in the Prairie Provinces, in spite of gains in manufacturing, mainly in iron and steel and textiles, and in logging, railway operation and construction. The contraction was largely due to losses in coal mines and trade, and was very much less extensive than on February 1, 1924. The payroll of the 781 firms making returns totalled 94,353, as against 95,289 in the preceding month.

British Columbia.—Manufacturing, logging, mining and highway construction registered increased activity, while transportation and trade were slacker. Statements were received from 596 firms whose staffs increased from 62,448 persons on January 1 to 63,842 at the beginning of February.

The following table gives the index numbers of employment in the five economic areas into which the country is divided:—

NUMBER EMPLOYED, JANUARY, 1920=100

District	Relative weight	Feb. 1, 1925	Jan. 1, 1925	Feb. 1, 1924	Feb. 1, 1923	Feb. 1, 1922	Feb. 1, 1921
Maritime Provinces.....	8.3	79.1	78.5	83.2	90.4	76.8	96.3
Quebec.....	27.5	89.1	85.0	92.8	87.7	74.6	90.4
Ontario.....	41.9	83.4	81.4	90.0	90.0	79.5	88.1
Prairie Provinces.....	13.3	88.4	88.1	92.1	91.6	83.0	93.7
British Columbia.....	9.0	95.1	92.9	92.7	88.4	84.3	87.2
Canada.....	100.0	86.1	83.9	90.6	89.5	78.9	90.1

Employment by Cities

Recovery was indicated in four of the seven cities for which separate tabulations are made—Montreal, Quebec, Toronto and Hamilton—while in Ottawa, Winnipeg, and Vancouver there were contractions in personnel.

Montreal.—Employment improved in iron and steel, tobacco, textile, sugar and confectionery works, while trade, construction and electric current works registered declines. A combined working force of 96,973 persons was employed by the 686 firms making returns, as compared with 93,539 on January 1. The gains indicated on February 1, 1924, were much less extensive than on the date under review.

Quebec.—Boot and shoe factories and construction showed increased activity in the city of Quebec, according to 94 employers whose staffs rose from 8,255 in the preceding month to 8,908 at the beginning of February.

Toronto.—A gain of nearly 1 per cent was indicated in Toronto, where 789 firms increased their payrolls by 899 persons to 89,812 on the date under review. Manufacturing generally, especially of iron and steel and textile products, showed improvement, but offsetting curtailment was recorded in trade and construction. The tendency at the beginning of February of last year was unfavourable.

Ottawa.—Pulp and paper works reported increased operations; reductions in trade, iron and steel and some other divisions, however, caused the balance of employment to be un-

sons in the staffs of the 233 firms making returns; they employed 21,457 workers on February 1. Activity on February 1, 1924, had showed a minor decrease and the situation then was not so favourable as at the present time.

The following table shows the index numbers of employment in these cities:—

NUMBER EMPLOYED, JANUARY, 1920=100					
District	Relative weight	Feb. 1, 1925	Jan. 1, 1925	Feb. 1, 1924	Feb. 1, 1923
Montreal.....	13.7	85.3	82.5	87.1	86.2
Quebec.....	1.3	101.3	93.1
Toronto.....	12.7	83.0	82.2	84.7	88.5
Ottawa.....	1.3	86.8	87.1	89.7	95.7
Hamilton.....	3.3	77.3	77.0	84.3	86.0
Winnipeg.....	3.4	84.2	81.4	84.7	89.0
Vancouver.....	3.0	97.4	98.3	91.1	85.8

favourable. Statements were received from 130 firms employing 9,171 persons, as compared with 9,282 on January 1.

Hamilton.—Manufacturing showed moderate recovery, particularly in the iron and steel and clay, glass and stone group; electrical apparatus works, however, registered a smaller payroll. The 201 firms reporting in Hamilton had 23,546 persons in their employ, or 123 more than on January 1. More pronounced improvement was indicated on February 1, 1924.

Winnipeg.—Activity in printing and publishing establishments and in trade declined, while additions to staff were reported in textiles and local transportation. Returns were compiled from 298 employers, whose staffs aggregated 23,909, compared with 24,050 in the preceding month.

Vancouver.—There were gains in manufacturing and road construction, but employment in shipping and stevedoring and trade diminished. The result was a loss of 154 per-

Manufacturing Industries

The resumption of operations in iron and steel, tobacco, lumber and textile works provided work for a large number of persons; within these divisions the gains in cotton, woollen, garment and knitting mills and in the crude, rolled and forged, railway car, automobile, structural iron and steel, agricultural implement and general plant machinery divisions were especially pronounced. There were also increases on a smaller scale than in the groups enumerated above in leather, rubber, pulp and paper, non-ferrous metal and chemical factories. On the other hand, employment in food, fur, electric current, electrical apparatus, stone and cement works showed further, though moderate curtailment. Statements were received from 3,792 manufacturers who reinstated 18,044 operatives, bringing their staffs up to 390,393. The recovery on February 1 last year from the losses indicated in the preceding month, was somewhat more extensive than on that date

in 1925, but the contractions at the beginning of 1924 had also exceeded those registered at the first of this year.

Animal Products—Edible.—Further curtailment of operations was noted in fish and meat preserving establishments in February, when the 141 firms making return released 387 persons. They employed 13,118 workers. All provinces except British Columbia shared to some extent in the decreases. Although minor improvement was recorded on the same date of last year, the index number then was slightly lower than at the present time.

Fur Products.—Manufacturers of fur goods in Quebec and Ontario reported a falling off in activity, which slightly exceeded that indicated on February 1, 1924. A total working force of 982 persons was registered by the 24 firms making returns; they had 1,093 employees at the beginning of January.

Leather Products.—Boot and shoe factories, especially in Quebec and Ontario, showed heightened activity; 194 firms in the leather group increased their working forces by 794 persons, or approximately 5 per cent, to 16,254 at the beginning of the month under review. Additions to staffs on a slightly larger scale were recorded on February 1, 1924, and the index number then was above its present level.

Lumber and Products.—The first movement towards a resumption of seasonal activity was made in lumber mills, while container, furniture and other wood using factories also enlarged their pay-rolls to a considerable extent. There were increases in all provinces, but the expansion in Ontario was much greater than elsewhere. A combined working force of 38,044 persons was employed by the 705 manufacturers of lumber products reporting; on January 1 they had 35,711 workers in their employ. The improvement recorded on February 1, 1924, was slightly more extensive than on that date of this year.

Plant Products—Edible.—Biscuit, chocolate and confectionery factories were more fully employed than at the beginning of January, but decreases in personnel were recorded in sugar, syrup and canning works. The result was a decrease of 136 persons in the staffs of the 316 firms making returns. As they employed 24,125 persons on February 1 as compared with 24,261 in the preceding month, this was a decline of .6 per cent, of which the greater part occurred in Ontario. Increased activity was indicated on February 1 of last year, when the index number stood very slightly higher.

Pulp and Paper Products.—The production of pulp and paper and of miscellaneous paper

goods increased moderately, but printing and publishing establishments were not as fully engaged as at the beginning of January. Statements were received from 462 firms employing 49,722 persons, as compared with 49,185 in the preceding month. There were gains in all but the Prairie Provinces. The additions to staffs reported on February 1, 1925, rather exceeded those indicated on the date under review.

Rubber Products.—Thirty-one manufacturers of rubber goods increased their working forces by 833 persons to 10,954 at the beginning of February, the expansion taking place largely in Quebec and Ontario. In spite of the more pronounced gains indicated on February 1, 1924, the situation then was less favourable than at the present time.

Textile Products.—Cotton, woollen, hosiery, knitting, garment, personal furnishing, headwear and bedding factories registered larger pay-rolls than at the beginning of January. The increases were rather greater than those recorded on February 1, 1924, but the index number is very slightly lower than at that time. The 532 manufacturers reporting for the date under review employed 65,736 persons, or 4,471 more than in their last report. All provinces shared in the recovery.

Tobacco, Distilled and Malt Liquors.—The resumption of operations in many of the factories which closed down for inventory, repairs, etc., at the beginning of January, caused a large gain in the number employed in tobacco works. Returns tabulated from 105 firms in this division showed that they increased their working forces from 8,917 persons on January 1 to 10,978 at the beginning of February. The bulk of this expansion of 23 per cent occurred in Quebec, although improvement was also noted in Ontario. The gains were much larger than those registered on February 1, 1924, but the index number was lower than on that date.

Chemicals and Allied Products.—The production of drugs and other chemical goods in Ontario afforded more employment than in the preceding month, 162 persons having been added to the pay-rolls of the 117 manufacturers making returns. They employed 6,209 workers on February 1.

Clay, Glass and Stone Products.—Continued curtailment of operations was noted in cement and stone works, while glass and brick manufacturing showed slight improvement. A combined working force of 6,628 persons was employed by the 108 factories making returns in the clay, glass and stone group; on January 1 they employed 6,840 persons. Firms in Ontario registered most of this decrease of 3

per cent. The situation at the beginning of February of last year showed improvement, and the index number then was a good deal higher than at the present time.

Electric Current.—Continued contraction in employment was indicated by producers of electric current, 83 of whom reduced their staffs by 474 persons to 11,329. Quebec and British Columbia recorded most of the decrease. Employment continues to be in greater volume than during the corresponding period of last year, although the shrinkage noted then affected a smaller number of workers.

Electrical Apparatus.—Electrical appliance works in Ontario reported a falling off in activity, releasing 281 persons from their payrolls, which on February 1 aggregated 9,259. Despite the fact that substantial increases were registered on February 1, 1924, employment then was in smaller volume than on the date under review.

Iron and Steel Products.—Rolling and forging mills, automobile, railway car, structural iron and steel, shipbuilding and agricultural implement works reported large additions, while increases on a slightly smaller scale took place in machinery, iron pipe, small hardware, weighing and measuring instrument plants. All provinces shared to some extent in the improvement, which was most noteworthy in Ontario and Quebec. Statements were received from 642 employers, whose staffs rose from 92,597 persons at the beginning of January to 100,653 on February 1. Employment in iron and steel works is not as active as on that date in 1924, when the increases had affected a rather greater number of workers.

Non-Ferrous Metal Products.—Lead, tin, zinc, copper and other non-ferrous metal works employed more persons than in the preceding month. The gains took place chiefly in Ontario and British Columbia. The firms making returns, 103 in number, employed 10,316 workers, or 419 more than on January 1. Employment had also increased at the first of February a year ago.

Logging

Logging showed expansion everywhere but in the Maritime Provinces, there being a net increase of 1,225 persons in the staffs of the 229 operators making returns. They employed 34,618 workers. This gain rather exceeded that noted on February 1, 1924.

Mining

Coal Mining.—Both Eastern and Prairie coal fields recorded a marked falling off in employment, while in British Columbia there

were important increases. The 91 operators making returns employed 25,418 persons, or 1,946 less than at the beginning of January. The tendency indicated on February 1, 1924, was decidedly favourable and the index number was considerably above its present level.

Metallic Ores.—The production of metallic ores in Ontario and British Columbia showed an increase, according to returns from 44 mines whose staffs rose from 12,962 on January 1 to 13,227 on the date under review. Although this gain is smaller than that registered on February 1, 1924, the index number this year stands higher than on that date.

Non-Metallic Minerals other than Coal.—Quarrying in the Maritime Provinces showed declines that were partly offset by improvement in asbestos mining in Quebec. The 67 firms whose returns were compiled employed 4,494 persons, or 215 less than on January 1. This reduction is slightly smaller than that recorded on February 1, 1924, when employment was in greater volume.

Communication

Telephone and telegraph operation reported reductions in employment, those in the latter being fairly large. All the provinces shared to some extent in the losses. Statements were tabulated from 168 communication companies employing 22,230 persons as against 22,529 in the preceding month. Decreases on a much smaller scale were indicated on the same date of last year, but the index number then was below its present level.

Transportation

Street Railways and Cartage.—There were general but small declines in employment in local transportation at the beginning of February, when 202 persons were released from the staffs of the 114 firms making returns. They employed 18,160 workers. Very pronounced curtailment of operations took place on the same date in 1924.

Steam Railway Operation.—Contrary to the downward movement indicated at the beginning of February of last year, there was a small increase in employment on the date under review; 103 concerns and divisional superintendents increased their working force from 72,711 on January 1 to 72,860 on February 1. Reductions in Ontario were more than offset by increases in the Maritime and Prairie Provinces.

Shipping and Stevedoring.—Improvement was noted in water transportation in the Maritime Provinces, but in Quebec and British Columbia there were losses in employment. Reports were compiled from 54 employers

whose staffs declined from 9,113 persons on January 1 to 8,693 early in February. This reduction exceeds that registered at the same time in 1924.

Construction and Maintenance

Building Construction.—The 295 building contractors making returns employed 16,763 workers, as against 17,242 in their last report. Increased activity was recorded in Quebec, but elsewhere the tendency was seasonally downward. Very much more pronounced curtailment was indicated on February 1, 1924, but the index numbers for the two periods are practically the same.

Highways.—Increased activity in highway construction in British Columbia, partly as a relief measure, caused this group to show improvement. According to returns from 76 em-

ployers, they had 6,284 persons on payroll, or 394 more than at the beginning of January. Decided shrinkage was noted at the beginning of February of a year ago.

Railways.—In Quebec, Ontario and the Prairie Provinces there were substantial increases in employment on railroad construction and maintenance, while elsewhere there were moderate declines. Statements furnished by 33 concerns and divisional superintendents in this industry showed that they employed 27,119 persons, as compared with 24,621 in the preceding month. This expansion was considerably in excess of that reported on the corresponding date in 1924.

Trade

There were further seasonal reductions in salesforce in retail stores throughout the coun-

INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES, DEC. 1, 1924, ETC.

NOTE.—January, 1920=100.

try, while in wholesale trade there was on the whole a very slight increase. A combined payroll of 56,533 persons was reported by the 596 firms making returns, who employed 58,726 at the beginning of January. This decrease was decidedly smaller than that indicated on February 1 of last year, when wholesale trade had also shown a large falling off. The index number now stands about 3 points higher than at that time.

EMPLOYMENT OFFICE REPORTS FOR JANUARY, 1925

DURING the month of January, 1925, an increase in the volume of business transacted by the offices of the Employment Service of Canada over the preceding month was reported. There was, however, a decline in vacancies and placements when compared with January, 1924. The accompanying chart shows the number of vacancies recorded and placements effected for each 100 applications for employment registered at all the employment offices of the Service. Computations are made semi-monthly. It will be noted from this chart that the ratio of vacancies and placements to applications was slightly larger in January than in December, but considerably below January of last year. The reports from the offices show that the average number of applications for employment registered during the first half of the month was 1,839 daily as compared with 1,408 daily during the preceding period, and with 1,917 daily during the same period in January, 1924. Registrations during the latter half of the month averaged 1,428 daily, in comparison with 1,544 during the same period of a year ago. Employers notified the Service of an average of 1,169 vacancies daily during the first half of January in comparison with 903 daily during the preceding period and 1,388 daily during the corresponding period of last year. During the latter half of the month under review vacancies averaged 913 daily as against 1,209 during the same period of 1924. Placements effected during the first half of January, 1925, averaged 1,085 daily in comparison with 829 daily during the preceding period and 1,276 daily during the same period in 1924. During the latter half of the month under review placements averaged 849 daily as compared with 1,040 daily during the corresponding period of last year. The average number of placements in regular employment during January, 1925, was 583 and 502 daily during the first and second halves of the month respectively, while placements in casual work

The accompanying table shows the index numbers of employment by industries as at the first of February and January, 1925, as compared with February 1, 1924, 1923, 1922 and 1921. The columns headed "Relative Weight" in the tables in this article show the proportion that the number of employees reported in the indicated district or industry bears to the total number of employees reported in Canada by the firms making returns on February 1, 1925.

averaged 502 and 347 daily. The following table gives placements effected to date by the offices of the Employment Service:—

Year	Placements		
	Regular	Casual	Total
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812

1924.....	247,425	118,707	366,132
1925 (1 month).....	14,029	10,879	24,908

MARITIME PROVINCES

The demand for bush workers continued with plenty of applicants to fill all orders received. In Halifax several building contracts were completed during the month causing the lay-off of a large number of skilled building tradesmen and labourers. Placements effected through offices in Nova Scotia numbered 502 of which 353 were of men and 149 of women. The logging industry absorbed 92 workers. There were 303 placements in the Service group, the majority being in casual work. In New Brunswick placements numbered 669—433 of men and 236 of women. There were 189 placements in bush work and in the service group 372 persons were found employment. Of the latter 281 placements were in work of one week's duration or less.

QUEBEC

Quebec offices reported a very small demand for workers in the manufacturing industries, farming, transportation and trade. In the service group 402 placements were effected, chiefly female household workers in permanent employment. Logging camps were supplied with 259 men, chiefly replacement orders.

ONTARIO

Very little change was reported in the industrial situation but conditions generally

showed signs of improvement towards the end of the month. Factories were more active, but the number of orders from manufacturing establishments was not large and a surplus of workers was at all times available. There were 961 placements effected in the manufacturing industries. In some offices several orders for bushmen were received and filled without difficulty, 1,684 placements being effected during the month. Most of the camps are reported as having enough men. Placements in the service group numbered 2,862, of which 1,677 were in household service where

1,272 in the service group, of which household service accounted for 913, principally female day workers.

SASKATCHEWAN

There was a steady call for farm hands with plenty of applicants available, although difficulty was experienced in filling some of the orders where the wage rate offered was low. Placements on farms totalled 521 during the month. One hundred and forty-six placements were effected in the logging industry, although some offices experienced difficulty in filling all

there was a surplus of orders for permanent resident workers. In the construction and maintenance group 6,889 placements were recorded, a large number of these being on road construction and maintenance and sewer work instigated as relief measures, while over 4,500 temporary jobs were secured for snow shovellers. Placements of farm workers totalled 466 during the month and farm orders for spring workers were beginning to come in.

MANITOBA

The demand for farm workers had increased somewhat at the end of January, 512 farm placements were effected during the month. Five hundred and fifty-seven workers were placed in the logging industry, about 50 per cent of whom were sent to camps in the vicinity of Port Arthur. Work was found for

their orders for cord wood cutters. Placements under services number 565, of which 279 were of household workers.

ALBERTA

Placements on farms numbered 461 during the month. Most of the logging camps had all the workers they required, although 478 placements were effected in this industry. Five hundred and ninety-nine placements were made in the service group, 217 being permanent positions for household workers and 158 casual. The supply of women workers continued in excess of the demand.

BRITISH COLUMBIA

Road construction and sewer work undertaken as relief measures by provincial and municipal governments accounted for nearly

half the placements effected by British Columbia offices during the month, employment for 1,164 persons being found in work of this kind. The mining industry was quite active, but there was no demand for workers, every mine having its full quota of men. The logging industry absorbed 516 workers, but many of the larger camps were still closed owing to the deep snow. Two hundred and thirty-one placements were effected in manufacturing industries, saw mills accounting for more than half. Placements in the services group totalled 1,108 of which 554 were in household service, the majority being casual work. Quite a number of women seeking domestic employment were out of work, which is an unusual situation in this province.

Movement of Labour

During January, 1925, the offices of the Employment Service of Canada made 14,029 placements in regular employment of which 7,300 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 1,339 were granted the Employment Service reduced transportation rate, 797 going to points within the same province as the despatching office and 542 to other provinces.

The offices in Quebec granted 90 transportation certificates, all of which were issued to bushmen travelling to points in Ontario, 31 from Montreal to Sault Ste. Marie and 59 from Hull to North Bay, Cobalt and Sudbury. Ontario offices issued 372 certificates, 352 for points within the province and 20 to points in Quebec, the latter being for bushmen sent from Pembroke to the Hull zone. Of the 352 provincial transfers Toronto sent two mechanical draughtsmen to Ottawa, one blacksmith to Sudbury, two cooks to Fort William, ten labourers to Guelph and 48 bushmen to North Bay and Peterborough. Cobalt shipped 11 bushmen to Timmins, and Pembroke 9 bushmen to North Bay. Port Arthur, Fort William and Sudbury issued 269 certificates to bushmen going to points within their own zones. Manitoba offices issued 485 certificates for reduced transportation, 333 to points in other provinces and 152 provincial transfers. Of the latter 27 were for bush workers going to points within the Dauphin zone, 16 from Winnipeg and 11 from Dauphin. The balance of the provincial certificates was issued by Winnipeg, 119 for farm workers, the majority of whom were going to points in the vicinity of Brandon and six female hotel and household workers to points in the Brandon and Winnipeg zones. All the workers shipped to other

provinces were sent from Winnipeg, Port Arthur receiving 301 bush workers, three blacksmiths, three cooks, two waitresses and three kitchen girls; Regina receiving 10 farm hands, two farm housekeepers and two hotel maids; Estevan two farm hands and one waitress; Saskatoon two farm hands and one farm housekeeper and Prince Albert one labourer. The offices in Saskatchewan granted 137 certificates, 98 to workers going to points in other provinces and 39 to points within the province. Of the former Port Arthur received 83 bushmen, two from Moose Jaw, 24 from Regina and 57 from Saskatoon. Dauphin received seven bushmen from Regina, three from Prince Albert, two from Saskatoon and one from Swift Current, and Vancouver one housekeeper and one domestic from Regina and Prince Albert respectively. The provincial movement included 27 farm hands, 6 bushmen, three farm domestics, one cook, one chambermaid and one teacher. In Alberta the transportation certificates issued numbered 195, all for points within the province. Calgary sent three plasterers, one bricklayer, two labourers, three loggers and three waitresses to points within the Calgary zone, 31 bushmen and two farm hands to Lethbridge, 12 bushmen and one farm hand to Edmonton and 5 farm hands to Drumheller. From Edmonton eight bricklayers and one plasterer were sent to Calgary, 6 station men and three plasterers to Lethbridge and 111 workers to points within the Edmonton zone. The latter included 15 miners, 11 farm hands and 85 bush workers of various occupations. Medicine Hat sent three bricklayers to Calgary. British Columbia offices issued 60 certificates, 57 provincial and three interprovincial. The latter were for two farm hands sent from Vancouver to Calgary and one housekeeper from Vancouver to Saskatoon. The provincial transfers included 33 bush workers sent from Prince George and Prince Rupert to points within their zones, one carpenter sent from Penticton to a point within the Penticton zone and from Vancouver of one foreman and one welder to Nelson, one blacksmith and one engineer to Prince George, one teamster and one waitress to Penticton, nine tunnel construction workers to Kamloops, four tie makers to Revelstoke and one cook, one farm hand and two muckers to points within the Vancouver zone.

Of the 1,339 workers who benefited by the Employment Service reduced transportation rate 974 were carried by the Canadian National Railways, 351 by the Canadian Pacific Railway, three by the Pacific Great Eastern Railway and 11 by the Temiskaming and Northern Ontario Railway.

BUILDING PERMITS ISSUED DURING JANUARY, 1925

REPORTS from 60 cities tabulated by the Dominion Bureau of Statistics show that the value of the building permits issued in January, 1925, was less by 14.2 p.c. than in December, 1924, but in the more significant comparison with the same month of last year, there was an increase of 22 p.c. The aggregate for January was \$5,433,204, that for the preceding month, \$6,333,619, or \$900,415 more, and for January, 1924, \$4,454,119, or \$979,085 less, than in the month under review.

Some 42 cities furnished detailed statements showing that they issued nearly 400 permits for dwellings valued at approximately \$1,900,000 and over 700 permits for other buildings at an estimated cost of not quite \$2,500,000. As has been pointed out in previous issues, the construction of several buildings may be authorized by a single permit; the number of buildings to be erected, therefore, is usually greater than the number of permits granted.

Nova Scotia, Quebec, and Ontario registered declines in the value of the permits issued as compared with the preceding month; the reduction of \$829,047 or 22.4 p.c. in Ontario was the largest. Of the increases recorded elsewhere, that of \$408,329 or 106.6 p.c. in British Columbia was actually the most pronounced, but New Brunswick showed the greatest proportional increase of \$24,800 or 330.6 p.c.

As compared with January, 1924, Nova Scotia, New Brunswick, Ontario, and Manitoba recorded decreases in the value of estimated building. Ontario showed the largest actual reduction, of \$33,691 or 1.2 p.c., while the greatest proportional loss, of \$30,292 or 93.3 p.c., was in Nova Scotia. There were increases in this comparison in Quebec, Saskatchewan, Alberta and British Columbia. Quebec and British Columbia, with increases of \$626,840 or 65.9 p.c. and \$421,484 or 113.9 p.c., respectively, registered the most pronounced gains.

The value of the building permits issued during January in Montreal and Toronto was lower than in December, but higher than in January, 1924; the increase in Toronto in the latter comparison was especially noteworthy. In Winnipeg the total exceeded that for the preceding month, but was smaller than in January of last year, while Vancouver registered improvement in both comparisons. Fredericton, Sherbrooke, Three Rivers, Brantford, Galt, Ottawa, Woodstock, Regina, Calgary, Point Grey, Prince Rupert and Victoria also showed increases over December and January, 1924.

The accompanying table shows the value of the building permits issued during January, 1925, and December and January, 1924. The 35 cities for which records are available since 1910 are marked with asterisks.

NOTE.—York Township is practically a suburb of Toronto, while the four Border Cities—Ford, Riverside, Sandwich and Walkerville—bear very much the same relation to Windsor.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Transportation—Street Railways

TORONTO, ONTARIO.—TORONTO TRANSPORTATION COMMISSION AND THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA, DIVISION No. 113

Agreement to be in effect from March 31, 1924, until March 31, 1926.

The employers will meet and treat with the union representatives on all grievances and disputes.

Wages per hour: trainmen, first three months, 55 cents; next nine months, 57½ cents; after one year, 60 cents; one man car operators, 5 cents extra per hour. Motor and Truck Repairmen, first three months, 55 cents; next nine months, 57½ cents; after one year, 60 cents. Shedmen: foremen, 60 cents; operating shedmen, 56 cents; ordinary shedmen, 55 cents; car cleaners, 54 cents. Compressor room men, 60 and 61 cents; fender room men, 58 cents. Motormen and conductors in charge of trainers, 25 cents extra per day.

Wages and conditions applying to trackmen formerly in the service of the Toronto Railway Company, and who entered the service of the Commission on September 1, 1921, will not be altered.

Operating conditions for conductors, motormen, one-man car operators, motor and truck repairmen, shedmen, compressor room and fender room men:

Eight hour day, straight time, to fullest extent practicable, with a leeway of one-half hour to complete schedule for 66⅔ per cent of the crews, the remainder to work ends and spares. Overtime rates shall not be paid except in the case of regular scheduled crews who are scheduled to do over eight and one-half hours' work and then only after such has been completed. Overtime, time and one-half. Overtime rates after eight and one-half hours' work shall not be paid if overtime is due to any cause beyond the control of the Commission.

Sunday work, time and one-half. No employee shall be entitled to receive extra payment for overtime on Sundays, but shall receive time and one-quarter for all work on Sundays.

Extras: extra trainmen, allowance of one-half hour for extra runs under two and one-half hours; extra runs between two and one-half hours and three hours shall pay three hours; no allowance when day's work exceeds eight and one-half hours, nor shall more than two allowances be made in one day. Extra men shall

be told off the night before for all crews known to be open as far as this can be done without risk of leaving cars out of service on the following day.

Extra trainmen are guaranteed a minimum amount for each regular pay period worked equal to 6 hours' pay (at the standard rate applicable in each case) per day, six days per week, provided a man reports for work and carries out duties assigned to him. If in a pay period a man fails once to report, minimum guarantee to be reduced in proportion which one day bears to the pay period. Failure to report more than twice shall relieve the Commission of any liability for a minimum guarantee. There shall be no change in the present way of preparing schedules.

Provision is made for trainmen's uniforms, seniority, reporting time, motormen's seats.

No man shall be given a set off-day but shall take off-day in accordance with his position on the board, except where mutually agreed upon.

Only men in shops as required for necessities of service shall work on Saturday afternoons, except when considered required to meet the necessities of the operation.

Tools shall be supplied to shopmen, who shall be responsible for same.

Repairmen's and shedmen's off-days shall as at present be scheduled and posted in the men's rooms. In case of a lay-off or reduction of staff, men laid off shall be first taken on, being laid off according to seniority.

An employee against whom charges are received shall be warned for minor cases and for serious cases he shall be disciplined or released. Any employee shall have right to appeal to the Superintendent and except as to a charge of dishonesty may bring a committee of employees.

The Superintendent or Manager shall receive a duly appointed committee of members of Division 113 at any reasonable time to discuss matters arising out of this agreement.

Service—Laundering, Dyeing and Cleaning

OTTAWA, ONTARIO.—THE SANITARY LAUNDRY COMPANY, LIMITED, AND THE LAUNDRY WORKERS' INTERNATIONAL UNION, LOCAL 275.

Agreement expiring January 7, 1925 (as summarized in the *LABOUR GAZETTE* for January, 1924) amended to remain in effect for one year until January 7, 1926.

All legal holidays shall be granted to all employees with pay, but employees are to co-operate with management to get out work interrupted by a holiday.

The 44-hour week shall be maintained and all employees shall be guaranteed at least 40 hours work per week. If necessity arises the employees shall work four additional hours at overtime pay, time and one-half. Any general lay-off or extra time must be agreed upon by a committee of the president, the vice-president and the secretary of the union and three representatives of the Management. Employees laid off and members of Local 275 shall have preference of re-employment when business increases.

Service—Public and Municipal

MEDICINE HAT, ALBERTA.—THE CITY OF MEDICINE HAT AND THE CIVIC EMPLOYEES' FEDERAL LABOUR UNION No. 46.

Schedule of City Police Department for the year 1925.

Hours per day, eight; six days a week.

Provision for clothing and equipment to be supplied in case of sergeants, constables and detectives. Special provision for clothing for constable performing duties of pound keeper.

Constables are to be granted fourteen days' leave; sergeants and detectives, eighteen days' leave each year with pay, after one year's service.

Class promotion is at date from day any constable joined the force.

Wages: per month: 1st class constables, \$125; 2nd class constables, \$115; 3rd class constables, \$107.50. Sergeants and detectives, \$135 and \$140. Clerk and desk officer, \$10 per month over his grade as constable.

FAIR WAGE CONTRACTS, FEBRUARY, 1925

DURING February the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to six fair wage contracts awarded by the Department of Public Works of Canada. Five of these contracts contain the usual fair wage clause as follows:—

All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof. Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed thereby by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor

and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

The remaining contract contains a fair wage schedule, the following clause being included in regard to labour conditions:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or fail at any time to pay to any employee or employees for any services performed or for any hours of labour wages according to the rates set forth in the schedule or fixed thereby by the Minister of Labour hereunder regarding overtime and classification, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

A statement was also received as to supplies ordered by the Post Office Department, subject to the regulation for the suppression of the sweating system and the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS

Construction of public building at Courtenay, British Columbia. Name of contractors, E. L. Macdonald and George Brethour, Courtenay, British Columbia. Date of contract, January 8, 1925. Amount of contract, \$31,500. The fair wage schedule inserted in the contract is as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours per day
Bricklayers and masons..... per day	\$ 9 00	8
Carpenters and joiners.....	7 00	8
Concrete workers..... per hour	55	8 and 9
Electrical workers..... per day	7 50	8
Labourers..... per hour	45	8 to 10
Lathers..... per yard	7 to 9c.	
Lathers, per day (according to efficiency).....	\$3 to \$10	
Marble setters..... per day	9 00	8
Marble setters' helpers.....	5 50	8
Painters and glaziers.....	6 00	8
Plasterers.....	9 00	8
Plumbers and steamfitters.....	8 00	8
Plumbers and steamfitters helpers.....	5 00	8
Roofers.....	\$6-\$8.50	8
Sheet metal workers.....	8 00	8
Sheet metal workers' helpers.....	4 50	8
Structural steel workers.....	9 00	8
*Terrazzo layers.....	7 00	8
*Terrazzo layers' helpers.....	\$4 to \$5	8
Teamsters, 1 horse and cart.....	7 00	9
Teamsters, 2 horses and wagon....	\$9 to \$10	9

*Usually this work is done by contract at so much per square yard.

Extension to breakwater-wharf at Bonaventure, Quebec. Name of contractor, M. Bernatchez, Montmagny, Quebec. Date of contract, February 11, 1925. Amount of contract, unit price as set forth in contract, \$2.45 per cubic yard for cribwork in place and ballasted; approximate expenditure, \$13,984.60.

Construction of wharf at Port Hammond, British Columbia. Name of contractor, William Greenlees, Vancouver, British Columbia. Date of contract, January 28, 1925. Amount of contract, \$3,042.

Construction of four new operating valves and valve sets at Lockport, St. Andrew's Rapids, Manitoba. Name of contractor, Victoria Foundry Company, Limited, Ottawa, Ontario. Date of contract, February 11, 1925. Amount of contract, \$6,700.

Construction of wharf at Amos, Quebec. Name of contractors, J. D. Trudel and J. A. Gagnon, Amos, Quebec. Date of contract, February 4, 1925. Amount of contract, \$4,005.

Construction of public building, Verdun, Quebec. Name of contractors, C. Duranceau and A. Duranceau, Montreal, Quebec. Date of contract, February 10, 1925. Amount of contract, \$37,000.

POST OFFICE DEPARTMENT

The following is a statement of payments made in February, 1925, for supplies ordered by the Post Office Department subject to the regulation for the suppression of the sweating system, the securing of fair wages, and the performance of work under sanitary conditions:—

Nature of orders	Amount of orders
	\$
Making metal dating stamps and type, also other hand stamps and brass crown seals...	818 63
Making and repairing rubber stamps, daters, etc.	138 75
Making up and supplying letter carriers' uniforms, etc.....	17,235 99
Stamping pads, ink, etc.....	480 40
Mail bag fittings.....	1,953 20
Scales repaired.....	83 00

Pilotage District of Halifax

New by-laws under the Canada Shipping Act have been issued for the Pilotage District of Halifax in relation to the annual eyesight and hearing tests and other matters affecting licensed pilots. It is provided that "if on March 31 of any year there is a balance to the credit of the Halifax Pilotage Fund, such balance shall be divided among the pilots in such a manner as to bring the monthly remuneration of each up to \$300, in calculating which sum the amounts set aside for superannuation shall be included, but no pilot shall receive more than \$300 so calculated for any one month's service." The new by-laws also include rules to govern payments out of the Superannuation Fund. (A decision of the Supreme Court of Canada in reference to the pooling of wages by pilots in the Pilotage District of Montreal was given in the LABOUR GAZETTE, November, 1924, and references to

pilots' superannuation were made in the issues of July, 1924, page 536, and May, 1923, page 454.)

A deputation from the Toronto Trades and Labour Council waited on the Ontario Government in February and presented requests for provincial aid in relieving unemployment, for the regulation of juvenile and female labour, and general improvement in working conditions, for beer of 5 per cent strength, and for the extension of fuller political rights and privileges to Government and civic employees. The Government was asked to amend the Mothers' Allowances Act to include a widow with one child and mothers whose pensions are cut off when the eldest of two children reaches 16 years, and to provide allowances for mothers whose husbands are in gaol for three months or more.

PRICES, RETAIL AND WHOLESALE, IN CANADA, FEBRUARY, 1925

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices was less pronounced in February than for some months. Index numbers of wholesale prices calculated by various authorities were slightly lower while the family budget in terms of retail prices advanced somewhat.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.93 for February; \$10.77 for January; \$10.75 for February, 1924; \$10.53 for February, 1923; \$10.61 for February, 1922; \$14.08 for February, 1921; \$15.77 for February, 1920; \$16.92 for June, 1920 (the peak); \$12.54 for February, 1918, and \$7.75 for February, 1914. The most important advances occurred in flour and bread while there were smaller advances in potatoes, meats, cooking eggs, cheese, tea and coffee. Butter, fresh eggs, sugar and rice were lower. Including the cost of fuel and rent with that of foods the total budget averaged \$21.19 as compared with \$21.09 for January; \$21.18 for February, 1924; \$21.17 for February, 1923; \$21.07 for February, 1922; \$24.85 for February, 1921; \$26.92 for July, 1920 (the peak); \$24.71 for February, 1920; and \$14.54 for February, 1914. Fuel was slightly lower. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the importance of the commodities, declined slightly to 164.5, as compared with 165.2 for January; 156.6 for February, 1924; 153.6 for February, 1923; 153.5 for February, 1922; 191.1 for February, 1921; 256.7 for May, 1920 (the peak); 238.8 for February, 1920; and 200.5 for February, 1919. Forty price quotations were higher, forty-three were lower and 153 were unchanged. In the grouping according to chief component material four of the eight main groups were higher and four were lower. Vegetables and their products advanced because of higher prices for grains, flour and other milled products and for fresh vegetables. Fibres, textiles and textile products advanced due to higher prices for cotton and silk. Wood, wood products and paper and iron and its products both advanced also, the former because of increases in some lines of lumber and the latter because of higher prices for pig iron. Animals and their pro-

ducts declined substantially because of lower prices for butter, eggs and hides which more than offset advances in livestock and meats. The other groups which declined were non-ferrous metals because of decreases in copper, lead, tin and spelter; the non-metallic minerals group; and the chemicals and allied products group.

In the grouping according to purpose, consumers' goods advanced slightly, declines in apples, whitefish, butter and eggs being more than offset by advances in flour, meats, cheese, sugar and gasoline. Producers' goods also advanced somewhat due to higher prices for lumber and for materials for the textile and clothing industries and for the meat packing industries. Materials for the fur, the leather, and the metal working industries were lower.

In the grouping according to origin raw or partly manufactured goods were slightly lower while fully or chiefly manufactured goods were practically unchanged. In articles of farm origin, field products advanced but animal products declined. Domestic farm products were lower. Articles of forest origin advanced while articles of marine and of mineral origin declined.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number published by the Department since 1910 has been reconstructed by the Dominion Bureau of Statistics, the new index being weighted and based upon the prices of 236 commodities in 1913.* In June, 1923, figures back to 1919 by months and back to 1890 by years were issued. From June, 1923, to the end of 1924 the Department continued to calculate and publish the old series in summary form in the LABOUR GAZETTE in order to afford comparisons with price levels back to 1913. For the detailed analysis from month to month, however, the new index number of the Bureau of Statistics was used.

As the Bureau's index number has now been reconstructed back to 1913 by months and is available back to 1890 by years, the index number of the Labour Department is being discontinued. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail.

The special index number of wholesale prices of fifty commodities has also been discontinued. As this gives monthly figures prior to 1913 back to 1901 based on prices in 1913 as 100, it may be used to indicate the general movement of prices by months for that period, the index number of the Bureau of Statistics being available by months since 1913.

* LABOUR GAZETTE, June, 1923, and September, 1924.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board, including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods and thirty-eight finished or consumers' goods based upon price levels in 1913 as 100 advanced to 157 for January as compared with 149 for December and 148 for October. Domestic goods advanced while imported goods were practically unchanged. Grouped by stage of manufacture, raw materials and consumers' goods advanced substantially while producers' goods were slightly lower.

Professor Michell's index number of forty articles with prices during 1900 to 1909 as 100 declined to 180.0 as compared with 182.3 for January; 180.1 for February, 1924; 264.1 for February, 1920; and 117.9 for February, 1914. Both foods and manufacturers' goods were lower.

The Canadian Bank of Commerce index of exports advanced from 160.85 in January to 161.36 in February; that for imports, however, declined from 169.37 in January to 166.57 in February. The combined index of both exports and imports fell from 165.11 to 163.96.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of February of seventy-one staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods; laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current for Householders*

With rates in 1913 at 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

Retail Prices

Beef prices were again higher. Sirloin steak averaged 27.6c. per pound as compared with 27.1c. in January. Increases occurred in most localities. Rib roast advanced from an average of 20.1c. per pound in January to 20.7c. in February and shoulder roast from

* LABOUR GAZETTE, December, 1923, page 1442.

14.2c. per pound in January to 14.6c. in February. Veal advanced in most localities, averaging 18.2c. per pound as compared with 17.8c. in January. Mutton was up from an average of 27.6c. per pound to 28.5c. Pork, roast, rose from an average of 24.1c. per pound to 24.6c. Salt pork was slightly higher, averaging 23.5c. per pound. Bacon was up from 33.7c. per pound to 34.1c. In fresh fish cod and halibut were up slightly. Salt herrings were slightly lower. Lard was unchanged in the average, increases in some localities being offset by declines in others.

In fresh eggs declines in most localities occurred while cooking eggs advanced, the former averaging 65.7c. per dozen as compared with 66.7c. in January and the latter averaging 54.2c. per dozen as compared with 51.9c. in January. Milk advanced in Three Rivers and Nanaimo. Butter, dairy and creamery, averaged lower, the former being 37.6c. per pound in February as compared with 39.7c. in January and the latter 43c. per pound in February as compared with 43.9c. in January. Cheese was slightly higher, averaging 29.5c. per pound.

Prices of bread advanced at Sydney, Halifax, Truro, Moncton, St. Hyacinthe, Brockville, Kingston, Orillia, Windsor, Owen Sound, Cobalt, Timmins, Sault Ste. Marie, Port Arthur, Fort William, Brandon, Regina, Prince Albert, Saskatoon, Moose Jaw, Calgary, Trail, New Westminster, Nanaimo, and Prince Rupert. Flour showed a general advance, averaging 6.1c. per pound as compared with 5.5c. in January. Rolled oats were slightly higher. Tapioca showed little change. Canned tomatoes, peas and corn showed slight advances. Onions rose from 5c. per pound to 5.2c. Potatoes were up from an average of \$1.39 per 90 pounds in January to \$1.49 in February, increases occurring in nearly all localities. Evaporated apples showed little change, while prunes averaged somewhat higher at 15.5c. per pound. Canned peaches showed little change. Marmalade declined slightly. Both granulated and yellow sugar showed a general decline, the former averaging 9.1c. per pound as compared with 9.5c. in January and the latter averaging 8.6c. per pound as compared with 9c. in January. Coffee rose from 57.9c. per pound to 59.2c. and tea from 70.4c. per pound to 71.1c.

Anthracite coal averaged slightly lower at \$16.77 per ton. Slight declines were reported from Montreal, Belleville, and Timmins. Bituminous coal was slightly lower, averaging \$10.36 per ton. Hard wood averaged \$12.43 per cord. Coal oil advanced slightly, averaging 30.6c. per gallon.

No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on price changes during the month issued by the Dominion Bureau of Statistics.

The changes in grain prices during February were less important than for some months. No. 1 Manitoba Northern wheat averaged \$1.96½ per bushel as compared with \$1.96 in January. The high price for the month was \$2.06½, reached near the beginning, and the low \$1.86, toward the middle of the month. The slowing down of export demand and the subsidence of speculation were said to be the cause of the lower prices. American corn at Toronto was up from an average of \$1.43 per bushel to \$1.45½. Western barley advanced from 94c. per bushel to 96½c. Rye advanced from \$1.33½ per bushel to \$1.38½. Western oats declined somewhat from 67½c. per bushel to 63½c. Flax seed also declined 5c. per bushel to \$2.63½. Flour at Toronto advanced 10c. per barrel to \$10.70. Shorts at Toronto declined from \$38.00 per ton to \$36.25. Raw rubber, Ceylon, was 1c. per pound lower at 36c. Raw sugar advanced slightly. Canned corn at Toronto rose from \$1.87½ to \$1.92½ per dozen tins. Turpentine was up 5c. per gallon at \$1.55. Western cattle at Winnipeg advanced from \$6.47½ per hundred to \$6.50 and choice steers at Toronto from \$6.50 per hundred to \$6.75. Hogs rose from \$11.17 per hundred to \$11.80 and sheep at Toronto from \$7 per hundred to \$7.41. Meats moved in sympathy with live stock, beef forequarters at Toronto advancing from \$8.60 per hundred to \$9 and hindquarters from \$14.10 to \$14.50. Dressed hogs were up 50c. per hundred to \$14. Creamery butter at Montreal declined from 38c. per pound to 34c., while creamery prints at Toronto were down from 41c. per pound to 36c. and dairy prints from 34c. per pound to 28½c. Cheese advanced 3c. per pound to 23c. New-laid eggs were down from 67c.-70c. in January to 56c.-58c. in February. Raw cotton at New York advanced slightly, averaging 24.6c. per pound as compared with 24c. last month. The low price for the month was 24.05c. per pound, reached near the beginning, and the high 25.35c., reached toward the end. Unfavourable crop conditions were said to be the cause of the higher price. Raw silk advanced 20c. per pound to \$6.60. In lumber, birch at Toronto rose from \$60 per M to \$62 and British Columbia fir from \$46 per M to \$48. Spruce at St. John was up from \$19 per M to \$21. Sulphite pulp was down from \$52-\$55 per ton to \$50-\$52 and ground wood pulp from \$29-\$31 per ton to \$28-\$30. Several non-ferrous metals declined, copper at Montreal from \$16.85 per hundred to \$16.65; lead from

\$10.25 per hundred to \$9.65; tin from 61c. per pound to \$59c; and spelter from 94½c. per hundred to 90½c. Gasoline at Toronto was up from 20½c. per gallon to 24½c. The advance was said to be due to declining production of crude oil.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in other countries. The index numbers of retail prices are from official sources, unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. Reports received during the month showed that the movement of wholesale prices in January was in most cases upward.

Great Britain

WHOLESALE PRICES.—The *Statist* index number (in continuation of Sauerbeck's figures, base period 1867-77 = 100) declined 2 per cent to 144.8 at the end of January. This decline was the first to be recorded since August, 1924, with the exception of the reaction in November due to a fall in food prices. During the period under review food-stuffs declined 0.8 per cent, vegetable foods rising slightly in price while animal foods and sugar, coffee and tea declined. Materials declined 2.8 per cent, minerals and textiles showing marked declines while sundries rose slightly.

The Board of Trade index number, on the base 1913 = 100, rose 0.5 per cent in January to 171.0. Foods rose 1.7 per cent owing to advances in cereals and in meat and fish, and materials declined 0.2 per cent, the only group to advance being cotton.

The *Times* index number on the base 1913 = 100 was 175.6 for January, a decline of 2.1 per cent from the December level. Cereals rose 4.7 per cent. Meat and fish declined 3.3 per cent; other foods declined 4.4 per cent; iron and steel declined 0.5 per cent, and other metals and minerals, 4.9 per cent. Cotton declined 0.3 per cent, other textiles, 6.3 per cent and other materials 0.1 per cent.

The *Economist* index number for February, on the base 1901-05 = 100, advanced slightly to 216.9 as compared with 216.7 for January. Textiles advanced substantially, while there was a slight advance in groceries. The other groups declined, the most important being cereals and meat and the miscellaneous group.

Belgium

WHOLESALE PRICES.—The official index number of the Ministry of Industry and Labour, on the base April, 1914 = 100, dropped three points to 566 in December. Glass products declined in price 3.7 per cent; chemical products, 3.6 per cent; construction materials, 2.0 per cent. Tar and products rose 2.9 per cent and raw rubber rose 8.8 per cent. Other groups showed only slight changes.

RETAIL PRICES AND COST OF LIVING.—The official index number of retail prices of 56 articles at Brussels, on the base April, 1914 = 100, declined one point in January to 555. The index number for the Kingdom with the same base period, showed no change remaining at 521.

The official index number of cost of living of a middle class family, on the base 1921 = 100, was 139.05 in January, an advance of 1.2 per cent over the December figure. Foods, clothing and sundries rose slightly while heat and light declined. Rents rose 9.4 per cent to 155.38 as a result of a decree of December 27, 1924 allowing an increase in rents to 225 on the basis 100 in 1921.

The official index number of cost of living of a working class family, on the base 1921 = 100, rose 1.5 per cent to 139.89. Foods, clothing and sundries rose slightly, and heat and light declined slightly. Rent rose 9.5 per cent.

France

WHOLESALE PRICES.—The index number compiled by *Statistique Générale*, on the base July, 1914=100, rose 1.4 per cent in January over the December level, reaching 525. Foods rose 1.8 per cent to 455, although animal foods declined somewhat. Materials rose one per cent to 586. Minerals and metals and textiles declined, while the miscellaneous group advanced 3.8 per cent.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical office of prices in gold, on the base 1913=100, advanced to 138.2 for January as compared with 131.3 for December, 1924. Both foods and industrial materials advanced, the former from 127.2 to 137.3 and the latter from 138.9 to 139.9. Goods produced rose from 123.4 to 130.9, and goods imported from 170.9 to 175.0.

Italy

WHOLESALE PRICES.—The index number of the Chamber of Commerce, Milan (base period, 1913=100) was 612.06 for January, as against 593.39 for December, an increase of 3.15 per cent. Foods rose 3.4 per cent and industrial materials rose 3.0 per cent, so that the total and both of these groups reached the highest level yet recorded. This was the case also of the sub-groups vegetable foods, chemical products, minerals and metals, and miscellaneous industrial materials. All groups showed increases.

The index number of cost of living at Milan, compiled by the City of Milan, on the base July, 1920=100, rose 1.4 per cent in December to 128.00. Foods rose 1.6 per cent to 127.26.

Sweden

WHOLESALE PRICES.—The official index number of the Department of Commerce, on the base respective months of 1913=100, rose one point in January to 169. Raw materials showed no change in price and manufactured goods advanced one point. Vegetable foods, feed and forage, raw and manufactured metals, pulp and paper, hides and leather, and chemico-technical products all advanced slightly. Animal foodstuffs, fertilizers, mortar, etc., and textile fibres and fabrics all declined slightly in price. Other groups showed no change.

New Zealand

WHOLESALE PRICES.—The official index number of the Census and Statistics Office, on the base 1909-13=1000, stood at 1866 for December, 1924, 1868 for November, 1866 for October and 1869 for September. Group 1, agricultural produce; Group 5, building materials; Group 6, leather; Group 7, chemicals and manures; and Group 8, coal, declined while Group 2, flour, bran, etc.; Group 3,

wool, hides, tallow, etc., and Group 4, general merchandise, advanced.

United States

WHOLESALE PRICES.—Bradstreet's monthly index number of commodity prices for March 1, showed a small decrease of 0.4 per cent, reaching \$13.8353. Ten groups declined during the month, and three, Live Stock, Miscellaneous and Naval Stores, advanced.

The *Annalist* index number of wholesale prices of 25 foods (prices in 1890-1899 as 100) stood at 213-443 at the middle of February as compared with 211.051 at the middle of January. The advance for the month was 1.1 per cent.

COST OF LIVING.—The index number of the Special Commission of the Necessaries of Life, Massachusetts, on the base 1913=100, increased about 0.2 per cent on the December level to 161.5 in January. Foods rose about 1.2 per cent. Clothing prices dropped 1.8 per cent owing to decreases in prices of suits, hats, gloves, hosiery, underwear, women's shoes and cotton goods. The index number for fuel and light increased slightly owing to an increase in the price of kerosene, partly offset by decreases in electricity prices in two cities. There was no change in the shelter and sundries items.

FATAL INDUSTRIAL ACCIDENTS IN CANADA IN 1924

THE record of industrial accidents for 1924, as shown by reports to the Department of Labour, indicate a falling off in the number of industrial fatalities among employees from 1,412 in 1923 to 1,270 in 1924. The number of persons employed during the year 1924 was, however, somewhat smaller than during 1923. In both these years the logging industry had a higher fatality record in proportion to the number of workers employed than any of the other industries; in 1924 falling trees, branches, etc., were responsible for 86 and drownings for 38 deaths in this group, and a considerable number of deaths also occurred through the handling of materials such as the rolling and piling of logs. Non-metallic mineral mining and quarrying came second in its rate of fatalities, a principal cause of accidents being the fall of loose rock accidentally detached from the side of open pits. In the entire mining, smelting and quarrying group three main causes of deaths among the workers were falls of rock, and accidents due to the use of explosives and to mine cars. In the steam railway service 138 deaths were reported, in water transportation, 75, in storage

and local transportation, 39, and in public utilities including the telephone and telegraph services, 45. In the manufacturing industries 163 deaths were reported, the greatest number being shown in the saw and planing mills and in the iron, steel and products group. Ninety-three deaths occurred in the agriculture group, 21 of these being caused by horses and 12 by the use of farm machinery.

Among the causes of industrial accidents in all groups, as shown in Table I accompanying this article, "moving trains, vehicles, etc.," caused the deaths of 236 persons; 22 deaths were due to derailment and collisions, 106 to being struck by, run over, or crushed by or between cars and engines, 24 were caused by mine and quarry cars, 34 by automobiles and other power vehicles, and 12 by animal-drawn vehicles. There were in all 133 deaths due to drownings. While only 25 deaths are shown as due to infection it might be stated that this does not represent nearly all the deaths due to this cause, the above figure only showing the deaths where an original cause is not given. Ten deaths were

BY INDUSTRIES AND CAUSES

[illegible]

caused during the year by persons falling into open receptacles such as vats containing sulphuric acid and hot liquids, into brine, lime-kilns, a pot of boiling mash, and tanks.

In the analysis according to provinces, the highest record was shown in Ontario with 464 fatalities, in British Columbia there were 253, in Quebec 242, in Alberta 96, in Nova Scotia 96, in New Brunswick 43, in Saskatchewan 38, and in Prince Edward Island 6.

The accompanying tables show the fatal industrial accidents in 1924 classified by months,

and the ratio of accidents to the number of employees in certain of the industries based on figures showing the estimated number of persons employed in these industries in 1923 the figures for 1924 being not yet available, the causes of the fatalities, and an analysis of the accidents by provinces. The sources from which information was received by the department include:—

For Canada, the Board of Railway Commissioners and the Explosives Division of the Department of Mines, Ottawa, as well as the

*These fatalities include accidents to fishermen and seamen outside Canadian waters. In 1923 these included 6 fishermen drowned in the North Atlantic on March 7, and 1 at Portland, Maine, on October 30; one fisherman drowned at Seward, Alaska, on May 31; 3 fishermen on steamer, Delaware River, United States of America, killed by explosion of boiler on October 11 and 2 sailors drowned at sea, off New York, on October 5, and two persons, a deckhand and a watchman, who fell into the hold of vessels at Buffalo, New York, on September 11 and November 1 respectively. There was also included 1 railway fireman killed in a collision at Island Pond, Vermont, United States of America, on April 1. In 1924 there are included in the list 8 members of the crew of a schooner drowned between Louisiana, Nova Scotia and Newfoundland early in January; 3 fishermen drowned during a storm at the Portlock Banks, Alaska, on March 3; a fisherman drowned during a heavy sea at The Banks, Newfoundland, on November 11; and the captain of a fishing schooner drowned in wreck of schooner near Gloucester, on August 28.

RECENT LEGAL DECISION AFFECTING LABOUR

Money Collected from Trade Union Members is the Property of the Union

THE Amalgamated Society of Carpenters and Joiners, a labour organization having its headquarters in Great Britain, had a branch at Whitby, Ontario. This branch decided in 1924 to withdraw from the Amalgamated Society and unite with the United Brotherhood of Carpenters and Joiners, an organization of a similar character operating in the United States and Canada. Before returning the funds the members of the local branch held a banquet, which they paid for out of these funds, and the Amalgamated Society brought an action against the persons whom it held responsible for this alleged misapplication of the Society's money. Judgment was given in the lower court in favour of the plaintiff, and the defendants appealed in the second Divisional Court, which found that the money spent on the banquet was improperly used. According to the rules of the society all moneys subscribed by the members are the property of the society generally and not of the branches, and none of the rules authorized such an expenditure. On behalf of the appellant it was contended that the Amalgamated Society could not sue in this case owing to the provisions of section 4 of the Trade Union Act (Revised Statutes of Canada, 1906, chapter 125). This sections is as follows:—

4. Nothing in this act shall enable any court to entertain any legal proceeding instituted with the object of directly enforcing or recovering damages for the breach of any agreement,—

(a) between members of a trade union, as such, concerning the conditions on which any members for the time being of the trade union shall, or shall not, sell their goods, transact business, employ or be employed;

(b) for the payment by any person of any subscription or penalty to a trade union;

(c) for the application of the funds of a trade union,

(i) to provide benefits to members, or

(ii) to furnish contributions to any employer or workman, not a member of such trade union, in consideration of such employer or workman acting in conformity with the rules or resolutions of such trade union, or,

(iii) to discharge any fine imposed upon any person by sentence of a court of justice;

(d) made between one trade union and another; or,

(e) bond to secure the performance of any of the above-mentioned agreements.

(2) Nothing in this section shall be deemed to constitute any of the agreements above mentioned unlawful.

The appeal court stated that a trade union had the same rights as any other lawful organization except as limited by the statute. Section 4, however, would only prevent the court from entertaining an action instituted with the object of directly enforcing or re-

covering damages for the breach of any agreement for certain specified purposes; and the present appeal did not come within any of these purposes. The judgment concluded:—"The defendants, acting with others, took the money of the plaintiff society and wrongfully applied it to their own use. They must account for it, and what the plaintiff society does with it is not their business."

The appeal was dismissed with costs.

(Ontario—*Amalgamated Society of Carpenters and Joiners versus Sinclair*).

Workman Forfeits Group Insurance Benefit by Leaving Employment

An insurance company, in 1920, issued a policy whereby it assured the lives of the employees of a foundry company on the principles of "group insurance." All the employees became eligible provided their names were furnished by the foundry company to the insurance company, each employee being required to name a beneficiary. There was an express provision that the employers should furnish the insurer with the names of such employees as left the service of the company. One of the employees included in this arrangement joined the moulders of the foundry company in a strike, returning to work a week later. Subsequently he continued at work until he sustained injuries which resulted in his death. He had named as beneficiary a woman with whom he lived, but who was not legally his wife, and to her he left his property, including all life insurance, with a direction that it should be used by her for the maintenance and education of their son. This woman brought action against the employer and the insurer to recover the amount of insurance, the employer being included on the ground that it had agreed to keep the policy issued by the insurer in full force and effect. The foundry company stated that when the deceased went on strike they had notified the insurer that he was no longer an employee, and that the insurance was therefore cancelled so far as he was concerned. The court found that the employing company had issued this notice as required by the contract of insurance, and that the insurer could not be held liable to pay the amount claimed.

(Ontario—*Wojcik versus Anthes Foundry Company Limited*).

Employers' Liability may not be Limited by Agreement

A young man aged seventeen years was employed by a company in work which was per-

formed on the tracks and cars of the Canadian Pacific Railway. He sustained injuries while so engaged, and action for damages was brought on his behalf against the employing company and also against the railway company on the ground of negligence. The jury which first tried the case awarded damages to the employee, finding that both defendant companies failed in the performance of their duty, which was "to take reasonable care that the premises are reasonably safe for parties using them in the ordinary and customary manner and with reasonable care." Negligence was found to have been shewn by the defendants: "(1) In so far as giving orders to employees to pass between cars whilst in motion, knowing full well that such instructions could not be adhered to by their employees in the performance of their duties.; (2) Further not seeing that vertical grab irons were fixed on the end of the box car, or cook car, in question on each side of the door; (3) And further it is the opinion of the jury that a step should have been provided on the end of the cook car on a level with the floor of the car."

On appeal the Court of Appeal sustained the finding of the jury. The employing company stated that the young man, the plaintiff in the case, had by the terms of his contract of employment agreed that neither he nor his representatives would be permitted to recover compensation in excess of the sum of \$1,500 in case of injury arising from negligence or default. The court held that the bald statement of the effect of such a contract, which left the defendants free to be as negligent as they pleased, was sufficient to show that it should not be binding.

(Saskatchewan—*Millar vs. Smith and Company and Canadian Pacific Railway Company*).

Workman's Loss Through Accident Measured by Percentage of Disability

A quarryman who was earning weekly wages of \$27 met with an accident, causing disabilities for which his employers were assessed by the Superior Court at Montreal at \$728 for compensation, this amount being based on a 10 per cent disability rate. Appeal was brought by the employer in the Court of King's Bench, on the ground that the workman's injury had diminished his earning capacity to the extent of 3 per cent, as shewn by medical testimony. The workman on the other hand stated that his earning power had actually been reduced 15 or 20 per cent. The case involved the question, whether in deter-

mining the extent of a workman's loss as the result of an accident, account should be taken of the subsequent wages actually earned by him, or whether the true criterion was not rather the diminution in earning capacity as fixed by the calculations of the medical experts. A majority of the judges of the Court of Appeal held the latter opinion. "To determine the permanent incapacity of an injured workman it is not necessary to take account of the wages which he has earned after the accident." The degree of general incapacity, it was decided, is the thing to be examined and established, and this was best fixed by means of medical opinion based on science and experience. One of the appeal judges, in dissenting from this opinion, threw some doubt on the absolute value of the percentages of disability quoted by the medical authorities as resulting from the loss of certain limbs, etc. He cited the following opinion from another Quebec judge:—

"We have been referred to tables designed to aid in ascertaining percentages of loss of wage-earning power. While such tables have a sort of relative usefulness in the way of preventing wide aberrations, the weakness of the use of them can be realized by the reflection that if they were utilized to fix a percentage of impairment due to an accident to each part of the human body, and if all the percentages so ascertained were added together, a total would be arrived at probably much greater than the sum total of the man's earning power."

The appeal was sustained, one judge dissenting.

(Quebec—*Labrecque and others versus Charette*.)

Minimum Wage Law valid only for Minors

A judgment declaring unconstitutional the minimum wage law of Wisconsin was noted in the January issue of the LABOUR GAZETTE, where it was stated that this decision followed the judgment of the United States Supreme Court in the recent District of Columbia Minimum Wage case (LABOUR GAZETTE, May, 1923, page 461). A similar result followed in connection with the Minnesota Minimum Wage Act. In the latter case, however, the State Supreme Court distinguished between the application of the law to women and to minors, finding that it was not unconstitutional in so far as it applied to children. The judgment stated:—

"We see no difficulty in applying the law as written, if women not minors are excluded from its operation. And we are persuaded that, had the Legislature known that the fixing of a minimum wage for adult women infringed the liberty of contract guaranteed by the federal constitution, it would nevertheless have enacted the law as to minors."

APRIL, 1925

[NUMBER 4

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

Employment in Canada indicated a slightly upward trend in February as compared with the previous month. Reports from the

Employment Service of Canada showed that the average number of vacancies and placements rose slightly during the first half of the month, but again declined during the latter half, the general level of employment being lower than during the same period last year. At the beginning of March the percentage of unemployment among the members of trade unions throughout Canada was 9.5, as compared with percentages of 10.2 at the beginning of February, and with 7.8 on March 1, 1924. The number of local unions on which this calculation was based was 1,642, with a membership of 164,367 persons. Reports from 5,696 firms showed that they were employing 715,158 persons in March, or 6,921 more than on February 1. The employment index number, which is based on the number employed in January 1920 as 100, rose to 87.0 on March 1 from 86.1 in the preceding month, as compared with 90.7 on March 1, 1924.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.74 at the beginning of March as compared with \$10.93 for February; \$10.58 for March, 1924; \$10.79 for March, 1923; \$10.54 for March, 1922; \$13.23 for March, 1921; \$16.92 for June, 1920 (the peak); \$15.98 for March, 1920; \$12.66 for March, 1918; and \$7.68 for March, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1913 as 100 declined to 161.6 for March as compared with 164.8 for February, 154.1 for March, 1924; 155.9 for March, 1923; 153.6 for March, 1922; 186.0 for March, 1921; 256.7 for May, 1920 (the peak); 241.3 for March, 1920; and 200.3 for March, 1919.

The time loss caused by industrial disputes was greater in March than in the previous month or in March, 1924. Fifteen disputes were in progress at some time during the month, involving 11,729 employees, and resulting in a time loss of 244,703 working days. One of the disputes which began during March was that in the coal mining industry in Nova Scotia, involving about 11,563 employees. Six disputes terminated in

March, leaving nine in progress as the month closed. In February 1925, there had been 12 disputes, involving 3,026 workpeople, and resulting in a time loss of 26,334 working days.

Combines Investigation Act, 1923

In accordance with the announcement in the January issue, an investigation has been opened, under the Combines Investigation

Act, 1923, into an alleged combine in connection with the marketing of the potato crop in New Brunswick. The investigation is being conducted by the Registrar under the Act, and Mr. P. J. Hughes, K.C., of Fredericton, New Brunswick, has been instructed by the Department of Justice to act as counsel when desired. As in other inquiries, a report will be made to the Minister of Labour, in accordance with section 21 of the Act, at the conclusion of the investigation. Publication of the report will be in accordance with section 22 of the Act which states: "Within fifteen days after its receipt by the Minister the report . . . shall be made public unless the commissioner is of the opinion that the public interest would be best served by withholding publication, and so states in the report itself, in which case the Minister may exercise his discretion as to the publicity to be given to the report in whole or in part."

In regard to the interim report by Mr. Lewis Duncan in reference to the existence of a combine in the fruit and vegetable industry (LABOUR GAZETTE, March, page 261), the Minister of Labour stated in the House of Commons on March 30 that the report had been submitted to the attorneys general of the four western provinces, in which a combine had been shown to exist. The Act provides that if action shall not have been taken by the Provincial authorities after three months, the Dominion Government may consider what further action, if any, shall be taken in the matter.

A summary is given elsewhere in this issue of the report of the commissioner appointed under the act to investigate an alleged combine among the coal dealers in Winnipeg.

Industrial Disputes Investigation Act, 1907

The Minister of Labour laid on the table of the House of Commons on March 16 a "blue book" containing a full account of the recent judicial proceedings respecting the validity of the Industrial Disputes Investigation Act, 1907, in the case of the "Toronto Electric Commissioners *versus* Snider *et al.*"

The report contains an introduction outlining the main facts of the case, followed by the text of (1) the judgment of Mr. Justice Orde, of the High Court Division of the Supreme Court of Ontario; (2) the judgment of Mr. Justice Mowat (trial judge) of the High Court Division of the Supreme Court of Ontario; (3) the judgment of the First Appellate Division of the Supreme Court of Ontario (with the dissenting opinion of Mr. Justice Hodgins); (4) the judgment of the Judicial Committee of the Privy Council. The cases of the various parties as presented before the Judicial Committee are also given, including the cases of the appellants; the Attorney General of Ontario; the Respondents; the Attorney General of Canada; as well as the argument before the Judicial Committee of the Privy Council; and the text of judgments delivered in the Quebec Courts in 1912 and 1913, upholding the constitutionality of the Act.

The report further contains four appendices as follows: (1) text of the act, with its amendments of 1910, 1918 and 1920; (2) summary tables of proceedings under the act from 1907 to 1924; (3) the text of sections 91 and 92 of the British North America Act, 1867; and (4) a summary of the various Canadian acts which provide government intervention in labour disputes. The fourth appendix was reprinted as a supplement in the March issue of the LABOUR GAZETTE.

Old age pensions in Canada

The Minister of Labour gave notice in the House of Commons on March 24th, of the following proposed Resolution:—"Resolved, that it is expedient that the final report of the Special Committee of the House of Commons which was appointed at the last Session to make an inquiry into an Old Age Pension System for Canada, be referred to a Special Committee of the House for examination and report with reference to the correspondence which has occurred since last Session with the several provincial governments arising from the proposal of the Special Committee for co-operative action between the Federal and Provincial authorities on the subject of Old Age Pensions."

Labour legislation in 1924

The Department of Labour of Canada is issuing this month its annual publication giving the text of the acts concerning labour that were passed by the Dominion Parliament and the various provincial legislatures during the past year. This is the fourth annual supplement to the volume "Labour Legislation in Canada as existing in Canada on December 31, 1920," published by the Department in 1921. A cumulative index is included with each supplement containing references to existing statutes and amendments up to the time of publication. The cumulative index of 1924 is therefore a guide to all the labour legislation enacted in Canada up to the end of that year, and the whole series, including the volume of 1920 and the four supplements, contains the body of existing Dominion and Provincial laws affecting labour. A summary is given of the action taken in Canada during 1924 for the purpose of giving effect to several of the Draft Conventions of the League of Nations International Labour Organization. One of the principal groups of new measures enacted during the year consisted of important amendments to the Workmen's Compensation acts of several provinces, particularly in Alberta, Ontario and New Brunswick. The chief measure relating to trade union organization was the act respecting Professional Syndicates, enacted in the Province of Quebec. In regard to hours of labour, mention may be made of the amendment of the Nova Scotia Coal Mines Regulation Act, giving legal sanction to the eight-hour working day below the surface. The same province enacted a new Minimum Wage Act which, when it becomes effective, will practically cover all occupations in which women are employed. In Manitoba the administration of mothers' pensions was placed in charge of a new Child Welfare Board, a new part being inserted in the Child Welfare Act of 1922 to embody the provisions formerly comprised in the Mothers Allowances Act of 1916. The legislation of the year has been already outlined in the LABOUR GAZETTE, in the accounts given from time to time of the sessions of the various legislatures.

Wages and hours of labour in Canada

This issue of the LABOUR GAZETTE contains new tables showing the changes in wages and hours of labour in Canada in certain industries during the past five years. These tables are supplementary to those which appeared in Bulletin Number 7, which was issued with the January GAZETTE

and include several important occupations in regard to which full information was not available when the Bulletin was being prepared. Besides the records of the wages, rates and hours of labour, the tables include yearly index numbers applicable to the various industrial groups, the purpose of the compilation being to show clearly the movements in wages and hours of labour that have been recorded during the last five-year period.

Minimum Wage inquiry in Manitoba

The Minister of Public Works of Manitoba announced in the Legislature during March that an investigation into the working of the Minimum Wage Act would be held during the recess. This statement was made in connection with the rejection earlier in the session of an amending bill which had been introduced by a labour representative. The amendment would have brought within the scope of the Act boys under the age of 18 years, and enabled workers who were not being paid the full amount of the minimum wage prescribed by the Board, to prosecute their employers, and to obtain an order from the court to the employer to pay arrears of wages. Supporters of the bill alleged that some employers circumvented the provisions of the Act by discharging their female employees and engaging boys in their places. The bill when in committee was opposed by representatives of the Manitoba Boys' Work Board and by some of the employers. The former argued that the proposed inclusion of boys under the Act would destroy their initiative at an age when they were being trained for concentrated effort, and that if high wages were offered to them they would be taken from school before the proper time. A representative of the hardware industry stated that boy apprentices had to be taught for a year before they were of any value, and anticipated that the bill, if passed, would prevent local wholesale houses from training boys for work.

Mothers' pension inquiry in New Brunswick

The commission appointed last year by the Government of New Brunswick to investigate and report on the question of mothers' pensions have completed their work, and are to submit a report for consideration by the provincial legislature during the present session. The Government intends, however, before submitting definite proposals to obtain as far as possible the views of all the municipal bodies, as it is considered that this matter is of direct interest to them and may entail burdens which they should not be

called upon to entertain without having had sufficient time to give the subject their careful attention.

Inspection of camps in Manitoba and Quebec

The Manitoba Legislature, on March 24, passed the following resolution:—

Whereas no regulations exist in the Province of Manitoba to govern employers of labour engaged in lumbering, mining or other similar industry, requiring the establishment of a special camp; and whereas evidence is not lacking that the conditions in such camps are far from satisfactory; and whereas such regulations have been passed by other Provinces of Canada, and that it is very essential that the living and working conditions in such camps should be safe, sanitary and comfortable, it is deemed advisable that suitable regulations should be adopted for the Province of Manitoba; be it therefore resolved that this House is of the opinion that the Government should make the necessary arrangements to provide for adoption of regulations governing living conditions in lumbering, mining and other industries of a similar nature requiring the establishment of a special camp, and also that the Government should make the necessary arrangement for a periodical inspection of such camps by inspectors of the Provincial Board of Health; and further, that the Provincial Bureau of Labour shall report to the next session of the House their recommendations as to the necessary legislation for the proper supervision and inspection of these special camps.

The resolution, as at first proposed by the labour representatives, would have assigned the duty of inspection to the Provincial Bureau of Labour, and would have called for the inspection of working as well as of living conditions. In its amended form it relates only to matters falling within the sphere of the Board of Health.

In connection with the reference in the resolution to provisions in other Provinces, it will be recalled that by-laws were issued in April 1924 under the Public Health Act of 1922 of the Province of Quebec. They apply to lumber and pulpwood camps, mining camps, lumber sawmills and pulp-mills, railway construction camps and brick manufacture. Particulars as to the new health requirements in camps in Quebec were given in the LABOUR GAZETTE for May, 1924.

Winter unemployment relief in Alberta

The Vancouver Board of Minister of Labour of Alberta, informed the Legislature on March 30, that the provincial government had expended in relief of unemployment during the past winter a sum estimated to be between \$300,000 and \$350,000. Unemployment was prevalent, he stated, even although there had been a strong demand for farm labour, the province having many workers who were unskilled in farm work and entirely unsuited to it. He anticipated, however, that work would soon open up, bringing a demand for labour of all classes. His own department, he said, had

put forward an extensive programme of road and bridge building and other work to provide employment, and had urged the railway companies and other employers of labour to open up their work at the earliest possible date.

Premier Greenfield, according to press reports, stated on the same occasion that the government had done everything possible to relieve the situation in the coal camps. The Canadian Pacific Railway Company had been urged to place its coal orders; and the Company had expressed its willingness to give Alberta a share of this business, stating, however, that the recent wage reduction in the British Columbia Mines at Fernie had enabled the operators there to reduce the price of coal below that of the Alberta mines.

Hospital treatment for sailors in Canada

The Vancouver Board of Trade recently suggested to the Dominion Government that the dues now levied and collected on every ship arriving at the port of Vancouver for maintaining a hospital for the care and treatment of sick mariners, should be reduced from two cents to one cent per registered net ton. The present rate was fixed under an amendment made to the Canada Shipping Act in the session 1920-21, increasing the dues from one and one-half cents to two cents per net ton. The Minister in charge of the bill at that time pointed out that in some of the previous years the amounts collected by the impost of one and one-half cents had not been sufficient to meet the expenditure, and as it was only right that the shipping of the world should take care of its sick seamen, the tax should be increased to such an extent as to make sure that the cost of such treatment would be met. The Vancouver Board of Trade was informed by the Federal Department of Health that a reduction in the tax would not be justified, for the following reasons: The number of sailors to be treated each year is not uniform and the apparent surplus in a particular year represents only the excess of the revenue received over the amount actually spent for treatment and accommodation, and does not represent the full amount required for administration.

The rights of sick mariners on ships paying the duty are stated in section 386 of the Canada Shipping Act as follows:—

386. (1) The master or person in command of any ship paying such duty may send to any hospital for sick mariners, at any hour of the day, and, in the case of accidents or emergency at any hour of the night, any sick mariner belonging to the ship. Such sick mariner so sent with a written recommendation from such master or person in command of such ship, endorsed as approved by the collector of the Customs of the port, or other officer appointed for the purpose by the Min-

ister, shall be gratuitously received into such hospital, and receive therein such medical and surgical attendance and such other treatment as the case requires.

(2) At any port at which such duty is received, and at or for which there is no marine or seaman's hospital, or other hospital so designated and appointed as aforesaid, the collector or other chief officer of the Customs, upon being required, so to do at any hour of the day, and in case of accident or emergency, at any hour of the night, by the master or person in command of any ship which has paid such duty, shall make without delay the best provisions in his power for the medical and surgical assistance and treatment of every sick mariner belonging to such ship at the nearest public hospital if there is one at a convenient distance, and, if not, then at some public or private house.

Chinese seamen employed by B.E. Steel Corporation

Further information was given in reply to a question in the House of Commons on March 25, as to the employment of Chinese on the steamers of the British Empire Steel Corporation, Limited. The Minister of Immigration made the following statement in the House on April 28, 1924:—

A bond for \$105,000 has been deposited with the department, this bond to cover 105 Chinese who are to be engaged on the steamships *Rosecastle*, *Daghild*, *Wabana*, *Lingan*, *Hochelaga* and *Kamouraska*, plying between the ports of Sydney, Louisburg, Halifax, St. John and Montreal. While the bond is for \$105,000, it provides for a penalty of \$1,000 in case of each Chinaman engaged on the steamships mentioned. Only 76 Chinamen have come forward or are coming forward under this arrangement with the Steel Corporation, the bond covering also the cases of 29 Chinese who came forward last fall for employment on the *Kamouraska*. There are precedents in the department for action of this nature. These Chinese are regarded as non-immigrants and the bond deposited by the British Empire Steel Corporation will be retained until the department is satisfied that all of the Chinese covered by the same have been checked out of Canada.

The statement made last month showed that only 95 Chinese were employed as members of the crews of vessels operated by the British Empire Steel Corporation, Limited, since the deposit of the bond of \$105,000. Of this number 73 were passed out of Canada; five deserted at Canadian ports, for whom the company was penalized in the sum of \$5,000; and seventeen remained as members of the crew of the steamship *Rosecastle*.

Children's employment permits in Quebec

In reply to a question in the Quebec Legislature in March it was stated that during 1924 2,852 employment certificates for children were issued in Montreal, 301 in Quebec City, 156 in Hull, 138 in Three Rivers, 48 in Sherbrooke, 90 in St. Hyacinthe (2 months), 69 in Valleyfield, and 23 in Lachute. Evening classes are conducted at all these places; but, in addition, many children were registered in other manufacturing centres where no evening schools exist.

The certificates are issued by the Provincial Department of Labour under the amendments of 1919 to the Industrial Establishments Act, providing that boys and girls between the ages of 14 and 16, who wish employment, must first obtain certificates from the Department. There is nothing in the act to oblige employers to report the number of children refused work in the factories. During the year the Department refused permits to about 50 children who appeared to be too young or not strong enough for factory work.

Garment workers' unemployment insurance

Payments of unemployment benefits are to begin on June 1 under last year's agreement between the International Ladies' Garment Workers' Union and the

cloak and suit manufacturers in New York (LABOUR GAZETTE, September, 1924, page 766). *The Survey*, of New York, in its issue of March 15, outlines the main features of the agreement as follows:—

For the purposes of administering the fund, the year has been divided into two seasons, the spring season running from February 1 to July 31, and the fall season from August 1 to January 31. Nine weeks each season are written off as "normally" dull and for these no unemployment benefits are provided. Seventeen weeks during each season are recognized as the full-time period during which workers are entitled to full employment. Members of the union working less than seventeen weeks are entitled to benefits, but then only for a maximum period of six weeks during each season. Those working fifteen weeks will receive two weeks' benefit; those working twelve weeks, five weeks' benefit; those working eleven or less will receive six weeks' benefit at the rate of \$10 a week up to a maximum of \$120 for twelve weeks during the year.

In order to be eligible for unemployment benefits, workers must have been members of the union for at least one year, must have been employed in the New York market for one year, and must have registered at the union's registration office and have reported at specified intervals. To offset these limitations, unemployment within the full-time period is cumulative; that is, a member of the union who is given only part-time employment during the seventeen full-time weeks will be credited with the difference between the number of hours he actually works and the number of working hours in the week.

How to form a vocational library

The Technical Education Branch of the Department of Labour of Canada has published a Bulletin (Vocational Education, No. 11)

containing information as to the best methods to be followed by technical schools in organizing libraries. The Department had noted a lack of system in some of the existing libraries, many technical schools possessing somewhat haphazard collections of books which fell short of being true libraries in the sense of containing representative works on all the subjects of study. The object of the Department in publishing this Bulletin is to assist

the local schools in forming libraries that may be efficient, up-to-date, and reasonably complete collections of the literature of vocational education. The Technical Education Branch of the Department of Labour has itself a library of material on vocational education and related subjects, and has established a system of library procedure in the arrangement and classification of this collection. The Bulletin publishes a résumé of this procedure in the hope that it may prove suggestive to directors and principals of vocational schools who intend to establish similar libraries. A list of subject headings has been evolved by the Department based on the catalogues of the American Library Association, and the original list has been extended from time to time to meet the needs of libraries on vocational education. At the present time the list consists of some 300 subject headings, with cross references to all related subjects, suggesting lines of study that might otherwise be overlooked. The classification of the books, pamphlets and periodicals in the library is based on a special list selected from the "Dewey Decimal Classification", eleventh edition, 1922, together with a special classification supplied by the United States Board for Vocational Education. Copies of the bulletin may be obtained by application to the Technical Education Branch, Department of Labour, Ottawa.

Profit sharing by Toronto firm

The Robert Simpson Company, of Toronto, has recently carried to a further stage the programme which was originated in 1919 for giving their employees a share in the operations and profits of the business. In 1919 the executives of the Robert Simpson Company founded the Employees' Saving and Profit-Sharing Fund. This fund is administered by a Board of Trustees quite independent of the business, and is participated in by a large number of employees. No employee may deposit more than 5 per cent of his or her wages, and, in order that those in senior positions may not benefit unduly, no employee may deposit more than \$2 weekly. The company contributes annually 5 per cent of net earnings after payment of depreciation, bond interest and preference dividend. The amount in the fund, invested largely in trustee securities, is over \$700,000.

The new development, which was announced during March, consists of an organization designed to give the officials and managers an opportunity of more active participation in the company's affairs through stock ownership. In order to establish this relationship a holding company has been incorpor-

ated by Dominion charter under the name of "Simpsons Limited." The new company is the owner of all the common shares of the "Robert Simpson Company, Limited," a substantial block of this common stock being held by the company's managers and other senior employees. A further larger block, it is stated, is to be placed in trust for sale at a later date to younger employees upon reaching executive positions with the company. However, the control of the "Robert Simpson Company, Limited," remains unchanged, as the majority stockholders in the parent company still retain a majority of the common stock in "Simpsons Limited."

Board of control for workshops in Toronto

The Toronto members of the International Ladies' Garment Workers' Union recently organized a movement to eliminate fire traps, unsanitary conditions, and "cellar shops." The September issue of the GAZETTE noted that Mr. R. A. Stapells, president of the Toronto Board of Trade, had been making an investigation as to unsanitary conditions that were alleged by a representative of the International Union to exist in some of the smaller shops in the city. The Toronto Cloak Manufacturers' Protective Association gave its support to this movement, and the result of the combined effort is expected to be the establishment within a short time of a Board of control, composed of representatives of the Association, of the International Union and of the public, which it is hoped may be able to effect reforms in certain of the factories and workshops by the consent of all parties. The principles on which the Board will act are given as follows: That industry is responsible for the conditions of its establishments; that it is futile to expect improvement in industrial conditions by legislation and enforcement which suffers from inadequate appropriations, frequent administrative changes and the lack of established standards of inspection; that it is the duty of the industry to control, supervise and improve sanitary conditions without outside agencies; that the general public is interested in the sanitary conditions of workshops, and the enforcement of such is a debt owing by manufacturers and workers to the public.

Valid laws must afford equal protection

The February issue of the LABOUR GAZETTE contained in the section on Recent Legal Decisions Affecting Labour, a note on a decision by the Minnesota Supreme Court declaring unconstitutional the State law to provide One Day Rest in Seven.

The principle underlying the decision was that laws, to be valid, must "operate equally," affording equal protection to all the members of the class affected by them. The court stated that "the legislature undoubtedly may except from the operation of such a law employments and activities the suspension of which would be detrimental to the public, and also those where continuous operation is essential, or where other differences of situation, condition or resulting consequences furnish a reasonable ground for excepting them from such a restriction. But if it brings the employees of one establishment within the law and leaves those of another outside the law with no reasonable ground for not treating them alike, it violates the equality rule. . . . No differences in conditions have been pointed out, and none occur to us, that suggest a legitimate reason for saying that employees in hotels, bakeries, restaurants, factories, packing plants and machine repair shops shall have a day of rest, and that employees in places of amusement, newspaper plants, canneries, flour mills and automobile repair shops shall not. We know of no reason for exempting places of public amusement from the operation of the law that does not apply with at least equal force to hotels which furnish accommodations for the travelling public at all times. We think the statute clearly violates both the state and the federal constitutions."

Holidays with pay in Canada

The Swift Canadian Company, Limited, announced during March that the arrangements that have been in effect for the past two years at the Company's Toronto plant, providing holidays with pay for certain of the employees, were to be extended so as to include large numbers of hourly and piece-work employees. The vacation rule formerly allowed holidays with pay to male employees of five years' continuous service and to female employees of three years' continuous service. The extension now introduced reduces the five years requirement to four, thus bringing under the vacation ruling many additional employees. The amended policy extends the paid privilege to male hourly and piece-work employees and to weekly-paid employees such as night smokers, watchmen, chauffeurs and teamsters, who will have completed four years' continuous service (using pension service record) on or before October 1. Women plant employees are granted like vacations after three instead of four years' continuous service.

The Edmonton City Council, on March 23, in considering new agreements with the civic employees, voted to "iron out" the distinc-

tions which had hitherto existed between the various classes in the matter of "holidays with pay." The permanent employees had been receiving two weeks' vacation annually with pay, with the exception of the street car barnmen, who had seven days, and the motormen, who had ten days (or 90 hours) with pay. In future all hourly men without distinction are to have the privilege of two full weeks' holidays with pay, hitherto enjoyed only by the monthly employees. In the case of the motormen this rule is interpreted to mean that these employees will have two weeks' leave, including Sundays, with pay for 96 hours. The superintendent intimated that the new allowance will cost the street railway about \$1,100 a year more. It was stated that \$25,829 was paid last year in overtime allowances to the employees. Some account of the prevailing practice in Canada in reference to vacations with pay was given in a note in the *LABOUR GAZETTE* in October, 1924.

Holidays with pay in Great Britain

A bill has been introduced in the British House of Commons to provide that workpeople engaged twelve months are entitled to at least six days' holidays with pay, and those employed less than twelve months to a proportionate holiday. The factories in many of the industrial centres in the North of England and in Scotland, close by custom for seven days in August each year. The supporters of the bill, however, claim that this custom aggravates the condition of other workers who are unable to provide the means for a holiday or to subscribe a small sum throughout the year to holiday clubs, but who suffer loss of wages through the closing of the factories. Since 1918 the printing trade workers have enjoyed fourteen days' leave with pay, by an agreement between the employers and the unions. It is desired to extend this principle to the agricultural, mining, engineering and textile industries.

Census of wages and hours in Great Britain

The British Ministry of Labour is about to undertake a general inquiry into earnings and hours of labour in Great Britain and Northern Ireland in 1924. Comprehensive information on this subject was last collected in 1906, when a general inquiry into earnings and hours of labour in the United Kingdom was made by the Labour Department of the Board of Trade, the results of which were published in a series of eight volumes each dealing with a group of industries. It is pointed out that a census of pro-

duction in 1924 is now being taken by the Board of Trade, and that the utility of the information so collected will be considerably increased if statistics of wages and hours of labour in the same year are available for comparison.

The Department of Labour proposes also to undertake an inquiry, at an early date, with a view to obtaining information as to the extent to which systems of apprenticeship at present prevail in each of the principal industries, the sources from which apprentices are obtained, the conditions of services of apprentices (commencing age, premium, length of apprenticeship, rates of pay, etc.), and the arrangements made for their training. No comprehensive information on this subject has been officially collected since before the war.

The following information as to the salaries of school teachers and inspectors in the Province of Quebec was given in the Legislature on March 25. The minimum salary for religious teachers is \$160 and the maximum salary \$1,100; for lay teachers the minimum salary is \$300 and the maximum \$3,400; for religious directors the minimum salary is \$200 and the maximum \$1,300; for lay directors the minimum salary is \$1,500 and the maximum \$4,700. School inspectors have a minimum salary of \$1,600 and a maximum of \$2,000.

The amount of the retiring pensions of superannuated police officers at Hamilton, Ontario, it is stated in the press, is to be raised from 40 per cent of the salary at the time of retirement, to 50 per cent. The Hamilton police pension fund has been in existence since 1893. Each man on the force contributes 7 per cent of his salary, and has the right to vote on withdrawals from the fund (*LABOUR GAZETTE*, May, 1924, page 394).

In a note in the last issue on the Manitoba Joint Council of Industry it was stated that the provincial government, while making no immediate provision for the council, had no intention of discontinuing it. The Attorney General of the province subsequently explained in the legislature that "in view of the Privy Council's decision with respect to the Industrial Disputes Investigation Act, and the possibility of action being taken at Ottawa resulting from that decision, the government did not desire at the present time to make any change in the Manitoba Act under which the council came into being." It will be recalled that the Manitoba Industrial Conditions Act of 1919 provides machinery, through the Joint Council of Industry, for intervening in industrial disputes with a view to their settlement.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

The Labour Situation

EMPLOYMENT at the beginning of March showed a favourable trend, but the situation continued to be worse than at the beginning of the same month of last year.

Slight declines were shown in the business transacted by the offices of the employment Service of Canada during the month of February, 1925, as compared with the preceding month and with the corresponding period a year ago. Following is a summary of employment conditions at the end of March, 1925, as reported by the Superintendents of the Employment Service of Canada:—

In the Maritime Provinces quiet conditions prevailed in the construction groups, although the municipalities had continued to employ men on clearance work on the city streets and highways. Building tradesmen were supplied with work on minor repair jobs and construction in the larger centres. The demand for loggers had fallen off slightly, but orders for labourers and loaders were received at the New Brunswick offices. The farm group was inactive, although with the approach of spring some demand is anticipated. A fairly large call for household workers for the country was reported with a shortage of applicants, while placements in casual work registered an expansion.

No substantial changes were reported in the industrial situation in the province of Quebec, the slight improvement at the end of February being still in evidence. While vacancies in the agricultural group were not many, further and large orders were expected in the near future. Quietness was prevalent in logging prior to the opening of the river driving season. A marked improvement was shown in the building trades and the superintendents reported further prospects for building, railway and highway work during the coming months. Manufacturing was quiet. The demand for workers for household and personal services was far in excess in the registration of experienced applicants.

In the province of Ontario the continued fine weather had resulted in an increased demand for farm workers the calls being met mainly from Toronto, Hamilton, Niagara Falls, St. Thomas and Chatham. A further expansion in this group may be anticipated for the coming months. Contractors and building tradesmen were preparing for an increased building program, but as yet the expansion has not expressed itself in increased employment. Aside from temporary and casual work on city streets and highways and

minor repair work, building tradesmen were offered few opportunities. In the logging industry the interseasonal lull was evident, experienced bushmen and axmen leaving the camps, while the spring demand for river drivers was not yet reported. Little improvement was recorded in the industrial centres, the iron and steel industry and textile trades showing a slight expansion especially in Western Ontario. The women's sections reported slight increase in orders, particularly of those calling for cooks, cook generals and household workers, the scarcity of trained workers of this type being noticeable.

Activities in the farm section in Manitoba showed a decided improvement over the same period of last year, but the response of applicants was not well marked, difficulty being found in supplying experienced workers. However, with the warmer weather men from the lumber camps will be available to meet this call. Despite the decline in the demand for bushmen, a few re-placement orders had been filled. The employment outlook on the whole was good, although the slackness in building and construction was reflected in the large lists of unemployed at the offices.

An early and large demand for farm workers, which will increase as the season advances, was reported in Saskatchewan, but experienced workers were secured with slight difficulty. The construction group was quiet, it being too early as yet for the spring expansion in building, while casual jobs incidental to the winter season, had fallen off. A marked decline in the demand for bushmen was shown and the logging camps were beginning to break up.

In the province of Alberta a slight increase was shown in the placements of farm hands and at some offices a marked registration of men willing to go on farms was recorded. No change was noted in the building group, although an early expansion in construction may be anticipated if contractors' plans are carried through. At present, however, casual work, civic relief measures and odd building jobs supplied work for the unemployed. A nominal demand only was recorded in the logging group.

Industrial conditions in British Columbia registered very few changes, the logging industry showing no improvement. The indications in the building and construction groups point to a busy season in the coming months, but at present casual and temporary work only was available. With the improved weather in the Okanagan valley work had

commenced in the farm districts and no difficulty was felt at the offices here in supplying experienced workers. Conditions in the women's sections remained much the same as previously reported, the demand being recorded mainly in household work.

EMPLOYERS' REPORTS The trend of employment at the beginning of March was upward, according to reports from employers of labour tabulated by the Dominion Bureau of Statistics. The improvement took place wholly in manufacturing, other industries on the whole showing declines.

Firms in all except the Prairie Provinces registered increased activity, which was most noteworthy in Ontario. In the Maritime Provinces, employment increased substantially, particularly in the iron and steel and food groups; coal mining on March 1 also recorded greater activity than in the preceding month, while construction was slacker. In Quebec, logging and construction showed curtailment, but there were gains in manufacturing, notably in textile, iron and steel, pulp and paper and lumber factories. In Ontario, iron and steel showed marked expansion; improvement was also noted in textiles and other branches of manufacturing and in transportation, mining and construction. Logging, on the other hand, showed seasonal declines, and there were also losses in trade and communication. In the Prairie Provinces, there was a generally unfavourable moment. Manufacturing, logging, mining, transportation, construction and trade all recorded curtailment. In British Columbia, manufacturing was more active, the lumber industry showing the greatest gain. Logging, highway construction and transportation also afforded considerably more employment, but trade and railway construction were slacker.

Improvement was recorded in Montreal, Ottawa, Hamilton and Vancouver, while in Quebec, Toronto and Winnipeg conditions were less favourable. In Montreal, manufacturing, particularly of textile, iron and steel products, and building construction showed increased activity, while road construction and maintenance reported losses. In Quebec City, construction afforded decidedly less employment; the changes in other industries were slight. In Toronto, employment was in less volume than on February 1, manufacturing, communication and trade showing curtailment. In Ottawa, moderate improvement was recorded, especially in iron and steel and lumber factories. In Hamilton, iron and steel works were decidedly busier and there

were also gains in textiles. Electrical apparatus plants, however, afforded less employment. In Winnipeg, there were decreases in meat packing and slaughtering establishments and in retail trade, while other industries showed little change. In Vancouver, considerably greater activity was indicated in manufacturing, particularly in lumber mills, and in transportation.

Within the manufacturing division, iron and steel recorded the greatest improvement; lumber, edible plant product, textile and non-ferrous metal product factories also indicated considerable increases. The only large reductions in the group were in meat packing and slaughtering establishments. Logging showed seasonal losses. Curtailment was noted in the western coal fields, but coal mining in the Maritime Provinces and metal mining in Ontario and British Columbia afforded more employment than in the preceding month. Telephones showed further declines. Steam railway operation in the Prairie district was slacker, while shipping in British Columbia was more active. Building construction registered improvement, but there were contractions in highway and railway construction. There was a falling off in trade, both retail and wholesale.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of March, 1925.

TRADE UNION REPORTS. The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lock-outs, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reported.

There was a further slight decline in unemployment reported at the end of February by the 1,642 local trade unions from which returns were tabulated whose membership aggregated 164,367 persons. Of these 15,619 were unemployed, a percentage of 9.5 as compared with 10.2 per cent in the preceding month and with 7.8 per cent at the close of February last year. Members in Nova Scotia, New Brunswick, Quebec, and Manitoba were better employed than at the close of January. A substantial share of the increase in Quebec

was due to a better situation in the garment trades and in Manitoba to more employment in the metal and building trades. In the other provinces reductions occurred with the exception of Ontario, where the percentage out of work remained the same. Unemployment was greater in all provinces than at the close of February, 1924. In comparison with January considerable improvement was manifest in the manufacturing groups, conditions being largely affected by renewed activity in the garment trades of Quebec, though cigar makers, pulp and paper makers, tailors, metal polishers, glass, textile, and iron and steel workers also contributed to the gain. Printing tradesmen, woodworkers, and bakers reported very slight reductions. Practically all groups of the manufacturing industries registered declines as compared with February of last year. Less unemployment than in January was indicated among the miners of Nova Scotia but Alberta miners were slacker. A nominal change only was reported in the British Columbia mines. Asbestos miners in Quebec were fully engaged. Unemployment in the building trades as shown by reports received from 185 unions with 18,402 members declined slightly during February. Steam shovel and dredgemen, bricklayers, masons and plasterers and plumbers and steamfitters were a little slacker than in January but in the remaining trades gains were reported. In comparison with February of last year steam shovel and dredgemen; bricklayers, masons and plasterers, plumbers and steamfitters, tile layers, lathers and roofers and hodcarriers were better employed but less work was afforded bridge and structural iron workers, carpenters and joiners, electrical workers, granite and stonecutters and painters, decorators and paperhangers. There was a slight reduction reported in the transportation group as shown by the returns received from 659 unions with a membership of 60,118 persons. The situation for navigation workers was slightly more favourable but the increase was more than offset by the declines in the steam and electric railway groups. Transportation workers were not so fully employed as in February of last year, navigation workers, steam and street and electric railway employees all showing less activity. Hotel and restaurant and theatre and stage employees and stationary engineers and firemen were slacker than in January but barbers reported a slight change for the better. Retail shop clerks were a little busier. Lumber workers and loggers reported considerable unemployment. Fishermen were somewhat more active.

EMPLOYMENT OFFICE REPORTS

During the month of February, 1925, the offices of the Employment Service of Canada made 20,195 references to vacancies and effected a total of 18,987 placements, of which 11,252 were in regular employment and 7,735 in casual work, this in contrast with a total of 38,947 placements during February, 1924. Of the placements in regular employment 8,865 were of men and 2,387 of women workers. Applications for work were received from 31,537 workers, of which 23,773 were men and 7,764 were women, while during February of 1924 the number of applications was 49,915. Employers notified the Service of opportunities for 14,283 men and 5,957 women, a total of 20,240 vacancies, which compares with 41,016 opportunities for work during February, 1924. The decline from the volume of business transacted during the same month a year ago may be attributed very largely to the fact that during that season large numbers of workers were given temporary and casual work clearing railway tracks, city streets and highways, after the unusually heavy snow storms in Ontario and eastern Canada. A report in detail of the work of the offices for the month of February, 1925, will be found elsewhere in this issue.

PRODUCTION REPORT

The Dominion Bureau of Statistics reports that the production of pig iron in Canada in February, was 29,506 long tons, an increase of 4 per cent over the 28,302 tons made in January. The February output included 20,671 tons of basic pig iron, 4,432 tons of foundry iron, and 4,403 tons of malleable iron. Of the total production, 20,598 tons, or 70 per cent, was made for the further use of the reporting firms, and the balance of 8,908 tons was intended for sale. The cumulative production of pig iron for the two months ending February amounted to 57,808 tons, as compared with 123,990 tons reported for the first two months of 1924. Two blast furnaces were blown in during the month, so that five furnaces were in blast at the end of February. Active furnaces were located as follows: 2 at Sydney, Nova Scotia, 2 at Sault Ste. Marie, Ontario, and one at Hamilton, Ontario. The daily capacity of the active furnaces was 2,075 tons. The production of ferro-alloys, at 1,780 tons, marked a slight increase over the January output of 1,691 tons, and consisted mainly of the grade composed of about 80 per cent manganese; a small quantity of ferro-silicon also was produced.

The production of steel ingots and castings in Canada during February rose to 37,221

long tons, or 37 per cent over the 27,126 tons made in January. Basic open hearth steel ingots rose 9,437 tons to a total of 35,624 tons; steel castings advanced 68 per cent to 1,597 tons. For the two months ending February the cumulative production was 64,347 tons, including 61,811 tons steel ingots and 2,536 tons steel castings.

A report from the Department's correspondent at Cobalt shows that 17 cars containing 1,348,580 pounds of silver ore were shipped from the Cobalt camp during the month of March as compared with 8 cars of silver ore containing 618,043 pounds in the previous month. The Nipissing Mines shipped 242 bars containing 277,370 ounces of silver, and The Mining Corporation of Canada shipped 199 bars containing 198,167.89 ounces of silver making a total of 441 bars containing 475,537.89 ounces of silver shipped during the month of March as compared with 335 bars containing 363,784.79 ounces shipped in the previous month.

A report from the Department's correspondent at New Glasgow, Nova Scotia, gives the following figures showing the production of coal in Pictou County, Nova Scotia, for the month of February, 1925: Acadia Coal Company, Limited, Stellarton, Nova Scotia, 38,180 tons; Intercolonial Coal Mining Company, Limited, Westville, Nova Scotia, 8,601 tons; and the Greenwood Coal Company, Limited, Thorburn, Nova Scotia, 2,925 tons.

As complete figures for the coal production in Canada for February are not available, statistics for the previous month are given at the end of this section.

The report of the British Columbia Forestry Branch shows that 274,681,607 feet of timber, board measure, was scaled in the province during February, 1925. The total includes fir, 131,198,732 feet; cedar, 61,003,298 feet; spruce, 22,159,947 feet; hemlock, 36,377,022 feet; balsam, 5,631,674 feet; yellow pine, 3,494,984 feet; white pine, 5,474,128 feet; jack pine, 1,480,089 feet; larch, 7,386,777 feet; and miscellaneous 474,956 feet.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, according to a preliminary statement, amounted to \$16,486,042 during February, 1925, as compared with \$16,716,468 in January, and with \$17,784,581 in February, 1924.

The gross earnings of the Canadian Pacific Railway were given in a preliminary statement as \$11,786,711 for February, 1925, as compared with \$11,896,513 for January, and with \$13,083,123 for February, 1924. The gross earnings for the two months of 1925 were \$23,683,224, as compared with \$26,475,555 for the same period in 1924.

Coal Statistics for January.—The output of coal from Canadian mines during January dropped to a point about 3 per cent below the production for the preceding month, and about 3 per cent below the average for January in each of the past five years. The figures were 1,481,776 tons in January, as against 1,520,024 tons in December, while compared with the average for the month during the five preceding years, the decrease was 33,924 tons. Production by provinces in January, when compared with the five-year average for the month, showed increases in New Brunswick and Saskatchewan, and decreases in Nova Scotia, Alberta and British Columbia.

The number of men employed in the coal mines of Canada during January was 20,700, of whom 23,787 worked underground and 6,913 on the surface, as compared with a total of 30,959 in December, 1924, of whom 23,966 worked underground and 6,993 on the surface. Production per man was 48.3 tons for January, as against 48.6 tons per man for December; during January the production per man-day was 2.6 tons, this average being the same as in the previous month.

BUILDING PERMITS AND CONTRACTS AWARDED

According to a report prepared by the Dominion Bureau of Statistics, the value of building permits issued in February in 60 cities throughout Canada, was greater than in the previous month, and was also greater than in February, 1924. The figure for February, 1925, was \$5,781,642; for January, 1925, \$5,433,204; and for February, 1924, \$4,027,780.

According to the *MacLean Building Review* issued by MacLean Building Reports, Limited, the value of contracts awarded in Canada during March was \$13,392,900, as compared with \$11,047,600 in February and \$11,584,500 in March last year. Residential building accounted for 52.6 per cent of the March total amounting to \$7,051,800. Business building amounted to \$3,734,400 or 27.9 per cent; industrial building to \$437,500 or 3.3 per cent and public works and utilities to \$2,169,200 or 16.2 per cent. The activity was distributed among the provinces as follows: Ontario, 48.4 per cent; Quebec, 27.1 per cent; British Columbia, 16.9 per cent; Prairie Provinces, 6.7 per cent; and the Maritime Provinces, .9 per cent.

FOREIGN TRADE

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in February, 1925, the merchandise entered for consumption amounted to \$61,429,913 as against \$62,133,882 in February, 1924. The domestic

merchandise exported amounted to \$70,126.125 in February, 1925, as compared with \$75,347,012 in January and \$67,274,543 in February, 1924. Foreign merchandise exported amounted to \$1,038,302 in February, 1925, and \$1,057,234 in February, 1924.

The chief imports in February, 1925, were: fibres, textiles and textile products, \$14,838,136; iron and its products, \$10,751,114; non-metallic minerals and products, \$8,948,160; agricultural and vegetable products, mainly foods, \$7,868,945.

The chief exports in the same month were: in the groups of wood, wood products and paper, \$18,881,637; agricultural and vegetable products, mainly foods, \$18,879,206; and animals and animal products, \$11,701,768; non-ferrous metals and their products, \$8,388,333. During the eleven months ending February, 1925, exports of agricultural and vegetable products, mainly foods, were valued at \$374,079,885; wood, wood products and paper at \$227,426,500; animals and animal products at \$150,838,837; and non-ferrous metals and their products, \$79,469,128.

Strikes and Lockouts

The time loss due to industrial disputes was greater in March than in February, 1925, or March, 1924. There were in existence during the month 15 disputes, involving 11,729 employees and resulting in a time loss of 244,703 working days, as compared with 12 disputes in February, involving 3,026 workpeople, and resulting in a time loss of 26,334 working days. In March, 1924, there were recorded 13 disputes, involving 827 employees and resulting in a time loss of 11,087 working days. Seven new strikes and lockouts commenced during March, with a time loss of 266,018 working days. Four of the strikes and lockouts commencing prior to March, and two of the strikes and lockouts commencing during March terminated during the month. At the end of the month, therefore, there were nine strikes and lockouts on record affecting 11,563 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

Retail food prices were lower, due chiefly to seasonal declines. The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.74 for March as compared with \$10.93 for February; \$10.58 for March, 1924; \$10.79 for March, 1923; \$10.54 for March, 1922; \$13.23 for March, 1921; \$16.92 for June, 1920 (the peak); \$15.98 for March, 1920; \$12.66 for March,

1918; and \$7.68 for March, 1914. Eggs and butter showed substantial seasonal declines while there were slight decreases in the cost of beans and yellow sugar. Slight increases occurred in the average cost of bread, flour, veal, mutton, lard, cheese, rolled oats, rice, evaporated apples, prunes, granulated sugar, coffee, tea, and potatoes. Including the cost of fuel and rent with that of foods, the total budget averaged \$21 at the beginning of March as compared with \$21.19 for February; \$21 for March, 1924; \$21.42 for March, 1923; \$20.96 for March, 1922; \$23.87 for March, 1921; \$26.92 for July, 1920 (the peak); \$25.01 for March, 1920; \$20 for March, 1918; and \$14.35 for March, 1914. Fuel and rent were unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics declined substantially being 161.6 for March as compared with 164.8 for February; 154.1 for March, 1924; 155.9 for March, 1923; 153.6 for March, 1922; 186.0 for March, 1921; 256.7 for May, 1920 (the peak); 241.3 for March, 1920; and 200.3 for March, 1919. In the grouping according to chief component material four of the eight main groups were lower, two were higher and two were unchanged. Vegetables and their products were substantially lower due mainly to lower prices for grains and flour. Less important declines occurred in the following groups: fibres, textiles and textile products because of declines in cotton and wool; iron and its products due to lower prices for some lines of pig iron; and non-ferrous metals due to lower prices for most of the metals in this group. Animals and their products advanced slightly, increases in the prices of live stock, meats and butter having more than counterbalanced the declines in eggs, fish and hides. Wood and wood products also advanced slightly. Non-metallic minerals and their products and chemicals and allied products were unchanged.

The City Council of Edmonton, Alberta, has rejected a proposal for the amendment of the City Charter to permit stores in the municipality to remain open until 9 o'clock on Saturday evenings. Representatives of the Trades and Labour Council appeared before the City Council to oppose the proposal. The Vancouver City Council, by the casting vote of the mayor, rejected during March a proposal to amend the existing early closing by-law so as to allow longer shopping hours for the shoe and clothing stores on Saturday night. The by-law requires that a petition to reopen the early closing regulations shall bear the signatures of more than half of the dealers in the line of business affected.

COMBINES INVESTIGATION ACT, 1923

Report of Commissioner appointed to Investigate an Alleged Combine Among Coal Dealers at Winnipeg and other Places in Western Canada, 1924-1925

A REPORT made during February by Mr. David Campbell, K.C., of Winnipeg, was issued in March. Mr. Campbell was appointed in October, 1924, as a commissioner under the Combines Investigation Act, 1923, to investigate an alleged combine of retail and wholesale coal dealers and coal mine owners, resulting in their acquiring control of the purchase and sale of coal in the province of Manitoba and elsewhere, to the injury of the consumers.

An application had been presented to the Registrar under the Act for an investigation, accompanied by a formal complaint, signed and sworn to by six residents of Winnipeg, all more or less in touch with the retail coal business. One of the chief allegations was stated by one of the complainants as follows:—

"I believe there is a combination in existence among the members of Winnipeg Retail Coal Dealers' Association to maintain the retail prices of coal at the standards which now maintain among them, and in particular, to maintain the price of Drumheller Lump at approximately \$13 per ton. I also believe that one of the methods used by said members of making this combination effective is to cut off the supplies from and to put out of business any coal dealer who will not maintain the said standard of prices. In particular, I believe that the coal dealers who are in this combination are at present engaged in a movement to cut off my coal supplies and to put me out of business, and that the sole reason for this is my unwillingness to co-operate with them in maintaining their scale of charges and my persistence in selling my coal at prices substantially lower than theirs."

The Commissioner, after enumerating the various parties alleged to be included in a combine, allowed that a strong *prima facie* case had been made out by Mr. Hudson and others of the complainants. "Briefly," he says, "they allege that a combine exists among some or all of the above named corporations, firms, associations or individuals whereby the prices of domestic coals to the customers at Winnipeg are enhanced to the amount of from \$300,000 to \$500,000 per year in excess of what was a fair cost, and to this extent was an injury or detriment to the public. . . . The evidence of Mr. Hudson sets up many facts which pointed strongly to the existence of a combine and documentary evidence produced early in the proceedings apparently corroborated some of his statements and emphasized many of his contentions."

In summarizing the evidence at the inquiry, the commissioner refers to the refusal of Mr. Hudson, one of the complainants, to join the

Winnipeg Retail Coal Dealers' Association, or to be governed by its fixed prices.

"Mr. Hudson testified that in November or December, 1923, he was approached by Mr. Burns, the Secretary of the Retail Coal Dealers Association of Winnipeg, to become a member of the association and to be governed by its prices. This he stated occurred shortly after he began business for himself that season, and had been advertising coal at reduced prices. He states that he refused to be governed by others in the matter of prices and that Burns then told him the Association would see that his supply of coal was shut off. Mr. Burns denies having had such a conversation with anyone, and says that in all probability he did communicate with Hudson about that time with a view to securing his membership, as he was then busily engaged in building up the association.

"In all probability Mr. Burns said sufficient to raise in Mr. Hudson's predisposed mind the suggestion that if he failed to join the association and reduced his prices to the extent that he was then doing, an attempt would be made to put a stop to his securing a supply of coal.

"I am quite convinced that at no time could this association shut off Hudson's supply of coal, because any person who proposes to deal in coal and has money to buy it can do so."

The Commissioner proceeds to examine the allegations in detail, including an alleged determination on the part of certain of the "combine" to destroy the business of the complainant Hudson. He discusses the methods of the Retail Coal Dealers Association of Winnipeg, and concludes that while their methods might lead to abuse they did not appear to have reached a stage at which they would come within the purview of the Combines Investigation Act. He says:

"I am therefore of the opinion that the discussion and fixing of prices is one of the main purposes of this association, but as already indicated, until that is carried to the point that prices are unreasonable or unfair, no fault can be found in that direction. I have already expressed my view that the prices charged by the retail dealers, or fixed by the association cannot be said to be unreasonable or unfair having regard to all the circumstances. And realizing the efficacy of the Combines Investigation Act, and its protection being so easily accessible to rich and poor alike, one can rest quite content as to what may happen in the future."

Finally, the Commissioner refers to recent activities of the Association in confining the retail coal business to so-called "legitimate" dealers, that is, those who are equipped with sheds for housing coal and who are engaged permanently in the business:—

"Having regard to these abuses which have been a real menace to the coal trade and a loss to producers for many years, one can scarcely find fault with the efforts of the association or others to suppress such

activities. The small gain to those who happen to buy at the reduced price, is more than offset by the probable failure to obtain well prepared coal, and the absence of these dealers carrying their fair share of the burden of necessary reserve supplies together with the injury they inflict upon bona fide dealers with large investments.

"But let us suppose that the Western Canada Fuel Association achieves its aims in finally eliminating the so-called illegitimate dealer. We immediately find ourselves facing a new problem—What could be more conducive to the dealers, particularly in many towns

and villages in these provinces, getting together and raising the price of coal to suit their desires for profit, or deciding not to carry the burden of reserve stocks of coal? However, we need only consider the foregoing supposition for the purpose of testing the present activities of this association, viewed in the light of present conditions. Upon these grounds I have come to the conclusion that, in its activities in endeavouring to limit or prevent this unfair competition it has not operated to the detriment of or against the best interests of the public, and I feel the future can and will be amply safeguarded by this Act."

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1925

THE number of strikes and lockouts in

Canada in existence at some time or other during the month of March was fifteen, as compared with twelve in February. The time loss for the month was greater than in March, 1924, being 244,703 working days, as compared with 11,087 working days in March, 1924. The considerable time loss and number of employees in March, 1925, was chiefly due to a dispute of coal miners in Nova Scotia.

Date	Number of disputes	Number of employees involved	Time loss in working days
March, 1925.....	15	11,729	244,703
February, 1925.....	12	3,026	26,334
March, 1924.....	13	827	11,087

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees, and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all strikes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Eight disputes, involving 147 workpeople, were carried over from February. Four of the strikes and lockouts beginning prior to March, and two of the strikes and lockouts commencing during March, terminated during the month. At the end of March, therefore, there were on record nine strikes and lockouts: coal miners, Nova Scotia; cigarmakers at Montreal; cap makers at Toronto; boot factory employees at Montreal; fur workers at Toronto; shingle sawyers at New Westminster, British Columbia; moulders at Hamilton; Ontario; moulders at Owen Sound, Ontario, and moulders at Sarnia, Ontario. The record does not include minor disputes as described in the previous paragraph, nor does it include

any dispute in regard to which information has been received indicating that employment conditions are no longer affected, but which the union or organization concerned has not yet called off. Information is available as to three such disputes, namely, moulders at Galt, commencing August 2, 1922; moulders at Guelph, June 2, 1924, and street railway employees at St. John, N.B., June 29, 1921.

Information was received in the Department, too late for insertion in the March issue of the LABOUR GAZETTE, of a strike of moulders at Owen Sound, which commenced January 19, and remained unteminated at the end of March.

In the March issue of the LABOUR GAZETTE, information appeared as to a strike of coal miners at Edmonton in which it was stated that the dispute terminated in favour of the employer, the strikers returning to work on the employers terms. Information has been received that work was resumed under the conditions in force prior to the dispute, subject to further negotiations when mining conditions had been improved. In the meantime minor changes in conditions proposed by the strikers were made.

Of the disputes which commenced during March, two were against reduction in wages; one was for increased wages; one for increased wages and shorter hours; the fifth was for changes in working conditions; the sixth was over a question of union jurisdiction, and the seventh was owing to failure to agree on certain changes in wages rates and working conditions, and stoppage of credit at the company's stores. Of the strikes and lockouts which terminated during the month, four were in favour of employees; one was indefinite, and the sixth resulted in a compromise being effected.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement.

COAL MINERS, NOVA SCOTIA.—A dispute between the employees and management of four

coal companies in Nova Scotia resulted in a cessation of work on March 6, of some 11,463 coal miners at Glace Bay, Springhill, Sydney Mines, Stellarton and Thorburn. Of this number, many had been working only part time for several months prior to the dispute. Events leading up to this dispute were reported in a special article in the March issue of the *LABOUR GAZETTE*, page 267. Negotiations were carried on between the manager of the company and the district heads of the United Mine Workers of America, but were broken off when the company posted notices that credit at the company's stores would be stopped on March 2. On March 3, the executive officers of the union served the company with a notice in the form of an ultimatum, expiring at three o'clock in the afternoon of March 4, threatening to withdraw the maintenance men at collieries Nos. 2, 4 and 6, unless in the meantime the company would re-establish credit at the stores, and give immediate orders for resumption of work on the basis of a minimum of four days per week. On March 4, the company refused to grant these demands and the cessation of work followed. On March 19, a conference was held when the Premier of Nova Scotia made the following proposals to the executive of the mine workers:—

(1) That the men return to the pits at the 1924 wage rates; that the corporation agree to operate the collieries at the 1924 rates; and that men and operators sign an interim agreement embodying the rates and conditions of the 1924 scale, such agreement to run to January 15, 1926.

(2) That the Government set up a commission under the Nova Scotia Inquiries Act, such commission to submit its findings before the termination of the interim agreement proposed.

(3) That the findings of such commission are not to be binding on either party; but that the men and operators meet and negotiate, in the light of such findings, the basis of their future agreement.

(4) That some satisfactory understanding be arrived at with the company with the desire of having a better distribution of work at the collieries where so little work has been done of late.

(5) That all the company stores be reopened, if it has been decided to return to work.

The miners replied to these proposals, accepting some points and seeking more definite pronouncements upon others. The company refused to consider the proposals. A great deal of unemployment, with consequent dis-

tress, had existed prior to the dispute, and matters became so much worse toward the end of the month through the total cessation of work in the mining areas affected that appeals for aid were made both in Nova Scotia and elsewhere.

CIGARMAKERS, MONTREAL, QUE.—A strike of seven cigarmakers occurred on March 24, against a reduction in wages of from \$1 to \$2 per thousand cigars. This dispute remained unterminated at the end of March.

CAP MAKERS, TORONTO, ONT.—On March 3, eleven cap makers went on strike for changes in working conditions. The workers demanded an equal division of work during the slack season as some of the employees would otherwise have no work. This was objected to and the workers declared a strike. At the end of March this strike remained unsettled.

CLOTHING WORKERS, MONTREAL, QUE.—On December 2, 1924, seventy clothing workers went on strike because the company was alleged to have violated the agreement with the union by discharging several employees, and refusing to appear before a Board of Arbitration as provided for in the agreement. Information received in the department indicates employment conditions no longer affected, and the dispute is accordingly removed from the strike record.

CLOTHING WORKERS, MONTREAL, QUE.—During March information reached the Department indicating that employment conditions had ceased to be affected in the clothing workers' strike which commenced February 3, practically all the firms involved had granted the employees' demands, which were to establish a 44-hour week and to secure collective bargaining.

CLOTHING WORKERS, TORONTO, ONT.—The strike of clothing workers which commenced February 5, for recognition of the union, increased wages and improved working conditions, was practically brought to an end by 55 firms, out of the 60 involved at the commencement of the dispute, agreeing to the union's terms. At the end of March employment conditions were reported to be no longer affected by this dispute.

SHINGLE SAWYERS, NEW WESTMINSTER, B.C.—A strike of 14 shingle sawyers occurred March 3, when the sawyers were refused an increase in wages from 24 cents per hour to 26 cents per hour. This dispute remained unsettled at the end of March.

MOULDERS, OWEN SOUND, ONT.—Information was received in the Department during the latter part of March of a strike of 22 moulders at Owen Sound which commenced Janu-

ary 19, against a reduction in wages of five per cent. The prevailing rate had been \$6.10 per day. At the end of the month this strike remained unsettled.

MOULDERS, SARNIA, ONT.—Six moulders went on strike March 3, against a five per cent reduction in wages. Negotiations were carried on but at the end of March this strike was still in existence.

PLASTERERS, KINGSTON, ONT.—A strike involving eleven plasterers occurred at Kingston on March 3. It was alleged that plasterers from Toronto, engaged on construction work in Kingston, tried to persuade the Kingston workers to join the Toronto union while they were already members of a Kingston union and that this was refused by the men and a

strike resulted. Negotiations were carried on and it was decided both unions would work together, the Toronto union being paid Toronto union rates, and the Kingston union receiving Kingston rates. Work was resumed March 11.

PAINTERS, VANCOUVER, B.C.—On March 3, seventy painters went on strike for an increase in wages from 75 cents per hour to 90 cents per hour, and for a reduction in working hours from six days per week, eight hours per day, to five days per week, eight hours per day. Negotiations were carried on and a compromise effected by the painters receiving an increase to 81½ cents per hour, and the hours worked per week being reduced to 44. Work was resumed March 20.

STRIKES AND LOCKOUTS DURING MARCH, 1925

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
-----------------------------------	------------------------------	---------------------------	---------

(a) Strikes and lockouts commencing prior to March, 1925.

MANUFACTURING—			
<i>Clothing, including knitted goods:</i>			
Clothing workers, Montreal, Que.	8	Commenced December 2, against discharge of employees. Information received indicates employment conditions no longer affected.
Clothing workers, Montreal, Que.	50	600	Commenced February 3, to establish 44-hour week and collective bargaining. Information received indicates unemployment conditions no longer affected, the objects of the strike being attained.
Clothing workers, Toronto, Ont.	18	Commenced February 5, for recognition of the union, increased wages and improved working conditions. Information received indicates employment conditions no longer affected, the objects of the strike being attained.
<i>Boots and shoes (other than rubber and felt):</i>			
Boot factory employees, Montreal, Que.	7	182	Commenced February 26, for increased wages. Unterminated.
<i>Fur and leather products (other than boots and shoes):</i>			
Fur workers, Toronto, Ont...	16	416	Commenced February 20, for recognition of the union. Unterminated.
<i>Iron, steel and products:</i>			
Moulders, Hamilton, Ont.....	17	442	Commenced January 30, against a reduction in wages. Unterminated.
Moulders, Owen Sound, Ont...	22	176	Commenced January 19, against a reduction in wages. Unterminated.
SERVICE—			
<i>Personal—Domestic:</i>			
Bakers, Winnipeg, Man.....	9	144	Commenced February 21, against a reduction in wages. Settled by arbitration and work resumed March 19.

STRIKES AND LOCKOUTS DURING MARCH, 1925—*Continued*

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(b) Strikes and lockouts commencing during March, 1925.			
MINING, NON-FERROUS SMELTING AND QUARRYING— Coal miners, Nova Scotia.....	11,463	240,723	Commenced March 6; failure to agree on certain changes in agreement of wages rates and working conditions, and stoppage of credit at company's stores. Unterminated.
MANUFACTURING— Tobacco and liquors: Cigarmakers, Montreal, Que..	7	49	Commenced March 24, against a reduction in wages. Unterminated.
Clothing, including knitted goods: Capmakers, Toronto, Ont.....	11	275	Commenced March 3, for changes in working conditions. Unterminated.
Saw and planing mills: Shingle sawyers, New Westminster, B.C.....	14	336	Commenced March 3, for increased wages. Unterminated.
Iron, steel and products: Moulders, Sarnia, Ont.....	6	150	Commenced March 3, against a reduction in wages. Unterminated.
CONSTRUCTION— Buildings and structures: Plasterers, Kingston, Ont.....	11	88	Commenced March 3; question of union jurisdiction between members of different unions. Settled by negotiations and work resumed March 11.
Painters, Vancouver, B.C.....	70	1,120	Commenced March 2, for increased wages and shorter hours. Settled by negotiations and work resumed March 20.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING FEBRUARY

THE British *Ministry of Labour Gazette* for March contains the following table which analyses the disputes in progress in February, 1925, in Great Britain and Northern Ireland by groups of industries, and indicates the number of workpeople involved at the establishments concerned, and the approximate time lost during the month in all disputes in progress:—

Groups of industries	Number of disputes in progress in February			Number of workpeople involved in all disputes in progress in February	Aggregate duration in working days of all disputes in progress in February
	Started before Feb. 1	Started in February	Total		
Mining and quarrying.....	2	8	10	4,400	25,000
Metal, engineering and shipbuilding.....	4	9	13	1,300	8,000
Textile.....	3	5	8	800	12,000
Transport.....	1	4	5	1,400	5,000
Other.....	10	18	28	5,200	35,000
Total, February, 1925.....	20	44	64	13,100	85,000

Of the 44 disputes beginning in February, 16 directly involving 1,900 workpeople, arose out of demands for advances in wages; 10, directly involving 2,100 workpeople, on other wage questions; 8, directly involving 2,600 workpeople, on questions respecting the employment of particular classes or persons; 4, directly involving 1,200 workpeople, on details of working arrangements; and 6, directly involving 200 workpeople, on other questions. In addition about 4,500 workpeople were involved, either directly or indirectly, in 20 disputes which began before February and were still in progress at the beginning of that month.

Settlements were effected in the case of 24 new disputes, directly involving 6,500 workpeople, and 8 old disputes, directly involving 3,100 workpeople. Of these new and old disputes, 10, directly involving 3,600 workpeople, were settled in favour of the workpeople; 9, directly involving 1,700 workpeople, in favour of the employers; and 13, directly involving 4,300 workpeople, were compromised. In the case of 5 disputes, directly involving 400 workpeople, work was resumed pending negotiations.

BRITISH COLUMBIA HOURS OF WORK ACT, 1923

Revised Regulations Regarding 8-Hour Working Day

THE Board of Adjustment appointed under the British Columbia Hours of Work Act of 1923 has made the following regulations in lieu of all the regulations previously issued. The Board's former regulations, which are now rescinded, were reprinted in part in the last three issues of the LABOUR GAZETTE.

The new regulations are as follows:—

Having regard to the nature and conditions of the industrial undertakings hereinafter mentioned, the condition of employment and welfare of employees, the Board of Adjustment, after inquiry held pursuant to the "Hours of Work Act, 1923," and subject to the approval of the Lieutenant-Governor in Council, hereby exempts to the extent hereinafter stated from the provisions of the said Act the industrial undertakings and workers engaged therein, hereinafter mentioned, namely:—

1. All persons employed in sawmills, planing-mills and shingle-mills situate in that part of the province lying east of the Cascade Mountains shall be permitted to work one hour per day in excess of the limit prescribed by section 3 of the Act; but the total hours worked in any week shall not exceed fifty-four.

2. In the industrial undertakings referred to in the preceding regulation the limit of hours of work thereby fixed may be exceeded by one hour per day on five days of each week for the purpose of making a shorter work-day on one day of the week; but the total hours worked in any week shall not exceed fifty-four.

3. In sawmills, planing-mills, and shingle-mills situate in that part of the province lying east of the Cascade Mountains, and which are operated with a single shift of engineers, firemen, and oilers, the engineers, firemen, and oilers shall be permitted to work overtime to the extent of one and one-half hours per day to cover preparatory and complementary work in addition to the said fifty-four hours per week set forth in Regulation 1.

4. All persons employed in the lumber and shingle-manufacturing industries in booming operations, or in handling and transporting lumber for planing to fill urgent orders, or for shipping to fill urgent orders, shall be permitted to work such hours in excess of the limit of hours of work prescribed in section 3 of the Act as may from time to time be necessary.

5. All persons employed on night shifts in sawmills, planing-mills, and shingle-mills situate in that part of the province lying west of the Cascade Mountains shall be permitted to work a total of forty-eight hours each week in five nights, in lieu of forty-eight hours each week in six nights; but no night shift shall exceed ten hours: Provided that this regulation shall not apply in respect of industrial establishments carried on by any employer unless the actual working-hours of each person working for that employer, either by the day or by the piece, or otherwise, are limited to forty-eight hours in the week.

6. All persons employed in the logging industry in booming operations, or in transporting logs on a logging-railway by motor-trucks, horses, flumes, or river-driving or in transporting workmen or supplies for purposes of the industry, or in the operation and upkeep of donkey-engines, shall be exempt from the provisions of section 3 of the Act.

7. In all industrial undertakings which use steam as a motive power and which are operated with a single

shift of engineers, firemen, and oilers, the engineers, firemen, and oilers shall be permitted to work overtime to the extent of one and one-half hours per day to cover preparatory or complementary work in addition to the maximum hours of work prescribed by section 3 of the Act.

8. All persons employed as members of the shipping staff in industrial undertakings where shipping operations are of an intermittent nature shall be permitted to work during such hours in excess of the limit of hours of work prescribed in section 3 of the Act as may be necessary from time to time to enable urgent shipping orders to be promptly executed.

9. All persons employed in ship-repair plants, engineering-works, machine-shops, foundries, welding plants, sheet-metal works, belt-works, saw-works, and all like plants doing repair-work, when engaged on urgent work which must of necessity be done, in order that other industries shall not be seriously handicapped in their operations, are exempt from the provisions of section 3 of the Act.

10. All bakers employed in the baking industry shall be permitted to work ten hours per month in excess of forty-eight hours per week, and all bakery salesmen or deliverymen twenty-six hours per month in excess of forty-eight hours per week.

11. The fishing industry and all its attendant branches, including the canning or otherwise preserving of fish and the manufacture of by-products of fish, shall be exempt from the provisions of the Act.

12. All persons employed in cook and bunk houses in connection with any industrial undertaking shall be exempt from the provisions of the Act.

13. All persons employed in the manufacture of furniture, beds and mattresses, as operators of picking and garneting machines, shall be permitted to work four hours per week in excess of the limit of hours of work prescribed by section 3 of the Act during the following months: February, March, April, May, September, October.

14. Two machine-tenders and two back-tenders in the employ of the Sidney Roofing and Paper Company, Ltd., are exempt from the provisions of section 3 of this Act while engaged in the manufacture of paper, but only while so engaged.

15. All persons employed in the manufacture of wooden boxes or containers for shipment or distribution of fish, fruit or vegetables shall be permitted to work such hours in excess of the limit prescribed by section 3 of the Act, for the months of June, July, August, September, and October, 1925, as may from time to time be necessary to fill urgent orders.

16. The employer in every industrial undertaking in which additional hours are worked by any person employed therein in pursuance of section 6 of the Act, or in pursuance of any of these regulations which permits a limited extension of working-hours in excess of the limit of hours of work prescribed by section 3 of the Act, shall keep a record thereof in the following form, and shall on the first day of each month file with the Board of Adjustment a duplicate of the record for the last preceding month.

(Form omitted).

17. Every employer shall notify, by means of the posting of notices in conspicuous places in the works or other suitable place, where the same may readily be seen by all persons employed by him, the hours at which work begins and ends, and, where work is carried on by shifts, the hours at which each shift begins and ends, also such rest intervals accorded during the period of work as are reckoned as part of the

working-hours. These hours shall be so fixed that the duration of the work shall not exceed the limits prescribed by the "Hours of Work Act, 1923," or by the regulations made thereunder, and when so notified they shall not be changed except upon twenty-four hours' notice of such change posted as hereinbefore specified; and in all cases of partial or temporary exemption granted by the Board of Adjustment under section 10 of the Act a like notice of the change in working-hours

shall be posted, which notice shall also state the grounds on which the exemption was granted.

18. Where additional hours of work are allowed by any of these regulations to cover certain classes of workers, or special conditions set out in the regulation, such additional hours shall apply only in respect of the classes of workers and the special conditions so set out, and shall in no sense be regarded as part of the normal working-day.

JOINT INDUSTRIAL COUNCIL OF IMPERIAL OIL, LIMITED

MR. D. M. Allan, superintendent of the Imperial Oil Works, at Imperoyal, Nova Scotia, in the course of a recent address on "Brotherhood in Industry," described the industrial council which controls the affairs of this concern. "The industrial council," he said, "now embraces eighteen members, who serve one year. Nine are elected by the employees on the principle of representative government by secret ballot—every employee voting must have been in the company's service one year—and nine are selected by the superintendent from the salaried group of employees. The superintendent always acts as chairman. Only on a tie vote is the chairman privileged to vote. The secretary, who is not a member of the council is selected by them, and must be acceptable to both the elected and selected members. Every employee on our payroll through his delegate has a vote on all questions of hours of work, rates of wages, and in fact on any question affecting the employees' industrial or social life. As to employing labour: When additional help is required, an applicant must first satisfy the employment department and pass a medical examination before he is eligible for a position. If he is accepted, the employment department keeps in touch with him and from time to time his efficiency is noted, so that when an opportunity for promotion crops up, his efficiency and merit are fully considered. At the end of one year's service, he is insured at the company's expense as long as he remains in our employ."

Among other features organized by the same company for the benefit of its employees are the Co-operative Investment Trust Fund, the Sickness and Accident Benefits Fund and the Superannuation Fund. The trust fund was established in 1920, its purpose being the creation within the organization of a body of shareholders embracing all of those who contribute in any degree to the conduct and operation of the business; the encouragement of thrift; and the extension of the actual condition of partnership within the industry which it has always been the endeavour of the directors to promote. Every employee

who has been employed by the company one year is eligible to become a subscriber in this fund.

Under the Sickness and Accident Benefits plan, which is available for employees after one year's service, when an employee is taken sick and is unable to work for more than seven days, he is entered on the Sickness Benefits Payroll and gets 50 per cent of his wages for a number of weeks, according to the length of his service with the company, that is: an employee who has been with the company for one year and becomes sick can draw sickness benefits for six weeks and for each additional year's service he draws five weeks' more Sick Benefits; that is, a man employed one year is entitled to six weeks' Sick Benefits; 2 years, 11 weeks' Sick Benefits; 3 years, 16 weeks' Sick Benefits, etc. Regarding injuries to employees, the same rule applies as in the case of sickness, and in both cases the services of the works doctor is at the disposal of the employees, free of charges.

The Superannuation Fund provides annuities for employees who have had ten or more years' service with the company. This is based on physical condition or age. The maximum amount is 2 per cent per year of service and is calculated on the average salary for the ten years preceding retirement.

The City Council of Owen Sound, Ontario, in order to provide more work for the unemployed, recently reduced the working day of city employees from 9, and in some cases 10 hours, to 8 hours, the wages remaining as before, ranging from a maximum of 39 to 25 cents per hour. It was expected that the change of hours would enable the city to employ more men at the same cost.

The Premier of Alberta stated in the provincial legislature on March 26 that a second session would be called later in the present year to deal with the railway situation in the northern section of the province. A bill is to be introduced to establish an assessment appeal commission to consider appeals from municipalities.

WORKMEN'S COMPENSATION IN ONTARIO

General Review of the Board's Work during 1924 and in the Past Ten Years.

THE report of the Workmen's Compensation Board of Ontario for the year 1924, the tenth year of the operation of the Act, contains the following general review of the work accomplished during the past year and since the Act took effect.

Benefits.—The total amount of benefits awarded under the Act during the year 1924 was \$6,122,820.34.

There has been little change in the amount during the past four years. The total in 1923 was \$6,173,861.74, in 1922, \$5,692,896.61, and in 1921, \$6,189,263.49.

Of the total \$6,122,820.34 benefits in 1924, \$4,888,244.37 was in Schedule 1 industries, which are under the collective liability system, and \$1,234,575.97 was in Schedule 2 (including Crown cases), which are under the individual liability system.

Of the \$4,888,244.37 benefits in Schedule 1, \$4,052,287.77 was compensation and \$835,956.60 medical aid, the medical aid being 17 per cent of the total. The amount of medical aid in 1923, 1922, and 1921, respectively, was \$788,905.90, \$692,819.94, and \$662,793.89. The Schedule 2 figures do not include medical aid, it being provided and paid for directly by the employer.

Accidents.—There were 58,675 accidents in all reported to the board in 1924, as compared with 61,109 in 1923, 50,411 in 1922, and 45,191 in 1921. The number of fatal cases was 402.

Less than one per cent of all cases under the Act result in death, nearly 5 per cent have some degree of permanent disability, about 54 per cent cause temporary disability of seven days or more, and the remaining 40 per cent involve medical aid only.

More small accidents are being reported now than formerly. Cases for medical aid only show a large increase and temporary disability cases a slight increase, while permanent disability and death cases have slightly decreased. The workmen's average time loss for each accident has not materially altered.

Nearly half the benefits paid are for cases with some permanent disability, considerably more than one quarter for temporary disability cases, and considerably less than one-quarter for death cases. The cost of permanent disability cases ranges from \$150 or less for loss of part of a finger to a maximum of \$25,000 for total disability; death cases where there are dependants cost an average of about

\$5,000 and a maximum of \$13,000; temporary disability accidents average about \$70, the majority of them causing no more than a few weeks' loss of time.

Less than one-quarter of all the accidents now are caused by machinery. A far greater number result from handling, striking against, or being struck by, objects or material. The great reduction in machinery accidents may be attributed to more systematic attention by employers to the work of accident prevention.

Workmen.—About 87 per cent of the injured workmen are British subjects, 57 per cent are married, and less than 2 per cent are females. Their average age is 34.

Their average wage in 1923 was \$23.32, as compared with \$22.15 in 1922, \$25 in 1921, \$25.50 in 1920, and \$13.25 in 1915.

Condition of Industries.—The total pay-roll during 1924 for the industries in Schedule 1 is estimated at \$387,085,000, as compared with \$434,163,000 in 1923, \$391,888,000 in 1922, \$355,259,000 in 1921, and \$464,589,000 in 1920, showing a much smaller decrease than might have been expected. In 1915 the total pay-roll was \$147,603,000.

The number of employers in Schedule 1 is 25,155. The industries with the largest pay-roll are building, lumbering, and mining, and those having the largest accident cost are lumbering, mining, and building, in the order named. The parts of the province having the greatest number of accidents are the county of York, District of Temiskaming, and the counties of Wentworth, Welland, and Essex, in the order named. No figures are available for the amount of pay-roll in Schedule 2 but it is estimated at about one-third of Schedule 1, making the total pay-roll of all industries under the Act \$516,113,000. The chief employments not covered are mercantile business, farming, and domestic service.

Assessments.—The assessments paid by employers in Schedule 1 vary according to the accident cost in each class of industry, being for instance \$5 per \$100 of pay-roll for quarrying (which has had a very bad accident experience), and five cents per \$100 of pay-roll in clothing manufacturing, which has a very light accident hazard. The average over all for 1924 was \$1.17, and the average since the commencement of the Act, \$1.10.

The administration expenses of the Act are about four per cent of the total benefits.

Work Handled.—Each day during 1924 an average of 195 new accidents were dealt with, \$20,400 was awarded in compensation and medical aid, and 614 cheques were issued; assessments averaged 100 per day; about 4,000 pieces of mail were received and despatched each day, and the average number of office callers was 80.

The average time elapsing between receipt of the necessary reports and forwarding of the first compensation cheque was less than two days.

Ten Years' Operation of Act

The close of the first ten years' operation of the present Act invites retrospection. The Act was passed in 1914 under the premiership of the late Sir James Whitney, coming into effect January 1, 1915, having been framed by the late Chief Justice Sir William Meredith after prolonged investigation and consideration, with the help of representatives of both workmen and employers. It was the first Act of its kind in Canada, and a radical departure from the old law. It was received by workmen in general with favour, by employers with much misgiving and some antagonism.

Dealing with questions between capital and labour and directly touching the pockets of an immense number of people, fixing what some are to receive and others are to pay, as well as the usual difficulties and dangers that beset all public administration, made the handling of the work a matter of some anxiety with the framer and great doubt with some of those concerned; and the Act has had to pass through the unsettled and trying times of the war and the war's aftermath.

Over 440,000 accidents have been dealt with, nearly \$46,000,000 awarded to injured workmen and their dependants in compensation and medical aid, and about 225,000 assessments levied from employers.

Both workmen and employers are in general so far satisfied with the working of the Act that they have protested against the making of any material change in the administration.

There can be no doubt the law has proved exceedingly beneficial to both parties. Workmen appreciate the wide protection and liberal scale of compensation which they receive, and the speediness and certainty of payment which they enjoy under the simple form of procedure and the collective system of liability which prevail; employers appreciate their freedom from individual liability, which

might cripple or ruin any but the largest, and the saving which is entailed by getting insurance at cost; both parties appreciate the immunity from the annoyances and the enormous expense of litigation.

Though compensation is a matter of right and not a matter of charity, the Act brings relief and assistance to many thousands of injured workmen and widows and children throughout the province who would otherwise be in need. Nearly 800,000 compensation and over 350,000 medical aid cheques have been issued during the ten years, the accidents averaging nearly one accident for each of the 450,000 workmen covered by the Act.

With the larger allowances to widows and children, the increased percentage and the high maximum and minimum, and full medical aid, the Ontario Act is probably now the most liberal of any upon the continent. But it is very far from being the most burdensome upon the employer. Comparison of the Ontario rate book with the rate manuals of neighboring states will show that our rates of assessment are exceedingly low for the amount of benefits paid, the expenses being very light and there being no cost of procuring business, or profit or other loading, as in ordinary insurance. The collection in Pennsylvania of over \$80,000,000 premiums to pay \$35,000,000 benefits, and in Britain of over £8,000,000 premiums to pay about £3,000,000 benefits, while Ontario collects only \$100 to pay \$96 benefits, are illustrations of the reason for our low rates. Perhaps nowhere else does so nearly the whole of what the employers pay actually reach the hands of the injured workmen or their dependants.

With its immense advantages it may be asked why our system of administration is not more widespread. It is because of doubt as to keeping things on the merits and avoiding indirect influences and exploitation. There have been many examples of late of the falling down of public administration and many warnings of the necessity of conscientiousness at all cost in the performance of public duty; and the need is greater in the decision of cases than in the ordinary work of administration. New York is now trying to get rid of political constraint in the decisions of its Commission; Quebec is afraid to adopt our form of administration for fear of weaknesses and similar abuses. If such an administration is to be a success there must not only be efficiency but also the strictest integrity and neither fear nor favour in the handling of the work.

Accident Report of the Ontario Factory Inspector

THE report of the Ontario Factory Inspector for the year ended October 31, 1924, shows a total of 4,787 accidents of which 51 were fatal. The highest number of accidents in any one group was in the metal trades, in which 1,724 were reported; the pulp and paper trades came next with 1,388 accidents; the transportation group had 448; the textile industry 234; the manufacture of conveyances group, 181; the rubber and rubber goods industry 177; the food manufacturing industries, 157; the chemical industries, 107; the leather goods industry, 90; the lumber industry, 85; the clay, glass and stone industries, 68; the woodworking industry, 39; the wearing apparel industries, 4; laundries, 2, and unclassified trades, 83.

Of the total injuries reported, 2,684 were injuries to the upper extremities of the body, including 532 injuries to the head and face (of which 325 were eye injuries); 1,021 were injuries to the fingers, 400 to the hand, 281 to the thumb, 182 to the arm, 116 to the wrist, 43 to the shoulder, 34 to the elbow and 75 to other parts; 485 were injuries to the trunk of the body, including 189 stomach injuries. There were 1,134 injuries to the lower

extremities, including 323 injuries to toes, 331 to feet, 201 to legs, 141 to knees and 138 to ankles.

Machinery and its connections were responsible for 1,385 injuries, these being classified as due to the following parts: Rolls, 47; gears, cogs, sprockets, 33; belts, pulleys, shafting, 81; saws, 83; planers, 14; drills, 26; milling machinery, 8; shears, 21; emery wheel, 66; press, 66; punch, 14; dies, 12; barker, 32; calender, 8; cutter knives, 13; conveyors, 9; hammers, 22; jointers, 7; stitcher, 7; loom, 2; centrifugal machinery, 1; paper machinery, 28; spinning machinery, 7; winders, 16; grinding wheels, 31; lathes, 35; machinery connections, 25; wiredrawing, etc., 12; trucking, 101; other machinery, 191; spoolers, 1; miscellaneous causes, 370.

There were 825 injuries due to falling substances, 506 to falls of persons, 470 to being jammed between articles, 353 to sprains and strains, 293 to burns and scalds, 276 to hand tools, 218 to infected wounds, 167 to flying missiles, 100 to foreign substances in the eyes; 79 to hooks, chains and cables; 45 to engines and cars; 33 to elevators, 15 to cranes and derricks, 14 to electricity, and 8 to explosions.

MINING ACCIDENTS IN ONTARIO IN 1924

THE number of accidents reported to the Ontario Department of Mines up to January 15, 1925, as occurring during the year 1924, was 2,167. Thirty-seven of these accidents resulted in the death of 40 men, this being the highest fatality record since 1916 when 51 men were killed.

Fatalities.—The number of men killed per 1,000 men employed at the mines for the year 1924 was 2.30. The number of persons employed in 1924 was 12,500 as against 12,000 in 1923, 11,000 in 1922, 9,436 in 1921, 11,486 in 1920, 12,926 in 1919, 15,226 in 1918, and 17,791 in 1917 (the year of greatest employment in the period 1901 to 1924). The ratio of fatalities per 1,000 employees during these years was 3.20 in 1924; 2.50 in 1923; 2.72 in 1922; 2.54 in 1921; 2.61 in 1920; 3.00 in 1919; 2.10 in 1918; and 2.02 in 1917.

Of the 40 fatalities in 1924, 23 occurred underground and one at the surface, two occurred in the metallurgical works and 14 in the quarries, clay and sand pits. (In 1923 two men in the latter group were killed). Falls of ground were responsible for 25 per cent of the fatalities, shaft accidents were responsible for 29.16 per cent; explosives for 16.66 per

cent; miscellaneous underground causes for 25 per cent and surface accidents for 4.16 per cent. Twenty-seven of the fatalities occurred among English-speaking people while 13 occurred among men of foreign nationalities.

The greatest number of fatalities occurred to men between the ages of 36 and 40, there being 9 deaths in this group; 3 deaths occurred among workmen between the ages of 17 and 20, 6 to workmen between 21 and 25; 7 to workmen between 26 and 30; 5 to workmen between 31 and 35; 4 to workmen between 41 and 45; one to a workman between 51 and 55; 3 to workmen between 56 and 60; 1 to a workman between 61 and 65, and 1 to a workman between 66 and 70.

Non-fatal accidents.—Among the non-fatal accidents, 1,135 occurred underground and 462 at the surface of the mines, 315 occurred at the metallurgical works; 172 in the quarries, and 46 in the clay, sand and gravel pits. The principal cause of accident in the mines is given as "rock or ore while working at face or chute," there being 221 due to this cause. Trammings was responsible for 181 accidents, fall of persons for 164, fall of rock

or ore from face; wall or back for 142; falling objects for 126; flying objects, sledging, etc. for 104, hand tools for 91, nails or splinters for 89, strain while lifting for 82, drilling machines for 80, being crushed between two objects for 59, machinery for 44, run of ore from chute or pocket for 43, cages, skips or buckets for 41, falling down shaft, winze, raise, or stope for 27, running into or against objects for 22, burns for 20, explosives for 20, poisoning from cyanide, mercury, etc. for 11, electricity for 6, and explosion of carbide for 2.

In the metallurgical works falling objects and being burned by slag, matte or scrap were each responsible for 60 accidents, fall of persons for 35, being crushed between objects for 30, hand tools for 22, cranes, ladles and hooks for 22, flying objects for 20, transportation for 17, nails or splinters for 9, machinery for 9, strain while lifting for 9, acid, gas and steam for 8, burns for 7, being poisoned by mercury, nickel, etc. for 5, electricity for 1, and unclassified 1. In the quarries 42 of the non-fatal accidents occurred through the handling of material, falls of persons caused 17, sledging, flying objects etc., 17; machinery, 14; transportation, 13; hand tools, 13; falling objects, 13; being crushed between objects, 10; falls of rock, 8; strain while lifting, 6; nails or splinters, 6; explosions, 5; and electricity, 1. In the clay, sand

and gravel pits 11 accidents occurred in the transportation of materials, 6 were caused by strain while lifting and 5 were due to falls of persons, hand tools were responsible for 4, machinery for 4, falling objects for 3, being crushed between objects for 3, and falling material for 3, handling material for 2, flying objects for 1, nails or splinters for 1, electricity for 1.

Of the thirty-two men injured in accidents from the use of explosives, nine were English-speaking and twenty-three were men of foreign extraction. An analysis of these twenty-three accidents showed that eighteen were due to poor judgment or carelessness on the part of the employees and could have been avoided. Of the accidents in which the employee was presumably at fault either through ignorance, stupidity or carelessness, fourteen were caused by foreigners and four by English-speaking employees.

Of the 2,130 non-fatal accidents, the records of the Department show that infection followed in 220 cases. Tincture of iodine of five per cent strength is recommended where the skin is broken, the surface to be painted with the iodine only once before applying a dressing.

There were two prosecutions under the Mines Act during the year.

FACTORY INSPECTION IN NOVA SCOTIA IN 1924

THE seventeenth annual report of the Factories Inspector under the Nova Scotia Factories Act covers the twelve month period ending September 30, 1924. A large part of the report relates to industrial accidents, their causes and prevention, but considerable data with regard to accidents are reserved for the report of the Workmen's Compensation Board. In describing the powers and duties of the Factory Inspector the report quotes section 24 of the Factories Act, which requires that "in case of fire or accident in any factory occasioning any bodily injury to any person employed therein, whereby he is prevented from working for six days next after the fire or accident, a notice shall be sent to the inspector in writing by the employer forthwith after the expiration of the said six days, and if such notice is not so sent the employer shall be liable to a penalty not exceeding thirty dollars." The Act gives the factory inspector the right to enter any industrial establishment, and though his first and principal care is the welfare of the employees

he can also be of considerable service to the employer. Discussions with the employer, the report says, are not confined altogether to matters coming under the Act, but also cover the wider field of social activities in which many employers are engaging for the welfare and comfort of their employees. Very commendable work, it is stated, has been done by employers for their employees. Much of this work is outside the scope of the Act, but it is believed that factory laws and factory inspection have been important factors in turning the employers' thoughts in the direction of welfare work generally. While the employer's experience, however, is generally circumscribed by his surroundings, that of the inspector is province-wide, and in addition he has access to literature from authoritative sources, much of which comes from industrial establishments elsewhere in connection with their safety, sanitation and welfare work. The work of factory inspection, it is suggested, might be made to function in the same manner as the agricultural, public health and other services of the province, if

those interested in industries would co-operate in the same spirit.

With regard to sanitation, the report states that both employers and employees are realizing the importance of good working conditions, and that the employees are prompt in making suggestions. Exceptional cases of dust or gases caused by some manufacturing process have been observed by some workers, usually through the illness of one of their number. These cases, being out of the ordinary, are not covered by the admitted standards, but useful information is sometimes obtained by correspondence with the makers of the machinery used in the process, or with inspection departments in other provinces or states.

Some of the problems with which the factory inspector is called upon to deal are described in the report. There is the problem of the workers in small establishments who feel that their workshops should be equipped with exhaust systems and service facilities similar to those in the large plants. In the small shops, however, the workers are not as a rule constantly employed for the whole working day at the unhealthful part of the industry, but for a part of the time are engaged at other manufacturing processes, while in the larger plants there is sufficient work to keep some of the employees constantly engaged during the working hours at the same process. Most of the standard regulations deal with the ventilation problem by providing that it shall not be obligatory on the employer to install mechanical means to remove dangerous gases unless the worker is exposed to the dangerous occupation for more than a certain number of hours each day. The report states that some employers have still to be reminded that their workrooms would be the better if the walls, floors and windows were kept cleaner, if the toilets were clean and in good repair and if the workrooms were well ventilated.

The number of accidents in the factories of the province for the year was 1,308, of which 12 were fatal. The record for 1923 was 1,422, including 9 fatalities. There was therefore a reduction of 114 in the number of accidents in 1924, but an increase of 3 in the number of fatalities. The decrease of accidents was general in almost all the industries except the sawmills, where unusual activity prevailed during the year. The accidents in the sawmills numbered 260 in 1924, of which 7 were fatal, as compared with a total in the

previous year of 214, of which 2 were fatal. In the other woodworking industries there were 127 accidents, none of which were fatal; in the metal trades (except large steel works and the steel-car-building plants) there were 118 accidents, of which one was fatal; in the car building industry there were 67 accidents; in the steel works 432, with 2 fatalities; in the textile mills 25 accidents, with 1 fatality; in the confectionery, food and bottling works there were 45 accidents; and in the miscellaneous industries 74, including 1 fatality. The fatalities were due in most cases to new and unexpected causes, and some of them resulted from injuries which at the time of happening did not appear serious. Two owners of small sawmills were among the number killed. Of the seven sawmill fatalities, three were caused by pulleys bursting, two when pulleys were being turned, and one when an unused pulley on the countershaft of a planer burst; one when a workman fell when carrying a switch tie, and it fell on him; one was caused by a shaft on which a workman's clothes caught; and one by a workman's clothing being caught by the projecting bolts of a small pulley on a saw arbor. A night watchman was scalded to death when the blow-down connection of a boiler broke. The two fatalities in the steel mills were caused by falls, one from a telephone pole after the man had received an electric shock, and the other from the side of a building where steam and water pipes were located. In a knitting mill an old man fell against a box and injured his ribs and death was caused by pneumonia which developed from the injury. A man working in an excelsior factory died as the result of a fractured skull, and a workman in a dry dock was hit and killed by a plank which fell out of a sling load.

On the subject of accident prevention the report states:—

Accident statistics prove conclusively that approximately 75 per cent of the industrial accidents are beyond the sphere of guarding or fencing of machinery and equipment but they are not beyond the scope of accident prevention activities. Plant safety organizations were first established to deal with this class of accidents; and though they must necessarily give considerable attention to the matter of devising mechanical guards and fencing of equipment and dangerous places, they have obtained the most surprising results in reducing accidents which were at one time considered the unpreventable hazards of the industry. These safety organizations develop a safety spirit which make men careful and cautious, makes them think along safety lines, makes them restrain the hasty impulse, makes them thoughtful and considerate of their fellow workmen and makes safety a dominant characteristic of their lives.

LABOUR DEPARTMENTS AND BUREAUS IN CANADA

Outline of the Functions of the Federal and Provincial Organizations

DEPARTMENTS or Bureaus of Labour having charge of the welfare and interests of labour within their several jurisdictions, have been established in Canada by the Dominion Parliament and by the Provincial Legislatures of Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia.

In New Brunswick an act was passed in 1904 (chapter 17) providing for the establishment of a Bureau of Labour. This act, however, never became effective; its purposes would have been "to collect, assort and systematize and publish information and statistics relating to employment, wages and hours of labour throughout the Province, co-operation, strikes, or other labour difficulties, trades unions, labour organizations, the relations between labour and capital, and other subjects of interest to working men and working women, with such information relating to the commercial, industrial and sanitary condition of working men and working women, and the permanent prosperity of the industries of the province as the bureau may be able to gather." The administration of the Factories Act of New Brunswick is now in charge of the Provincial Workmen's Compensation Board, to whom the chief factory inspector presents his reports.

An outline of the various acts which establish labour departments and bureaus is given in the following paragraphs:

The Department of Labour of Canada

The Department of Labour of Canada was established by act of Parliament under authority of the Conciliation Act of 1900. The section of the act relating to the department was as follows:—

With a view to the dissemination of accurate statistical and other information relating to the conditions of labour, the Minister shall establish and have charge of a Department of Labour, which shall collect, digest, and publish in suitable form statistical and other information relating to the conditions of labour, shall institute and conduct inquiries into important industrial questions upon which adequate information may not at present be available, and issue at least once in every month a publication to be known as the *LABOUR GAZETTE*, which shall contain information regarding conditions of the labour market and kindred subjects, and shall be distributed or procurable in accordance with terms and conditions in that behalf prescribed by the Minister.

The Conciliation Act was administered by the Postmaster General who remained at the head of the new department until 1909. In that year Parliament passed the Labour Department Act, placing the department under

a Minister of Labour. The Minister of Labour was charged with the administration of the Conciliation and Labour Act and the Industrial Disputes Investigation Act, 1907, with such other duties as might be assigned to him by the Governor in Council. The acts placed under the administration of the department indicate to some extent the scope of its work when first organized, but the administration of the Fair Wages resolution has been one of the most important duties discharged since its early years.

The Prime Minister, the Right Hon. Sir Wilfrid Laurier, in moving the second reading of the Labour Department Act of 1909, said: "Some years ago the Parliament of Canada thought it advisable to organize a Department of Labour. It was in the nature of an experiment, and when the proposal was submitted to the House, some did not suppose that it would be conducive to much real good. But whoever at that time entertained this idea has since revised his judgment. The experiment has proven eminently successful, and were the same legislation to be introduced to-day I doubt if it would meet with any opposition. It is sufficient for us to bear in mind what has been done by the Department of Labour since its organization to enable us to agree that its creation has been more than justified by the results, because it has been successful not only in alleviating the condition of labour itself but in making the relations between the wage-earners and the wage-payers more satisfactory than they ever were before. In our judgment the experiment of nine years ago should now be carried out to its full fruition by the establishment of a Department of Labour presided over by a responsible minister of the Crown. I should say that this has been asked for by the labour organizations of the country."

The Prime Minister quoted resolutions passed by the Trades and Labour Congress of Canada, one of which, passed at the annual convention in 1907, read as follows:—

"That the Government be urged to separate the Department of Labour from the Post Office Department. This has become necessary, in the opinion of this Congress, owing to the great increase of business in the Department of Labour, and, further, a Minister of Labour, acting solely in that capacity would be in a better position to give greater attention to the demands of the workmen."

The work of the Department of Labour of Canada now includes the following duties:

The administration of the Industrial Disputes Investigation Act, 1907, which provides for the establishment of Boards of Conciliation and Investigation in cases of disputes affecting mines and public utilities.

The maintenance of a staff of officers at various points whose services are utilized in the adjustment of labour disputes.

The administration of Fair Wages policy of the Government of Canada which provides for the observance of the current wages rates and hours of the district on Government contracts and on railway construction towards which financial aid has been voted by Parliament.

The administration of the Employment Offices' Co-ordination Act under which, in co-operation with various provincial governments, free public employment offices are maintained in 66 centres; statistical information relative to employment conditions is also collected and published.

The administration of the Technical Education Act which provides for grants to the provinces for the purpose of promoting technical education; the collection and publication of information in the form of bulletins and otherwise.

The administration of the Government Annuities Act, 1908, whereby provision may be made for old age by the purchase of annuities by individuals, or associations on behalf of their members, or by employers on behalf of their employees.

The administration of the Combines Investigation Act, 1923, which provides means for investigation of alleged combines.

The collection, compilation and publication of statistics of wages hours, prices, cost of living, strikes and lockouts, industrial accidents and industrial agreements; also of labour organization and organization in industry, commerce and the professions; the conduct of investigational and research work bearing on industrial relations and labour conditions; the publication of bulletins of information on these subjects.

The monthly publication of the LABOUR GAZETTE containing a review of the industrial situation throughout Canada, a record of proceedings under the Industrial Disputes Investigation Act, statistics of wages and hours, wholesale and retail prices in Canada and other countries, strikes and lockouts, industrial accidents, summaries of laws and legal decisions affecting labour and other information on current matters of industrial and labour interest.

The compilation and publication of reports containing the texts of the labour laws of

the Dominion Parliament and of the Provincial Legislatures.

The maintenance of a library of publications on labour and economic subjects.

The collection and transmission of information required by the International Labour Conference and Office; correspondence with Federal and Provincial Government departments and with organizations of employers and employees relative thereto; the representation of Canada at the International Labour Conference and on the Governing Body of the International Labour Office.

Quebec Department of Public Works and Labour

The Department of Public Works and Labour for the province of Quebec was established under an Act of 1905, being articles 2361 to 2369 of the Revised Statutes of 1909, but a Department of Public Works had been in existence for many years before provision was made for a labour division. Under the Act of 1905, the Minister of Public Works and Labour, in addition to his functions in connection with the management and control of public works, performs the following duties in regard to labour: he institutes and controls inquiries into important industrial questions and those relating to manufacturers, collects useful facts and statistics relating thereto and transmits the same to the Quebec Bureau of Statistics; and has supervision of and control over all proceedings under the Quebec Trade Disputes Act. An amendment of 1919 enabled the Lieutenant-Governor in Council to appoint a deputy minister of labour, who should have control of such matters as should be assigned to him, subject to the direction of the minister. Among these duties is that of inspecting industrial establishments from the standpoint of the health and safety of the workers. In 1924 a staff of 10 male and 3 female inspectors was employed in this work. The department also takes charge in regard to fair wages on government contracts, superintends licensed registry offices for domestic servants, administers the Boiler Inspection Act, the act respecting the prevention of fires, and the inspection of foundries. An important duty of the Department is in connection with the issues of educational certificates to children under 16 years of age, such certificates being required under amendments of 1919 to the Industrial Establishments Act before these children may be employed for wages.

Ontario Department of Labour

A Bureau of Industries was established in Ontario in 1882 under the Provincial Depart-

ment of Agriculture. This Bureau published statistics on matters relating to industries in the province. One of its main functions, then as now, was in connection with factory inspections. In 1900 a Bureau of Labour was created as a branch of the Department of Public Works. The objects of the Bureau were set forth in the Bureau of Labour Act as follows:—

4. It shall be the duty of the Bureau to collect, assort, systematize and publish information and statistics relating to employment, wages and hours of labour, co-operation, strikes, lockouts, or other labour difficulties, trades unions, labour organizations, the relations between labour and capital, and other subjects of interest to workmen throughout Ontario, with such information relating to the commercial, industrial and sanitary condition of workmen, and the permanent prosperity of the industries of Ontario, as the Bureau may be able to gather.

A further change was made in 1916 when the Trades and Labour Branch Act was enacted, placing the Branch in the charge of a superintendent with the rank of a deputy head of a department. The new branch was attached to the Department of Public Works by an order in council. Its establishment has been recommended by a Provincial Commission on Unemployment, and one of its duties was in connection with the organizing of employment offices. The Act defined the duties of the branch as follows:—

(a) collect such statistical and other information respecting trades and industries in Ontario as may be deemed necessary or expedient from time to time;

(b) ascertain the localities in which mechanics, artisans or workmen in any particular trade or industry are required and wherever practicable assist in supplying the demand for such work or labour.

(c) ascertain and report upon sanitary and other conditions relating to the health, comfort and well-being of the industrial classes;

(d) establish and maintain in the various centres of population throughout Ontario employment bureaus and similar agencies for obtaining suitable employment for workmen; and subject to The Employment Agencies Act, 1917, to regulate all voluntary, private or municipal employment bureaux. Amended 1917, c. 15, s. 2.

(e) ascertain and report upon the rates of wages paid to employees in the various trades and industries carried on in Ontario;

(f) enquire and report as to the establishment of new industries in Ontario, in any case where by reason of the production of raw material for such industry in Ontario, or the immigration of persons skilled in the particular industry or other circumstances it appears that such industry can profitably be carried on;

(g) enquire into, consider and report upon the operation of laws in force in other parts of the Empire and in foreign countries, having for their objects the protection, technical training and welfare of the industrial classes, and make such recommendations and suggestions thereon as may be deemed advisable;

(h) consider and report upon any petition for, or suggestion of a change in the law of Ontario relating to labour and wages or any matter affecting the industrial classes, presented or made by any trades and labour council or other organization representing those classes or by any other person;

(i) prepare and transmit to the Lieutenant-Governor in Council annually a report containing the reports of the officers employed in the administration of the various Acts assigned to the Branch, and upon the work of the Branch during the preceding year, together with such statistical and other information as may have been collected in the Branch.

The superintendent or his representatives had the right of access to offices, factories, etc., at any reasonable hour, and could be granted authority to hold inquiries under the Public Inquiries Act. The administration of the following acts was assigned to the Trades and Labour Branch; The Bureau of Labour Act; The Stationary and Hoisting Engineers Act; The Building Trades Protection Act; The Factory, Shop and Office Building Act; The Steam Boilers Act; The Employment Agencies Act, 1917, and Acts relating to the protection of the persons or interests of the industrial classes as may from time to time be designed by the Lieutenant-Governor in Council.

In 1919 the Department of Labour was established, in charge of a Minister and Deputy Minister of Labour, the duties of the Department being identical with those of the former Trades and Labour Branch. The new Department through its Factory Inspection Branch, supervises factories, shops, office buildings, barber shops, elevators and hoists, foundries and polishing plants, the employment of women in industry, minimum wage orders, stationary engineers' certificates. The Steam Boiler Branch superintends boiler designs, new boilers and boiler exchanges, and the Employment Service conducts employment exchanges at 25 industrial centres in the province, besides maintaining a provincial employment clearing house.

Manitoba Bureau of Labour

The Manitoba Bureau of Labour Act of 1915 (chapter 6) provided for the establishment of a Bureau of Labour, attached to the Department of Public Works, or, under an amendment of 1922, "to any other such department as the Lieutenant-Governor may determine." The duties assigned the Bureau were stated in the Act as follows:—

"to collect, assort, systematize and publish information and statistics relating to employment, wages and hours of labour, co-operation, strikes, lockouts or other labour difficulties, trades unions, labour organizations, the relations between labour and capital, and other subjects of interest to workmen throughout Manitoba, with such information relating to the commercial, industrial and sanitary condition of workmen, and the permanent prosperity of the industries of Manitoba, as the Bureau may be able to gather."

By an amendment of 1916 the Bureau was charged with the duty and obligation of seeing that the provisions of the Shops Regulation Act, The Bake Shops Act, The Public

Buildings Act, The Manitoba Factories Act and The Building Trades Protection Act, or those contained in any Acts that may hereafter be substituted for these Acts, are at all times duly and properly observed and enforced.

Saskatchewan Bureau of Labour and Industries

The Saskatchewan Bureau was established under the Bureau of Labour and Industries Act of 1920 (chapter 24). The administration of the Bureau is in charge of a Commissioner. The duties are defined in the act as follows:—

The Bureau shall collect, assort, systematize and publish information and statistics relating to: (a) employment, wages and hours of labour throughout the province; (b) strikes or other labour difficulties; (c) trades unions and labour organizations; (d) the relations between capital and labour and other subjects connected with industrial problems; (e) the commercial industrial, and sanitary conditions of employment; (f) the natural resources of Saskatchewan and their industrial possibilities; (g) such other matters as may be related to industrial development in the province.

The Bureau shall also provide facilities for finding employment and for the distribution of male and female labour throughout the province.

It shall be the duty of the Bureau and it shall have power to—(a) establish and maintain one or more employment offices at such places within Saskatchewan as may be designated by the Lieutenant-Governor in Council; (b) put employers who want workpeople, and workpeople who want work within Saskatchewan, into communication with one another free of charge; (c) cause to be made surveys of and inquiries into the natural resources of Saskatchewan to ascertain their extent and how the same may be best utilized in the extension of the industries of the province; (d) inquire and report as to the establishment of new industries in Saskatchewan, in any case where by reason of the production of raw material for such industry, or the immigration of persons skilled in the particular industry, or other circumstances, it appears that such industry might be profitably carried on; (e) co-operate with the Federal Labour Exchange.

The Bureau shall administer the following Acts and such other Acts as may be from time to time assigned by the Executive Council to the administration of the Bureau: (a) The Factories Act; (b) The Building Trades Protection Act; (c) The Electrical Workers' Protection Act; (d) The Employment Agencies Act; (e) The Mines Act; and (f) The Minimum Wage Act.

Alberta Bureau of Labour

The Bureau of Labour of Alberta was created under an act of 1922 (chapter 80). It is in charge of a Commissioner of Labour appointed by Order in Council, the duties of this official being to "superintend the performance of such work relating to the collection, assortment, systemization and publication of information and statistics affecting labour as may be directed by the minister;" to administer such acts as may be assigned to the Bureau by Orders in Council; and to discharge such other duties as may be delegated to him by the minister. The Bureau now administers the provincial Employment

Bureau and the Minimum Wage Act, the Boilers Act, The Factories Act and the Theatres Act. The annual reports of the Bureau contain valuable material on wages and hours of labour in the various industries in the Province.

British Columbia Department of Labour

The British Columbia Department was established under the Department of Labour Act of 1917 (chapter 32). A Minister of Labour presides over the Department, with a deputy minister appointed by order in council. The duties of the department are defined in the act as follows:—

(a) To administer the laws of British Columbia affecting labour;

(b) To acquire and disseminate knowledge on all matters connected with the industrial occupations of the people, with a view to improving the relations between employers and employees;

(c) To collect and publish reliable information relating to or affecting the industries of British Columbia and rates of wages;

(d) To collect such statistical and other information respecting trades and industries in British Columbia as may be deemed necessary or expedient from time to time;

(e) To ascertain the localities in which mechanics, artisans, or workmen in any particular trade or industry are required, and wherever practicable assist in supplying the demand for such work or labour;

(f) To ascertain and report upon sanitary and other conditions relating to the health, comfort, and well-being of the industrial classes;

(g) To establish and maintain in the various centres or population throughout British Columbia employment bureaus and similar agencies for obtaining suitable employment for workmen and working women and for the distribution of male and female labour throughout the province. Amended 1919, c. 39, s. 2.

(h) To inquire and report as to the establishment of new industries in British Columbia where it appears that such industries can profitably be carried on;

(i) To inquire into, consider, and report upon the operation of laws in force in other parts of the British Empire and in foreign countries having for their objects the protection, technical training, and welfare of the industrial classes, and make such recommendations and suggestions thereon as may be deemed advisable;

(j) To consider and report upon any petition for or suggestion of a change in the law of British Columbia relating to labour and wages or any matter affecting the industrial classes, presented or made by any trades and labour council or other organization representing those classes, or by any other person;

(k) To perform such other duties as may from time to time be prescribed by any Act of the Legislative Assembly.

The Department has authority to require the trade unions, industrial societies and other organizations to supply information as to their rules and practices; to require employers to furnish reports as to their employees, that is, their names, occupations, wages, hours of labour, etc.; and to obtain from any available source information as to the cost of living, and the relations of prices to labour and industrial conditions in the province. The

statistical reports of the Department are summarized in the yearly report, which contains valuable information as to labour conditions. The annual report includes a directory of associations of employers, a trade union directory for the province, and the report of the Minimum Wage Board. The Department of Labour also administers the gov-

ernment employment service and the Factories Act. The Deputy Minister of Labour is *ex officio*, the chairman of the Board of Adjustment under the Hours of Work Act of 1923, providing for an 8-hour working day in the industries of the province, excepting those industries expressly exempted by the Board.

International Chamber of Commerce

Representatives of business interests of forty nations will gather at Brussels on June 21 of this year in the third general conference of the International Chamber of Commerce to discuss common problems, to consider means of facilitating trade between countries and to further the adoption and simplification of commercial practices by which the interchange of goods between peoples is carried on. The meeting will bring together bankers and financiers, economists, industrialists and merchants, many of whom are figures of national and not a few of international importance. The turn their discussion takes and the conclusions at which they will arrive may not only have a far-reaching effect upon business conditions in all countries but also a direct bearing upon the course of world affairs within the next few years. It was at a similar meeting held in Rome two years ago that the principles underlying the Dawes Plan, which is now in effect, were adopted. It is their purpose to discuss at Brussels further steps in the application of this plan, the adjustment of remaining reparations questions and the economic rehabilitation of the countries which have not yet recovered from the shock of war.

In preparation for the discussion a survey of world economic conditions is now being made by an international committee of which Fred I. Kent, of New York, is chairman. Among its members are Owen D. Young and Henry M. Robinson, of the United States; Sir Arthur Balfour and Stanley Machin, presidents of the Association of British Chambers of Commerce for 1923 and 1924 respectively, of Great Britain; Alfred Descamps, director of economics of the Banque de France, and Maurice Lewandowski, directing manager of the Comptoir National d'Escompte de Paris; Mario Alberti, and Albert Pirello, of Italy, both former members of the Dawes Commission; Maurice Despret, Belgium, chairman of the Board of the Banque de Bruxelles, Henri Heer, Switzerland, a member of the economic committee of the League of Nations; K. A.

Wallenberg, Sweden, president of the Association of Scandinavian Chambers of Commerce; and W. Westerman, Holland, chairman of the Board of the *Rotterdamsche Bankvereeniging*.

In the light of human experience in dealing with economic problems growing out of the war it is reasonable to assume that this method of approach obviates the almost insuperable obstacles that are encountered if they are treated as political questions. But there are many other economic problems which involve the economic welfare of all countries and directly affect business activity, and should be dealt with in the same way.

Hours of Labour in the United States

Under the title of "Hours of Labour in Industry: The United States," the International Labour Office has just published the latest of its series of studies on hours of work in various countries. In an introductory note, it is pointed out that legislation in the United States restricting hours of work is mostly confined to women and children, or to dangerous or unhealthy occupations, and such legislation is generally left to the separate States, with the result that there is a great diversity of laws in the country. Further, there are but few great national collective agreements; and the existing agreements being mostly local in scope and application, a detailed study can only be carried out with considerable difficulty. Moreover, customs and mentality, which play a not unimportant part in industrial conditions, often differ widely between one part of the United States and another. The study, however, contains a considerable body of information, statistical and other, concerning hours of work in the various industries of the United States. The tendency during recent years, it is pointed out, has been towards a shorter working day. The present trend in organized industry is towards a forty-four-hour week. Tables compiled by the American Federation of Labour in April, 1922, and reproduced in the study, show that over 1,250,000 workers are on this basis.

PROPHECIES OF INDUSTRIAL PEACE

*Article by Dr. Charles W. Eliot, President Emeritus of Harvard University,
Contributed to the "New York Times," March 22, 1925.*

THE following article by Dr. Charles W. Eliot, President Emeritus of Harvard University, outlines certain new developments in the relations of labour and capital that have come rapidly during the past few years. Notable among these have been:—

1. Government mediation and conciliation as carried on by the Canadian Department of Labour under the Industrial Disputes Investigation Act, 1907.

2. The spread of co-operative management. Either through the regular unions already organized in the plants, or by means of new organizations established for the purpose, representatives of the workers in many instances now sit down with their employers to

discuss in democratic fashion the problems of their industry.

3. Insurance against unemployment, accident, sickness and death. Either jointly with the regular unions, or independently on behalf of their employees, many employers have established funds to protect them from the various risks in connection with industry.

4. Employee stock ownership. Many large companies have taken their employees into partnership through a wide distribution of stock among the workers, and by a sharing of their profits among the customers they serve.

Dr. Eliot sees in these developments prophecies of industrial peace and in the following article describes some of the more conspicuous examples in detail.

Text of Dr. Eliot's Article

ANY one who listens can hear nowadays many prophecies of industrial peace, loud and near, or faint and far; and some of these prophecies reach beyond industrial peace to international peace also. In the midst of the dire confusion into which the civilized world has fallen since 1914 it is comforting for people who are naturally expectant of good to reflect on these prophecies. A few of them are here described and recorded, in order to give knowledge of their nature and their abundance to many Americans who have never listened to them.

Department of Labour of Canada

Among these cheering prophecies should first be mentioned the activities of the Canadian Department of Labour, which was established in 1900 and has now been continuously useful for twenty-four years. Under the Industrial Disputes Investigation Act of 1907 this Government department, headed by a Minister of Labour, has successfully promoted processes of conference and conciliation between employers and employees throughout Canada.

The boards set up by the department—a separate board for each dispute—have no arbitral authority, save when an arbitration is arranged by mutual consent of the disputants. They have the usual powers of a court in compelling testimony, and their proceedings are paid for by the Federal Gov-

ernment. They can apply no force in support of their decisions. They appeal only to public opinion for enforcement of their decisions; and their whole effort is to inform public opinion accurately concerning every dispute in which their intervention is requested by either party. By this method the department has brought about the immediate settlement of a large number of acute controversies and has promoted face-to-face conference between the contestants in many other disputes in which no immediate settlement was reached.

The "Labour Gazette."—It early established the LABOUR GAZETTE, prepared and edited in the department at Ottawa. This GAZETTE publishes much trustworthy information on many subjects interesting to labour, such as the average weekly cost of supporting a family of five from year to year through a series of years under changing conditions, the monthly loss of working time caused by industrial disputes, the proceedings at meetings of various international associations at many places in Canada and the United States, the resolutions passed by labour meetings or conferences in both Canada and the United States and the action, if any, which resulted therefrom, the main facts regarding comparative unemployment in a series of months or years and the proposals of workers' unions or associations concerning public education, accident prevention and compensation for

accident. It also publishes statedly a general review of the industrial situation as shown in the labour market, the fluctuations of commodity prices and the number of building permits and contracts.

Industrial Disputes Investigation Act.—

When one considers all the activities of the Department of Labour at Ottawa before and since the enactment of the Industrial Disputes Investigation Act, one sees clearly that the Canadian action on the labour problem has been and still is the most intelligent and successful in the world. It shows one safe way, at least, toward industrial peace. The Hon. W. L. Mackenzie King invented this legislation and got it put into effect. He is now Canadian Premier.

The leading ideas which appear in his writings, speeches and political career are that governmental investigation should precede the lockout or the strike, in order to bring law and order into industry and to introduce joint control; secondly, that the Government should pass laws effective in uncovering wrongs and exposing injustice in industrial controversies, and that if the community is to pay regard to the rights of labour and capital on the one hand, labour and capital on the other must not be indifferent to the well-being of the community; and, thirdly, that the methods of preserving peace between nations are similar to those that obtain in industry—namely, conciliation, arbitration and the international support of a judicial tribunal whose decisions are enforceable by an international police.

The year 1922 gave a striking demonstration of the high value to the Dominion of its labour legislation. In that year not a single working hour was lost on the railroads or in the railway shops of Canada; whereas industries in the United States suffered enormous losses through the strikes of railroad labour, the grievances and demands being essentially the same on both sides of the border.

A very interesting table showing proceedings under the Industrial Disputes Investigation Act by industries from March 22, 1907, to Dec. 31, 1924, is published in a fresh report from the Canadian Department of Labour. This table shows that the number of applications for a board were 92 from mines, 366 from transportation and communication, 55 from miscellaneous corporations, including war work, and 123 from trades outside the scope of the Act. On this number of applications the number of strikes not averted or ended were 15 on mines, 16 on transportation and communication, 4 on miscellaneous corporations, including war work, and 2 on

disputes outside the scope of the Act. These figures show that out of 636 applications for a board only 37 failed to avert or end strikes. Another remarkable statement just made in THE LABOUR GAZETTE for December, 1924, is that at the end of November, 1924, there were no strikes or lockouts on record in Canada.

The Judicial Committee of the Privy Council in England lately rendered a decision on an appeal by the Toronto Electric Commissioners which declared the Industrial Disputes Investigation Act to be outside the powers of the Federal Parliament. This decision has been received by the Canadian press, without distinction of party, with expressions of grave concern and disappointment. How thoroughly the Industrial Disputes Investigation Act has commended itself to all the voters in Canada appears clearly from the following fact: Of the sixteen years since the enactment of the act by a Liberal Government, six have been years of Liberal administration, six of Conservative administration, and four of Coalition administration. No attempt has been made by any party to repeal the act, and no amendments which would undermine the general principle of the act have been proposed. It commends itself to both Liberals and Conservatives, to both employers and employees. The present legalistic obstacle to its progress is sure to be overcome.

When an American contrasts the treatment which industrial disputes have received in Canada and in the United States, he is forced to admit that the Canadian legislation and the practices under it have been vastly superior in all respects to the American. They have been more successful than the American in preventing the heavy losses which result from both strikes and lockouts. They have also secured more justice for the labourer and, therefore, more content and comfort for the labourer's family. Furthermore, they have given the reflecting public much more information about wages, combinations of capitalists detrimental to the public interest, technical education and employment services.

Co-operative Management

The most encouraging prophecies, however, come from corporations whose managers have been for some years advocating and adopting co-operative management, democratic control of their plants, profit-sharing, accident insurance or that kind of care of workmen and their families accompanied by friendly intercourse with them which is sometimes derisively called "paternalism" by labour union agitators.

International Harvester Company

In March, 1919—about six years ago—the directors and officers of the International Harvester Company, under the lead of the President, Harold F. McCormick, offered to their employees a plan for establishing closer relations between employees and the management. This plan provided for the establishment of the "Harvester Industrial Council," and also of "works councils," in each of which bodies representatives elected by the employees should have equal voice and vote with the management in all matters of mutual interest, including wages, hours and working conditions. Each of the works maintained by the company (the company was then maintaining twenty-three separate manufacturing plants in the United States and Canada) was to have a works council. Through these councils any employee or group of employees could at any time present suggestions, requests or complaints with the certainty of a full and fair hearing. The company also established in aid of this plan a department of industrial relations, charged with giving special attention to all matters pertaining to labour policies and the well-being of the employees.

Only employees who were citizens of the United States, 21 years of age or over and had been continuously in one of the company's works for one year were to be eligible for nomination as employees' representatives. All employees, both men and women, were entitled to vote, except foremen, assistant foremen and other employees having influence over employment or discharge. The manager of the department of industrial relations, or some one designated by him, was to act as chairman of the works council, and a secretary was to be appointed by the superintendent of the works. Neither the chairman nor the secretary had a vote. Employees serving as members of the works council were to receive their regular pay from the company during such absence from work as this service actually required and employees attending any meeting at the request of the works council or of any subcommittee of a council were to receive their regular pay from the company for such time as they were actually and necessarily absent from work on this account.

General Council.—When a works council reaches an agreement on any matter its recommendation shall be referred to the superintendent for execution. If, however, the superintendent considers the matter of such importance as to require the attention of the general officers, he shall immediately refer it to the president of the International Harvester Company, who within ten days after the mat-

ter has been referred to him shall either propose a settlement thereof or refer the matter to a general council, consisting of two or more representatives of their own number from each of the works or plants which he deems jointly interested. There shall be one such member of the general council for each 1,000 employees or major fraction thereof, except that no works shall have fewer than two representatives in the general council.

The management representatives in the general council shall be appointed by the President, and shall not exceed the number of employee representatives. Reasonable travelling expenses for all representatives at a general council shall be paid by the company. Every representative serving on any works or general council shall be wholly free in the performance of his duties as such, and no discrimination against him shall afterward be made on account of action taken by him in his representative capacity. Under this plan no discrimination shall be made against any employee because of race, sex, political or religious affiliation or membership in any labour union or other organization.

Employees' Benefits.—As early as 1908 the International Harvester Company had organized benefit plans for its employees, which rested on a benefit fund consisting of contributions from members of the association, income from investments, gifts and legacies to the fund, and such contributions as the company made from time to time; but this plan was revised and much improved in 1920, after the adoption of the works council in every plant of the company. It now includes sickness, pregnancy, accident, disability and death benefits, but no benefits are paid when disability is due to intoxication, the use of alcoholic liquors or drugs, to venereal diseases or their results, or to fighting, wrestling or fooling in any disreputable resort. The Board of Trustees of the Employees' Benefit Association is watchful of members' interests, and effected substantial improvements in both January and October, 1921.

Pension System.—In 1908 the International Harvester Company also announced the establishment of a pension system, which permitted any male employee on the payroll of the company at the time to become eligible for a pension, provided he had reached the age of 65 years and had been twenty years or more in the service of the company. Women employees might be retired at the age of 55 years. In 1922 the directors issued a statement to their employees embodying all the changes made since the announcement of the pension plan in 1908, and declaring that they

adopted this improved plan "as evidence of their appreciation of the fidelity, efficiency and loyalty of the employees."

Compensation.—In 1910 the company adopted a plan for compensating its employees in all cases of industrial accidents occurring in its works. The company had already expended large sums in guarding its machinery and throwing safeguards around all dangerous spots in its plants. Nevertheless, the accident department paid out \$236,000 for industrial accidents in the two years from 1910 to 1912.

Welfare Work.—The Harvester Company was early in the field to promote the health of its employees by providing pleasant lunch-rooms and good lunches at cost, sanitary lavatories and working quarters, pure drinking water, good artificial lighting and ventilation, and free nursing and medical service. Since the establishment of the works councils and the Department of Industrial Relations all these efforts for the promotion of the health of the employees have been studied anew and made more efficient.

Already in 1915 the Harvester Company, as a matter of business and public service, had provided free public lectures on good farming, and had prepared numerous pamphlets, ranging from 8 pages to 160, for distribution at very low prices in farming communities. A few of the subjects will indicate the diversity of these publications—"Alfalfa," "Sweet Clover," "Seed Corn," "Hog Cholera," "Cold Pack Canning," "Grow a Garden," "Binder Twine Industry" and "Fly-Trap Pattern." Since the adoption of the works council in 1919 all these activities have been systematized and extended. Two excellent examples of the work of the Harvester Company's agricultural extension department are its seventy-page illustrated treatise, issued in 1922, on "Hogs for Pork and Profit," and its recommendation of the visual method of instruction, as illustrated by its chart, slide and reel division, with its 2,000 lecture charts and 1,000 sets of lantern slides and motion picture reels, which are lent to anyone who will make use of them. Two other excellent examples from the publications of 1923 are "The Cow, the Mother of Prosperity," and "You Don't Need to Have Flies in the House."

Copartnership.—In 1920 the directors and stockholders of the International Harvester Company formulated a plan to promote employee ownership of the company's stock by providing extra compensation for employees who agreed to invest a part of this extra compensation in the company's stock and to continue to hold that stock. They took this

action in the belief that this is a good way to strengthen the community of interest between the company and its employees. The company stated to its employees that, its business being chiefly dependent on agriculture, the extent of its yearly earnings is much affected by crop conditions beyond human control, but, nevertheless, that a substantial part of these earnings depends on effective teamwork by employees and managers alike. The directors coupled with this extra compensation and stock ownership plan the announcement of a savings and investment plan. These two plans will, in the judgment of the directors, round out the general policy of co-operation between the employees and the management.

The root and source of these beneficent activities of the International Harvester Company may be seen in the following statement of President Cyrus H. McCormick in 1922: "Every company or organization of men doing business in any community * * * is in duty bound to do something to help build up that community, aside from the things required by law or the things beneficial to itself."

General Results.—Whatever the International Harvester Company learns from its own practices and the investigations it conducts about the best management of its diversified industries it imparts without reserve to all other manufacturing companies and to the public. For example, the advantageous results of a discussion of the occupational rating plan, made by A. H. Young in the company's works during 1923, were set forth by him at the annual meeting of the Associated Industries of Massachusetts at Boston in October of the same year and made the subject of a round-table discussion. As the conclusion which Mr. Young draws from his work is that "the worth, the practicability and monetary benefits to be derived can be measured only by the extent to which it is applied," it is obvious that the Harvester Company does not propose to hide, but on the contrary to proclaim, every advantageous discovery in industrial methods which its agents make or contrive.

The general attitude of the Harvester Company toward its many experiments on co-operative management remains the same to-day that it was at the beginning. It regards its plans and experiments as not final or fixed but progressive and fluid. It has lately made a notable step forward in adopting a stock sale policy by which the employees are allowed to buy preferred stock at a favourable price, with special privileges attached to completion of the contract and to continuity in

holding. No important modifications have been made since 1923 in the establishment system of works councils, and the company believes that both management and men attach increasing value to the system. The company has had no discouraging experience with its employees for the last two years (1923-25). On the contrary, both workers and management understand better and better the business of the company and the value to its business of good relations between the workers and the managers. In view of the very large number of employees in the works of the International Harvester Company—34,507 on November 30, 1924—and the widespread sale which it makes of its product, the experiments of this company in regard to co-operative management and a working knowledge of a business by the employees have great significance.

The "Mitten Management"

A very interesting example of the effects of co-operative management is to be found in the records and publications of the Philadelphia Rapid Transit Company. T. E. Mitten took charge of the Philadelphia Rapid Transit Company thirteen years ago when its employees had lately been on a strike accompanied by great violence against persons and property. The company had no credit and the shareholders no dividends, the rolling stock was dilapidated and the service rendered to the public very defective. Within the past twelve years the following results have been attained and are now in plain sight of all three parties—the public, the corporation, or its shareholders, and the employees: For the employees, pensions, sick benefits, \$1,000 life insurance, a large savings fund belonging to the Association of Employees, and the co-operative wage dividend fund with satisfactory income shared equally between the employer and the employee. The "Mitten men and management" have for more than twelve years past increasingly advanced their mutual interests by co-operative management which has produced increased wages and other advantages for the men and re-established dividends for the stockholders. At the same time the public have come to enjoy a street car service unequalled elsewhere. In no other American city is a ride over surface and elevated lines combined provided at the rate of four tickets for 25 cents. It supplied continuous service during the great war without interruption by strike.

These results have been procured by the Philadelphia Rapid Transit Company under Mr. Mitten's management in spite of the troublous times during and following the war, and in spite of the serious obstacles inter-

posed by three successive city governments, well intentioned but short lived. The company is at this moment involved in a controversy with the city government; but the Philadelphia public is beginning to understand that the company is more likely to be right than the city in selecting a policy for the future, because the company has a history and a long contractual life, whereas a city administration has neither a history nor a broad outlook, and the personnel of one administration is liable to be scantily represented in the next. The personal qualities of Mr. Mitten have of course counted for much in this extraordinary transformation of the Philadelphia Rapid Transit Company; but that seems to be the case in every successful development of good relations between employer and employees, no matter whether the owner be a huge corporation, a rich firm, a single family or a single individual.

The Bethlehem Steel Plan

One of the most interesting ventures in co-operative management or effective representation of the employees in the management of a plant is that set up six years ago by the Bethlehem Steel Corporation and then adopted by the employees in three of their large plants, the method and results of which have only recently been divulged. In this "Bethlehem plan" the Bethlehem Steel Corporation itself decided to introduce a liberal scheme of employee representation whenever its employees desired such a plan. The basis of representation varied in the different plants owned by the corporation, being one representative for each 100 employees in plants employing under 1,500; in plants employing 1,500 to 10,000, one representative for each 200 employees; for plants employing over 10,000, one representative for each 300 employees, provided, however, that in no case should there be less than ten representatives. Eighteen years of age and sixty days of employment qualified for voting. Twenty-one years of age and six months' employment, with citizenship or first papers, qualified as a candidate for election. Company officials and those hiring or discharging were disqualified for voting at elections.

The plan was adopted in the main works of the corporation at Bethlehem in 1919 and has now been functioning there for nearly six years. It has been extended to several plants which have been acquired by the corporation since that date. In June, 1923, the plan was functioning at seven steel plants employing 55,000 people, at seven shipbuilding plants employing 12,000 people and in mines and quarries owned by the corporation employing 9,000 men. The total working force changes

somewhat from time to time and has sometimes exceeded 100,000 persons, and it has always included a large variety of crafts, nationalities and groups characterized by diverse social and industrial habits. The test, therefore, of the Bethlehem plan has already been a thorough one. The corporation has been reticent about results, and its officials, when they talk about the plan, confine themselves to established facts. Even now they prefer to have outside observers appraise the effort and its results.

Share in Management.—The Bethlehem plan relies essentially on a process of educating employees in a knowledge of the business in which they earn their livelihood by trusting them with large powers in its management under conditions which bring home to the employees their power and responsibility and make them aware that their interests and those of their employers are identical.

Experience under the plan has already proved that the employees invariably choose able and experienced representatives. The following facts were published in 1923: In the Bethlehem main plant the average service period of the ninety-eight elected workmen representatives is twelve years, and the average from all the plants of the company is eight years. It is an important part of the duties of the president of the corporation, the chairman of the board of directors, and the assistant to the president to meet the elected representatives of the employees and the appointed management representatives, to acquaint themselves with the mental attitude of the average employee, and to instruct them in the actual conditions and prospects of the business. These officials tell both sets of representatives that they must ask every question which interests them and may expect a direct answer. "If it is something you want and we cannot grant it, we will not hesitate to say so. If our decision is not convincing to you, you have the absolute right to convince us that we are wrong."

It has been a great help toward success for the Bethlehem plan that there has been no "absentee" ownership or direction in the Bethlehem Steel Corporation. The principal officials of the company live in Bethlehem, and every plant has a resident manager with a resident staff.

Teachers and "educators" may be excused for taking especial interest in the following passage in John Calder's recent report on the

Bethlehem plan: "Employee representation is true education, a 'drawing out' of unused faculties, and nowhere is 'learning by doing' so effectually accomplished for the working man; for we never really know anything which we cannot do. Such a process proceeding increasingly at the daily job, with adults 25 to 65 years of age and long past the formal stages of education, is a public service, and one of the most hopeful things for the social welfare of the United States and the self-governing abilities of its inhabitants." That is the soundest kind of educational doctrine.

The Bethlehem plan is not supposed to be perfect, but perfecting. The Bethlehem Steel Corporation was early in the field with an Industrial Relations Department which paid much attention to safety, health, sanitation, relief, pensions, employees' benefit associations and housing. This department had won a place in the esteem of the employees in every plant; but all these beneficial actions of employer toward employee welfare work have become relatively insignificant in comparison with the educational effect of genuine co-operative management.

Employees' Savings Plan.—Under date of February 2, 1925, the *Bethlehem Review* publishes the employees' second savings plan, which provides for the issue to employees of 7 per cent cumulative preferred stock of the Bethlehem Steel Corporation on a partial payment basis at the price of \$100 a share. In connection with this second savings plan the president of the company announces that "not so long ago Bethlehem stock was owned by comparatively few people. To-day it is owned by 53,380 stockholders, many of whom are employees of the corporation, and in addition over 11,000 employees are paying for stock under the savings plan." President Grace adds: "I believe that it is a better community in which thrift is practiced and that a business is more healthy in which employees are part owners." The new announcement by President Grace is in line with previous announcements to the effect that the Bethlehem plan is not perfect but perfecting. The Bethlehem Steel Corporation has lately published some very instructive tables to demonstrate the working of its plan in important respects between October, 1918, and October 1, 1924. The following selections from these tables illustrate two points which are important in the working out of any plan of employee representation:—

PERCENTAGE OF EMPLOYEES VOTING	
Plant.	1924.

Columbia Conserve Company

The story of the Columbia Conserve Company of Indianapolis is very different from those of the large companies thus far dealt with, but no less interesting. In 1917 it was a small concern which belonged—stock, buildings and land—to one family, and employed a small force of ordinary quality in raising and canning tomatoes. In that year the family decided to adopt a thoroughgoing management of the business by the “hands”—that is, to turn over the management to a group of the employees who by their industry and their mental capacity had shown that they could probably handle the perplexing problems which tomato raising and canning present.

Employee Representation.—The fundamental idea was to get the actual management of the business completely into the hands of the elected representatives of the employees. At first the Factory Committee was composed of ten men and women, chosen by popular ballot from among the manual workers, and three men from the office. A year later it was decided to have two committees in place of one; the first, called the council, made up of the manager and his assistant, the superintendent and his assistant and the foremen and forewomen; and a second, to be known as the Factory Committee, composed exclusively of persons belonging to the rank and file. After another year's experience the Factory Committee was abandoned and the council remained the sole managing body.

Any employee could attend the council meetings, and if he attended eight consecutive meetings he could become a voting member of the council. In spite of this easy

access to membership in the council, the number of members increased but slowly, and in 1923 contained only about 20 per cent of the working force. The President of the company had the power to veto, but his veto might be overruled by a two-thirds vote of the council. In only one instance did the President have occasion to object to any action of the council, and in that instance the council rescinded its vote to reduce working hours from fifty-five a week to fifty as soon as the President returned from a somewhat prolonged absence and explained to the council the situation and prospects of the company. Meetings of the council were held at first during working hours, once a fortnight; but in the second year and thereafter meetings were held after working hours. These meetings have seldom lasted less than three hours, and frequently as long as five hours. The members of the council receive no pay for their services.

The employees found it hard to believe at first that no subject connected with the business was barred in council meetings and that no employee would suffer because of any opinion expressed in the meetings. The council members now realize that frankness and fearlessness in council meetings strengthen rather than impair their position in the factory.

Naturally, throughout the first year discussion in council related chiefly to hours and wages, because the members understood no other subjects. The first change made in hours was a reduction, but as the members acquired technical and economic knowledge by study of the business the time devoted to discussion of hours grew less and less, until now the activity of the business determines the number of hours of work a day or a week. The length of the working week is now changed several times each year, according to the condition of the business and its prospects. In a business decidedly seasonal in character that is, of course, the only sensible way. Tomatoes being an extremely perishable vegetable, all hands work each day during the season until the tomatoes in hand are made safe. The regular employees receive no pay for overtime. The council has demonstrated that intelligent employees welcome variety not only in kind of employment—partly in the factory and partly in the fields—but in working conditions and hours.

The council early furnished evidence that in this rather small industry, the plant of which, composed of factory and farm, was owned by one family, all employees would prefer annual pay to a weekly pay, as they said, a

salary to wages, the salary being paid weekly, as wages usually are. The "salaried" force is paid as much for a short week as for a long one and is paid during vacations. It is one of the most satisfactory results of this salary method that there is no shirking or malingering among the salaried force. These manual labourers behave just as any salaried teachers, office employees or bureau hands behave. By the end of 1917 practically the entire force on factory and farm had been placed on salary. Of course, the casual workers who are employed at the height of the season in addition to the regular force cannot be put on the salary basis. In the course of six years the council learned that the best way to protect the employees of the Columbia Conserve Company against involuntary unemployment is to reduce the seasonal quality of the business.

The council has proved itself to be conservative in respect to advance of salary rates. They have, however, thought reduction of rates unnecessary. The only considerable increase of salary which the council has voted was in the salary of the manager for the year 1922. During his absence the council voted to increase the salary of the manager, a member of the owning family, by 50 per cent. The council's principal effort is to secure regularity of employment for all hands, and therefore to avoid dismissing or suspending salaried employees because there is no work for them. They have succeeded in this effort up to this day, although business conditions in the canning trade have been unusually difficult for the past two years.

In another respect the action of the council has been very wise and successful. It has no use for uniformity either in work or in wages. It exerts itself to engage factory hands in farm work and machine tenders in work which is ordinarily thought to belong to the building trades and to recruit accountants and salesmen from the operative class. They have no use for the labour union ideas of uniform wages or uniform ratings. They re-rate all the employees once a year, dividing them into three classes for each sex. Does this policy indicate that the council will prefer to keep old or partially disabled employees at work at reduced salaries rather than pension them?

Dividends to Workers.—A profit-sharing plan has from the beginning made part of this experiment in operatives' control of a factory. The same percentage is paid on payroll as is paid on the capital stock. The dividends on the payroll are not paid to the workers, but the amount is set aside as a reserve fund

to be used by the council to assist those employees who need financial help from time to time. The employee who takes his dividend in stock may sell it to the company at any time at par, and any employee who leaves the employ of the company must offer his stock to the company at par. This profit-sharing scheme is, of course, not thorough-going; and it probably exercises comparatively slight influence on the company's employees and on the council's proceedings.

Democratic Management.—Two results of this management of a factory business by its hands are highly interesting. First, this democratic management continues to employ only the "man who will and can in all things do his share." The second result is best described in words taken from an article in the *Survey Graphic* for September, 1922, by W. P. Hapgood—one of the family that started the business—entitled "High Adventure of a Cannery": "Of course we have become much more efficient * * * * * during four months of 1922 we produced three and a half times as many goods as in the similar period of 1921, and our payroll was only one-fifth larger. * * * Putting this in percentage, our cost per unit in 1921 was 100, and in 1922 37." Mr. Hapgood adds: "I believe that by such a plan as ours not only are the efficiency and the spirit of the employees very much improved, but the management gets far more pleasure from its work."

In 1924 a general assembly of the employees began to meet every fortnight on company time to discuss any matter connected with the factory and make recommendations to the council. It is hoped that through the work of the general assembly more employees will be stimulated to take part in the work of the council, for the experience of the Columbia Conserve Company resembles that of many other manufacturing companies which have endeavoured to get their employees to take active part in the management of the corporate business. That is, it is only a minority of the employees in a given business who are ambitious to learn the business well enough to become skillful and energetic in management. The majority of the employees prefer to do their daily work without attempting or caring to control the ordering of that work, or, in other words, they are quite content to let those of their fellow-employees who are interested in learning to run the business do all the managing for them. This preference of a majority of the employees seems to be illustrated on a very large scale in the plants of Henry Ford.

An interesting item in the recent experience of the Columbia Conserve Company is that when the superintendent, who was one of the owners of the farm and factory, resigned his position the place was filled by appointing one of the hands by the council. Within two years this new superintendent was demoted by the council and his younger brother put in his place.

During the year 1924 the council has dealt more actively with the finances and sales of the company, and the sales force and the office force have been recruited entirely from the hands.

The policy of the company in putting the management of the farm and factory into the hands of the employees has resulted in a great increase of efficiency and productiveness. Thus the sales in 1924 show an increase over those of 1923 of more than 33 per cent. Mr. Hapgood's estimate of the increased efficiency of the company in 1924 over that of the year 1917 is 100 per cent. About the first of January, 1925, Mr. Hapgood proposed to the council that all the profits of the company, beginning with 1925, in excess of 6 per cent on the capital stock be turned over to the employees, with which to buy out the stock owned by the absentee stockholders, and on the 8th of January the council accepted this proposal by a unanimous vote. Mr. Hapgood states that if the earnings of the company continue for the next six years to be as large as they were in 1924 the employees will then own the entire business. These results have been obtained in a small factory whose work is very seasonal. Could they not be more easily obtained in a business which was large and not seasonal?

Pacific Coast Coal Company

Another company which has obtained striking success in converting members of unions into zealous workers under a system of co-operative management is the Pacific Coast Coal Company, which operates four bituminous mines near Seattle. Here is the plan in as few words as possible:

Central Council.—At each mine is a Mine Council; in Seattle is a Central Council. The Mine Council is composed of six or eight employees elected in complete freedom by the employees and of three or four members appointed by the management; but the voting power for each side is the same. The Central Council is composed of about half the members of the Mine Councils elected and appointed respectively. These councils decide all questions concerning wages, hours and living and working conditions, the Mine Councils dealing primarily each with its own

local matters, the Central Council with matters of interest to all the mines. An important person in this organization is the representative of the employees called the committeeman, who deals between regular meetings with the foreman or supervisor on the job. His promises and proposals are accepted as authoritative, and small matters are through him often decided on the spot. Larger questions go in succession to the Mine Council, the Central Council, the company president and to arbitration. These councils have been functioning since February, 1922. In practice few appeals have gone to the Central Council and none beyond it; and in the Mine Councils all decisions have been nearly unanimous.

Under this régime the employees are now producing more tonnage per man-hour than has ever been produced in the past, and new records are often made. No operation has been delayed or stopped an hour on account of labour troubles since this co-operative management was introduced. Many of the employees are persons familiar with craft unions, an experience of value to them in their present job of operating a well-devised system of co-operative management.

The transition from closed shop to open shop conditions and the introduction of co-operative management can seldom be hurried; for they require patient and careful development, and are never to be thought of as finished but as always to be improved. Their success depends on close personal contact between men and management. The success of the Pacific Coast Coal Company is especially interesting because its site is on the Pacific Coast remote from the eastern and central ventures on the subject, and because it has been so thorough and so prompt.

Agreement in Clothing Industry

To the foregoing descriptions of inventions and plans made by industrial corporations, old and new, to promote co-operative management and the interest of employees in large production should now be added mention of some detached and comparatively recent happenings which move in the same direction.

In the middle of 1923 the clothing trade in Chicago took a notable step toward the coming of industrial peace by an agreement between the Chicago Industrial Federation of Clothing Manufacturers and the Amalgamated Clothing Workers of America. This agreement covered authorization for the manufacturer to deduct 1.5 per cent of the weekly wage of each union employee, pro-

vided the employer made the same contribution to an unemployment fund to be managed by representatives of the manufacturers on the one hand and the clothing workers on the other. This agreement was carefully thought out in detail. For example, it included the provision that the rate of benefits shall be 40 per cent of full-time earnings with \$20 per week as a maximum benefit for any employee; and also that no employee should receive benefits for more than five weeks during the insurance year. The representative of the manufacturer and the representative of the union agreed each to use his best efforts to work out the details necessary to the efficient handling of the unemployment fund. In order to build up a reserve and to prevent immediate drains on the fund, no benefits were to be paid before January 1, 1924. It is an interesting feature of the agreement that no benefit is to be paid for unemployment that directly or indirectly results from strikes, stoppages or other cessation of work.

In providing available instruction for both employers and employees on the subject of unemployment, this scheme was wise and ample. A year earlier, in 1922, the Joint Board of Clothing Workers of Chicago presented to the fifth biennial convention of the Amalgamated Clothing Workers a book of 424 pages which gave a very complete and interesting account of the achievements of the Chicago Joint Board, beginning with an account of the great strike of 1910 and including such subjects as the development of arbitration, the strike of 1915, wages and hours from 1911 to 1921 and the principle of union preference. It was a very striking exhibit of the progress of the clothing workers of Chicago in knowledge, wisdom and influence. Moreover, it was illustrated with portraits of individuals and groups that had been especially useful to the organization during this period of remarkable development. The names and faces on these portraits demonstrated that an overwhelming majority of the persons represented were of foreign birth or race.

General Motors Corporation

The General Motors Corporation, with headquarters in New York, a branch at Oshawa, Canada, and numerous subsidiaries in the United States, established in 1919 a plan to encourage thrift among its employees. It recently announced that it would distribute \$1,036,000 in cash and \$1,364,000 in the stock of the company to those employees who embraced the plan in 1919. This is a return within five years of \$3 for every \$1 invested by the employees. Employees have a right to withdraw their money at any time, but

only employees who leave their money with the company for five years get the full benefits of the plan. At the present moment 55 per cent of the eligible employees are participating in the plan. As the business of the General Motors Company is to manufacture and sell automobiles of varied quality at various prices, and as its business is highly successful, the interest the company and its thousands of employees take in its instructive plan for encouraging thrift may properly be counted among prophecies of industrial peace; for that peace, like international peace, is to be the product of better understanding and friendlier relations.

Trade Unions as Managers

The recent entrance of unions or union members into the ownership of banks should certainly be regarded as a prophecy of industrial peace. A union that owns a bank may easily come to be owner or part owner of a factory or mine, and hence may learn to take an owner's or manager's view of the effect of a strike or a lockout. Thus, the Brotherhood of Locomotive Engineers of Cleveland, or members of the brotherhood, have come to own a coal mine in West Virginia which has been closed for many months because the owners were unable to meet the wage demands of the union workers. When a strike is seen on a large scale to stop the worker's dividend check as well as his pay envelope, strikes will be less frequent than they have been.

Consumers' Co-operation

Customer ownership in public utilities is also a good sign of approach to industrial peace. Instances of successful sale of stock, both common and preferred, to customers as well as to employees, have multiplied of late. Successful sales conducted by banks, brokerage firms and the companies themselves are reported from many parts of the country all the way from Massachusetts to California. A striking example of this new practice is given by the Public Service Corporation of New Jersey, which in a customer ownership campaign ended January 31, 1925, sold 77,572 shares of 7 per cent cumulative preferred stock to 19,545 subscribers scattered throughout New Jersey. Since 1921 this corporation has sold to customers about 260,000 of 7 per cent and 8 per cent cumulative preferred stock. Ownership of stocks or bonds by employees and customers in public utilities corporations, or in factories whose products meet widespread needs or desires, tends, of course, to inculcate the doctrine that the interests of capital and labour are mutual, and may best be secured by co-operative management, friendly discussion and arbitration.

The Union Label

One of the bad signs concerning the coming of industrial peace has been the use of the union label on a great variety of printed circulars and announcements habitually issued by industrial and financial corporations, churches, philanthropic societies and candidates for political office without distinction of party. The label meant the "closed shop" and the use of it meant recognition of the union's power. The Roman Catholic Church in America, however, has never found it necessary to put that label on any of its books, circulars or other printed matter. The recent (November, 1924) statement made by Cardinal O'Connell, the senior American Cardinal, to the effect that the Catholic church has always been "the defender of true liberty, and that no workman should be constrained, otherwise he would be a slave to an organization and would lose his personal liberty," brings strong support to the cause of industrial peace. Cardinal O'Connell also declared that a statement recently conveyed in Washington, D.C., newspaper dispatches to the effect that the hierarchy had declared for the label, and hence for the closed shop may be "flatly contradicted as false." It is noticeable that the printing of the union label on announcements made by industrial or financial corporations is decidedly declining. Truly a cheerful prophecy of industrial peace.

Subsidiary Enterprises

In addition to the efforts now made by corporations, large and small, to promote the safety and welfare of their employees, some large corporations whose products are metallic have adopted the policy of owning and operating well-situated deposits of the coal, ore and limestone which they will need in their business during a long future. The Bethlehem Steel Corporation illustrates well this far-seeing and peace-promoting policy. Twenty years ago Bethlehem owned none of these essential materials for its industry except some small ore deposits in Cuba. To-day the corporation owns deposits enough to maintain its seven steel-making plants at full capacity for at least fifty years. Moreover Bethlehem now owns over 150 locomotives in operation on 450 miles of company-owned tracks and twenty-three vessels for ocean and lake transportation. This striking development tends to assure to the company reasonable profits and a credit which will enable it to get new capital when needed to maintain growth, and to its employees steady employment at good wages in spite of financial panics and waves of industrial depression.

There is nowadays a strong tendency in large corporations which desire to render nation-wide service to cause their stocks and bonds to be "publicly owned" in order that a large public may be directly interested in the success of the business. Armour & Co. have lately (October, 1924) published the fact that the company is owned by 77,000 people who represent every walk of life and are scattered through all the States of the Union. More than half of them are employees of the company itself. Out of the total of 77,000 owners 69,664 own only from one to twenty-four shares.

Industrial Ownership

Another good instance of a large corporation's desire to spread the ownership of its stock as widely as possible is given in an article in the *World's Work* for January, 1925, by David F. Houston, President of the Bell Telephone Securities Company and formerly Secretary of Agriculture and of the Treasury. Mr. Houston states that the Bell Telephone Securities Company, a subsidiary of the American Company, has been calling its people's attention to the fact that the stock exists, that it can be purchased in the market at the market price and that it yields good and safe return. He also publishes a table which shows that 118,799 persons applied for the preferred stock offered by the Bell Telephone Company of Pennsylvania, the Wisconsin Company, and for part of the stock of the Southwestern Bell Telephone Company, and actually purchased 733,676 shares. The number of vocations represented in the table is forty-six, and the three largest groups are labourers, 24,317; housewives, 21,626; clerks, 10,774.

Mr. Houston says accurately that this list presents "A literal cross section of American Society," and he adds that a similar classification of the thousands of holders of the stock of the American Company would reveal a similar picture. He says further that incorporated business, and especially incorporated big business, is the vehicle through which labourers and other smaller investors are being enabled to become owners and capitalists.*

Intelligent labour is coming to see that the paramount needs to-day are to increase out-

*After this sentence was written a small book by Robert S. Brookings, "Industrial Ownership, Its Economic and Social Significance," The Macmillan Company, February, 1925, came to hand. Mr. Brookings says in his introduction: "I have had unusual opportunity to keep in touch with that all-important problem, the relation of management and capital to labour and the public." And in the last paragraph of

put, and therefore the amount to be distributed, to raise the standard of living of all labourers, to increase by education their skill and to lead them to practise self-denial and save money and to become owners.

That sort of ownership surely contributes to the acceptance of the doctrine that the interests of labour and capital, when rightly understood, are in many respects identical. When every worker is a capitalist industrial peace will shortly arrive.

"Baltimore and Ohio" Plan

In February, 1924, an agreement was entered into between the officers of the Baltimore & Ohio Railroad Company and the officers representing the Federated Shopcrafts in the Baltimore & Ohio service which provided for the appointment of co-operative committees in forty-five different shops. Since then 657 meetings have been held between men representing the management and men representing the employees. The average attendance at such meetings was twelve, the average length of the meetings one and one-half hours. The total number of suggestions submitted for discussion was 5,272, the number of suggestions adopted 3,810 and the number of suggestions held for further study 972.

The President of the road, Daniel Willard, said in an address delivered in Garrett, a town created by the Baltimore & Ohio Railroad on its way through Connellsville to Pittsburgh and thence to Chicago, that this agreement establishes a conference method between management and men which develops on the part of each party an earnest determination to deal honestly, fairly and sympathetically with the other. President Willard also states that the arrangement gives to every employee "an enlightened and enlarged view of his own worth and importance as a part of the * * * Baltimore & Ohio Railroad." President Willard further says that the employees of the road are doing the "best that is in them, not because they feel they are obliged to do it, but rather because they want to do it."

As the Baltimore & Ohio Railroad has been in difficulties with the Government, its employees and its competitors between Chicago and tidewater ever since John W. Garrett, President of the road from 1858 to 1884, conceived the idea of extending the road to

Chicago, the present announcement by President Willard has peculiar interest for all persons who think that better relations between employers and employees are in sight.

Conclusions

The conclusions to be drawn from this paper are that the United States is on the road to industrial peace, that the manual labourer is winning more comfort and content by learning from owners and superintendents how to manage industries well than he has ever gained by strikes and the accompanying violence, and that the industrial leader of the future will be a man gifted by nature with capacity to see accurately, to work hard, to seize opportunity and to meet fellow-men, near by or far away, his inferiors, equals or superiors, with sympathy and love.

Unemployment Insurance in the United States

Recent information indicates that about 134,000 employees in the United States are protected in part against unemployment by insurance set up between trade unions and employers. Ten groups of workers are included in this total, in the following occupations and localities: Clothing (men's), at Chicago, Illinois; clothing (men's), at New York, N.Y.; clothing, (women's), at Cleveland, Ohio; clothing (women's), at New York, N.Y.; clothing (lace), at Scranton, Pennsylvania, and Kingston, N.Y.; hats and caps (cloth), at St. Paul, Minnesota; hats and caps (cloth), at New York, N.Y.; hats and caps (cloth), at Philadelphia, Pennsylvania; hats and caps (cloth), at Chicago, Illinois; wall paper, at nineteen scattered plants.

The Cleveland women's clothing industry and the wall paper industry provide for a guaranteed period of employment with benefits to cover a portion of the normal earnings if employment falls short of the guaranteed period. The insurance fund is maintained solely by the employers, as is the case in the hat and cap industry.

Where there are joint contributions from workers and employers, the shares of the two parties are equal, with the exception of the women's clothing industry in New York, where the employers have agreed to pay a sum equal to 2 per cent of their weekly payrolls, whereas the employees pay only 1 per cent of their weekly earnings. An employment exchange of the union exists in the men's clothing industry in Chicago and will be started in the men's and women's clothing industries in New York.

the book itself he says, "We may thus attain an economic democracy which will scale with our political democracy." In the appendix he gives the complete table of the stockholders in Bell Telephone Companies, which is only summarized above, and also tables showing the comparative earnings of investments in industry and in banking. All persons interested in industrial ownership should consult this book.

PROPOSED EMPIRE SETTLEMENT BOARD FOR CANADA

Resolution by Alberta Legislature Favours Concerted Policy of Colonization

THE Alberta Legislature, on March 9, unanimously passed the following resolution:—

That, while the responsibility for framing and carrying into effect immigration policies rests primarily with the Dominion Government, the result of such policies seriously affects the welfare of the province in creating demand for extensions of provincial services and making possible problems of unemployment;

Therefore, believing that a sound and well-directed immigration policy is in the interests of the Dominion, this house is of the opinion that the Dominion Government in framing its immigration policy for the future should, as far as possible, have regard to:

1. The consolidation of colonization settlement and the relation of such settlement to existing public services.

2. A careful selection of immigrants.

3. A reasonable supervision of immigrants during and after settlement, and that in framing such policy there should be full co-operation between the Dominion and the provinces, not only to ensure the successful settlement of the land but also to avoid duplication of effort and expense.

Premier Greenfield, speaking on this resolution, suggested that a board similar to the Empire Settlement Board in Great Britain should be set up for Canada. He said:—

"Great Britain has surplus population which she is anxious to settle within the empire. The British government, under the Empire Settlement scheme, give financial assistance to their own people who desire to settle within the empire. Then let us approach the British government, the direct purpose being to supplement their effort, with a proposal that a board similar to the empire settlement board be set up in Canada; the Canadian board to include two or three of the best financial men in Canada. men who will carry complete confidence here and in Great Britain, and whose standing will ensure that investments are sound, that securities given are adequate and that repayment is reasonably ensured. Then, let us negotiate with provincial governments to select a number of definite areas in their provinces with good soil and adequate precipitation, where railways, schools and roads exist now, provincial authorities to select the areas, provide necessary direction upon arrival of settlers in the province, and advice in purchase of stock, equipment, etc., and generally protect the settler after arrival from exploitation, and follow up the settler until he is established. The machinery for this work is largely in existence now. You have then established co-operation between imperial, federal and provincial governments, and co-ordinated your effort on both

sides of the Atlantic, the areas or projects to be approved by the provincial government, the Canadian Settlement Board and the Empire Settlement Board, and, when approved, the Canadian land settlement board to have power to issue land bonds to an amount necessary to finance each project as undertaken and sell lands on long terms on the amortization plan to settlers. It may be necessary to finance moderate improvements on unimproved lands. The security would be the land itself, which in carefully selected areas with carefully selected people, with settlers carefully supervised until established, should be good security.

"A board operating as I have outlined, would be the largest land purchasing agency in Canada, and as such could in great measure check any tendency to unduly increase land values. If it proves necessary in order to keep interest rates on the land low, to provide some form of government guarantee it should be good business to do so. A scheme along lines suggested, if sound, and I believe it is, would appeal to the biggest men in Canada and it needs and calls for the best we have. It would be substantial enough to appeal to the prospective settler with limited means as being a good organization to tie to. The average loan necessary would not be heavy as quite a percentage of settlers would have some capital. Such a scheme, minus the provision made by the empire settlement board could, if necessary be extended to settlers from countries other than Britain, as we gained experience in the operation, and to Canadian people desirous of going on the land. The important thing is careful selection. There would be some losses—they would not be large—as you have at least made every effort to protect against losses.

"The proposal involves the substitution of orderly organized colonization by an organization that is out for service to Canada, service to the settler and not for gain. That will act as a definite check on artificial boosting of land values and that will end the haphazard immigration, without supervision and protection of the settler from exploitation, that has previously prevailed in Canada."

Some account was given, in the LABOUR GAZETTE for June, 1924, of the present Canadian policy in regard to the organization of land settlement. Prior to the war the Canadian Immigration Department carried on cer-

tain employment activities in connection with the suitable placement of immigrant farm workers, but this work was suspended shortly before the outbreak of hostilities. Within recent months the Department has again undertaken similar work, although the desire is not to function as an employment service but rather as a land settlement division. It assists in establishing satisfactory relations for immigrants who are desirous of settling on farms or, for a time at least, working for some Canadian farmer. The field staff of the Soldiers' Settlement Board, under the name of the Land Settlement Branch, now operates as a branch of the Department of Immigration

with a view to carrying out this work. The employment feature of the duties of the Land Settlement Branch is really only incidental, as the main endeavour is to insure that those coming to Canada to undertake farm work shall have the necessary aid and encouragement to fit them into the agricultural life of this country.

The policy of state-aided Empire Settlement, as embodied in the British "Empire Settlement Act, 1922," was outlined in the issue of the *GAZETTE* quoted above, in the course of a review of the Empire Settlement Committee for 1923.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the *LABOUR GAZETTE* relate to activities which have a direct bearing on the training of apprentices and industrial workers, and are therefore of interest in connection with the work carried on in Canada by the secondary vocational schools in receipt of federal grants under the Dominion Technical Education Act. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

Advancement of Gifted Children in Industry

A new social experiment of a somewhat novel character is noted in the *Alberta Labour News* of March 14. This has recently been undertaken in the United States in connection with the discovery and advancement of gifted children in industry. A committee on "Gifted Children in Industry" was set up in 1923 by the executive committee of the Associated Industries. The terms of reference of the committee were, firstly, to find out whether there were in the factories of the members of the Associated Industries some boys and girls with such conspicuous talents and strong character that further education might be expected to make of them industrial leaders or persons of marked and unusual usefulness to the community, and secondly, if such children were discovered, to make recommendations as to any plan for providing financial assistance for them in order that they might secure the training which would best develop their talents.

Printing School at Montreal

A trade school for printers is to be opened in connection with the Montreal Technical School in the near future. The school is to be operated by an advisory committee composed of the Provincial Director of Technical Education, the Principal of the Technical School, and representatives from the printing industry. Sub-committees have been appointed to deal with the selection of a staff, the organization of a course of study and the drafting of an agreement to be entered into by apprentice, employer and school. The printing industry which requested the provincial government to establish the school appears to be solidly behind the undertaking and it is expected that the new school will be a success from the beginning.

Vocational Schools in British Columbia

Mr. John Kyle, organizer of technical education for the province of British Columbia, referring to the development of vocational schools in British Columbia, says:—

"That the Junior High School will ultimately develop into a vocational school seems almost certain, for already in Vancouver Technical School vocational classes are formed in machine-shop practice and electrical engineering; in addition, several individual vocational students are engaged in cabinet-making, printing and sheet-metal work. The formation of such vocational classes is undoubtedly the work of the future; to neglect them would leave industrial training with no finality of purpose. Technical school principals would do well to give more consideration than they do at present to this direct preparation of students for participation in industrial work. Preparation for uni-

versity matriculation examinations tends to prevent teachers from thoroughly correlating academic and technical studies in the technical schools, and therefore academic teachers in technical schools cannot be induced too strongly to become familiar with and interested in workshop operations, activities and experiences."

The good results of the work already established in Vancouver and the need for greater development are indicated by the following extracts from a recent article in the *Daily Province* of Vancouver:—

"The benefits of a technical school education for boys are obvious. Students do not learn trades at the school but they secure the ground work which gives them an intelligent conception of what is required in their chosen vocation and which equips them to make greater progress than would otherwise be the case. This has been amply demonstrated in the boys the school has already graduated. These, for the most part, have made splendid progress and their success has justified the school. More than one employer has stated that 'tech.' boys are the class of material they have been seeking for years. The other day a well-known plumber declared that in the last ten years he had tried out many boys with mediocre results and it was not until he had engaged as apprentices technical school graduates that he began to get satisfactory results.

"Mr. Lister, Principal of the Vancouver Technical School, states that what is required in the Vancouver school system is a well-conducted vocational guidance bureau so that students would learn what trades are demanded and employers would know where to look for well-trained boys. Such a department would place the right kind of boys in the right kind of places, and be of inestimable assistance not only to the boys but to the industrial world as well."

Linking up Industry and Education in Great Britain

The London Advisory Council for Juvenile Employment, at a recent meeting considered the problem of the relation between school training and industrial employment. The chairman of the Council, Mr. Max Bonn, dealing with the progress recently made, said that for the first time they had a workable and live scheme of organization for London inaugurated during the past year. Month by month through 1924 they had made steady progress, and they were now placing juveniles at the rate of 50,000 to 60,000 a year. As to the future, they were faced with four great problems—(1) the raising of the school-

leaving age; (2) the compulsory day continuation schools; (3) the lowering the age of unemployment insurance to meet (1) or (2); and (4) the compulsory notification by employers of engagements and dismissals. He hoped that before long a deliberate, considered policy on those lines would enjoy the full backing of His Majesty's Government.

Lord Eustace Percy, the president of the Board of Education of England and Wales, said they should not regard the question of juvenile unemployment, as it was too often regarded, merely as an emergency problem in a period of acute unemployment resulting from the war. It was nothing of the kind. It was the weak spot in our system of education. It was a humbling thought that outside a comparatively narrow limit there had not been until recently—and there was not very much even now—any really close touch between either employers or employed in industry and the type of education given in our schools. There were some exceptions, such as the junior technical or trade schools, and it was perfectly true that many large firms in the city did require from boys entering their offices as clerks a secondary education completed up to 16. That was a very healthy requirement. It was quite clearly impossible to consider the raising of the school age to 15, the establishment of compulsory day continuation schools, a great extension of secondary school education, or the establishment of central schools, unless the provision they were going to make in that way was going to be definitely recognized by the employers and trade unions of the country as a contribution which they were prepared to recognize and adapt themselves to in the management of industry; and unless that education was something which industry not only acquiesced in, but something that industry actually demanded as advisable in the interests of industry. When he said that, he was not adumbrating any view of education as being purely vocational or subservient to the needs of industry, but—and this was the great thing which educationists had to realize—no education could be regarded as a sound one, and no education authority or schoolmaster could feel they had done their duty to a child unless the child issued from school straight into either some further preparation for definite employment or into some definite employment. They all knew they were very far from the realization of those things. He was going to say something indiscreet, something which would probably get him into hot water. There were a great many members of trade

unions in the country who were always pressing, and rightly pressing, for more free places in secondary schools, more secondary school accommodation, but too often those very men were not prepared to recognize, so far as they were concerned with laying down the rules for the industry, that a boy entering an industry with a secondary education at the age of 16 was better fitted for industry or more competent in industry, or that he brought any more of a trained mind to bear in industry than if he had left school at 14 and had received no further education. The real solution of the problem existed in closer co-operation between the Minister of Labour and the President of the Board of Education, and in the closer co-operation throughout the country of the two things which they officially represented in Whitehall—namely, the schools and employment. He should certainly do everything in his power to get that better co-ordination.

As to what the chairman had said about the raising of the school age and about continuation schools, he (Lord E. Percy) regarded it as his prime duty as President of the Board of Education to see that children over the age of 14, as well as under the age of 14, had educational facilities offered to them appropriate to their age and appropriate to their future in life, and when he had satisfied himself that those facilities were in a fair way to be offered, then was the moment to consider the question of compulsion.

Apprentices in London

At a meeting of the National Institution of Apprenticeship, held in the Mansion House of London in February, 150 boys and girls who had recently completed their apprenticeship to skilled trades were presented with certificates of merit. These young people had been apprenticed to engineers, scientific instrument makers, opticians, printers, book-binders, tailors, court dressmakers, diamond mounters and sellers, jewellers, and watch-makers. The Lord Mayor said that the National Institute of Apprenticeship was formed in 1898, and had apprenticed 3,719 young people to skilled trades. Last year, 203 boys and girls were apprenticed. Many more would have been selected, but parents were unable to accept the lower wages paid during the first two years. During the year 1,249 applications for assistance toward apprenticeship were made. Those whom it was impossible to assist otherwise were given advice as to the best means of seeking employment. Other organizations whose resources were

available for the purpose co-operated with the Institution in finding suitable candidates.

Unemployment Among Apprentices in New York Building Trades

Mr. Francis Mahoney, trade analyst and supervisor of apprentice work, New York Building Congress, gives the following information showing the extent of unemployment among apprentices in certain trades:—

At the present time, there are at least 500 carpenter apprentices out of work in New York City. Out of 31,504 carpenters (registered), there are only 1,496 apprentices employed by the various employers. This, too, in spite of the fact that the union is allowing one apprentice to every two or more men.

During the peak demand for woodworkers, there were an average of 150 of these apprentices out of employment all the time.

The bricklayers, with an estimated membership of 8,500, and absolute control of employment conditions, have approximately 1,400 apprentices, and of these an average of more than 300 are constantly out of employment. During the peak demand, at least 200 of these young apprentices were out of work. This, too, in spite of the fact that employers may apprentice two to a firm and have three on every job.

Nearly two-thirds of the bricklaying apprentices are indentured with their fathers, the employers refusing to accept the responsibility of these young workers.

The plasterers, who have come in for a great deal of condemnation, with 5,000 union members, show only 620 indentured apprentices, whereas the union allows one to every five men. At the present time there are at least 200 out of the 620 indentured apprentices out of work, and, in fact, all of these boys have, on the average, lost fully one-quarter time during the so-called boom years.

The painters and decorators, with 10,000 members in District Council No. 9, have but 190 apprentices. It is taking the continued effort of one employee in the office of the apprenticeship commission to keep even this small number, 90 per cent, employed.

The cement masons, with 600 members and an allowance of 50 apprentices, seem never to have succeeded in keeping more than 33 steadily employed.

The conditions in electrical work as regards apprenticeship are so bad that we are finding a great majority of the apprentices leaving that trade and going back to errand boy, stock clerk and other such jobs.

These are facts that are taken from the files of an active and statistically permanent organization. These are only a few facts that concern some of the important trades.

Chamber of Trades Promotes Apprenticeship and Vocational Education in France

To develop in the general public a taste and respect for the manual professions, to organize and to control apprenticeship, to establish manual training schools and aid in the development thereof, and to open a vocational training bureau to assist children in the choice of a manual profession to which they are adapted by taste or aptitude—these are the objectives of the Chamber of Trades of the Department of the Aube, according to an official report made by the American Consul in Nancy, France. The Chamber was established in 1921 by the municipal authorities, the local Chamber of Commerce and repre-

sentatives of both the workingman's and employers' syndicate at Troyes. The Chamber first directed its activities toward a more rational organization of apprenticeship, drawing up a special form of contract between the employer and the apprentice. A clause thereof provides that the employer must deposit with

the Chamber a sum equal to one-fifth of the wages of the apprentice. This sum, together with the interest thereon, is paid over to the apprentice when he has completed his contract. Within two years, nearly 500 contracts were signed. In only four cases were any of the contracts broken.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Safety Work in Saskatchewan

THE Chief Inspector of the Bureau of Labour and Industries of Saskatchewan, in his report for the year ending April 30, 1924, appeals for more co-operation on the part of all those who are interested in the various safety regulations in force in the province.

Investigations of the elevators installed show that a large percentage of elevator accidents may be prevented if the automatic or semi-automatic safety devices are maintained in proper working order. Both the employer who will allow these appliances to remain inoperative, and the employee who has a knowledge of their faulty condition, are subjecting all persons using the elevator to considerable risk of personal injury. If the apparatus is kept under proper observation and repair, accidents in a large measure, could be prevented. The operator of an elevator should do his share in the endeavour to maintain the installation in proper working order by immediately reporting defects which come to his notice.

In regard to safety in building operation, he says:—

The responsibility for the safety of the workman on construction rests primarily with the employer. The degree of safety must be set by him and supervised to ensure that the standard set is lived up to. The workman is frequently willing to take a chance, but the employer cannot afford to assume a single risk.

The effort to prevent accidents and ensure safety in construction work should be directed to eliminate every risk as far as possible. The equipment should be carefully examined and tested. The construction of scaffolds, ladders, horses, guard rails and runways should be to a standard of safety.

One of the more frequent causes of accident is the ever present litter of waste material plentifully supplied with projecting nails, and although recognized as dangerous, little effort is ever made to collect this debris into piles at a safe distance from the building.

The ladder is of considerable use in construction and is not without its dangers if the rungs or treads are loose, crooked, or if it is placed with an insecure footing, then accidents are liable to occur.

The absence of guard rails on scaffolds is also a source of danger.

Illness Amongst Workers

Dr. T. C. Routley, general secretary of the Canadian Medical Association, in a paper en-

titled "The Worker and His Worst Enemy—Illness," expresses the opinion that the economic losses due to sickness among industrial workers in Canada is parallel to that of other countries. He bases his opinion upon information obtained by the Division of Industrial Hygiene in the Ontario Provincial Department of Health, a division which compiles information to be applied to the solution of health problems among industrial workers in Canada. The records of the Department showed that a big iron and steel plant in Ontario employing 1,270 last year made a health survey of its plant and found that there had been 7,423 days lost through illness during the year. Of these, 1,068 days were lost through accidents and 6,365 from sickness. Nor was this the full contrast, for the 1,068 days lost from accident included all time lost, while the 6,365 days lost from illness included only the time after the sixth day of absence, and only the sickness among employees who had been in the firm over three months. A pulp and paper mill in Ontario which employs between 500 and 700 men, in a similar survey, found that lost time from sickness amounted to two and a half times that lost from accidents.

Dr. Routley states that "so persuaded are large employers of labour becoming of the urgent need of knowing the extent of losses caused through avoidable illness among their workers, that the most foresighted among them in Great Britain, Canada and the United States, have instituted either health departments under medical men or very far reaching systems of welfare nurses." In the United States there are some 900 establishments with such departments and the number is constantly increasing because employers have found by practical experience that the money spent in the prevention of illness among workers is money invested in more contentment and greater productivity. A Toronto plant, he states, had an average lost time from sickness per man per year, of 6.5 days in 1918. In 1919, 1920 and 1921 by the application of preventive measures, it was reduced to 2.92. He also draws attention to

the fact that blood poisoning from wounds shows less formidable figures than formerly attributing this to the education of the workers in the scientific use of iodine immediately after wounds are made and in the need for skilled attention to such wounds at the plant dispensary. One firm in Massachusetts reported in 1917 that during the five years since their medical department was established there had been an average of 241 accidents a month but not a single case of sepsis.

Accidents in Ontario

A noticeable decrease was shown in the number of industrial accidents, both fatal and non-fatal, reported to the Workmen's Compensation Board of Ontario during the first quarter of 1925, as compared with the same period of 1924. The total number of accidents decreased from 14,144 to 12,655, while deaths due to accidents decreased from 92 to 46. Ontario has averaged over 30 deaths a month for the past several years, and in the past three years compensation payments for accidents have cost industry an average of over six million dollars yearly.

Injuries to Eyes in Welding

The Winnipeg Trades and Labour Council at a meeting early in March, instructed its legislative committee to draft an amendment to the Manitoba Workmen's Compensation Act that would add to the list of diseases compensable under that Act defects in eyesight arising among workers in electrical and other kinds of welding.

Industrial Diseases in Australia

Under the Workmen's Compensation Amendment Act of Western Australia compensation is provided in cases of injury or death resulting from certain industrial diseases. Such diseases are treated in the same manner as injury by accident, provided they are due to the nature of the work in which the worker was employed at any time within twelve months previous to the date of his disablement.

International Study of Safety Devices

The International Labour Office has lately published the first of a series of studies of safety devices in industry, as required by the laws of various countries. The purpose of the series is outlined in a general introduction as follows:—

"Accident prevention is an essential feature in the protection of the worker, yet it is almost more difficult to secure precise information on this subject than on any other. Progress in industrial safety depends entirely on technical research and practical experience, but little general idea of either can be gained from the

infrequent publications which too often treat the subject in a fragmentary fashion. Hence there is a danger that valuable experiments for the prevention of a given industrial risk may be carried on simultaneously in several countries, each investigator being cut off from the results of the research of others, and from the possibility of modifying or improving his own work in the light of these, simply by the lack of information."

The first publication in the new series is a monograph describing the safety devices for woodworking machinery used in Great Britain and Switzerland, reports on this subject having been recently published in these countries. A description is given of the methods taken for guarding circular saws, and for the safe use of band saws, planing machines, spindle moulders, mortising machines, frame saws and other machinery. Numerous illustrations are given of the various devices.

The International Labour Office expresses the hope that manufacturers, workers, and technical staff, for whose benefit this report is published, will forward to the Office any comment they may have to make and suggestions for increasing the value of future publications. On the reception which they accord to this volume depends the progress of the new type of work which the Office has undertaken.

Inquiries concerning the International Labour Office and its publications may be addressed to the Office at Geneva, Switzerland.

Proposed Labour Safety Division in the United States

The Secretary of Labour of the United States in the annual report of the Department which was outlined in the January issue of the *LABOUR GAZETTE*, calls attention to the urgent necessity for developing the accident prevention work of the Federal Government. In order that a definite forward step may be taken in this work, he recommends that a Division of Labour Safety be created in the Bureau of Labour Statistics. Such a division he says, would promote uniformity in the accident prevention laws of the several States, and in the methods of gathering and compiling accident statistics, so that the Secretary of Labour would eventually be able to bring these together on a national scale, show the actual number of accidents, and compute accident rates in all the principal industries. He quotes from a recent bulletin of the Bureau of Labour Statistics as follows:—

There are five things which must be known regarding groups of accidents if their study is to be of the greatest service in accident prevention. These are (1) the number of accidents occurring, (2) the industries in which they occur, (3) the causes of accidents,

(4) the amount of exposure to hazard, (5) the severity of the accidents.

The difficulty is that the States do not limit what shall be regarded as an accident in the same way. Some exclude those causing disability of one day or less, some those causing disability of two days or less, and some those causing disability of two weeks and less. This lack of uniformity regarding what shall be recorded greatly impairs the value of the record as an index of the precise conditions. It is not a matter of great concern to one attempting to formulate national statistics from these State records as to just what the definition shall be, but it is of great importance that it shall be uniformly adopted.

It is evident that the gross total of accidents occurring in a State with varied industries leads nowhere. It is only when the matter is traced back to the industrial conditions under which the accidents occur that a beginning is made toward a knowledge of the proper remedial measures and their application. When, however, accidents in the various industries are separated, some hint is offered regarding the points where accident-prevention effort is needed.

While an industrial classification gives some indication as to where efforts for prevention may be usefully applied, it does not in the least help in determining what the effort shall be. To gain some notion of what to do in the premises a classification by accident causes is needed. The number of States which have made some efforts at such cause classification is evidence that there is some appreciation of its importance.

Woodworking Safety Code

A safety code for woodworking plants has been published by the United States Bureau of Labour Statistics (Bulletin No. 378), having been prepared by a sectional committee which included representatives of the International Association of Industrial Accident Boards and Commissions and the National Bureau of Casualty and Surety Underwriters, representative makers of safeguards, users of woodworking machinery, workmen and others. The code is primarily intended to cover the hazards of the "point of operation" in woodworking machinery, from the crude lumber to the finished product. It is one of a series intended ultimately to cover all American industry, which is in course of preparation in accordance with the standard fixed by the American Engineering Standards Committee, and is in form to be adopted by States and municipalities, or promulgated by order of an industrial commission. It may also be used by industrial establishments which use woodworking machinery as a means to test and standardize their safety equipment. The purpose of the code is to create conditions that would ensure reasonable safety for life, limb and health. Where practical difficulty or unnecessary hardship would result from following the code it is suggested that enforcing authority may grant exceptions from its literal requirements, or permit the use of other devices or methods, but only when it is clearly evident that equivalent protection is thereby afforded.

The Department has also received safety pamphlet No. 9 "Fencing and Other Safety Precautions for Power Presses" published by the British Stationery Office, also a pamphlet "Safety Standards for Elevators, Escalators, Dumbwaiters and Hoists," published by the Department of Labour and Industries of Pennsylvania, United States.

Posture and Rest in Muscular Work

The British Industrial Fatigue Research Board has recently published its report No. 29 showing the decisions arrived at as the result of two experimental investigations into the influence of rest pauses and changes of posture on capacity for muscular work. It points out that in spite of the general tendency to displace manual work by machine work, there still remain many occupations where the demands made upon the workers are mainly physiological, and that it would be in the best interest of both workers and employers that heavy manual tasks should be performed in such a way as to ensure the minimum of fatigue and consequently the greatest efficiency. The experiments were conducted with the dynamometer, a machine for testing the strength of the back and arm muscles. A summary of the results is given as follows:—

The strength of pull, or weight-lifting power shows considerable variations at different heights above floor level. Taking the floor level value as 100, it gradually sinks to a minimum value of 72 to 81 at 14 to 17 inches above the floor, and then increases until it attains a maximum of 107 to 142 at a height of 28 inches above the floor. At greater heights it falls rapidly. The weight-lifting power is only 2 per cent less when the subject stands on one leg instead of two, but it is just over half as great when he uses one hand instead of two.

When the dynamometer is pulled at regular intervals the initial strength of pull falls rapidly for about 4 minutes, and then for a long time keeps at a nearly constant level (the "steady state"). The height of this depends on the frequency of the rhythm, being 53 per cent on the initial height when contractions were made every $1\frac{1}{2}$ seconds, and 85 per cent on it when made every 4 seconds.

In most of the experiments on rest pauses, the duration of the rest periods was to that of the work periods as 1 to 4, or as 2 to 3. If the subject of experiment remained motionless during the rest period, the total work done was always less (sometimes 28 per cent less) than when no rests whatever were taken; but if the subject gently bent his shoulders back and moved his arms about, these changes of posture caused a tremendous reduction in the fatigue effect. The total work done was 2 to 14 per cent greater than when no rests were taken, and the strength of pull remained at a constant level for as long as the experiment was continued (e.g., 88 minutes). When no changes of posture were made during the rests, the strength of pull continued to fall for most if not all of the experiment.

The posture effect is probably due in chief part to the influence of the postural changes on the circulation, as was suggested by the following experiments. (1) It was found that if the strength of pull was determined (a) when standing; (b) when sitting, and (c) when al-

ternately standing and sitting, the average strength of pull in (c) was 6 to 15 per cent greater than the average of (a) and (b). Presumably the alternate standing and sitting movements, being of a somewhat different character, promoted the circulation. (2) If an occasional pull were made during the rest pauses of a "posture-unchanged" experiment, the fatigue effect was considerably diminished in spite of the extra work done, as each pull of itself promotes the circulation. (3) If the shoulders were bent back about $2\frac{1}{2}$ inches during each individual pull, instead of being kept immovable, the fatigue effect was greatly diminished, and the strength of pull was almost as great when no postural changes were made during the rest pauses as

when they were made. (4) If a hot bath were taken 20 minutes before an experiment the fatigue effect was very much more pronounced, presumably because some of the usual blood supply was diverted from the muscles to the skin.

Rest pauses of the same relative duration to the work periods were taken at intervals of $2\frac{1}{2}$ seconds, 10 seconds, 40 seconds, 2 minutes, and 5 minutes. It was found that the capacity for work is very little affected by the length of the interval.

The pulse showed no greater acceleration in the experiments when the posture was changed during rest pauses than when it was not changed, in spite of the fact that 30 per cent more work was being done.

Standard and Scheduled Hours for Women in United States Industry

The Women's Bureau of the United States Department of Labour, in its sixth annual report, gives the conclusions reached through an investigation conducted by the Bureau into the scheduled working hours of women employed in the industries of thirteen States on September 15, 1922. The States covered by the investigation were as follows: Alabama, Arkansas, Georgia, Indiana, Iowa, Kentucky, Maryland, Missouri, New Jersey, Ohio, Rhode Island, South Carolina, and Virginia; and two cities outside these States, Philadelphia and Chicago were also included in the inquiry.

Information was secured on the scheduled hours of 162,792 women, employed in 1,709 plants. Almost one-fifth of these women had an eight-hour day or less, over one-third a 9-hour day, and nearly one-fourth more than 9 hours. In South Carolina, over four-fifths of the women, and in Georgia over three-fifths, had a daily schedule of 10 hours or more, while Iowa and Maryland, with practically one-third or more of the total number of the women included in the inquiry, were scheduled for a day of eight hours or less. The other States fell between these extremes.

A 50-hour week was the standard for the largest group of women, and over one-third had a week of 48-hours or less. In respect to the 48-hour week Rhode Island, New Jersey, and Maryland took the lead, with approximately 68 per cent, 55 per cent, and 52 per cent respectively, of the women reported in each, showing such a schedule. An overwhelming majority of the South Carolina women, on the other hand, regularly put in more than 54 hours a week, while in both Georgia and Alabama practically two-thirds of the women had a weekly schedule of more than 54 hours.

Differences were shown in the hour policies of two industries employing large numbers of women—namely, the manufacture of textiles and clothing. While a day of between 8 and 9 hours was most common in the clothing in-

dustry, a 10-hour day was customary for the largest group of textile workers. Only 6 per cent of the textile workers had a week of 44 hours or less, in contrast with one-third of the clothing workers showing such a schedule. Practically one-half of the women in the various textile industries had a week of 55 hours or more, as compared with less than 3 per cent in the clothing industry.

The report also gives information with regard to experiments in the reduction of the work day in certain industries to conform with the 8-hour standard. These experiments showed that businesses which have shortened their working week have not suffered by the reduction, judging by such records as had been kept of the output of the plant before and after the change. In certain types of industries where the attention of the worker is of greatest importance, reductions of one or more hours a day brought no decrease in daily production.

Two of the States included in the study, Missouri and Ohio, have laws limiting the day's work in most industries to 9 hours, while three—Alabama, Indiana and Iowa—place no limitation upon the hours of work in any industries.

Correction

Mr. George Wilkinson, chief inspector of mines of British Columbia, writes to correct a statement as to the cause of one of the fatal accidents given in the report on Fatal Industrial Accidents in Canada in the last quarter of 1924, which appeared in the February issue of the LABOUR GAZETTE, on page 232. This statement referred to the death of a miner at Lantzville, British Columbia, on October 29, the cause of death being given as "electrocution when head touched live wire." Mr. Wilkinson gives the correct cause as found by the coroner's jury in their verdict: "Death due to heart failure, no blame being attached to any person."

THE MINING INDUSTRY IN NOVA SCOTIA IN 1924

THE annual report recently published by the Nova Scotia Department of Public Works and Mines on the mines in the province contains full records of the mining operations during the year ending on September 30, 1924. In addition to the usual statistics as to the employment, production and shipments, the report contains much valuable descriptive material regarding general conditions and equipment in the individual mines. The full text is also given of the important report made by Mr. George S. Rice, chief mining engineer of the United States Bureau of Mines, on the "Occurrence of Bumps in the Springhill Colliery". (This report was reviewed in the February issue of the *LABOUR GAZETTE*).

The number of days worked in the coal mines of the province in 1924 was 26 per cent less than in the previous year, while the production of coal was only 19 per cent less. The total number of days worked was 2,480,004 in 1924, as compared with 3,330,204 in 1923. The number of men employed at the collieries was 12,376 and 12,806 for the two years respectively. During the fiscal year 1924 there were 2,139 men working at the surface of the mines, 4,621 were engaged in actual coal cutting, and 5,616 in other labour underground. In addition to these colliery men there was also an average of 2,706 men employed in accessory operations during the year.

The output of coal per man in 1924 was 369 short tons (330 long tons), as compared with 540 short tons (482 long tons) in the previous year. This was the lowest production per man in any year during the past sixteen years, for which period the average rate of production was 543 short tons. In the United States the average production per man in a 15-year period is given as 726 short tons.

The demand for coal had slackened at the close of the 1923 period and the decline continued throughout the year under review, but with some improvement during the latter months. The most noticeable decrease was in the Nova Scotia market, where the sales decreased 335,000 tons, most of this decrease being in the amount consumed in the manufacture of steel and steel products. Shipments to the United States also showed a decided decrease, from 278,978 tons in 1923, to 5,706 tons in 1924. Sales to New Brunswick showed a falling off of 280,000 tons and coal sales for bunker use of 44,000 tons. There was also a slight decrease in the exportations to Newfoundland, Prince Edward Island and St.

Pierre. The shipments to the St. Lawrence market in the fiscal year were 1,570,733 tons of 2,240 pounds, as compared with 1,604,675 tons in the previous year.

The report also deals with fatal accidents in the coal mines, their number, causes and percentages. Comparative figures of fatalities in the coal mines in the United States are given for the period from 1908 to 1922 as well as certain recommendations for the prevention of accidents, including the recommendations contained in the report already referred to in regard to "bumps" at the Springhill Colliery. Thirty fatalities occurred underground and one at the surface. Falls of roof or face accounted for twenty deaths, mine cars or locomotives for five, gas and dust explosions for four, explosive substances for one and electricity for one. One accident, the result of an explosion of gas in Dominion No. 14 Colliery, New Waterford, in July last, led to the following recommendations being made by the Department and adopted by the Dominion Coal Company: (1) That the practice of using electric signals be discontinued in all development places; (2) that where electric bells are used, the battery and cell should be located at a point not higher than thirty inches from the floor; (3) that the maximum voltage for electric bells be specified.

The quantity of coke manufactured in the province during the year was 332,538 tons as compared with 356,657 tons in the previous year. There was also a falling off in the quantity of tar and of benzol gas manufactured from coal.

Seven hundred and fifty ounces of gold was produced during the year, an increase of 215 ounces as compared with the previous year. There were 1,269 tons of arsenical concentrates, containing approximately 288 tons of metallic arsenic shipped during the year. The report states that while this may be considered a fair start in this industry, the interest in, and demand for, white arsenic appear to be keen and firm, but those interested have not secured sufficient working capital to develop mines or install the necessary equipment to mine or prepare this mineral at a cost and in a quantity to give adequate returns.

Increases were shown in the quantity of silicate brick manufactured during the year of 64,000; in the mining and shipment of crude and calcined gypsum of 104,921 tons; and in the production of salt of 1,328 tons.

NOTES ON LABOUR UNION ACTIVITIES

Dates of Coming Conventions

Dominion Railway Mail Clerks, at Toronto, in June.

Canadian Association of Stationary Engineers, in June.

Associated Actors and Artists at New York, N.Y., on May 1 to 10.

United Cloth Hat, Cap and Millinery Workers' International Union, at New York, N.Y., May 1 to 10.

Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees at Kansas City, Missouri, May 1 to 14.

Order of Railway Conductors at Minneapolis, Minnesota, on May 4.

American Federation of Musicians at Niagara Falls, New York, on May 11 to 16.

International Union of Mine, Mill and Smelter Workers, at Denver, Colorado, on May 11.

Brotherhood of Railroad Station Employees, at Manchester, New Hampshire, on May 12.

Brotherhood of Railroad Trainmen at Cleveland, Ohio, on May 12.

American Wire Weavers' Protective Association (executive board meeting) at New York, N.Y., on May 15 and 16.

Boot and Shoe Workers' Union at Montreal, Quebec, on May 18.

New Brunswick Federation of Labour

The twelfth annual convention of the New Brunswick Federation of Labour was held at Fredericton on March 17, 18 and 19, with president J. E. Tighe in the chair.

The following resolutions were adopted by the Federation:—

1. Requesting the Government to redraft the Factories Act.

2. Urging on the Government the need for passing Mothers' Allowance and Minimum Wage Acts at this session of the Legislature.

3. Requesting amendments to the Workmen's Compensation Act to provide that in all cases of death payments to widows and children the amounts shall be \$30 and \$7.50 respectively.

4. Requesting that the New Brunswick Power Act be amended to make it lawful for the City of St. John to sell hydro current in the county of St. John.

5. Urging the Government to provide free school books in all public schools.

6. Urging the Government to pass legislation giving effect to the recommendations of the Commission of Inquiry into Mothers' Allowance.

7. Requesting amendments to the City of St. John Commission Act to provide that a majority vote of the mayor and commissioners will be all that is necessary to pass a bond issue.

8. Urging the Government to pass the necessary legislation to give effect to the recommendations of

the Commission of Inquiry into Minimum Wage Act for Women and Children.

9. Requesting the Government to give labour representation on all public boards and commissions appointed by it.

10. Requesting that the Educational Act be amended to provide for election of the members of school boards appointed by the municipalities.

11. Instructing the officers of the Federation to approach the Government with a view to having them increase the salaries of the members of the Workmen's Compensation Board to at least that paid the members of the Nova Scotia Board.

12. Expressing the sympathy of the Federation for the Nova Scotia miners and urging the delegates and local unions to do all in their power financially for them.

13. Expressing the Federation's appreciation of the Government in advancing vocational education in the province and for passing the necessary orders in council to provide for the examination and licensing of master and journeymen plumbers.

In the report of the special committee on the mothers allowance and minimum wage acts, the committee endorsed the recommendations of the Royal Commission with respect to mothers' allowances (LABOUR GAZETTE, June 1924, page 481), the committee however recommending that the administrative board consist of five persons two of whom should be women.

A delegation from the Federation subsequently waited upon the provincial government and presented its requests for legislation as outlined in the foregoing resolutions. A cordial hearing was given them by the Government which expressed its intention to go through with the development of the Grand Falls under public ownership as recommended last year, to look carefully into the recommendations regarding the Workmen's Compensation Act and other matters including the provision of free school books up to about Grade Five. The Government stated that it was committed to Mothers' Allowances and in favour of a Minimum Wage Act, but did not think legislation would be passed at the present session.

The next convention will be held in Fredericton.

The election of officers for the ensuing year resulted in the re-election of Mr. J. E. Tighe of Saint John, as president, and Mr. George R. Melvin, Saint John, as secretary-treasurer.

Fishermen's Union in Prince Edward Island

A fishermen's union has been organized in Prince Edward Island under authority of a statute passed at the last session of the legislature of the province (chapter 26). The act

provides that fifteen or more fishermen in any district may become incorporated as a local "station" of the Fishermen's Union of Prince Edward Island. The objects of the unions are stated as follows:—

(a) to procure information as to the best methods of curing and preparing fish for markets; the transportation and marketing of fish and fish products and the purchasing of fishing material and fishermen's supplies on a co-operative basis.

(b) to take united action upon matters arising in respect to the welfare of the fishermen and the regulations pertaining to the fisheries and to make representations and furnish information to the proper authorities upon all matters of interest to fishermen.

(c) to assist in the protection and conservation of the fisheries.

(d) generally to improve and elevate the material, intellectual and social welfare of the members of the union.

A similar organization came into existence in Nova Scotia in 1905 as the result of legislation passed by the Nova Scotia legislature providing means for the incorporation of such associations. In 1913 the union was practically dissolved, most of the branches ceasing to operate. Early in 1919 the branch at Clark's Harbour was reorganized and a few months later the branch at Canso was revived, both these unions now operating as independent units. Another independent union of fishermen is that of the weir owners of St. John and Charlotte counties, New Brunswick. These fishermen's associations are not exactly similar to the ordinary union of wage-earners, being rather organizations of producers. They exist for the purpose of protecting the interests of their members, to take co-operative action on matters arising in respect to the fisheries, make representations and furnish information to the proper authorities in respect to the fishing industry.

Edmonton Trades and Labour Council

The Edmonton Trades and Labour Council, at a recent meeting referred to its executive committee the question of notification of minor accidents. Many such accidents, it was stated, were never reported to the employers, as the law requires, because of their apparent triviality. But in some instances these misdeeds develop into serious complications, such as blood poisoning, sometimes with the result that the disabled man gets no compensation because of the difficulty of establishing proof as to origin. Some of the speakers explained the necessity of having valid corroborative evidence of all accidents, no matter how trivial, and urged that in all cases of accident a report should be made to the employer.

Vancouver Trades and Labour Council

At a recent meeting of the Vancouver Trades and Labour Council it was reported that a

scheme of health insurance for British Columbia was in preparation which was expected to meet with the approval of the Medical Association. The parliamentary committee of the Council reported that its members had met with the doctors and discussed with them a proposed bill on this subject. Efforts are now being made to collect all health insurance statutes and bills of other provinces and countries. When these have been secured the committee will draft a health insurance bill which it will present to the council for recommendation or submission to the Provincial Government.

Central Council of Catholic Syndicates

At a meeting of the Central Council of Catholic Syndicates, at Three Rivers in March, it was reported that the organization of a union of stationary engineers and of chauffeurs holding government certificates was practically complete. The butchers also had completed an organization.

Miners' Officials confer on Working of Co-operative Plan

A conference was recently held at Indianapolis, Indiana, between John L. Lewis, president of the United Mine Workers, and officers of District 11 and members of seven local unions, operating under a co-operative plan in the mining and selling of coal, to learn whether the system seeks to evade the union wage scale. An examination will be made into the financial condition of the mines in question. According to press reports President Lewis said that pending the examination no further action would be taken. Under the co-operative plan miners do not receive a guaranteed wage but divide the profits from the sale of coal with the operators. Union officials claim that in some instances under this plan miners have received less than the union wage scale. The union, it is stated, has no objection to co-operative mining where the union wage scale is paid.

President Green on "Joint Responsibility" in Industry

Mr. William Green, president of the American Federation of Labour, in an address on March 21 to the undergraduates at Harvard University on "Modern Trade Unionism," referred with approval to recent efforts to find common grounds upon which employers and workmen might meet. He said trade unionism refused "to accept the oft-expounded theory that the differences between capital and labour, between employer and employees, are irreconcilable." Maintaining the right of workers to organize and to practise collective bargaining,

he also declared the right of employers "to control, direct and manage industry and to receive a fair return upon invested capital." He said: "In expounding this philosophy I am conscious of the fact that there are employers of labour (so-called captains of industry) and workers in industry (so-called members of the proletariat) who take sharp issue with the views here expressed and the conclusions reached. That is to be expected. It is both logical and natural. . . . Obviously modern trade unionism is opposed to these two extremes, and of necessity is forced to contend against the vigorous opposition which emanates from these groups. Confronted by hostile employers and the workers' revolutionary group, trade unionism is pursuing its own policy, fighting for public acceptance of its creed and philosophy. . . . " "The new idea of joint responsibility in approaching the solution of industrial problems on the part of the employers, management and employees is being tried in various lines of industry. As a result of the shopmen's strike in 1922, the management and employers of the Baltimore and Ohio Railroad have been working together in a constructive way, and with what seems to be most successful results. In these and in various other ways the organizations of labour are adjusting themselves to the marked changes which have come through education and the modernization of industry. The union of the workers is not standing still. It is consolidating the gains of the past and pressing courageously along the highway of progress. . . . Working men and women are no longer mere fixtures in industry, but instead are intelligent, understanding human beings, with a concept of life which emphasizes the cultural and spiritual rather than the material."

Trade Union Organization in Great Britain

The General Council of the British Trades Union Congress has instituted an inquiry into methods of trade union organization, in accordance with a decision of the Hull Congress last September. (LABOUR GAZETTE, October, 1924, page 863). The Hull resolution insisted particularly on the following points: (1) That the number of trade unions should be reduced to an absolute minimum; (2) That organization by industry should be aimed at as far as possible; (3) That a united front should be formed for improving the standards of life of the workers.

The International Federation of Trade Unions in a communication recently issued to the press, states that in view of the rapid growth of organizations of transport workers, unskilled workers, municipal workers, etc., which are outside the scope of trade organi-

zations pure and simple, a strictly industrial basis of organization in Great Britain would appear to be almost impossible. The development of the organizations mentioned has already led to difficulties, and the General Council is now attempting to adopt a fixed policy which will facilitate the united front without endangering to too great an extent the principle of purely occupational or purely industrial organizations.

Saskatchewan Minimum Wage Board Reorganized

The Minimum Wage Board of Saskatchewan was reorganized during March, the members now being as follows: Mr. John A. Mathers, of Moose Jaw, chairman; Mr. J. K. R. Williams, of Regina, Mrs. F. M. Eddie, Regina; Mr. Joseph Keleher, Moose Jaw; and Mrs. W. Allan, Moose Jaw; Mr. Thomas Withy, of the staff of the Bureau of Labour and Industries, has been appointed secretary of the Board. Mr. W. F. Dunn, of Moose Jaw, the retiring chairman, had held this position since the Board was established under the Minimum Wage Act of 1919. New orders issued by the Board last year were noted in the December issue of the LABOUR GAZETTE. These orders reduced by \$1 the existing minimum rate of wages for experienced female employees in shops and stores, in laundries and factories, mail order houses, and hotels, restaurants and refreshment rooms.

Brickmakers Claim Exemption from Eight-Hour Day

Representatives of the brickmaking industry in British Columbia appeared early in March before the Board of Adjustment under the Hours of Work Act, 1923, to ask exemptions from the eight-hour day provision. They declared that the "open-air process" in brick-making could not be carried on for more than eight months out of every twelve, and claimed that it would be in the best interests of employers and employees that a greater number of hours be allowed during the working season. The board of adjustment promised careful consideration of the application reserving their decision.

The legislatures of Quebec, Ontario, Manitoba and Alberta concluded their sessions in the early part of the present month, many important measures affecting labour having been enacted. An account of these measures will be given in a future issue of the LABOUR GAZETTE.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Seventh Session Opens on May 19

PREPARATIONS for the Seventh Session of the International Labour Conference, to be held in Geneva on May 19, are well advanced.

The session will be devoted mainly to a category of questions to which the attention of the International Labour Organization has frequently been called, but which has not so far been dealt with, namely, social insurance. Provisional reports on various branches of social insurance, prepared by the International Labour Office, will be presented to the Conference in order to facilitate a general discussion on the problems involved. One department of social insurance, namely, Workmen's Compensation, will be the subject of special consideration, with a view to the possible adoption, provisionally, of a Draft Convention for final adoption at the 1926 Session. In accordance with the usual practice, the Office has collected, by means of a questionnaire, the opinions of Governments on this matter, and has published them, together with suggestions for a Draft Convention in conformity with them. (LABOUR GAZETTE, November, 1924, page 961; December, page 1069).

The Conference will also consider, for final vote, the three Draft Conventions and the Recommendation, provisionally adopted at the last Session, concerning equality of treatment as regards workmen's compensation, weekly rest in glassworks and night work in bakeries. The text of these proposed Draft Conventions was given in the LABOUR GAZETTE for August, 1924. The vote will be taken in the light of the observations and proposals for amendments received from governments and published by the Office.

Apart from these questions, the Conference will in the usual way be called on to deal with a number of matters relating to the general working of the Organization; for example, the Report of the Director, covering the year 1924, the Election of the Governing Body of the International Labour Office, and certain Amendments to the Standing Orders.

Great Britain and the Maritime Draft Conventions

A Government bill to give effect to the Draft Conventions for the amelioration of conditions of labour at sea is before the British Parliament under the title "Merchant Shipping (International Labour Conventions) Bill." When an amendment was proposed in the House of Lords, to make the act effective only when other powers have enacted similar legislation, Lord Peel, First Commissioner of Works, defined the position of the British

Government on the question as follows: If Great Britain, as a great shipping Power, did not ratify the Conventions, probably they would die altogether, for other countries were rather apt to wait for and follow the example set by Great Britain in these cases. While he agreed that it was generally best that Conventions should be ratified simultaneously by the various countries, he suggested that in a comparatively small case like the present it would be a mistake for Great Britain to lag behind and not to take action at once. "If you ratify with reservation," he continued, "it is almost an invitation—especially coming from a great shipping power like Great Britain—for other countries to ratify with other reservations; and the result is that these Conventions fall to the ground."

Canadian Delegate to Second Conference of Labour Statisticians

The Second International Conference of Labour Statisticians will meet at Geneva on April 20, under the auspices of the International Labour Office. The purpose of the conference is to continue the work begun at the conference held at Geneva in the month of October, 1923, by way of discussing methods of facilitating the exchange between countries of comparable data regarding labour conditions, and in this instance to discuss more particularly the following questions: 1. Classification of industries; 2. Cost of living index numbers; 3. Statistics of real wages; 4. Unemployment statistics.

Mr. W. R. Tracey, of the Dominion Bureau of Statistics, will represent the Government of the Dominion of Canada at the Conference. Mr. Tracey was already in Geneva by arrangement with the Health Section of the League of Nations. He is familiar with labour statistics, having been for several years in the Statistical Branch of the Department of Labour at Ottawa. The proceedings at the first International Conference of Labour Statisticians were outlined in the issue of the LABOUR GAZETTE for December, 1923.

Coming Empire Labour Conference

Mr. J. S. Middleton, Assistant Secretary of the Labour Party of Great Britain, states that a provisional agenda has been drawn up for a British Empire Labour Conference to be held next July. The final agenda will be settled by the labour parties of the Dominions concerned, but one of the subjects which the labour party of Great Britain proposes for discussion is the ratification of the International Labour Convention concerning the use of white lead in painting and the question of the prevention of anthrax.

RATES OF WAGES AND HOURS OF LABOUR IN CERTAIN TRADES AND OCCUPATIONS IN CANADA, 1920-1924

THE accompanying tables of wages and hours of labour are supplementary to the information given in the bulletin entitled "Wages and Hours of Labour in Canada, 1920-1924" issued with the January, 1925, number of the LABOUR GAZETTE which contained information on this subject applicable to various classes of trades and occupations as follows:—building trades, metal trades, printing, electric railway operation, electric light and power production, the manufacture of textiles, clothing, packed meats, pulp and paper, carriages, furniture, sash and doors, rubber, boots and shoes, harness and saddlery, and tobacco, also lumbering and saw milling, steam railways and mining. The bulletin referred to is No. 7 of a series of reports dealing with wages and hours of labour in Canada which has been issued by the Department of Labour containing wage rates and hours back to 1901 in certain cities throughout Canada. Apart from the wage rates and hours these bulletins contain index numbers for the different years applicable to the various industrial groups to which the reports relate.

The main object of these reports is to show the changes in wage rates and in hours during the periods covered. In each report the figures given constitute as far as is possible a continuous record and in each instance throughout the report the figures are from the same source, continuity being thereby assured within reasonable limits. Information is secured from representative employers, from labour organizations and from industrial agreements each year.

Since the compilation of the material for Report No. 7 tables have been compiled covering a number of other branches of industry and the different occupations involved therein. The information obtained for these additional compilations is presented herewith; the returns in question relate to establishments and occupations as follows: flour mills, bakeries and confectionery, breweries, distilleries, tanneries, cartage and other local transportation, grain elevators, longshoremen, laundries, telephones, electric power, and civic labourers, policemen and firemen. In most instances wages are shown by samples for the various industries.

TABLE I—SAMPLES OF RATES OF WAGES AND HOURS OF LABOUR IN
FLOUR MILLS

Occupation	Unit	1920		1921		1922		1923		1924

*Eight hour day with one day off in turn

EMPLOYMENT AND WAGES IN VARIOUS INDUSTRIES IN CANADA

THE Dominion Bureau of Statistics has recently issued reports on the coffee and spice industry, the wine industry, and the flour milling industry in Canada during 1923. Previous reports in this series relating to other industries were outlined in the *LABOUR GAZETTE* for March, 1925, and previous issues.

Coffee and Spice Industry, 1923

The number of active establishments in the coffee and spice industry in Canada in 1923 was 51, located as follows: Ontario, 17; Quebec, 11; British Columbia, 7; Manitoba, 6; Alberta, 3; New Brunswick, 5; and Nova Scotia, 2. The amount of capital invested in the industry in 1923 was \$7,964,532 as compared with \$8,032,569 in 1922, this being a decrease of \$68,037. The province of Ontario led in the amount of capital invested with \$2,766,384, Manitoba had \$1,788,534; Quebec, \$1,530,898; British Columbia, \$486,036; Alberta, \$73,317; and the maritime provinces, \$1,319,363. The total value of all products for the year 1922 was reported at \$14,868,283, whilst for 1923 it was \$14,177,068, a decrease of \$691,215, this being largely accounted for by a decrease in value of some of the principal products.

The total number of employees was the same as in 1922, namely 1,116 (701 males and 415 females) but the total payroll was \$28,376 less than the amount reported for the previous year, the total amount paid in salaries and wages in 1923 being \$1,423,383. There were 56 salaried officers of corporations, who received \$205,033, 36 general superintendents and managers, who received \$99,648; 27 technical experts, accountants, etc., who received \$56,938; 307 clerks, stenographers, salesmen, etc., who received \$488,498; and 690 employees on wages, who received \$573,266. The height of maximum employment was reached in the month of October with a total of 722 wage earners employed, whilst the minimum employment was reached in January with a total of 639. The average number of days each establishment was in operation on full time during the year was 272.7, on part time 15.0, and idle, 16.3. The number of hours worked by wage-earners per day or shift was 8.4 and per week 47.5.

The Wine Industry, 1923

There were 16 establishments reporting operations in the wine industry of 1923, of which 13 were in Ontario, 2 in British Columbia, and one in Manitoba. The total capital

employed in the industry was \$2,257,413, this being an increase over the amount reported for the previous year of \$317,582. Of the total capital investment, \$2,177,828 was invested in Ontario and \$79,585 in the other provinces. The total value of the products on rose from \$1,136,075 in 1922, to \$1,624,382 in 1923.

The total number of employees rose from 175 in 1922 to 189 in 1923, an increase of 14, whilst the total payroll also rose from \$189,549 in 1922 to \$197,728 in 1923. Salaried officers of corporations numbering 10 received in salaries \$3,280, general superintendents and managers numbering 6 received \$19,460; technical experts, accountants, etc., numbering 5 received \$8,990; clerks, stenographers and salesmen numbering 38 received \$51,271; wage earners numbering 100 received \$84,858; and outside piece workers numbering 30 received \$340. The month of maximum employment was October with a total of 175 wage earners, whilst the month with the minimum number of wage earners at employment was February with 76. The number of days in operation on full time in 1923 was 244, on part time 3.4, and the number of days idle was 56.6. The number of hours worked per day or shift was 8.7 and per week, 49.9.

Flour and Grist Milling Industry, 1923

The report on the flour and grist milling industry during the year 1923 covers the operations of 1,387 plants. Of these 560 were flour mills and 827 were grist and feed mills. There were 679 of these mills in Ontario, 436 in Quebec, 66 in Saskatchewan, 61 in Alberta, 46 in New Brunswick, 37 in Manitoba, 30 in Nova Scotia, 25 in Prince Edward Island and 7 in British Columbia. Compared with 1922 there was a decrease of \$9,502,314 in the capital invested, the total capital investment for the year being \$60,556,587, of which \$56,426,207 was in flour and grist mills, and \$4,130,380 in feed mills. The total value of production in the industry fell from \$166,881,455 in 1922 to \$154,895,991 in 1923, or a decrease of over 7.7 per cent, which is accounted for in the cheaper cost of grains in the latter year. The various grades of flour showed decreases in the average selling price per barrel ranging from 27 per cent for fall and winter to 15 per cent for spring. Chopped feed, low grade or feed flour and offal not specified, showed decreases in selling price per ton of approximately 11.3, 9 and 7 per cent respectively.

The total number of persons employed in the industry was 6,786, of whom 1,286 were salaried employees and 5,500 were wage-earners. Total payments for services amounted to \$7,450,428, of which \$2,321,738 was for salaried and \$5,128,690 for wages. The average salary paid was \$1,805 and the average wage \$932. Maximum employment reached the highest point in the month of November and the minimum in July. The average employment for the year in flour and

grist mills was 4,524 males and 98 females. In feed mills the maximum of employment was reached in April and the minimum in July. The average number of employees by months in the feed and chopping mills was 878. The average number of days each establishment was in operation on full time during the year was 216.28 in flour and grist mills and 190.98 in feed and chopping mills. The average hours worked per day were 9.7 and per week 57.9.

THE EMPLOYMENT SITUATION AT THE BEGINNING OF MARCH, 1925, AS REPORTED BY EMPLOYERS

THE trend of employment at the beginning of March was favourable; the upward movement, though not pronounced, contrasts with a very slightly downward tendency indicated on the same date of last year. Returns were received by the Dominion Bureau of Statistics from 5,696 firms, employing 715,158 persons, or 6,921 more than were on their pay-rolls in the preceding month. The index number, reflecting this comparatively small increase, rose from 86.1 in the preceding month to 87.0 on March 1, as compared with 90.7, 89.9, 81.9 and 88.0 on March 1, 1924, 1923, 1922 and 1921, respectively. The changes in employment since the beginning of 1923 are illustrated in the accompanying chart.

Manufacturing was decidedly more active, but employment in other industries on the whole showed declines, partly seasonal in character.

Employment by Provinces

Firms in all except the Prairie Provinces reported improvement; the gains in Ontario were most extensive.

Maritime Provinces.—Employment in manufactures, particularly in the iron and steel, sugar, confectionery and textile divisions, increased extensively, while there was also greater activity in coal mining on March 1. Construction, however, was slacker. Statements were tabulated from 500 employers, whose pay-rolls aggregated 60,832, as compared with 58,998 on February 1. Reductions in personnel were registered at the beginning of March, 1924; the index numbers for the two dates are, however, very much the same.

Quebec.—Logging and construction showed curtailment, but there were gains in manufacturing and transportation. Within the manufacturing division, the largest increases were in the textile, iron and steel, pulp and paper and lumber industries. Additions to staffs on a somewhat smaller scale took place

in leather, biscuit, sugar, confectionery, clay, stone and some other groups. There was an increase of 1,243 workers in the pay-rolls of the 1,225 reporting firms, who employed 196,818 persons on March 1. The situation at the beginning of the same month of last year was somewhat more favourable; the expansion then provided work for a slightly larger number of workers.

Ontario.—In Ontario, 5,681 persons were added to the working forces of the 2,608 employers whose returns were tabulated and who had 301,265 employees on the date under review. Iron and steel showed marked recovery; improvement was also noted in textile, edible plant product rubber, lumber and non-ferrous metal factories, and in transportation, mining and construction. On the other hand, logging was decidedly less active and trade and communication also registered reductions. Although employment on March 1, 1924, had declined, the index number then was higher than at the period under review.

Prairie Provinces.—There was a generally unfavourable movement in this district; manufacturing, logging, mining, transportation, construction and trade all recorded curtailment, in some cases of a seasonal character. Reports were compiled from 771 firms, employing 90,621 workers as compared with 94,161 on February 1. The contraction is rather larger than that indicated on the same date of last year, when employment was in greater volume.

British Columbia.—Manufacturing reported increased activity, the lumber industry showing the greatest gains. Logging, highway construction and water transportation also afforded considerably more employment than in the preceding month, while trade and railway construction were slacker. A combined pay-roll of 65,622 persons was employed by the 592 firms whose returns were received. On

February 1 they had 63,919 employees. This increase of 1,703 persons was somewhat smaller than that registered on March 1, 1924, but conditions were slightly better than at the earlier date.

The following table gives the index numbers of employment in the five economic areas into which the country is divided:—

(Base January, 1920=100)

District	Relative Weight	Mar. 1, 1925	Feb. 1, 1925	Mar. 1, 1924	Mar. 1, 1923	Mar. 1, 1922	Mar. 1, 1921
Maritime Provinces.....	8.5	81.7	79.1	82.4	90.7	80.7	90.7
Quebec.....	27.5	89.6	89.1	93.5	87.9	80.6	88.7
Ontario.....	42.1	85.0	83.4	89.8	90.8	81.7	86.2
Prairie Provinces.....	12.7	85.0	88.4	89.6	88.9	84.4	91.0
British Columbia.....	9.2	98.1	95.1	97.1	92.0	85.3	87.3
Canada.....	100.0	87.0	86.1	90.7	89.9	81.9	88.0

Toronto.—Employment in Toronto was in less volume than on February 1, manufacturing, communication and trade showing curtailment. Within the manufacturing industry, printing, meat packing and slaughtering establishments recorded the largest losses, while offsetting increases took place in chocolate and confectionery works. Construction reported slight improvement. The pay-rolls of the 756 employers making returns declined by 1,156 persons to 87,794 on the date under review. Employment had also shown a downward tendency on March 1, 1924.

Ottawa.—Firms in Ottawa indicated moderate improvement, the largest increases being in iron and steel and lumber factories. Reports were compiled from 118 employers, whose staffs aggregated 9,061 persons as compared with 8,937 at the beginning of February. These additions to staff exceeded those

Employment by Cities

Improvement was recorded in Montreal, Ottawa, Hamilton and Vancouver, but the situation was less favourable in Quebec, Toronto and Winnipeg.

Montreal.—Manufacturing generally (particularly textile, iron and steel works), and building construction showed increased activity, while road construction and maintenance afforded less employment. Statements were tabulated from 679 firms, whose staffs rose from 96,682 on February 1 to 98,090 at the beginning of March. This improvement is a good deal larger than that noted at the same time in 1924, but the index number then was one point higher.

Quebec.—Construction registered decided losses in Quebec, while the changes in other industries were not large. A combined working force of 8,175 persons was employed by the 90 firms reporting, who had 8,786 workers in the preceding month.

noted on the corresponding date of last year.

Hamilton.—Iron and steel works were decidedly busier, and there was also gains in textiles. Electrical apparatus plants, however, afforded less employment. The working force of the 196 firms reporting totalled 24,263, or 767 more than in the preceding month. Activity declined on March 1, 1925.

Winnipeg.—There were decreases in meat packing and slaughtering establishments and in retail trade in Winnipeg; other industries showed very little net change. Statements were received from 291 employers, who reduced their pay-rolls from 23,777 persons on February 1 to 23,386 on March 1. An unfavourable tendency was also indicated on March 1, 1924, when the index number stood a little higher.

Vancouver.—Considerably greater activity was indicated in manufacturing, especially of lumber products, and in transportation. An aggregate staff of 22,260 persons was reported by the 229 firms making returns, as compared

with 21,433 at the beginning of February. This increase of 827 workers exceeds that recorded on March 1, 1924, but the situation then was not so favourable.

The following table shows the index numbers of employment in these cities:—

City	Relative Weight	Mar. 1 1925	Feb. 1 1925	Mar. 1 1924	Mar. 1 1923	Mar. 1 1922
Montreal.....	13.7	86.7	85.3	87.7	85.9	80.5
Quebec.....	1.1	93.2	101.3
Toronto.....	12.3	81.8	83.0	84.5	85.7	81.9
Ottawa.....	1.3	86.6	86.8	89.3	92.2
Hamilton.....	3.4	80.1	77.3	83.2	89.2
Winnipeg.....	3.3	82.7	84.2	83.8	86.4	82.6
Vancouver.....	3.1	101.8	97.4	94.2	90.4	91.1

Manufacturing Industries

The 3,701 manufacturers reporting had 402,539 persons in their employ, an increase since the preceding month of 13,210 workers, which was greater than the gain registered on March 1, 1924 or 1923. The index number, however, was higher in both those years than on March 1 of the present year. The greatest improvement was in iron and steel, particularly in automobile works and in rolling mills. Lumber, sugar, biscuit, confectionery, textile, rubber, and non-ferrous metal factories also indicated considerable increases. The only large reduction in this division took place in meat packing and slaughtering establishments.

Animal Products, Edible.—Abattoirs, meat packing plants and dairies were slacker than on February 1, according to returns from 142 firms employing 12,539 persons as compared with 13,129 in the preceding month. While all provinces except British Columbia shared to some extent in the losses, those in the Prairie District were most extensive. The index number of employment was on practically the same level as on March 1, 1924.

Leather and Products.—Boots and shoes and miscellaneous leather goods afforded more employment than in the preceding month, 208 persons being added to the staffs of the 192 leather firms making returns. They employed 16,437 persons on March 1. Activity increased in Quebec and Ontario. Practically no change in conditions was shown on the same date of 1924, when employment was in somewhat greater volume.

Lumber and Products.—Seasonal operations in lumber mills caused a fairly large increase in employment and there was also improvement in vehicle, match and other divisions of the group. These gains exceeded those indicated on March 1 of last year, but the index number then was rather higher than at the present time. Statements were tabulated from

676 manufacturers, having 38,983 workers, as compared with 37,707 on February 1. British Columbia, Quebec and Ontario registered the most pronounced gains.

Plant Products, Edible.—Sugar, syrup, biscuit, chocolate and confectionery works made large additions to staffs, but the production of starch and glucose showed a falling off. Firms in Ontario, the Maritime Provinces and Quebec recorded a large share of the general increase. An aggregate working force of 24,989 persons was employed by the 311 firms making returns, who had 24,077 workers in their employ on February 1. Expansion on a much smaller scale was noted on March 1, 1924, and the index number then was very slightly lower than at the same date this year.

Pulp and Paper.—The production of pulp and paper afforded considerably more employment, but there were offsetting reductions in printing and publishing establishments. Quebec reported the bulk of the gain. The firms reporting, 450 in number, enlarged their paylists from 49,410 on February 1 to 49,666 at the beginning of March. This net increase of 256 persons was greater than that shown on March 1 of last year, but the situation then was rather more favourable.

Rubber Products.—The production of rubber goods in Ontario, and to a less extent in Quebec, afforded more employment than in the preceding month. This upward movement is more pronounced than that reported on the same date in 1924, and the index number this year stood several points above its level at that time. Thirty-one manufacturers of rubber goods employed 11,314 workers as compared with 10,951 on February 1.

Textile Products.—Cotton, woollen, knitting and garment factories registered considerable improvement, according to returns from 515 textile firms. They increased their working force by 1,579 persons to 67,455 on March 1. There were gains in all provinces, those in Quebec being most noteworthy. Slight curtailment was indicated at the beginning of March of last year and the index number then was lower.

Chemicals and Allied Products.—There were moderate increases in activity in chemical works in Quebec and Ontario, the expansion exceeding that noted on March 1, 1924. Reports were received from 114 employers, whose staffs totalled 6,261 persons as compared with 6,139 at the beginning of February.

Clay, Glass and Stone Products.—Some recovery from earlier losses was indicated on the whole in these industries, although glass plants recorded a slight reduction. The working

force of the 107 firms making returns stood at 6,729, or 145 more than in February 1. Additions to staffs were indicated in Quebec, while firms in Ontario showed declines. The index number at the beginning of March, 1924, stood a good deal higher, but the tendency on that date was retrogressive.

Electrical Apparatus.—Factories turning out electrical appliances in Ontario were rather less busy. According to reports from 35 firms in Canada, their pay-rolls declines from 9,226 persons on February 1 to 9,084 at the beginning of the month under review. No change in employment was reported on March 1, 1924; the index number then was below its present level.

Iron and Steel Products.—Pronounced recovery was indicated in the iron and steel industry, particularly in the automobile works and rolling mills. There was also noted improvement in agricultural implement, railway car, shipbuilding, heating appliance, wire, pipe and sheet metal works and in foundries and machine shops. Ontario firms recorded a large percentage of the gain, while increased activity was also shown in the Maritime Provinces and Quebec. Statements were received from 637 iron and steel firms, employing 109,212 workers as compared with 100,548 on February 1. Employment continues to be in smaller volume than on the same date of last year, despite the fact that the increases on the date under discussion were considerably larger than on March 1, 1924.

Non-Ferrous Metal Products.—There were general but moderate increases in these industries; smelters and refineries, aluminium, gold, silver, platinum, lead, tin and zinc works showed heightened activity. A combined working force of 10,623 persons was employed by the 99 reporting firms, as compared with 10,276 on February 1. This gain was not quite so large as that noted on March 1, 1924.

Miscellaneous Manufactures.—Roofing factories in Quebec recorded larger pay-rolls than in the preceding month. The number of workers employed by the 63 firms making returns in the miscellaneous group was 3,762 on March 1, as against 3,617 in the preceding month.

Logging

Except in British Columbia, there were seasonal losses in logging throughout the country, repeating the movement indicated in recent years in logging. Employment, however, was lower than on March 1, 1924. According to 225 firms they employed 32,166 persons on the date under review as compared with 34,542 on February 1.

Mining

Coal Mining.—The western coal fields registered reductions in employment that were partly offset by increases on March 1 in the Maritime Provinces. The result was a decrease of 327 men in the staffs of the 91 mine operators reporting who employed 25,108. Very much more pronounced contractions were noted on March 1 of last year, but the index number then was higher.

Metallic Ores.—Metallic ore mines in Ontario and British Columbia showed increased activity, the gains being rather larger than those reported on the same date of last year, when employment was in smaller volume. Statements were tabulated from 44 employers, whose staffs increased from 13,217 employees on February 1 to 13,521 at the beginning of March.

Communication

Telephones showed further declines, while no change was indicated in telegraphs. The 164 employers reporting had 21,837 persons on pay-roll as compared with 22,109 at the beginning of February. The greater part of this decrease took place in Ontario.

Transportation

Steam Railways.—In spite of moderate improvement in Quebec and Ontario, there were, on the whole, large reductions in employment in steam railway operation, this occurred chiefly in the Prairie Provinces. The working force of the 103 concerns and divisional superintendents making returns declined by 1,373 persons to 71,482 on March 1. This reduction affected a slightly larger number of workers than did the contraction recorded on the corresponding date of a year ago, when the index number was higher.

Shipping and Stevedoring.—There was a considerable increase in employment in this division in British Columbia and minor gains in Quebec, Ontario and the Maritime Provinces. Returns tabulated from 47 employers showed that they had 9,334 workers as compared with 8,636 on February 1. The gain was greater than that registered on March 1, 1924.

Construction and Maintenance

Buildings.—Firms in Ontario recorded increased activity in building construction, while elsewhere the general changes were small. A combined working force of 16,954 persons was employed by the 284 firms reporting, who employed 16,685 persons in the preceding month. The expansion contrasts with an important decrease at the beginning of March of last year and the index number then was decidedly lower.

Highways.—Employment in this division in the Maritime Provinces, Quebec and Ontario declined, while in British Columbia improvement was noted. The 76 employers making returns reported 5,656 persons, or 690 less than on February 1.

establishments, employing 54,970 persons, or 1,245 less than in the preceding month. Ontario and the Prairie Provinces recorded a large share of the decrease in personnel. Employment was in practically the same volume as at the beginning of March of a year ago,

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

Industry	*Relative Weight	Mar. 1, 1925	Feb. 1, 1925	Mar. 1, 1924	Mar. 1, 1923	Mar. 1, 1922	Mar. 1, 1921	Industry	*Relative Weight	Mar. 1, 1925	Feb. 1, 1925	Mar. 1, 1924	Mar. 1, 1923	Mar. 1, 1922	Mar. 1, 1921

*The term "Relative Weight," is explained in the text.

Railways.—Large reductions in employment were indicated by the 31 concerns and divisional superintendents making returns in this group; they employed 25,996 workers as against 27,102 in their last report. Quebec, the Prairie Provinces and British Columbia suffered most of the loss. The situation on March 1, 1924, was more favourable than at the present time.

Trade

Retail trade showed large declines and there were minor reductions in the wholesale division. Statements were tabulated from 582

when contractions on a smaller scale were registered.

The accompanying table shows the index numbers of employment by industries as at the first of March and February, 1925, as compared with March 1, 1924, 1923, 1922 and 1921. The columns headed "Relative Weight" in the tables in this article show the proportion that the number of employees reported in the indicated district or industry bears to the total number of employees reported in Canada by the firms making returns on March 1, 1925.

EMPLOYMENT OFFICE REPORTS FOR FEBRUARY, 1925

THE business of the offices of the Employment Service of Canada for the month of February was considerably less in volume than during the preceding month, the decline being general throughout the various provinces, in casual, temporary and work of a more permanent nature. A comparison with the corresponding month of the preceding year shows a marked reduction in the transactions, due largely to the casual work offered during the unusually severe weather of February, 1924. The accompanying chart shows the trend of employment since January, 1923, as represented by the ratio of vacancies notified and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, the computations being made semi-monthly. It will be seen that the curves of vacancies and placements rose slightly in relation to applications during the first half of February, followed by a decline during the latter half of the month. A lower level of employment is represented during this year than in the same period of 1924, the curves then indicating a rapid and marked rise caused by the unusual seasonal conditions in Eastern Canada. The ratio of vacancies to each 100 applications was 64.5 and 63.8 during the first and second half of February, 1925. In contrast with a ratio of 80.5 and 84.1 during the same periods in 1924. The ratio of placements to each 100 applications during the periods under review was 61.3 and 58.9, as compared with 77.3 and 78.8 during the corresponding month a year ago.

A summary of the reports from the offices shows that the average number of applications reported daily during the first half of February was 1,398, as compared with 1,428 daily during the preceding period, and with 2,058 daily during the corresponding period of 1924. Applicants for work during the latter half of the month registered an average of 1,230 daily, in contrast with 1,930 daily during the latter half of February a year ago. Employers notified the Service of an average of 902 vacancies daily during the first half, and 784 opportunities daily during the latter half of the month under review, as compared with a daily average of 1,657 and 1,623 vacancies during the month of February, 1924. Vacancies offered to the Service during the latter half of January, 1925, average 913 daily. The Service effected an average of 857 placements daily during the first half of February, of which 509 were in regular employment, and an average of 348 in casual work, as compared with a total average placement during the preceding period of 849 daily and with 1,592 daily

during the first half of February, 1924. During the latter half of the month under review placements averaged 725 daily (428 regular and 297 casual), as compared with an average of 1,521 daily during the corresponding period a year ago.

During February, 1925, the officers of the Service referred 20,195 persons to vacancies, and effected a total of 18,987 placements. Of these the placements in regular employment numbered 11,252, of which 8,865 were of men and 2,387 of women, while placements in casual work totalled 7,735. Opportunities for employment reported by employers numbered 14,283 for men and 5,957 for women, a total of 20,240 vacancies. The number of applications for work was 31,537, of which 23,773 were from men and 7,764 from women. The following table gives the placements effected to date by the offices of the Employment Service:—

Year	Placements		Totals
	Regular	Casual	
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925 (2 months).....	25,281	18,614	43,895

MARITIME PROVINCES

A general slackness in construction activities was noted and municipal relief and public works were affording fewer opportunities than formerly. Compared with the same period last year there was a decline of more than 80 per cent in the volume of work offered in this group in Nova Scotia and of 70 per cent in New Brunswick. Logging with 112 placements in Nova Scotia was approximately as reported for January, but registered a decline from 1924, while in New Brunswick with 82 placements, conditions were about the same as a year ago. Manufacturing industries showed little increase from January, but in both provinces there was recorded a marked reduction from the same period in 1924. During February the placements in regular employment in Nova Scotia were 202 men and 53 women and in New Brunswick 195 men and 78 women.

QUEBEC

Contractions were shown in the manufacturing industries, the work offered being more than 35 per cent lower than at the same time last year. A decline over the preceding period was recorded in logging, and the season was not quite so well advanced this year as during February a year ago. The construction of public works offered employment at

various points, but aside from these and a slight expansion in repairs and small building jobs, very few new opportunities were available. Placements in regular employment numbered 337 men and 392 women.

ONTARIO

A steady call for farm workers was again shown, the 476 vacancies offered being approximately the same in January, but

facturing industries showed very little change, an increased call for rubber workers at Kitchener and iron and steel mechanics at Toronto and Hamilton being met very satisfactorily. Further declines were shown in the service group and difficulty was felt in securing sufficient experienced household workers to meet the demand. In Ontario placements in regular employment were 4,181 of men and 789 of women.

at this season last year a larger number of helpers had been placed on farms. The logging industry registered an interseasonal decline due to the fact that the winter cutting was nearing completion, while log driving had not yet started; vacancies dropped to 1,380 from 2,488 of the preceding month. Construction including outdoor building was at a standstill and in most municipalities sewer work, road clearing, etc., which had been underway as measures of relief to unemployment, were completed. The decline in the number of vacancies reported by employers shows this fairly clearly, the decrease being from 7,032 during January to 3,623. Placements in regular work in this group were approximately the same as during February of a year ago, but it will be remembered that the casual vacancies and placements incident to the unusually heavy snow storms experienced in the Western Peninsula, were extraordinarily high during that time, especially in the Toronto district. The quietness in the building trades should be brightened shortly, as all districts report a good building program for the spring. Manu-

MANITOBA

Industrial conditions showed very little change in this province, the business transacted in manufacturing industries, construction and maintenance and services maintaining approximately the same volume as during the preceding month and during the corresponding month of 1924. Placements in logging numbered 260, being a perceptible decline from the January transactions and a marked reduction from the number of workers sent to camps during February a year ago. The farm group with 545 vacancies and 472 placements showed very little change in business transacted but the superintendents reported favourably for the coming month. Of the placements in regular employment 808 were of men and 300 of women.

SASKATCHEWAN

Greater activity was shown in the farming group, the 707 vacancies offered and 599 placements made registering an increase from last month and the corresponding period a year ago, the gains being shown chiefly in Moose

Jaw, North Battleford, Regina and Saskatoon. Logging, however, with 80 placements, had fallen off considerably during the month. The volume of business transacted in the other industrial groups was about as shown for January, with a perceptible decline in the number of experienced women workers available for household work. Placements in regular employment number 786 men and 289 women.

ALBERTA

A steady and slightly increasing demand (491 vacancies) was recorded in the farm group, the offices at Calgary and Edmonton reporting favourably for the coming month. A reduction was shown in the work available in the construction groups, the decline being registered chiefly in casual work, only 32 placements being made in contrast with 101 during January. Some sewer work and brush clearing was offered by the municipalities to relieve the unemployment situation. Logging continued active with 491 vacancies offered and a placement of more than 480. The offices placed 980 men and 306 women in regular work.

BRITISH COLUMBIA

A slight decline in activities was general throughout February, logging recording only 360 placements as against 516 during the preceding month. An advance in farming was reported, registered mainly near Penticton and Vernon, 157 farm workers being placed as compared with 48 during January and with 104 during the same month a year ago. The construction and maintenance group continued to provide temporary work for a large number of men, although only 612 placements in regular work were recorded. The number of casual jobs filled was 397 as against 175 during the preceding month and 72 during February, 1924. Reports from the Superintendents show a general expansion in the building trades from the preceding year with a brighter outlook for employment in March. The number of men placed in regular employment was 1,376 and of women 180.

Movement of Labour

During February, 1925, the offices of the Employment Service of Canada made 11,252 placements in regular employment, of which 5,902 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 762 were granted the Employment Service reduced transportation rate, 537 going to points within the same province as the despatching office and 225 to other provinces.

In Quebec province 13 bushmen were carried at the low transportation rate to camps within the Quebec zone. From Montreal and Hull

9 bushmen were sent to employment at Sault Ste. Marie, North Bay and Sudbury, Ontario. The transportation certificates issued by Ontario offices numbered 206, all to points within the province. Those who benefited by the reduced rates included 196 bushmen going to Timmins, Fort William, Port Arthur and Sudbury, one boilermaker going from London to North Bay; one boat builder from Sudbury to Sault Ste. Marie; one cook from North Bay to Timmins; a druggist from Toronto to Timmins, 3 riggers from Toronto to Port Arthur; one rod and chain man from Toronto to Sault Ste. Marie and two farm hands to Guelph, Ontario. From the office at Winnipeg, Manitoba, 342 special rate certificates were issued, of which 111 were to farm hands to points near Brandon and Dauphin, 8 were to farm housekeepers, 2 to bushmen and 12 to institutional workers destined for various points within the province. Transfers from Winnipeg to the province of Saskatchewan numbered 26, of which 22 were of farm hands and 4 of domestic workers going to points near Yorkton, Moose Jaw and Estevan. To Calgary, Alberta, were transferred at the reduced rate 3 painters and one farm hand. The 179 workers transferred to Ontario included one boiler maker to Toronto, 170 bushmen and loggers, one handy man, a farm housekeeper and 6 lath cutters going to the vicinity of Port Arthur. The office at Regina, Saskatchewan, transferred one bushman to employment near Dauphin, Manitoba. Within the province of Saskatchewan 67 workers benefited by the reduced rate transportation, of which 38 were bushmen, 20 were farm workers going to various points in the outlying districts. One teacher was transferred from Saskatoon and two from Regina to Estevan, the remaining 6 workers being kitchen help and household domestics. Of the 72 persons transferred to other districts in Alberta one was a farm hand going from Edmonton to North Battleford, Saskatchewan. The provincial transfers included 14 bushmen, 15 farm hands, 5 waitresses and household farm workers, 25 plasterers and building workers, 6 marble and tile setters going to the Calgary zone, and one miner, a dairy man, a barber and a watchman going to various points within the province. From British Columbia 52 workers were placed in employment at a distance, 2 waitresses and one houseworker going from Vancouver to Calgary, Alberta, one farm hand from Vancouver to Edmonton, Alberta, and one farm labourer from Vancouver to Saskatoon. Of the 47 provincial transfers 32 were of bushmen, teamsters, millmen and swamper destined to points near Prince George and Prince Rupert, 3 were miners, 3 rock men, the remaining 9 including carpenters, sheet metal

workers and labourers for the districts near Kamloops, Penticton and Nelson.

Of the 762 workers, who were granted the Employment Service reduced rate, 522 were

carried by the Canadian National Railways, 230 by the Canadian Pacific Railway, 6 by the Pacific Great Eastern and 4 by the Timiskaming and Northern Ontario Railway.

BUILDING PERMITS ISSUED IN FEBRUARY, 1925

ACCORDING to reports tabulated by the Dominion Bureau of Statistics, the value of the building permits issued in 60 cities increased from \$5,433,204 in January to \$5,781,642 in February, a gain of \$348,438 or 6.4 per cent. In February, 1924, the building authorized was valued at \$4,027,780; there was, therefore, an increase in the month under review of \$1,753,862 or 43.5 per cent in this more significant comparison.

Some 47 cities furnished detailed statements, showing that they had issued nearly 600 permits for dwellings estimated to cost over \$2,800,000, and for approximately 900 other buildings valued at more than \$2,800,000. As compared with January, 1925, there were increases in the building permits issued in all provinces except Ontario, where there was a decline of \$900,494 or 31.4 per cent. Quebec showed the greatest actual gain of \$733,978 or 46.5 per cent, but the proportional increases in Nova Scotia, Saskatchewan, Manitoba, and British Columbia were larger. Prince Edward Island, Nova Scotia, Ontario and Alberta registered reductions as compared with February, 1924; Nova Scotia showed the most pronounced loss of \$150,635 or 82.1 per cent. Of the increases recorded elsewhere, that in New Brunswick of \$31,700 or 823.4 per cent was proportionately the largest, while Quebec reported the greatest actual gain of \$1,575,903 or 214.1 per cent.

The value of the building permits issued during February, 1925, in Montreal, Winnipeg and Vancouver was higher than in the preceding month and also than in February of last year. In Toronto there was a reduction as compared with January, but the value greatly exceeded that registered in February, 1924. The building permits issued in Quebec, Shawinigan Falls, Westmount, Belleville, Guelph, Hamilton, Peterborough, Port Arthur, Stratford, Sarnia, York Township, Woodstock, Brandon, St. Boniface, Moose Jaw, Lethbridge, New Westminster, Point Grey and South Vancouver had a higher valuation than in January, 1925, or February, 1924.

The aggregate value of estimated building in 60 cities during the first two months of this year was \$11,214,846, as compared with \$8,481,899 and \$9,813,909 in the same two months of 1924 and 1923, respectively; there was, therefore, an increase of 32.2 per cent in the former and of 14.3 per cent in the latter comparison.

The accompanying table shows the value of the building permits issued in 60 cities during February and January, 1925, and Feb-

ruary, 1924. The 35 cities for which records are available since 1910 are marked with asterisks.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing—Iron, Steel and Products

WINGHAM, ONTARIO.—WESTERN FOUNDRY COMPANY, LIMITED, AND LOCAL 492, INTERNATIONAL MOULDERS' UNION OF NORTH AMERICA.

Agreement to be in effect from February 26, 1925, until February 26, 1926.

Wage basis: on plate and furnace work, percentage shall be 172 per cent. Minimum day rate, \$6.

There shall be no other changes in working conditions.

If after January 1, 1926, a conference agreement is made, the same shall supersede this agreement for the unexpired time.

Transportation and Public Utilities—Water Transportation

VANCOUVER, BRITISH COLUMBIA.—THE SHIPPING FEDERATION OF BRITISH COLUMBIA AND THE VANCOUVER AND DISTRICT WATERFRONT WORKERS' ASSOCIATION.

Agreement to be in effect from December 1, 1925, until December 1, 1930.

Only members of the Association are to be employed when any capable of doing a fair day's work are available.

All dock work except work now being done by certain pilers and specialty workers will be allotted to the Association and all substitutes and additional pilers will be obtained from the Association.

All grain trimming and sacking done by members of the Shipping Federation on boat, in stream or otherwise will be allotted to the Association.

In ordering of gangs for ship work three-fifths of such will be given to the Association, such to be computed on the basis of gross earnings as well as on number of men employed. The one hundred and eighteen ex-employees, now and while in association gangs shall be considered for despatching purposes as members of the Association.

Men employed on Association gangs are to be members of the Association, personnel of the gangs being determined by the Association and the manager of the Shipping Federation.

All gangs must be ordered through and despatched from the despatching bureau.

A member dismissed shall not be prevented from working at another job until case has been dealt with by the Grievance Committee.

No agreement will be entered into by the Federation or any of its members with any other longshoring organization during period of agreement.

Only members capable of doing a fair day's work are to be retained as members of the Association.

The Association will not strike or walk out in sympathy with other employees of the Federation.

A grievance committee, of six members, three appointed by each party shall settle differences or disputes. The committee shall hear, deal with and settle all such differences or if no settlement is reached, dispute shall be referred to a third party satisfactory to both sides whose decision shall be final. Any dispute must first be taken up with the Shipping Federation labour manager, and, if not settled, at once be referred to the grievance committee.

Wages schedules and rules and working conditions of the Shipping Federation shall be maintained and observed during the continuance of the agreement unless altered as provided hereafter.

The working rules and conditions will not be changed except with the consent and approval of both parties.

In the last week of October, 1925, and of each October thereafter during the continuance of the agreement each party shall appoint a committee of three to adjust wages for the ensuing year, as from December 1, following. Wages are to be raised or lowered as conditions at the time of the conference compare with conditions at the time of signing the agreement. If committees cannot agree the question shall be referred to a board of arbitration of three members, one from each party and a third selected by them, decision of the board to be final.

[Rates of wages in effect when this agreement was entered into were: 80 cents per hour with \$1.20 per hour for overtime.]

MONTREAL, QUEBEC.—THE SHIPPING FEDERATION OF CANADA (INCORPORATED) AND THE ASSOCIATION OF THE SYNDICATED LONGSHOREMEN OF THE PORT OF MONTREAL.

Agreement to be in effect from March 19, 1925, until December 31, 1925.

The companies agree to put up a bond of \$2,000 for a guarantee of due performance of the following:

Working hours, day work, 7 a.m. to noon and 1 p.m. to 6 p.m., wages per hour, 62 cents. Night work, from 7 p.m. to 11 p.m. and from midnight until 5 a.m., wages per hour, 72 cents.

Double time on Sunday, Victoria Day, Dominion Day.

When work is required during any meal hour, double time will be paid at prevailing rate until men are discharged.

Nitrate, bulk sulphur, full cargoes of china clay and full cargoes of coal shall be paid at rate of 77 cents per hour, day work, and 87 cents per hour night work.

Coal handling on general cargo vessels shall be paid at rate of 67 cents per hour for day work and 77 cents for night work.

Grain trimming and bagging, per hour, 77 cents day work and 87 cents night work; the running of grain in pipes to be stopped while men go down into the hold to work; two men to stand on deck during that time if necessary.

Men ordered out at night are to start at 7 p.m., and be paid full time until discharged or set to work, with a minimum of one hour's pay if not commencing work.

Night meals,—between 11 p.m. and midnight, are to be supplied or paid for by the ship.

Fifteen men will constitute a gang for discharging and sixteen men for loading according to the nature of cargo and capacity of ship.

Preference of work is to be given to men who have signed the personal agreement.

The above conditions are to apply to all ocean steamships coming into the port of Montreal under the companies' jurisdiction.

In consideration of the wages and conditions the longshoremen agree to put up a bond of \$2,000 as guarantee for due performance of the following:

The union is to supply the necessary men under their jurisdiction to perform work of longshoremen throughout the term of this agreement. Mails and baggage are to be handled at all times at prevailing rates, time to count from time men are ordered. In addition to the contract each longshoreman will sign a personal contract with the company when commencing to work each season.

The two bonds of \$2,000 are to be applied by the Trustees in payment in order of priority of time of any and all judgments or orders of any Court in the Province of Quebec in favour of the other party.

The Association is to have the right to appoint a representative on the wharves.

Transportation and Public Utilities—Electric Railways, Etc.

CALGARY, ALTA.—CORPORATION OF THE CITY OF CALGARY AND VARIOUS TRADE UNIONS.—See under Services.

Services—Public and Municipal

CALGARY, ALTA.—CORPORATION OF THE CITY OF CALGARY AND THE CALGARY FEDERATION OF CIVIC EMPLOYEES.

Agreement to be in effect from February 1,—December 31, 1925. Subject to sixty days' notice thereafter of cancellation.

Preamble.—The city Commissioners will at all times receive a grievance committee. No discrimination shall be shown against employees because of their connection with trade organizations.

Hourly employees are to be paid on the fifth full working day after the 15th and last days of the month.

There will be seven legal holidays and a civic half holiday. All permanent employees are to have also two weeks' holiday per year after one year's service.

Overtime, first hour, time and one-quarter; next three hours, time and one-half; thereafter, double time. Sundays and holidays, double time; double time for calls after 10 p.m. or emergency work, and not less than two hours for any one call. Overtime for monthly men shall be calculated on the proportional rate.

Men on running, double or revolving shift shall be paid one-fourth of a day's pay extra for holiday work, or one hour's pay extra for Sunday work.

Regular working hours, eight hours per day, 44 per week.

Permanent employees, unless affected by the Workmen's Compensation Act, shall come under sickness and accident pay scheme, contributing 75 cents per month, city contributing balance needed.

Promotions shall be made from the staff when applicants have necessary qualifications. Permanent employees dismissed except for cause shall have thirty days' notice or one month's pay, and permanent hourly employees two weeks' notice or two weeks' pay.

In event of failure to make a new agreement within 60 days either party, when requested by other party in writing, within the 60-day period, will agree to allow dispute (if any) to be dealt with under any act, federal or provincial, similar in intent to the Industrial Disputes Investigation Act, that may be in effect within the Province of Alberta.

The agreements between the city of Calgary and the separate trade unions follow:—

Agreement with the Amalgamated Association of Street and Electric Railway Employees of America, No. 533

Wages per hour, Motormen and Conductors, 1st six months, 53 cents; 2nd six months, 55½ cents; thereafter, 60½ cents. Motor conductors, 1st six months, 55½ cents; 2nd six months, 60½ cents; 3rd six months, 65½ cents. Shop and barmen: per hour—foreman carpenter, 88 cents; leading hand carpenter, 83 cents; carpenters, 78 cents; air break and wheel lathe operators, 78 cents; painter foreman, 83 cents; painters, 78 cents; cleaners, washers and yardmen, 52½ cents; truck and car repairers, 1st six months, 55½ cents; 2nd six months, 60½ cents; 3rd six months, 65½ cents; leading hand while so acting, 5 cents per hour extra; foreman while so acting, 10 cents. Track maintenance, per hour, switch repair-man, 60 cents; trackman, 57½ cents; greasers and switch cleaners, 52½ cents. Office staff all paid by the month.

Work on Sundays, one hour extra pay; on legal holidays, time and one quarter. Work on regular day off, double time. Motor conductors training students, 5 cents extra per hour.

Working Conditions—

Motor-Conductors and Conductors.—Hours per day, eight when possible, 48 hours per week.

Runs are to be selected by seniority. Promotions to Inspectorship are to be made from the Motor-Conductors who have over one year's service.

Spare men shall be given preference according to seniority of eight hours' work per day or as nearly eight hours as possible. Spare men reporting at or before six a.m. and not allotted a run shall be paid for a period of one and one-half hours, and for reporting after six a.m., one hour. Spare men are to receive regular overtime rates on legal holidays and Sundays.

Uniforms are to be supplied by the city, full cost being paid after one year's service, and in case of men with under one year's service, half cost.

One month's leave of absence within the year is to be the maximum except in special cases. Not more than 30 days' sick leave shall be granted at any one time, but further 30-day periods up to six months in all may be granted with medical evidence.

The chief inspectors and general foremen may discipline employees for all misdemeanors. The employee may have case investigated by a grievance committee of members of the union who may appeal to the superintendent, or further, to the City Commissioners. Division may finally require matter to be referred to a board of arbitration. Employees when exonerated shall be paid for lost time.

Barn Staff.—Eight hours per day, five and one-half days per week. One hour extra for all Sunday work. In reductions of staff, last on shall be first laid off, provided older employees are capable of doing the work.

Track Maintenance Men.—Eight hours per day, six days per week, one day off in seven. One hour extra to be allowed greasers working Sundays when Sunday is regular day off.

Overtime, trackmen and switch repairmen, time and one-half for all Sunday work.

Agreement with the International Union of Steam and Operating Engineers, Local No. 838

Wages, per hour.—Steam roller engineer, 85 cents; boiler washer, 70 cents; boiler washer's helper, 57½ cents. Other engineers paid per month. Other conditions are governed by the preamble.

Agreement with the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers of America, Local Union No. 528

Wages, per hour.—Teamsters, truck drivers, stablemen, 58½ cents; helpers, 55 cents. Garage men are paid per month, \$164.

Double time for work done on Sundays and holidays, except for men working on their regular shift.

Teams and trucks shall leave the stable or garage at 8 a.m. and remain on the job until 5 p.m. with one hour off for lunch, or until noon on Saturdays. Necessary attention shall be given to the horses both morning and evening. Not more than 3 days in one year shall be lost to employee on account of inclement weather.

Agreement with the United Association of Plumbers and Steamfitters of the United States and Canada, Local No. 496

Wages—Minimum rate to be regular union rate. Hours as specified in the preamble.

Agreement with the International Association of Machinists, Lodge No. 357

Minimum wage per hour, 78 cents. Leading hand, 5 cents extra while so acting. Minimum rate for Specialists, 70½ cents per hour. Hours of work, overtime and holidays as in the preamble.

Agreement with City Hospital Employees' Association, Local No. 8

Salaries and wages, per month—accountant, \$150; collector and investigator, \$118.75; admission and discharge clerks, \$95; switchboard operators, \$85.50; stenographers, female (experienced), \$95; other clerical help, female, \$85.50; storekeeper and purchasing agent, \$166.25; storekeeper bookkeeper, \$118.75; butcher-chauffeur, \$120; plumbers, \$158.10; plumber's helpers, \$110; carpenters, painters, laundry foreman, \$139.50; washerman, \$115. Per week, head ironer, head mangle (female), \$16; other, \$15. Per month, floor polisher, elevator man, porters, corridor cleaners, \$110; orderlies, \$120, \$115, \$110. Chef, general hospital, \$139.50 and meals; 1st cook, \$103 and meals; 2nd cook, \$95 and meals, kitchenmen, \$70, room and board; maids, \$45, room and board.

In the event of any help being required to live in or out the following allowance shall be made: room allowance, \$10 per month; meals, allowance by agreement with hospital manager. The hospital manager shall have the privilege of deciding which employees shall live in or out.

Two weeks' holidays each year with pay after one year's service. An employee who has to work on a holiday will be given another day off instead of extra pay.

The orderlies shall be supplied with uniforms.

Hours per week: for plumber and helper, carpenter, painters, floor polishers, laundry staff, and butcher chauffeur, 44 hours; for clerical or office staff, 47 hours per week; for storekeeper, laundry foreman and chef, as duties may require; for orderlies, cooks, kitchenmen, elevator operators, porters, corridor cleaners and maids, 48 hours per week, with one clear day off in seven.

Agreement with the International Brotherhood of Electrical Workers, Local No. 348

Wages, per day—journeymen linemen, \$6.75; apprentices, \$4.60-\$6.10; groundmen in gangs, \$5.15. Cablemen, journeymen, \$7.55; underground conduit men, \$7.50. Station and inside wiremen, and repair and testing department, journeyman, \$6.75; apprentices, \$4.60-\$5.95. Maintenance and trouble-men, journeymen, \$6.75; arc trimmers, \$4.75-\$5.55. Operators and meter readers, paid by the month. Electrical workers, street railway, per hour, electric welders, 84 cents; electric welders, track (temporary), 77 cents; beginners, 72 cents; armature winders, 80 cents; motor and controller men, 77 cents.

Hours of work, eight, and four on Saturday. An agreement to shift hours shall be made for not less than fourteen calendar days, or shift hours shall be paid at overtime rate. Work outside of regular hours

shall be considered overtime provided maintenance men may work any nine consecutive hours out of the 24 with one hour off for lunch. Maintenance men and arc trimmers, one-half day holiday on the day previous to their day off in lieu of Saturday afternoon.

Overtime—first hour, time and one-quarter; next three hours, time and one-half; thereafter, Sundays and holidays, after 10 p.m., or emergency work (not less than two hours for any one call), double time. Except for men working their regular shift, all time worked on Sundays and Dominion Holidays shall be considered as double time and Saturday afternoon shall be time and one-half, and after 5 p.m. double time.

Ratio of apprentices to journeymen, one to three; in case of inside wiremen and operators, one to one.

All employees shall receive at least one day off each week.

Agreement with the Calgary Civic Employees' Association, No. 37

Wages of caretakers, per month, \$120.90 to \$142.10. Per hour—gardeners, 60 cents; permanent skilled labourers, 57½ cents; permanent unskilled labourers, 52½ cents.

Paving Department, concrete finishers, 65 cents; power department, fitters, 70 cents; helpers, 57½ cents; coal trimmers, 52½ cents. Public Works Department, specialist, 67½ cents; sub-foreman, 60 cents; permanent labour, 52½ cents; street cleaners, 45 cents. Sewer maintenance, pipe layers, etc., 57½ cents; maintenance diggers, 52½ cents. Waterworks, hydrant men, etc., 57½ cents; maintenance diggers, 52½ cents. This agreement does not cover wages for relief work during unemployment periods.

Hours per week, 48.

Agreement with the International Brotherhood of Blacksmiths, Drop-Forgers and Helpers, Local No. 585

Minimum wage per hour, 78 cents. Floorman to receive rate of pay for horse shoeing while doing that work. A blacksmith must have served an apprentice period of four years, with varied experience, learning to operate a fire and successfully to complete a piece of work within a reasonable length of time. The general preamble will govern hours, overtime holidays, and other conditions.

Agreement with the City Hall Staff Association, Local No. 38

Salaries and wages shall be according to schedules as agreed. Nothing in the schedule shall be deemed to establish a minimum or maximum wage for any position.

Hours of work, from 8.30 a.m. to 5 p.m.; one and one-quarter hours off for lunch; Saturday, from 8.30 a.m. to 12.45 p.m.

Suitable uniforms shall be provided for inspectors.

Other conditions are to be governed by the general preamble.

An eight hour day bill applicable to the building trades and steel plants was introduced in the Legislative Assembly of Nova Scotia on April 10 by the member for Cape Breton. The bill provides that no man employed in the industries affected shall work longer than eight hours out of every twenty-four, and not more than six days out of every seven, except in the case of necessary overtime when he may work ten hours a day. The bill was defeated on a division, the Premier stating that the question of jurisdiction on these matters was being considered at Ottawa.

FAIR WAGE CONDITIONS IN WELLAND SHIP CANAL CONTRACTS

THE Minister of Labour issued on March 24 a ruling, effective from April 1, relative to the wages, rates and hours of labour which are observable on the various contracts for the construction of the Welland Ship Canal. This order was based on the labour conditions which are contained in the contracts for Sections 1, 2, 3, 4, 7 and 8, respectively. The contracts in question contain fair wages clauses to the effect that all workmen employed in the construction of this work should be paid such wages as are generally accepted as current from time to time, during the continuance of the contracts, for competent workmen in the district in which the work is being performed, and if there be no current rates in the district, then fair and reasonable rates, and that the hours shall be such as are customary in the trade in the district, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours. The Minister of Labour was also empowered to determine the wages, rates and hours which are current or fair and reasonable and the contractors were required to give effect thereto.

The work of construction on the Welland Ship Canal was begun in 1913, and has been carried on throughout the intervening years with the exception of a short interval during the war. Beginning with contracts for the work at the northern end of the Canal, contracts were awarded from time to time for additional sections extending to the southern terminus at Port Colborne. The work on Section 5, which consists in the main of dredging operations, is practically completed, but no contract has been awarded as yet for Section 6.

The last ruling which was made by the Minister of Labour relative to wages rates, etc., on this work was issued in the spring of 1923, and was based in the main on agreements that had been reached between the contracting firms and representatives of the different classes of labour employed. Application was made to the Minister of Labour during the past winter by the different contracting firms concerned for a revision of the 1923 wages rates, and some of the firms submitted a schedule of rates which in their opinion should be adopted. These proposed rates ranged from a minimum of 25 cents per hour for common labour upward. On receipt of this request the Minister of Labour directed that a special inquiry should be made for the purpose of ascertaining the rates of wages and working hours that are current at present in

the district. This inquiry was made by one of the fair wages officers of the Department of Labour, accompanied by a representative of the Department of Railways and Canals, which latter Department is charged with the supervision of the work.

During the course of this inquiry, an opportunity was granted by the Government officers to the contracting firms affected and

RATES OF WAGES AND HOURS OF LABOUR TO BE OBSERVED ON THE CONTRACT FOR SECTIONS 1, 2, 3, 4, 7 and 8, OF THE WELLAND SHIP CANAL, EFFECTIVE APRIL 1, 1925, AS COMPARED WITH 1923-24

(b) Minimum 12 hours' pay.

to the labour representatives to submit all information in their possession as to the standards which were being observed on other work and which were applicable to the Canal construction. Before acting on this report

the Minister convened and attended a conference of the contractors and labour representatives in St. Catharines and an opportunity was provided in this way for the fullest discussion of the situation in all respects. An opportunity was also afforded to the contracting firms and to the labour representatives to reach an agreement, if possible, by mutual understanding. Efforts made in this latter direction were, however, successful and the Minister's ruling was issued within a few days thereafter.

On the report submitted by the Government officers as to existing wages standards

in the district, certain changes were sanctioned by the Minister of Labour in the schedule from those that had been previously in effect. Changes were also made in the case of some trades in the working hours. The following table contains the rates which have been in force since 1923, as well as those which have just been sanctioned.

The rates as sanctioned in the schedule are subject to further revision from time to time under the terms of contract as may be necessary in accordance with any changes which may occur in current wages, rates and hours in the district.

FAIR WAGE CONTRACTS, MARCH, 1925

DURING March the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to six fair wage contracts awarded by the Department of Public Works. All of these contracts contain the usual fair wage clause as follows:—

All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof. Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor

and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

A statement was also received as to supplies ordered by the Post Office Department, subject to the regulation for the suppression of the sweating system and the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS

Public wharf, Fishermen's Harbour, Nova Scotia. Name of contractor, H. A. Russell Construction Company, Limited, Halifax, Nova Scotia. Date of contract, February 26, 1925. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$4,420.70.

Wharf, Dauphin Beach, Lake Dauphin, Manitoba. Name of contractor, Isaac Silverwood, Dauphin, Manitoba. Date of contract, February 2, 1925. Amount of contract, unit prices as set forth in contract. Approximate expenditure, \$5,990.

Supply and installation of interior fittings in public building, Kamloops, British Columbia. Name of contractors, The Canadian Office and School Furniture Company, Limited, Preston, Ontario. Date of contract, March 10, 1925. Amount of contract, \$4,565.

Docking, etc. Dredge No. 303 *Fruhling*. Name of contractor, British Columbia Marine Engineers and Shipbuilders, Limited, Vancouver, British Columbia. Date of contract, March 3, 1925. Amount of contract, \$7,976.

Installation of heating system, Laboratory, Booth street, Ottawa, Ontario. Name of contractor, W. G. Edge, Limited, Ottawa, Ontario. Date of contract, March 13, 1925. Amount of contract, \$2,200.

Repairs to tug *Fredericton*. Name of contractor, the Pictou Foundry and Machine Company, Pictou, Nova Scotia. Date of contract, March 11, 1925. Amount of contract, \$7,285.

DEPARTMENT OF RAILWAYS AND CANALS

Raising of banks, roads and lock walls west of guard gates above Lock No. 20 of the Cornwall Canal. Name of contractors, Fallon Brothers, Cornwall, Ontario. Date of contract, March 30, 1925. Amount of contract, schedule rates (approximately \$28,789.70 estimated from estimated quantities).

POST OFFICE DEPARTMENT

The following is a statement of payments made in March, 1925, for supplies ordered by the Post Office Department, subject to the regulation for the suppression of the sweating system, the securing of payment to working men and women of fair wages, and the performance of work under proper sanitary conditions:—

Nature of Orders	Amount of Orders
	\$
Making metal dating stamps and type, also other hand stamps and brass crown seals.....	575 69
Making and repairing rubber stamps, dates, etc.	126 24
Making up and supplying letter carriers' uniforms, etc.....	21,265 05
Stamping pads, ink, etc.....	258 70
Mail bag fittings.....	3,758 30
Scales repaired.....	165 55
Letter box repairs.....	67 50

British Bill for Employment of Disabled Ex-Service Men

A bill was introduced in the British Parliament in February to make compulsory upon employers the employment of ex-service men disabled by wounds in the late war, in such proportion to the total number of their employees as may be fixed by the Minister of Labour. A disabled man is defined in the bill as one who is in receipt of a service disability pension. The Minister of Labour may establish in every Employment Exchange district a Committee on the Employment of Disabled Men, consisting of three representatives of employers in that district, three representatives of employees, and three representatives of disabled men. These Committees would supervise the working of the act in their respective districts, fix the special rates of wages to be paid to disabled men when so requested by an employer, issue certificates to men qualified for employment under the act, and withdraw such certificates when it may be advisable to do so.

Employers would not be required to employ particular disabled men or those whom they may consider unsuitable for their work. The ratio of disabled men who must be employed may be varied by the regulations of the Ministry of Labour according to the character of the employment. These regulations, before taking effect, must be approved by Parliament. Employers are not bound to employ their quota of disabled men if a sufficient number of the latter are not unemployed in his district, or if they can prove that disabled men are not suitable for the purpose of their establishments.

The wages to be paid to disabled men would be the standard wages, subject to reductions by the committee on the employers' request. In determining the reduction no account is to be taken of the pension received by a disabled man.

The employment of disabled men is to be compulsory from the commencement of the act, but only in so far as circumstances on that date permit, or as vacancies arise by changes in staff. Employers violating the requirements of the act will be liable to a penalty of £100, with further penalties for continued offences.

The Toronto Board of Police Commissioners passed a by-law in 1923 establishing a Board of Electrical Examiners charged with the duty of testing the qualifications of persons doing electrical work in the city. The by-law provides that all such persons must obtain a license from the Police Commission, issued through the municipal license department after approval by the new Board. The Board consists of the chairman, representing the Hydro Commission, the City Architect, one representative for the contractors and one for the journeymen. Each man applying for a license pays a fee of \$4 for the examination and \$1 for the license, the total amount of \$5 going to a fund to pay the expenses of the Board. A renewal now costs \$4, and the annual fee is \$1, but it is stated that the cost of examination and renewals will be adjusted as the fund grows.

PRICES, RETAIL AND WHOLESALE, IN CANADA, MARCH, 1925

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during March was downward, both the family budget in terms of retail prices and the index numbers of wholesale prices calculated by various authorities being somewhat below the levels of the previous month.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.74 at the beginning of March as compared with \$10.93 for February; \$10.58 for March, 1924; \$10.79 for March, 1923; \$10.54 for March, 1922; \$13.23 for March, 1921; \$16.92 for June, 1920 (the peak); \$15.98 for March, 1920; \$12.66 for March, 1918; and \$7.68 for March, 1914. The decline was mostly due to a seasonal fall in the cost of eggs and butter. Beans and yellow sugar showed a slight decline. Slight increases occurred in the average cost of bread, flour, veal, mutton, lard, cheese, rolled oats, rice, evaporated apples, prunes, granulated sugar, coffee, tea and potatoes. Including the cost of fuel and rent with that of foods, the total budget averaged \$21 at the beginning of March as compared with \$21.19 for February; \$21 for March, 1924; \$21.42 for March, 1923; \$20.96 for March, 1922; \$23.87 for March, 1921; \$26.92 for July, 1920 (the peak); \$25.01 for March, 1920; \$20 for March, 1918; and \$14.35 for March, 1914. Fuel and rent were unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the importance of the commodities, declined substantially to 161.6 for March as compared with 164.8 for February; 154.1 for March, 1924; 155.9 for March, 1923; 153.6 for March, 1922; 186.0 for March, 1921; 256.7 for May, 1920 (the peak); 241.3 for March, 1920; and 200.3 for March, 1919. Fifty-two prices quotations were lower, 29 were higher and 155 were unchanged.

In the grouping according to chief component material, four of the eight main groups were lower, two were higher and two remained stable. The vegetables and their products group declined substantially, mainly due to lower prices for grains and flour. The other groups which declined were: fibres, textiles and textile products because of lower prices for cotton and wool; iron and its products because of lower prices for some lines of pig iron; and non-ferrous metals because of declines in the prices of most of the metals in

the group. The animals and their products group advanced slightly, higher prices for live stock, meats, butter and cheese more than counterbalancing the declines in eggs, fish and hides. The wood and wood products group also advanced slightly. Non-metallic minerals and their products and chemicals and allied products were unchanged.

In the grouping according to purpose, both consumers' and producers' goods were lower. In the former group the movement was confined to foods, increases in the prices of tea, meats and butter being more than offset by declines in flour, potatoes and eggs. In producers' goods, manufacturers' materials were substantially lower, increases in materials used in the meat packing and the rubber industries being more than offset by declines in materials for the milling, metal-working and the miscellaneous industries.

In the grouping according to origin, raw or partly manufactured goods declined substantially while fully or chiefly manufactured goods showed a slight advance. Canadian farm products, articles of marine origin and articles of mineral origin were lower. Articles of forest origin advanced slightly.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number published by the Department since 1910 has been reconstructed by the Dominion Bureau of Statistics, the new index being weighted and based upon the prices of 236 commodities in 1913.* In June, 1923, figures back to 1919 by months and back to 1890 by years were issued. From June, 1923, to the end of 1924 the Department continued to calculate and publish the old series in summary form in the LABOUR GAZETTE in order to afford comparisons with price levels back to 1913. For the detailed analysis from month to month, however, the new index number of the Bureau of Statistics was used.

As the Bureau's index number has now been constructed back to 1913 by months and is available back to 1890 by years, the index number of the Labour Department has been discontinued. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail.

The special index number of wholesale prices of fifty commodities has also been discontinued. As this gives monthly figures prior to 1913 back to 1901 based on prices in 1913 as 100, it may be used to indicate the general movement of prices by months for that period, the index number of the Bureau of Statistics being available by months since 1913.

The index number of wholesale prices in Canada published by the United States Fed-

* LABOUR GAZETTE, June, 1923, and September, 1924.

eral Reserve Board, including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods and thirty-eight finished or consumers' goods based upon price levels in 1913 as 100 advanced to 158 for February as compared with 156 for January; 149 for December, 1924, and 148 for February, 1924. Domestic goods, imported goods and export goods were higher. Grouped by stage of manufacture, raw materials were higher while producers' goods and consumers' goods were unchanged.

The Canadian Bank of Commerce index of exports advanced slightly to 161.89 for March as compared with 161.36 for February. The index of imports was somewhat lower at 166.35 as compared with 166.57 in February. The combined index of both imports and exports was 164.12 in March and 163.96 in February.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of February of seventy-one staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given, is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which

reports are received, includes twenty-nine staple foods; laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current for Householders*

With rates in 1913 at 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

Retail Prices

Beef prices on the whole showed little change, round steak averaged 22.2c. per pound in March and 22.1c. in February and rib roast averaged 20.6c. per pound in March and 20.7c. in February. Veal, roast, advanced from an average of 18.2c. per pound in February to 18.4c. in March. Mutton was up from 28.5c. per pound in February to 28.9c. in March. The advance was fairly general. Fresh pork averaged 25.3c. per pound in March as compared with 24.6c. in February. The advance was general. Salt pork and

bacon also advanced, the former averaging 23.9c. per pound and the latter 34.4c. In fresh fish cod and halibut were slightly lower. Lard advanced slightly, averaging 23.5c. per pound in March as compared with 23.3c. in February.

Eggs declined substantially, fresh averaging 52.5c. per dozen in March as compared with 65.7c. in February and 66.7c. in January and storage averaging 45.7c. per dozen in March and 54.2c. in February. A decline in the price of milk was reported from London. Butter showed a general decline, dairy averaging 36.3c. per pound in March, 37.6c. in February and 39.7c. in January and creamery averaging 40.6c. per pound in March, 43c. in February and 43.9c. in January. Cheese rose from an average of 29.5c. per pound to 30.1c.

Bread averaged slightly higher, increases being reported from Amherst, Quebec, Sorel, Thetford Mines, Hamilton, Guelph, Kitchener, Stratford and Lethbridge while declines were reported from Brockville, London, Port Arthur, Fort William, and Medicine Hat. Flour averaged slightly higher at 6.2c. per pound, declines in some localities being more than offset by advances in others. Soda biscuits were unchanged. Rolled oats and rice were slightly higher. Canned vegetables were steady. Beans declined slightly, averaging 8.2c. per pound. Potatoes averaged \$1.52 per 90 pounds as compared with \$1.49 in February. Evaporated apples advanced from an average of 20.1c. per pound in February to 20.7c. in March. Raisins and currants showed little change. Raspberry jam declined from 91.1c. per four-pound tin in February to 89.8c. in March. Sugar was slightly lower, granulated averaging 9.1c. per pound in February and 8.9c. in March and yellow averaging 8.6c. in February and 8.5c. in March. Coffee and tea were slightly higher, the former averaging 59.8c. per pound and the latter 71.6c.

Anthracite coal showed little change, averaging \$16.81 per ton in March and \$16.77 in February. Higher prices were reported from Halifax, Thetford Mines and Sault Ste. Marie. Bituminous coal was practically unchanged, averaging \$10.34 in March. Wood prices were little changed in the average. Coal oil also was unchanged in the average, increases in some localities being offset by declines in others.

No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices showed a substantial decline during March. No. 1 Manitoba Northern wheat, Fort William and Port Arthur basis, averaged \$1.76½ per bushel as compared with \$1.96½ in February. The high price for the month was \$2.05½ per bushel reached near the beginning and the low price \$1.48½ per bushel near the end of the month. A falling off in buying together with the conviction that the world shortage was not so severe as had been generally believed were said to be the cause of the decline. The statistical situation led to the view that there was plenty of wheat for some months. Other grains shared in the downward movement in wheat. Western oats were 52c. in March as compared with 63½c. in February and Western barley 84½c. per bushel in March as compared with 96½c. in February. Corn also declined, being \$1.36½ per bushel in March as compared with \$1.45 in February. Flax seed fell from \$2.63½ per bushel to \$2.50. The low level for grains was followed by reductions in the prices of milled products. Flour fell from \$10.70 per barrel to \$10.20, rolled oats from \$4.45 per 90-pound bag to \$4.10, and shorts from \$36.25 per ton to \$30.25. Raw linseed oil declined from \$1.39 per gallon in February to \$1.34 in March. Raw rubber at New York advanced from 36c. per pound to 40½c. Coffee declined slightly at Toronto. Tea, however, continued upward, an advance of 4c. per pound occurring in some grades. Potatoes at Montreal fell from 78½c. per bag to 73½c. and at Toronto from \$1-\$1.10 per bag to 80c.-90c. Choice steers at Toronto advanced from \$6.75 per hundred to \$7.50 and Western cattle at Winnipeg from \$6.50 per hundred to \$6.83. Increased demand was said to be the cause of the higher prices. Hogs at Toronto advanced from \$11.80 per hundred to \$13.45. Sheep also advanced, being \$8.38 in March as compared with \$7.42 in February. Fish prices were lower. Dried salt cod at Halifax was down from \$10 per quintal to \$9.50, salt herrings from \$6.50 per barrel to \$6 and white fish from 12c. per pound to 10c. Following the higher prices for live stock meat prices were upward, beef carcass at Toronto advancing from 17c. per pound to 18c., shop hogs from \$14 per hundred to \$16.13 and bacon from 25c.-27c. per pound to 31c.-33c. per pound. Beef hides at Toronto were down from 13c.-13½c. per pound to 12½c.-13c. and calf skins from 21c.-22c. per pound to 19c.-20c. Creamery butter at Montreal rose 2c. per pound to 36c. and at Toronto from 36c. per pound to 38c. New cheese at Toronto advanced from 23c. per pound to 25c. and old cheese at Montreal from 25c. per pound to 28c. Eggs showed further seasonal declines,

fresh being 39c.-42c. per dozen as compared with 56c.-58c. in February. Raw cotton averaged slightly higher at New York, being 25½c. per pound in March as compared with 24½c. in February. Raw silk was down from \$6.60 per pound to \$6.25. Wool prices declined, some lines being down 2c. per pound. Jute advanced from \$11 per hundred in February

to \$12.85 in March. Prices for most non-ferrous metals were lower. Antimony was down from 20c. per pound to 18c., copper from \$16.65 per hundred to \$16.30, copper sheets from 21½c. per pound to 21c., lead from \$9.65 per hundred to \$9.40, tin from 59c. per pound to 56c. and spelter from \$9.05 per hundred to \$9.
